Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Franklin Advisers, Inc. (“Franklin Advisers”), One Franklin Parkway, San Mateo, California 94403-1906.

The portfolio managers responsible for the Fund are:

Edward D. Perks, CFA (*President and Chief Investment Officer, Multi-Asset Solutions of Franklin Advisers*) has been a manager of the Fund since its inception. Mr. Perks joined Franklin Templeton Investments in 1992. Prior to his current role, he served as the chief investment officer of Franklin Templeton Equity, with oversight of several Franklin Templeton equity teams. He has also served as CIO-Franklin Equity Group (FEG), an evolution from his previous role as director of portfolio management. During his tenure with the firm, his experience has included equity, convertibles and high yield research across a wide range of industries. Mr. Perks holds a B.A. in economics and political science from Yale University. He is a Chartered Financial Analyst (CFA) charterholder, a member of the CFA Institute, and the Security Analysts of San Francisco (SASF).

Brendan Circle, CFA (*Portfolio Manager and Research Analyst of Franklin Advisers, Inc.*) is a portfolio manager and research analyst for Franklin Templeton Multi-Asset Solutions. His responsibilities include assisting in the management of multi-asset strategies. Mr.

Circle also specializes in the analysis of corporate bonds. Mr. Circle joined Franklin Templeton Investments in 2014. Prior to this current role, he served as a research analyst for the Franklin Templeton Fixed Income Group, focusing on high yield corporate bonds. Previously, Mr. Circle worked as a senior portfolio management associate at PIMCO, specializing in Global Investment Grade Credit portfolio strategies. Mr. Circle holds an A.B. in economics from Princeton University and an M.B.A. from the University of Chicago Booth School of Business. Mr. Circle is a Chartered Financial Analyst (CFA), as well as a member of the CFA Institute and the CFA Society of San Francisco.

Todd Brighton, CFA (*Senior Vice President and Portfolio Manager of Franklin Advisers*) is senior vice president and head of investment portfolio management for Franklin Templeton Multi-Asset Solutions. Mr. Brighton joined Franklin Templeton Investments in 2000. His prior responsibilities have included the analysis of equity and equity-linked investments, and the development of volatility-based strategies for the Franklin Equity Group. Mr. Brighton earned his B.S. degree in Managerial Economics from the University of California, Davis. He is a Chartered Financial Analyst (CFA) charterholder and a member of the CFA Institute and the CFA Society of San Francisco.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Goldman Sachs 4 Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is capital appreciation.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in stocks of approximately 150 distinct companies included in the S&P 500® Index. The Fund implements its objective by using three equally weighted factors: quality, value, and momentum.

Quality Strategy

The quality strategy emphasizes competitive advantage. The competitive advantage sub-portfolio invests in the stock of companies included in the S&P 500® Index that are believed to have superior profitability, as measured by return on invested capital, and trade at relatively attractive valuations. The holdings in this sub-portfolio are selected from all 11 sectors of the economy identified in the S&P 500 Index. Goldman Sachs Asset Management, L.P. (“GSAM”) excludes stocks it views as lower quality using the S&P Quality Rankings and excludes stocks with lower S&P Global Ratings Issuer Credit Ratings.

Value Strategies

The value strategies emphasize dividend income & growth and intrinsic value.

The dividend income & growth sub-portfolio invests in the stock of companies included in the S&P 500® Index that have attractive dividend yields and strong capital structures as determined by GSAM™. The holdings in this sub-portfolio are selected from all 11 sectors of the economy identified in the S&P 500 Index. GSAM excludes stocks it views as lower quality using the S&P Quality Rankings and excludes stocks with lower S&P Global Ratings Issuer Credit Ratings.

The intrinsic value sub-portfolio invests in the stock of companies included in the S&P 500® Index that generate strong free cash flows and sell at relatively attractive valuations. With respect to the Financials sector, the model will reference return on equity in lieu of free cash flows. The holdings in this sub-portfolio are selected from all 11 sectors of the economy identified in the S&P 500 Index. GSAM excludes stocks it views as lower quality using the S&P Quality Rankings and excludes stocks with lower S&P Global Ratings Issuer Credit Ratings.

Momentum Strategy

The momentum sub-portfolio invests in the stock of companies included in the S&P 500® Index that exhibit high momentum based on the trailing twelve months, excluding the recent one-month. The holdings in this sub-portfolio are selected from all 11 sectors of the economy identified in the S&P 500 Index. GSAM excludes stocks it views as lower quality using the S&P Quality Rankings and excludes stocks with lower S&P Global Ratings Issuer Credit Ratings.

Tribblend Rebalance

A portion of each of sub-portfolio rebalances on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three factors to ensure equal weighting. The Fund may change the frequency and timing of its scheduled rebalances at its sole discretion. The Fund may apply situational risk exposure constraints beyond the S&P Quality Rankings and S&P Global Ratings Issuer Credit Ratings in response to extraordinary market events. GSAM and Mellon Investments Corporation (collectively, “Sub-Advisers”) generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

GSAM incorporates S&P Quality Rankings and S&P Global Ratings Issuer Credit Ratings in the selection process.

S&P Quality Rankings

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B-	Lower
A	High	C	Lowest

A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
B	Below Average		

S&P Global Ratings Issuer Credit Ratings

S&P Global Ratings Issuer Credit Ratings (also known as credit ratings) express opinions about the ability and willingness of an issuer to meet its financial obligations in full and on time. Credit ratings can also be used to determine the credit quality of an individual debt issue, such a corporate or municipal bond, and the relative likelihood that the issue may default. Credit ratings are not an absolute measure of default probability, since there are future events that cannot be foreseen. Credit ratings are not intended as guarantees of credit quality or as exact measures of the probability that a particular issuer or debt issue will default.

S&P Global Ratings Issuer Credit Ratings opinions are based on analysis by experienced professionals who evaluate and interpret information received from issuers and other available sources to form a considered opinion. S&P Global Ratings analysts obtain information from public reports, as well as from interviews and discussions with the issuer's management. They use that information and apply their analytical judgment to assess the entity's financial condition, operation performance, policies and risk management strategies.

The Fund may lend its securities to increase its income.

The Fund may invest in a combination of exchange-traded funds ("ETFs") to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Market risk*
- *Accounting risk*
- *Model risk*
- *Company risk*
- *Stock risk*
- *Limited management, trading cost and rebalance risk*
- *Large-capitalization investing risk*
- *Passive investment risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Investment strategy risk*
- *Liquidity risk*

- *Redemption risk*
- *Expense risk*
- *Cybersecurity risk*
- *Temporary defensive positions and large cash positions risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Advisers and Portfolio Management. The Fund engages co-sub-advisers. Goldman Sachs Asset Management, L.P. (“GSAM”) serves as the Sub-Adviser responsible for the selection and allocation of investments. Mellon Investments Corporation (“Mellon”) serves as the Sub-Adviser responsible for trading services for the Fund.

GSAM is located at 200 West Street, New York, New York, 10282. GSAM has been registered as an investment adviser since 1990 and is an affiliate of Goldman, Sachs & Co. LLC (“Goldman Sachs”).

Marcus Ng, CFA is a portfolio manager on the Quantitative Investment Strategies (QIS) team within GSAM. He joined GSAM in 2019 as a vice president. Prior to joining GSAM, Mr. Ng was at S&P Investment Advisory Services (“SPIAS”), having joined in 2006. He managed the advisory quantitative equity portfolios and was responsible for quantitative portfolio research to enhance existing models and develop new strategies. Prior to joining SPIAS, Mr. Ng worked for the ClariFI® group at S&P Global Market Intelligence (formerly S&P Capital IQ) advising clients on how to use the full suite of technologies in the development of quantitative equity strategies. Mr. Ng holds a Master of Science in Investment Management from Boston University and a Bachelor of Science degree in Physics from California Institute of Technology. He is also a CFA charterholder.

Nicholas Chan, CFA is a portfolio manager on the Quantitative Investment Strategies (QIS) team within GSAM. He also oversees the team's client portfolio management effort in the Americas and Bengaluru. Mr. Chan joined Goldman Sachs in 2000. He earned an AB in International Relations, with honors and Phi Beta Kappa, from Stanford University in 2000 and an MBA from Harvard Business School in 2006. He is a CFA charterholder.

Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon is responsible for managing the investment of portfolio assets according to the allocations by GSAM. Mellon directs portfolio transactions, as required, to closely replicate the allocation instructions prepared by GSAM. The individual members of the team who are jointly and primarily responsible for monitoring and reviewing portfolio allocations, and executing of GSAM portfolio allocations are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving each sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2020.

JNL/GQG Emerging Markets Equity Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation.

Principal Investment Strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities of emerging market companies.

The equity securities in which the Fund invests are primarily publicly traded common stocks. For purposes of the Fund's 80% investment policy, however, equity securities also include depositary receipts (including American Depository Receipts ("ADRs"), European Depository Receipts ("EDRs") and Global Depository Receipts ("GDRs")), which are certificates typically issued by a bank or trust company that represent ownership interests in securities of non-U.S. companies, and participation notes ("P-Notes"), which are derivative instruments designed to replicate equity exposure in certain foreign markets where direct investment is either impossible or difficult due to local investment restrictions. The Fund may invest in initial public offerings ("IPOs") and securities of companies with any market capitalization. Certain instruments in which the Fund invests may be illiquid or thinly traded securities. The Fund may invest in exchange traded funds ("ETFs"), including commodity ETFs that provide exposure to or invest in gold.

The Fund may also invest in A Shares of companies based in the People's Republic of China ("China") that trade on the Shanghai Stock Exchange and the Shenzhen Stock Exchange through the Shanghai – Hong Kong and Shenzhen – Hong Kong Stock Connect programs ("Stock Connect"). Stock Connect is a mutual stock market access program designed to, among other things, enable foreign investments in China.

The Fund considers a company to be an emerging market company if: (i) at least 50% of the company's assets are located in emerging market countries; (ii) at least 50% of the company's revenue is generated in emerging market countries; (iii) the company is organized, conducts its principal operations, or maintains its principal place of business or principal manufacturing facilities in an emerging market country; (iv) the company's securities are traded principally in an emerging market country; or (v) GQG Partners LLC ("Sub-Adviser") otherwise believes that the company's assets are exposed to the economic fortunes and risks of emerging market countries (because, for example, the Sub-Adviser believes that the company's growth is dependent on emerging market countries). The Fund considers classifications by the World Bank, the International Finance Corporation, the International Monetary Fund and the Fund's benchmark index provider in determining whether a country is an emerging market country. Emerging market countries generally include every country in the world except the U.S., Canada, Japan, Australia, New Zealand, and most of the countries in Western Europe. From time to time, the Fund may focus its investments in a particular country or geographic region.

In managing the Fund's investments, the Sub-Adviser pursues a "growth style" of investing through which it seeks to capture market upside while limiting downside risk through full market cycles by combining a rigorous screening process with fundamental analyses to seek to identify and invest in companies that the Sub-Adviser believes have favorable long-term economic prospects. Specifically, the Sub-Adviser seeks to buy companies that it believes are reasonably priced, have strong fundamental business characteristics, sustainable relative earnings growth and the ability to outperform peers over a full market cycle, and can sustain the value of their securities in a market downturn. The Sub-Adviser may also purchase companies that do not fall into the traditional "growth" style box. The Sub-Adviser may sell a company if it believes that the company's long-term competitive advantage or relative earnings growth prospects have deteriorated, or the Sub-Adviser has otherwise lost conviction in the company. The Sub-Adviser may also sell a company if the company has met its price target or is involved in a business combination, if the Sub-Adviser identifies a more attractive investment opportunity, or the Sub-Adviser wishes to reduce the Fund's exposure to the company or a particular country or geographic region.

During unusual economic or market conditions, or for temporary defensive or liquidity purposes, the Fund may, but is not obligated to, invest up to 100% of its assets in money market instruments and other cash equivalents that would not ordinarily be consistent with its investment objective. If the Fund invests in this manner, it may cause the Fund to forgo greater investment returns for the safety of principal, and the Fund may therefore not achieve its investment objective. The Fund will only do so if the Sub-Adviser believes that the risk of loss outweighs the opportunity to pursue the Fund's investment objective.

The Fund is classified as "non-diversified," which means that it may invest a larger percentage of its assets in a smaller number of issuers than a diversified fund.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Market risk*
- *Managed portfolio risk*
- *Concentration risk*
- *Large-capitalization investing risk*
- *Investment style risk*
- *Emerging markets and less developed countries risk*
- *Foreign securities risk*
- *Depository receipts risk*
- *Currency risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Investing in China A Shares risk*
- *Investing through Stock Connect risk*
- *Participation note risk*
- *Redemption risk*
- *Liquidity risk*
- *Investments in IPOs risk*
- *Non-diversification risk*
- *Portfolio turnover risk*
- *China risk*
- *Commodity ETF risk*
- *Russia investment risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment in money market funds risk*
- *Investment strategy risk*
- *Latin America concentration risk*
- *Securities lending risk*
- *Frontier market countries risk*
- *Temporary defensive positions and large cash positions risk*
- *Regulatory investment limits risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is GQG Partners LLC (“GQG”), a Delaware limited liability company founded in 2016. GQG is an SEC registered investment adviser. GQG’s principal place of business is located at 450 East Las Olas Boulevard, Suite 750, Fort Lauderdale, Florida 33301. The Sub-Adviser provides investment management services for institutions, mutual funds and other investors using emerging markets, global, international and US equity investment strategies. The Sub-Adviser is a subsidiary of GQG Partners Inc., a Delaware corporation that is listed on the Australian Securities Exchange.

Rajiv Jain, Chairman and Chief Investment Officer of GQG, serves as the Portfolio Manager of the Fund and has full discretion and sole decision-making authority over the Fund’s portfolio, except in instances of his extended and unplanned unavailability. Prior to joining the GQG in 2016, Mr. Jain served as a Co-Chief Executive Officer, Chief Investment Officer and Head of Equities at Vontobel

Asset Management (“Vontobel”). He joined Vontobel in 1994 as an equity analyst and associate manager of its international equity portfolios. Mr. Jain earned an MBA in Finance and International Business from the University of Miami in 1993. He also has a Master’s degree from the University of Ajmer and an undergraduate degree in Accounting.

Sudarshan Murthy, CFA, Senior Investment Analyst of GQG, serves as the Deputy Portfolio Manager of the Fund and collaborates with Mr. Jain on all aspects of security selection and portfolio construction with respect to the Fund. Prior to joining GQG in 2016, Mr. Murthy was a generalist analyst in Asian equities at Matthews International Capital from 2011 to 2016 and a sell-side research associate at Sanford C. Bernstein from 2010 to 2011. Earlier in his career, he held various operational roles in the IT services industry, including at Infosys from 2001 to 2006. Mr. Murthy earned an MBA from The Wharton School of Business at the University of Pennsylvania, where he graduated as a Palmer Scholar (top 5% of graduating class). He also received a Post Graduate Diploma in Management from the Indian Institute of Management, Calcutta and a Bachelor of Engineering from the National Institute of Technology, Surathkal, in India. Mr. Murthy is a CFA charterholder.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL/Harris Oakmark Global Equity Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek capital appreciation.

Principal Investment Strategies. Under normal market conditions, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of common stocks of U.S. and non-U.S. companies. The Fund invests in the securities of companies located in at least three countries. Typically, the Fund invests between 25-75% of its total assets in securities of U.S. companies and between 25-75% of its total assets in securities of non-U.S. companies. There are no geographic limits on the Fund's non-U.S. investments, and the Fund may invest in securities of companies located in developed or emerging markets. The Fund's sub-adviser, Harris Associate L.P.'s ("Sub-Adviser"), considers emerging markets to be those classified as emerging markets by Morningstar, which are generally located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. The Fund may invest in the securities of large-, mid-, and small-capitalization companies.

The Fund uses a value investment philosophy in selecting equity securities. This value investment philosophy is based upon the belief that, over time, a company's stock price converges with the Sub-Adviser's estimate of the company's intrinsic value. By "intrinsic value," the Sub-Adviser means its estimate of the price a knowledgeable buyer would pay to acquire the entire business. The Fund's Sub-Adviser believes that investing in securities priced significantly below what the Sub-Adviser believes is a company's intrinsic value presents the best opportunity to achieve the Fund's investment objective.

The Sub-Adviser uses this value investment philosophy to identify companies that have discounted stock prices compared to what the Sub-Adviser believes are the companies' intrinsic values. In assessing such companies, the Sub-Adviser looks for the following characteristics, although not all of the companies selected will have all of these attributes: (1) free cash flows and intelligent investment of excess cash; (2) earnings that are growing and are reasonably predictable; and (3) a high level of ownership by management.

In making its investment decisions, the Sub-Adviser uses a "bottom-up" approach focused on individual companies, rather than focusing on specific economic factors or specific industries. To facilitate its selection of investments that meet the criteria described above, the Sub-Adviser uses independent, in-house research to analyze each company. The Sub-Adviser does not rely upon recommendations generated from other brokerage investment firms, generally referred to as the "Street." As part of this selection process, the Sub-Adviser's analysts typically visit companies and conduct other research on the companies and their industries.

Once the Sub-Adviser identifies a stock that it believes is selling at a significant discount compared to the Sub-Adviser's estimate of the company's intrinsic value and the company has one or more of the additional qualities mentioned above, the Sub-Adviser may consider buying that stock for the Fund. The Sub-Adviser usually sells a stock when the price approaches its estimated intrinsic value. This means the Sub-Adviser sets specific "buy" and "sell" targets for each stock held by the Fund. The Sub-Adviser also monitors each holding and adjusts these price targets as warranted to reflect changes in a company's fundamentals.

The Sub-Adviser believes that holding a relatively small number of stocks allows its "best ideas" to have a meaningful impact on the Fund's performance. Therefore, the Fund's portfolio typically holds thirty to sixty stocks, and as a result, a significant percentage of the Fund's total assets may at times be invested in a particular region, sector or industry.

The Sub-Adviser frequently evaluates whether corporate governance factors could have a negative or positive impact on the intrinsic value or risk profile of a potential investment. The Sub-Adviser also will evaluate the impact of social and environmental factors depending on the materiality of those factors relative to people, process and/or profit issues that affect the competitive position of the investment. To assess these factors, the Sub-Adviser may consider information derived from its ongoing dialogue with certain companies, proprietary research, and information from third-party sources.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Concentration risk*
- *Foreign securities risk*
- *Emerging markets and less developed countries risk*
- *Stock risk*

- *Equity securities risk*
- *Sector risk*
- *Large-capitalization investing risk*
- *Mid-capitalization investing risk*
- *Small-capitalization investing risk*
- *Investment style risk*
- *Volatility risk*
- *Currency risk*
- *Company risk*
- *Investment strategy risk*
- *Accounting risk*
- *Financial services risk*
- *Managed portfolio risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Government regulatory risk*
- *Expense risk*
- *Hedging instruments risk*
- *Cybersecurity risk*
- *Regulatory investment limits risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*
- *China and India country specific risk*
- *Pacific Rim investing risk*
- *Russia investment risk*
- *European investment risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Harris Associates L.P. (“Harris”), located at 111 South Wacker Drive, Suite 4600, Chicago, IL 60606. Harris is a limited partnership managed by its general partner, Harris Associates, Inc. (“HAI”). Harris and HAI are wholly-owned subsidiaries of Natixis Investment Managers, LLC, an indirect subsidiary of Natixis Investment Managers, an international asset management group based in Paris, France. Natixis Investment Managers is owned by Natixis, a French investment banking and financial services firm that is principally owned by BPCE, France’s second largest banking group. Together with its predecessor firms, Harris has advised and managed mutual funds since 1970.

The Fund’s portfolio is managed by Anthony P. Coniaris, CFA, David G. Herro, CFA, and Eric Liu, CFA, who are primarily responsible for the day-to-day management of the Fund’s investments. Mr. Herro has been a portfolio manager of the Fund since its inception. Mr. Coniaris became a portfolio manager of the Fund in January 2017. and Mr. Liu became a portfolio manager in July 2021.

Eric Liu, CFA, is a Vice President, a Portfolio Manager and a Senior International Investment Analyst at Harris. He joined Harris in 2009. Mr. Liu has a BA from the University of California Los Angeles.

Anthony P. Coniaris, CFA, is the Chairman and a Portfolio Manager at Harris. He joined Harris in 1999. Mr. Coniaris has a MBA from Northwestern University and a BA from Wheaton College.

David G. Herro, CFA, is the Deputy Chairman, Chief Investment Officer of International Equities and a Portfolio Manager at Harris. He joined Harris in 1992. Mr. Herro has an MA from the University of Wisconsin-Milwaukee and a BS from the University of Wisconsin-Platteville.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Heitman U.S. Focused Real Estate Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek to achieve long-term total return.

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities issued by real estate companies operating in the United States, including real estate investment trusts (“REITs”). The Fund’s investments in equity securities may include common stocks, preferred stocks, and securities offered in initial public offerings (“IPOs”). The Fund may invest in these equity securities directly or indirectly through investments in other investment companies, including exchange-traded funds (“ETFs”). The Fund defines a real estate company as any company that derives at least 50% of its revenue from, or has at least 50% of its assets in, real estate. The Fund considers a real estate company to be operating in the United States if the real estate company: (i) is organized in the United States, (ii) trades principally in a United States market, or (iii) derives at least 50% of its revenue from or has at least 50% of its assets located in, the United States. The Fund typically invests in equity securities issued by small to medium capitalization real-estate companies, but the Fund’s investments are not limited to a particular capitalization range.

The Fund may invest without limit in REITs. Equity REITs invest directly in real property while mortgage REITs invest in mortgages on real property. REITs may be subject to certain risks associated with the direct ownership of real estate, including declines in the value of real estate, risks related to general and local economic conditions, overbuilding and increased competition, increases in property taxes and operating expenses and variations in rental income. REITs pay dividends to their shareholders based upon available funds from operations. It is quite common for these dividends to exceed a REIT’s taxable earnings and profits, resulting in the excess portion of such dividends being designated as a return of capital.

The Fund may invest in common stocks. Common stock represents an equity (ownership) interest in a company and usually possesses voting rights and earns dividends. Dividends on common stock are not fixed but are declared at the discretion of the issuer. Common stock generally represents the riskiest investment in a company. In addition, common stock generally has the greatest appreciation and depreciation potential because increases and decreases in earnings are usually reflected in a company’s stock price.

The Fund may invest in preferred stocks. Preferred stock is a class of stock having a preference over common stock as to the payment of dividends and the recovery of investment should a company be liquidated, although preferred stock is usually junior to the debt securities of the issuer. Preferred stock typically does not possess voting rights and its market value may change based on changes in interest rates.

The Fund may invest in IPOs. The market value of IPO shares will fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading, and limited information about the issuer. The purchase of IPO shares may involve high transaction costs. IPO shares are subject to market risk and liquidity risk. In addition, the market for IPO shares can be speculative and/or inactive for extended periods of time. The limited number of shares available for trading in some IPOs may make it more difficult for the Fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing prices. Investors in IPO shares can be affected by substantial dilution in the value of their shares by sales of additional shares and by concentration of control in existing management and principal shareholders. Because of the price volatility of IPO shares, the Fund may choose to hold IPO shares for a very short period of time. This may increase the turnover of the Fund’s portfolio and lead to increased expenses to the Fund, such as commission and transaction costs. By selling IPO shares, the Fund may realize taxable gains it will subsequently distribute to shareholders.

The Fund may sell securities regardless of how long they have been held if Heitman Real Estate Securities LLC, the Fund’s sub-adviser (“Sub-Adviser”), determines that a current position has become overvalued relative to its peers, if a company makes a strategic decision with which the Sub-Adviser disagrees, if the Sub-Adviser finds an opportunity that it believes is more compelling, or if the Sub-Adviser’s outlook on the company or market changes.

The Sub-Adviser makes investment decisions through a bottom-up strategy, focusing on individual security selection. To guide the portfolio construction process, the Sub-Adviser incorporates both quantitative and qualitative analysis in real estate securities. The Sub-Adviser analyzes factors such as management, financial condition, cash flow, and company’s growth potential estimates to select companies in the real estate industry that it believes will make attractive long-term investments. The research process includes an evaluation of the commercial real estate supply and demand dynamics, management, strategy, property quality, financial strength and corporate structure. Judgments with respect to risk control, geographic and property sector variety, liquidity and other factors are considered and drive the Sub-Adviser’s investment decisions. In an effort to achieve its goal, the Fund may engage in active and frequent trading.

The Fund is a “non-diversified” fund, as defined in the Investment Company Act of 1940, as amended (the “1940 Act”), and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Concentration risk*
- *Real estate investment risk*
- *Market risk*
- *Equity securities risk*
- *Sector risk*
- *Non-diversification risk*
- *Issuer risk*
- *Managed portfolio risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Interest rate risk*
- *Portfolio turnover risk*
- *Investments in IPOs risk*
- *Regulatory investment limits risk*
- *Preferred stock risk*
- *Investment in other investment companies risk*
- *Exchange-traded funds investing risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Liquidity risk*
- *U.S. Government securities risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Heitman Real Estate Securities LLC ("Heitman"), with principal offices at 191 N. Wacker Drive, Suite 2500, Chicago, Illinois 60606. Heitman has provided investment management services to its clients since 1989 and specializes in publicly traded equity securities of North American companies principally engaged in the real estate industry, including REITS. Heitman was established in 1989 and has been a SEC-registered investment adviser since January 1995.

Jerry Ehlinger is a Senior Managing Director, Chief Investment Officer and Global Head of Heitman LLC's (Heitman's parent company) North American Public Real Estate Securities group. He also serves on the group's Global Investment Committee and co-manages the group's global real estate securities strategies. Throughout his career, Mr. Ehlinger has held a number of related investment positions in the REIT industry. Before joining Heitman in 2013, Mr. Ehlinger was Lead Portfolio Manager and Head of Real Estate Securities, Americas at DB/RREEF Real Estate. Prior, Mr. Ehlinger served as Senior Vice President and Portfolio Manager of Heitman LLC's real estate securities group from 2000 to 2004. He began his career at Morgan Stanley in 1996 where he

primarily covered the REIT sector both as a sell-side analyst and as a senior research associate at Morgan Stanley Asset Management. Mr. Ehlinger received an MS in Finance, Investment and Banking from the University of Wisconsin-Madison and a BS in Finance from the University of Wisconsin-Whitewater. Among other professional affiliations, Mr. Ehlinger is a member of the NAREIT Real Estate Investment Advisory Council, National Multi Housing Council, International Council of Shopping Centers, the CFA Institute, and the CFA Society of Chicago.

Jeffrey Yurk, CFA is Senior Vice President and Portfolio Manager in Heitman's North American Public Real Estate Securities group. He is an equity owner of the firm. Mr. Yurk is responsible for portfolio management, including fundamental company and market analysis. Prior to joining Heitman, Mr. Yurk was with Principal Global Investors, where he was responsible for providing quantitative and qualitative research on seasoned commercial mortgage-backed securities issuances. Mr. Yurk received a BBA and an MBA from the University of Wisconsin-Madison and is a CFA Charterholder.

Charles Harbin, CFA is Senior Vice President and Portfolio Manager for Heitman's North American Public Real Estate Securities group. He is responsible for portfolio management, including fundamental company and market analysis. Prior to joining the firm, he was with Deutsche Bank/RREEF as a senior analyst/vice president, developing long/short equity and debt investments for its multi-strategy, multi-asset class hedge fund. Prior to working at RREEF, Mr. Harbin was a long/short equity analyst for Renascent Capital Management and a derivatives analyst for Prebon Yamane, a financial brokerage and consulting firm. Mr. Harbin received a BA in Economics with honors from Sewanee, The University of the South.

Mathew Spencer is Senior Vice President and Global Portfolio Manager for Heitman's Public Real Estate Securities group. He is responsible for portfolio management, including fundamental company and market analysis for Heitman's global equity strategies. Prior to joining the firm, Mr. Spencer worked for Robert W. Baird & Co. between 2011 and 2015, first as an equity research analyst and then as an equity research associate, where he was responsible for assisting in the coverage on new REITs and covering stocks across multiple property sectors. Mr. Spencer received a BA in Finance from the University of Notre Dame.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Invesco Diversified Dividend Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital and, secondarily, current income.

Principal Investment Strategies. The Fund invests primarily in dividend-paying equity securities. The principal type of equity security in which the Fund invests is common stock.

The Fund invests in securities that Invesco Advisers, Inc. ("Invesco" or "Sub-Adviser") believes are undervalued based on various valuation measures.

The Fund may invest up to 25% of its net assets in securities of foreign issuers.

In selecting investments, Invesco seeks to identify dividend-paying issuers with strong profitability, solid balance sheets and capital allocation policies that support sustained or increasing dividends and share repurchases. Through fundamental research, financial statement analysis and the use of several valuation techniques, Invesco estimates a target price for each security over a 2-3 year investment horizon. Invesco seeks to manage risk by utilizing a valuation framework, careful stock selection and a rigorous buy-and-sell discipline and incorporate an assessment of the potential reward relative to the downside risk to determine a fair valuation over the investment horizon. When evaluating cyclical businesses, Invesco seeks companies that have normalized earnings power greater than that implied by their current market valuation and that return capital to shareholders via dividends and share repurchases. Invesco then constructs a portfolio that it believes provides the best total return profile, which is created by seeking a combination of price appreciation potential, dividend income and capital preservation.

Invesco maintains a rigorous sell discipline and consider selling or trimming a position in a stock when it no longer materially meets Invesco's investment criteria, including when (1) a stock reaches its fair valuation (target price); (2) a company's fundamental business prospects deteriorate; or (3) a more attractive investment opportunity presents itself.

In anticipation of or in response to market, economic, political, or other conditions, Invesco may temporarily use a different investment strategy for defensive purposes. If Invesco does so, different factors could affect the Fund's performance and the Fund may not achieve its investment objective.

The Fund's investments in the types of securities and other investments described in this prospectus vary from time to time, and, at any time, the Fund may not be invested in all of the types of securities and other investments described in this prospectus. The Fund may also invest in securities and other investments not described in this prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Equity securities risk*
- *Investment style risk*
- *Dividend-paying stock risk*
- *Foreign securities risk*
- *Sector risk*
- *Managed portfolio risk*
- *Accounting risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Investment strategy risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*
- *Cybersecurity risk*
- *Expense risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Invesco Advisers, Inc. (“Invesco” or "Sub-Adviser"), located at 1555 Peachtree, N.E, Atlanta, GA 30309. Invesco, an investment adviser since 1976, is an indirect, wholly owned subsidiary of Invesco Ltd., a publicly traded company that, through its subsidiaries, engages in the business of investment management on an international basis.

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Peter Santoro, CFA, Lead Portfolio Manager, who has been responsible for the Fund since March 2021 and has been associated with Invesco and/or its affiliates since 2021. Before joining Invesco, Mr. Santoro was a senior portfolio manager at Columbia Threadneedle Investments on multiple equity strategies. He joined one of the Columbia Threadneedle Investments legacy firms in 2003. Prior to that, Mr. Santoro served as an equity analyst for Rockefeller & Company, concentrating on the global consumer sector. Mr. Santoro has been in the industry since 1996. Mr. Santoro earned a BA degree in history from Amherst College and graduated cum laude. He is a CFA charterholder.

Caroline Le Feuvre, Portfolio Manager, who has been responsible for the Fund since 2020 and has been associated with Invesco and/or its affiliates since 2014. Prior to joining Invesco in 2014, Ms. Le Feuvre served as an equity analyst with Barrow Hanley Mewhinney & Strauss and previously with Morgan Stanley Investment Management. She entered the industry in 2006. Ms. Le Feuvre earned an MBA from the Stanford University Graduate School of Business and a BS degree in commerce with distinction from the University of Virginia.

Craig Leopold, CFA, Portfolio Manager, who has been responsible for the Fund since 2022 and has been associated with Invesco and/or its affiliates since 2022. Prior to joining Invesco, Mr. Leopold was most recently both a Lead Portfolio Manager and a Co-Portfolio Manager for several U.S. equity focused investment strategies at Rockefeller Capital Management. He was previously a Portfolio Manager at Columbia Threadneedle Investments on several U.S. equity strategies as well. He has been in the industry since 1991. Mr. Leopold earned a B.B.A. in Management from Adelphi University and an M.B.A. from Fordham University. He is a CFA charterholder.

Chris McMeans, CFA, Portfolio Manager, who has been responsible for the Fund since September 2017 and has been associated with Invesco and/or its affiliates since 2008. Prior to joining Invesco in 2008, Mr. McMeans was an equity research analyst for Lighthouse Capital Management. Previously, he was an equity support analyst for Morgan Stanley Investment Management's Van Kampen subsidiary. He entered the industry in 1999. Mr. McMeans earned a BA degree in economics from The University of Texas at Austin and an MBA with honors from the University of Houston. He is a CFA charterholder.

The portfolio managers are assisted by investment professionals from Invesco's Dividend Value Team. Members of the team may change from time to time.

A Lead Manager generally has final authority over all aspects of a portion of the Fund's investment portfolio, including but not limited to, purchases and sales of individual securities, portfolio construction techniques, portfolio risk assessment, and the management of daily cash flows in accordance with portfolio holdings. The degree to which a lead manager may perform these functions, and the nature of these functions, may change from time to time.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Invesco Global Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek capital appreciation.

Principal Investment Strategies. The Fund invests mainly in common stocks of U.S. and foreign companies. The Fund can invest without limit in foreign securities and can invest in any country, including countries with developing or emerging markets. However, the Fund currently emphasizes its investments in developed markets such as the United States, Western European countries and Japan. The Fund does not limit its investments to companies in a particular capitalization range, but primarily invests in mid- and large-capitalization companies.

In addition to common stocks, the Fund can invest in preferred stocks. The Fund normally will invest in at least three countries (one of which may be the United States). Typically, the Fund invests in a number of different countries. The Fund is not required to allocate its investments in any set percentages in any particular countries. Securities of foreign issuers that are represented by American Depository Receipts or that are listed on a U.S. securities exchange or traded in the U.S. OTC markets are considered “foreign securities” for the purposes of the Fund’s investment allocations.

Invesco Advisers, Inc. (“Sub-Adviser”) primarily looks for quality companies, regardless of domicile, that have sustainable growth. The Sub-Adviser’s investment approach combines a thematic approach to idea generation with bottom-up, fundamental company analysis. The Sub-Adviser seeks to identify secular changes in the world and looks for pockets of durable change that the Sub-Adviser believes will drive global growth for the next decade. These large scale structural themes are referred to collectively as MANTRA®: Mass Affluence, New Technology, Restructuring, and Aging. The Sub-Adviser does not target a fixed allocation with regard to any particular theme, and may choose to focus on various sub-themes within each theme. Within each sub-theme, the Sub-Adviser employs fundamental company analysis to select investments for the Fund’s portfolio. The economic characteristics the Sub-Adviser seeks include a combination of high return on invested capital, good cash flow characteristics, high barriers to entry, dominant market share, a strong competitive position, talented management, and balance sheet strength that the Sub-Adviser believes will enable the company to fund its own growth. These criteria may vary. The Sub-Adviser also considers how industry dynamics, market trends and general economic conditions may affect a company’s earnings outlook.

The Sub-Adviser has a long-term investment horizon of typically three to five years. The Sub-Adviser also has a contrarian buy discipline; the Sub-Adviser buys common stocks of high-quality companies that fit the Sub-Adviser’s investment criteria when the valuations, at the time of purchase, underestimate what the Sub-Adviser believes are their long-term earnings potential. For example, a company’s stock price may dislocate from its fundamental outlook due to a short-term earnings glitch or negative, short-term market sentiment, which can give rise to what the Sub-Adviser believes is an attractive investment opportunity. The Sub-Adviser monitors individual issuers for changes in earnings potential or other effects of changing market conditions that may trigger a decision to sell a security, but do not require a decision to do so.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Stock risk*
- *Equity securities risk*
- *Foreign securities risk*
- *Emerging markets and less developed countries risk*
- *European investment risk*
- *Pacific Rim investing risk*
- *Concentration risk*
- *Sector risk*
- *Investment style risk*
- *Small-capitalization investing risk*
- *Large-capitalization investing risk*
- *Mid-capitalization investing risk*
- *Managed portfolio risk*
- *Event driven and special situations risk*

- *Volatility risk*
- *Currency risk*
- *Depository receipts risk*
- *Cyclical opportunities risk*
- *Investment strategy risk*
- *Accounting risk*
- *Financial services risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *China and India country specific risk*
- *Portfolio turnover risk*
- *Temporary defensive positions and large cash positions risk*
- *Expense risk*
- *Derivatives risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Counterparty risk*
- *Cybersecurity risk*
- *Investment in money market funds risk*
- *Convertible securities risk*
- *Fixed-income risk*
- *Government regulatory risk*
- *Leverage risk*
- *Restricted securities risk*
- *Securities lending risk*
- *Settlement risk*
- *Preferred stock risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Invesco Advisers, Inc. (“Invesco” or "Sub-Adviser"), located at 1555 Peachtree, N.E, Atlanta, GA 30309. Invesco, an investment adviser since 1976, is an indirect, wholly owned subsidiary of Invesco Ltd., a publicly traded company that, through its subsidiaries, engages in the business of investment management on an international basis.

The portfolio manager of the Fund is John Delano, CFA. Mr. Delano is a portfolio manager of Invesco and/or its affiliates since May 2019. Prior to 2019, Mr. Delano was a Vice President and Director of Equity Research, Global Team of Oppenheimer since 2010. Prior to that, Mr. Delano served as Director of Equity Research, Growth Team, of Oppenheimer since 2007. Mr. Delano is principally responsible for the day-to-day management of the Fund's portfolio. Mr. Delano has been a manager of the Fund since April 2017 and a Portfolio Manager at Oppenheimer since March 2017. He has earned the right to use the Chartered Financial Analyst designation.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL/Invesco Small Cap Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term growth of capital.

Principal Investment Strategies. The Fund seeks to meet this objective by investing, normally, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities of small-capitalization companies, at the time of purchase. The Fund invests primarily in equity securities. The principal type of equity security in which the Fund invests is common stock. The Fund considers a company to be a small-capitalization company if it has a market capitalization, at the time of purchase, no larger than the largest capitalized company included in the Russell 2000® Index during the most recent 11-month period (based on month-end data) plus the most recent data during the current month. The Russell 2000® Index is a widely recognized, unmanaged index of common stocks that measures performance of the 2,000 smallest companies in the Russell 3000® Index. As of December 31, 2021, the market capitalization resulting from this formula was \$13.9 billion.

The Fund may also invest up to 20% of its assets in equity securities of issuers that have market capitalizations in other market capitalization ranges. The Fund may also invest up to 25% of its total assets in foreign securities. Any percentage limitations with respect to the assets of the Fund are applied at the time of purchase.

In selecting investments, the Sub-Adviser utilizes a disciplined portfolio construction process that aligns the Fund with the Russell 2000® Growth Index which the Sub-Adviser believes represents the small cap growth asset class. The security selection process is based on a three-step process that includes fundamental, valuation, and timeliness analysis. Fundamental analysis involves building a series of financial models, as well as conducting in-depth interviews with company management. The goal is to find high quality, fundamentally sound companies operating in an attractive industry. Valuation analysis focuses on identifying attractively valued securities given their growth potential over a one-to-two year horizon. Timeliness analysis is used to help identify the “timeliness” of a purchase. In this step, relative price strength, trading volume, characteristics, and trend analysis are reviewed for signs of deterioration. If a security shows signs of deterioration, it will not be considered as a candidate for the portfolio. The Sub-Adviser considers selling a security if the investment thesis for owning the security is no longer valid, the stock reaches its price target or timeliness factors indicate that the risk/return characteristics of the stock as viewed in the market are no longer attractive.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Stock risk*
- *Equity securities risk*
- *Investment style risk*
- *Small-capitalization investing risk*
- *Sector risk*
- *Real estate investment risk*
- *Foreign securities risk*
- *Managed portfolio risk*
- *Company risk*
- *Liquidity risk*
- *Accounting risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Investment strategy risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Temporary defensive positions and large cash positions risk*
- *Expense risk*
- *Cybersecurity risk*
- *Settlement risk*
- *Counterparty risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Leverage risk*
- *Convertible securities risk*
- *U.S. Government securities risk*
- *Credit risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Invesco Advisers, Inc. (“Invesco” or "Sub-Adviser"), located at 1555 Peachtree, N.E, Atlanta, GA 30309. Invesco, an investment adviser since 1976, is an indirect, wholly owned subsidiary of Invesco Ltd., a publicly traded company that, through its subsidiaries, engages in the business of investment management on an international basis.

The following individuals are jointly and primarily responsible for the day-to-day management of the Fund's portfolio:

Juan Hartsfield, CFA, Lead Portfolio Manager, has been responsible for the Fund since 2004 and has been associated with Invesco and/or its affiliates since 2004. From 2000 to 2004, he was a co-portfolio manager with JPMorgan Fleming Asset Management. From 1999 to 2000, he was a management consultant with Booz Allen & Hamilton. Mr. Hartsfield earned a BS degree in petroleum engineering from The University of Texas at Austin and an MBA from the University of Michigan. Mr. Hartsfield is a CFA charterholder.

Clay Manley, CFA, Portfolio Manager, has been responsible for the Fund since February 2008 and has been associated with Invesco and/or its affiliates since 2001. From 2002 to February 2008, he was a senior equity analyst on Invesco's small-cap team. Mr. Manley has a Bachelor of Arts (cum laude) in history and geology from Vanderbilt University, and a Master of Business Administration degree with concentrations in finance and accounting from Goizueta Business School at Emory University. Mr. Manley is a CFA Charterholder.

Justin Sander, CFA, Portfolio Manager, has been responsible for the Fund since April 2020 and has been associated with Invesco and/or its affiliates since 2013. Prior to joining Invesco, he worked at RBC Capital Markets as a vice president and equity research analyst covering the energy sector, at Waddell & Reed Investment Management Co. as an equity research analyst covering the financials sector. Previously, he worked as a credit analyst and commercial lender for a commercially focused Texas regional bank. Mr. Sander has been in the industry since 2008.

A Lead Manager generally has final authority over all aspects of a portion of the Fund's investment portfolio, including but not limited to, purchases and sales of individual securities, portfolio construction techniques, portfolio risk assessment, and the management of daily cash flows in accordance with portfolio holdings. The degree to which a lead manager may perform these functions, and the nature of these functions, may change from time to time.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/JPMorgan Global Allocation Fund

Class A Class I

Investment Objective. The investment objective of the Fund is to maximize long-term total return.

Principal Investment Strategies. In seeking to achieve its investment objective, the Fund has significant flexibility to invest in a broad range of equity, fixed income, and alternative asset classes in the U.S. and other markets throughout the world, both developed and emerging. J.P. Morgan Investment Management Inc. (“JPMorgan” or the “Sub-Adviser”) uses a flexible asset allocation approach in constructing the Fund’s portfolio.

Under normal circumstances, the Fund will invest at least 40% of its total assets in countries other than the United States unless JPMorgan determines that conditions are not favorable. If JPMorgan determines that conditions are not favorable, the Fund may invest under 40% of its total assets in non-U.S. countries provided that the Fund will not invest less than 30% of its total assets in non-U.S. countries under normal circumstances except for temporary defensive purposes. JPMorgan will invest in issuers in at least three countries other than the U.S. under normal circumstances. The Fund will invest across the full range of asset classes.

The Fund’s equity investments may include common stock, preferred stock, exchange traded funds (“ETFs”), convertible securities, depositary receipts, warrants to buy common stocks, master limited partnerships (“MLPs”), and other unaffiliated mutual funds and ETFs advised by JPMorgan (“JPMorgan Funds”) and, for the limited purposes described below, market cap weighted index ETFs that are managed by investment advisers that are unaffiliated with JPMorgan (“Unaffiliated Passive ETFs”, and together with JPMorgan Funds, the “Underlying Funds”). The Fund is generally unconstrained by any particular capitalization with regard to its equity investments.

The Fund’s fixed income investments may include bank obligations, convertible securities, U.S. Government securities (including agencies and instrumentalities), mortgage-backed and mortgage-related securities (which may include securities that are issued by non-governmental entities), domestic and foreign corporate bonds, high yield securities (“junk bonds”), loan assignments and participations, debt obligations issued or guaranteed by a foreign sovereign government or its agencies, authorities or political subdivisions, floating rate securities, inflation-indexed bonds, inflation-linked securities such as Treasury Inflation Protected Securities (“TIPS”), JPMorgan Funds, and, for the limited purposes described below, Unaffiliated Passive ETFs. The Fund is generally unconstrained with regard to the duration of its fixed income investments.

The Fund’s alternative investments include securities that are not a part of the Fund’s global equity or global fixed income investments. These investments may include individual securities (such as convertible securities, inflation-sensitive securities and preferred stock), JPMorgan Funds, ETFs, exchange traded notes (“ETNs”), exchange-traded commodities (“ETCs”), and, for the limited purposes described below, Unaffiliated Passive ETFs. The investments in this asset class may give the Fund exposure to: market neutral strategies, long/short strategies, real estate (including real estate investment trusts (“REITS”)), currencies, and commodities.

To the extent the Fund invests in the Underlying Funds, JPMorgan expects to select JPMorgan Funds without considering or canvassing the universe of unaffiliated underlying funds available, even though there may (or may not) be one or more unaffiliated underlying funds that investors might regard as more attractive for the Fund or that have superior returns. JPMorgan also generally expects to select a JPMorgan ETF unless JPMorgan determines the investment is not available to or appropriate for the Fund. To the extent JPMorgan determines that an investment in a JPMorgan ETF is not available to or appropriate for the Fund, only then will JPMorgan consider investing in an Unaffiliated Passive ETF. JPMorgan expects that, to the extent the Fund invests in ETFs, JPMorgan will primarily invest in passive ETFs. A “passive ETF” is a registered investment company that seeks to track the performance of a particular market security or index. The index may be a broad-based market index or it may relate to particular sectors, markets, regions or industries.

The Fund may also hold cash and cash equivalents.

In addition to direct investments in securities, derivatives, which are instruments that have a value based on another instrument, exchange rate or index, may also be used as substitutes for securities in which the Fund can invest. For example, in implementing equity market neutral strategies and macro-based strategies, the Fund may use a total return swap to establish both long and short positions to gain the desired exposure rather than physically purchasing and selling short each instrument. The Fund may use futures contracts, options, forwards, and swaps to more effectively gain targeted equity and fixed income exposure from its cash positions, to hedge investments, for risk management and to attempt to increase the Fund’s gain. The Fund may use futures contracts, forward contracts, options (including options on interest rate futures contracts and interest rate swaps), swaps, and credit default swaps to help manage duration, sector and yield curve exposure, and credit and spread volatility. The Fund may utilize exchange-traded futures contracts for cash management and to gain exposure to equities pending investment in individual securities. To the extent that the Fund does not utilize underlying funds to gain exposure to commodities, it may utilize commodity linked derivatives or commodity swaps to gain exposure to commodities.

The Fund may invest in securities denominated in any currency. The Fund may utilize forward currency transactions to hedge exposure to non-dollar investments back to the U.S. dollar. The Fund may engage in short sales.

The Fund will likely engage in active and frequent trading.

Jackson National Asset Management, LLC (“JNAM”) manages certain private investments held by the Fund. As of the date of this prospectus, it is contemplated that the duration of JNAM’s involvement in managing these private investments will be for however long it takes the Fund to sell such private investments.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Allocation risk*
- *Equity securities risk*
- *Market risk*
- *Interest rate risk*
- *Credit risk*
- *Sector risk*
- *Foreign securities risk*
- *Emerging markets and less developed countries risk*
- *Currency risk*
- *Derivatives risk*
- *Fixed-income risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Mortgage-related and other asset-backed securities risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Real estate investment risk*
- *Master limited partnership risk*
- *U.S. Government securities risk*
- *Exchange-traded funds investing risk*
- *Exchange-traded note risk*
- *Short sales risk*
- *Commodity risk*
- *Commodity-linked derivatives risk*
- *Convertible securities risk*
- *Portfolio turnover risk*
- *Managed portfolio risk*
- *Depository receipts risk*
- *Forward and futures contract risk*
- *Hedging instruments risk*
- *Investment in other investment companies risk*
- *Leverage risk*
- *Preferred stock risk*
- *TIPS and inflation-linked bonds risk*
- *Warrants risk*
- *Privately placed securities risk*
- *LIBOR replacement risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Investment strategy risk*
- *Temporary defensive positions and large cash positions risk*
- *When-issued and delayed delivery securities and forward commitments risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Advisers' abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is J.P. Morgan Investment Management Inc. ("JPMorgan"), with principal offices at 383 Madison Avenue, New York, NY 10179. JPMorgan is an indirect subsidiary of JPMorgan Chase & Co., a publicly held bank holding company and global financial services firm. JPMorgan manages assets for governments, corporations, endowments, foundations, and individuals worldwide.

Jeffrey A. Geller, Managing Director, CFA, is the Chief Investment Officer of JPMorgan's Multi-Asset Solutions Group and has investment oversight responsibility for all accounts managed by JPMorgan's Multi-Asset Solutions Group. In addition, Mr. Geller has direct portfolio management responsibilities for JPMorgan's Multi-Asset Solutions Group's less constrained mandates as well as those with large alternative allocations. Mr. Geller joined JPMorgan in 2006 and has been a portfolio manager of the Fund since June 2019.

Eric J. Bernbaum, Executive Director, CFA, is a portfolio manager within JPMorgan's Multi-Asset Solutions Group and has responsibility for portfolio construction and the implementation of tactical asset allocations across JPMorgan's Multi-Asset Solutions Group. Mr. Bernbaum joined JPMorgan in 2008 and has been a portfolio manager of the Fund since June 2019.

Grace Koo, Executive Director, is a portfolio manager within JPMorgan's Multi-Asset Solutions Group and has responsibility for quantitative multi-asset portfolio strategies, dynamic asset allocation and long-term capital market assumptions. Ms. Koo joined JPMorgan in 2007 and has been a portfolio manager of the Fund since June 2019.

Michael Feser is a managing director and a portfolio manager on the Multi-Asset Solutions team based in New York. In this role, Mr. Feser is responsible for managing portfolios and expanding the Multi-Asset Solutions team's capabilities in the sub-advisory segment. A particular area of focus is the design and management of risk/volatility-controlled investment strategies. In addition, Mr. Feser also serves on JPMAM's long-term capital markets assumptions committee, advises clients on investment strategy design and strategic asset allocation issues. An employee since 1994, Mr. Feser has more than two decades of markets, multi-asset and fixed income research and investment experience. Previously, Mr. Feser served as the Global Investment Director of Global Investment Management Solutions, where he oversaw the investment activities of the group's portfolio managers, new product development and worked with the Funds' boards globally. Prior to this, Mr. Feser held a number of roles across global investment management, including leading Multi-Asset Solution's quantitative research and portfolio management team, and heading fixed income quantitative research and portfolio management functions in London. Mr. Feser obtained an M.A. in Business Administration from the University of Cologne. He is a CFA charterholder and is Series 3, 7 and 63 licensed.

Philip Camporeale is a managing director and a portfolio manager on the Multi-Asset Solutions team, based in New York. In this role, Mr. Camporeale is responsible for developing and implementing global macro trading insights consistent with the Multi Asset Solutions investment process. A particular area of focus is the impact of global monetary policy on asset prices. Mr. Camporeale joined the Multi Asset Solutions team in 2011 and prior to his current role, Mr. Camporeale managed the Investment Specialist team focused on US Funds. An employee since 2000, Mr. Camporeale was previously a portfolio manager in the New York fixed income group where he was responsible for managing duration and yield curve strategies. Mr. Camporeale has also appeared in various media outlets including CNBC, Bloomberg, and The Wall Street Journal. Mr. Camporeale earned a B.S. in Accounting and an M.B.A. in Finance from Fordham University. He is Series 3, 7, and 63 licensed.

Jackson National Asset Management, LLC ("JNAM") manages certain private investments held by the Fund. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and

Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving each sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/JPMorgan Hedged Equity Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek to provide capital appreciation.

Principal Investment Strategies. The Fund seeks to provide capital appreciation through participation in the broad equity markets while hedging overall market exposure relative to traditional long-only equity strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities. The Fund seeks to achieve its investment objective by investing at least 80% of its assets in an “enhanced index,” which primarily consist of common stocks of medium to large capitalization companies in the S&P 500 Index. The enhanced index is a portfolio benchmarked to the S&P 500 Index, subject to constraints based on tracking error, individual name holdings, and sector. Because the Fund uses an “enhanced index” strategy, not all of the stocks in the S&P 500 Index (the “Index”), its primary benchmark, are included in the Fund, and the Fund’s position in an individual stock may be overweighted or underweighted when compared to the Index. The Fund will also systematically purchase and sell exchange-traded put options and sell exchange-traded call options, employing an options overlay known as a “put/spread collar” strategy. The options may be based on the Index or on exchange-traded funds (“ETFs”) that replicate the Index (“S&P 500 ETFs”). The combination of the diversified portfolio of equity securities, the downside protection from long index put options, and the income from the short index call options is intended to provide the Fund with a portion of the returns associated with equity market investments while exposing investors to less risk than traditional long-only equity strategies. Specifically, the Fund seeks to provide a competitive risk-adjusted return over a full market cycle relative to the Index with lower volatility than traditional long-only equity strategies. The “put/spread collar” strategy is designed to provide a continuous market hedge for the portfolio (i.e., to minimize loss).

The Fund’s investments in equity securities will be primarily in common stocks of U.S. companies with market capitalizations similar to those within the universe of the Index. Sector by sector, the Fund’s weightings are similar to those of the Index. Within each sector, however, the Fund modestly overweights equity securities that it considers undervalued or fairly valued while modestly underweighting or not holding equity securities that appear overvalued. Because each stock’s weighting in the Fund is controlled relative to that stock’s weight in the Index, the Fund’s weighted average market capitalization will be close to that of the Index.

Options positions are marked to market daily. The value of options is affected by changes in the value and dividend rates of the securities represented in the Index underlying the option, changes in interest rates, changes in the actual or perceived volatility of the Index and the remaining time to the options’ expiration, as well as trading conditions in the options market. In addition to the “put/spread collar” strategy, the Fund may use futures contracts, primarily futures on indices, to more effectively gain targeted equity exposure from its cash positions and to hedge the Fund’s portfolio if it is unable to purchase or write the necessary options for its overlay strategy.

The Fund’s combination of a diversified equity portfolio, with the “put/spread collar” options overlay strategy is designed to provide greater market protection than other equity investments, but may not always do so, particularly in rising equity markets when the Fund may underperform traditional equity strategies. In addition, as a result of the structure of the options overlay strategy, the Fund is not expected to provide market protection during times of low market volatility; during such periods, the Fund is expected to perform in line with broad equity markets.

The Fund is also permitted to use other derivatives such as futures, options and swaps in order to hedge various investments, for risk management and to opportunistically enhance the Fund’s returns. Under certain market conditions, the Fund’s use of other derivatives for cash management or other investment management purposes could be significant.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Company risk*
- *Derivatives risk*
- *Equity securities risk*
- *Exchange-traded funds investing risk*
- *Investment style risk*
- *Large-capitalization investing risk*
- *Liquidity risk*

- *Managed portfolio risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Options risk*
- *Redemption risk*
- *Stock risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Call risk*
- *Convertible securities risk*
- *Counterparty risk*
- *Cybersecurity risk*
- *ESG (Environmental, Social & Governance) investment strategy risk*
- *Investment in other investment companies risk*
- *Investments in IPOs risk*
- *Master limited partnership risk*
- *Preferred stock risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*
- *Warrants risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is J.P. Morgan Investment Management Inc. (“JPMorgan”), with principal offices at 383 Madison Avenue, New York, NY 10179. JPMorgan is an indirect subsidiary of JPMorgan Chase & Co., a publicly held bank holding company and global financial services firm. JPMorgan manages assets for governments, corporations, endowments, foundations, and individuals worldwide.

Hamilton Reiner, managing director, is a portfolio manager and head of U.S. Equity Derivatives at J.P. Morgan Asset Management. He has been managing U.S. equities and U.S. equity derivatives for the past 32 years, at firms such as Barclays Capital, Lehman Brothers, and Deutsche Bank. He started his career at the options investing firm O’Connor and Associates, where he developed his passion for derivatives investing. Mr. Reiner obtained a B.S.E. in Finance from the Wharton School of the University of Pennsylvania.

Raffaele Zingone, managing director, is a senior portfolio manager on the U.S. Structured Equity Team. An employee since 1991, Mr. Zingone is responsible for the Research Enhanced Index (REI) strategies and serves as co-portfolio manager on our Hedged Equity and Equity Premium Income strategies. Prior to this role, he was a research analyst following the aerospace, environmental, and diversified manufacturing sectors. Upon joining the firm, he was a quantitative equity analyst and later served as a U.S. Equity portfolio manager in London and New York. Mr. Zingone received his B.A. in mathematics and economics from the College of the Holy Cross and his M.B.A. in finance from New York University. He is a CFA charterholder.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL/JPMorgan MidCap Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek capital growth over the long-term.

Principal Investment Strategies. The Fund invests primarily in common stocks of mid-cap companies which its Sub-Adviser, J.P. Morgan Investment Management Inc. (“JPMorgan”), believes are capable of achieving sustained growth. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a broad portfolio of common stocks of companies with market capitalizations equal to those within the universe of Russell MidCap Growth Index stocks at the time of purchase. Market capitalization is the total market value of a company’s shares. As of December 31, 2021, the market capitalization range for the Russell Mid Cap Growth Index was \$440 million to \$58.7 billion.

Derivatives, which are instruments that have a value based on another instrument, exchange rate or index, may be used as substitutes for securities in which the Fund can invest. The Fund may use futures contracts, options, swaps and other derivatives as tools in the management of portfolio assets. The Fund may use derivatives to hedge various investments, for risk management and to increase the Fund’s income or gain.

For cash management or temporary defensive purposes, the Fund may invest any portion of its assets in affiliated money market funds, high-quality money market instruments or repurchase agreements.

In managing the Fund, the Sub-Adviser employs a process that combines research, valuation and stock selection to identify companies that have a history of above-average growth or which the Sub-Adviser believes will achieve above-average growth in the future. Growth companies purchased for the Fund include those with leading competitive positions, predictable and durable business models and management that can achieve sustained growth. The Sub-Adviser makes specific purchase decisions based on a number of quantitative factors, including valuation and improving fundamentals, as well as the stock and industry insights of the Sub-Adviser’s research and portfolio management teams. Finally, a disciplined, systematic portfolio construction process is employed to minimize uncompensated risks relative to the benchmark.

The Sub-Adviser may sell a security for several reasons. The Sub-Adviser may sell a security due to a change in the company’s fundamentals, a change in the original reason for purchase of an investment, or new investment opportunities with higher expected returns emerge to displace existing portfolio holdings with lower expected returns. Finally, the Sub-Adviser may also sell a security that the Sub-Adviser no longer considers reasonably valued.

Investments in all types of foreign securities will not exceed 20% of the total assets of the Fund.

The Fund maintains the flexibility to invest in securities of companies from a variety of sectors, but from time to time, based on economic conditions, the Fund may have significant investments in particular sectors.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Accounting risk*
- *Company risk*
- *Counterparty risk*
- *Financial services risk*
- *Foreign securities risk*
- *Investment style risk*
- *Issuer risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Information technology sector risk*
- *Stock risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Equity securities risk*
- *Expense risk*
- *Government regulatory risk*
- *Investment in money market funds risk*
- *Investment strategy risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is J.P. Morgan Investment Management Inc. (“JPMorgan”), with principal offices at 383 Madison Avenue, New York, NY 10179. JPMorgan is an indirect subsidiary of JPMorgan Chase & Co., a publicly held bank holding company and global financial services firm. JPMorgan manages assets for governments, corporations, endowments, foundations, and individuals worldwide.

Timothy Parton, managing director, is a portfolio manager within the U.S. Equity Group. An employee since 1986, Mr. Parton has managed a variety of Small and Mid-Cap portfolios over his tenure. He has been managing the J.P. Morgan Mid Cap Growth Strategy since November 2001 and the J.P. Morgan Growth Advantage Strategy since its inception in September 2005. In addition, Mr. Parton is a co-portfolio manager on the J.P. Morgan Equity Focus Strategy and J.P. Morgan Mid Cap Equity Strategy. He holds a B.Sc. in Economics and Accounting from the University of Bristol in England. He is a member of both the New York Society of Security Analysts and The CFA Institute, and a CFA charterholder.

Felise L. Agranoff, managing director, is a portfolio manager within the U.S. Equity Group. An employee since 2004, Ms. Agranoff is a co-portfolio manager for the Mid Cap Growth, Growth Advantage and Small Cap Growth Strategies. She started on the J.P. Morgan U.S. Equity Large Cap fundamental research team before joining the growth team in 2006. As a research analyst for the growth team, Ms. Agranoff covered the small and mid cap industrials sector as well as mid cap financials and business services. She obtained a B.S. in Finance and Accounting from the McIntire School of Commerce at the University of Virginia. She is a member of the CFA Institute and a CFA charterholder.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL/JPMorgan U.S. Government & Quality Bond Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to obtain a high level of current income.

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in:

- (i) U.S. treasury obligations;
- (ii) obligations issued or guaranteed by agencies or instrumentalities of the U.S. Government which are backed by their own credit and may not be backed by the full faith and credit of the U.S. Government;
- (iii) mortgage-backed securities guaranteed by the Government National Mortgage Association that are supported by the full faith and credit of the U.S. Government. Such securities entitle the holder to receive all interest and principal payments due whether or not payments are actually made on the underlying mortgages;
- (iv) mortgage-backed securities guaranteed by agencies or instrumentalities of the U.S. Government which are supported by their own credit but not the full faith and credit of the U.S. Government, such as the Federal Home Loan Mortgage Corporation and Fannie Mae (formerly, the Federal National Mortgage Association);
- (v) collateralized mortgage obligations issued by private issuers for which the underlying mortgage-backed securities serving as collateral are backed by (i) the credit alone of the U.S. Government agency or instrumentality which issues or guarantees the mortgage-backed securities, or (ii) the full faith and credit of the U.S. Government;
- (vi) repurchase agreements collateralized by any of the foregoing; and
- (vii) other investments related to those listed above.

Any guarantee of the securities in which the Fund invests runs only to the principal and interest payments on the securities and not to the market value of such securities or to the principal and interest payments on the underlying mortgages. A security issued or guaranteed by a U.S. government agency may significantly fluctuate in value, and the Fund may not receive the originally anticipated yield on the security. Shares of the Fund are not insured or guaranteed by the U.S. Government, its agencies or instrumentalities. The Fund may also invest in high-quality corporate debt securities. All securities in the Fund are investment grade at the time of purchase.

The Sub-Adviser seeks to add value by actively managing the portfolio's interest rate exposure, yield curve positioning, sector allocation and security selection. In selecting mortgage-backed securities for the Fund, the Sub-Adviser determines a security's average maturity and duration according to mathematical models that reflect certain payment assumptions and estimates of future economic factors. These estimates may vary from actual results, and the average maturity and duration of mortgage-backed derivative securities may not reflect the price volatility of those securities in certain market conditions.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Credit risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Managed portfolio risk*
- *Mortgage-related and other asset-backed securities risk*
- *U.S. Government securities risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Debt securities ratings risk*
- *Derivatives risk*
- *Extension risk*
- *Investment strategy risk*
- *Leverage risk*
- *Liquidity risk*
- *Market risk*
- *Portfolio turnover risk*
- *Prepayment risk*
- *Securities lending risk*
- *Settlement risk*
- *Structured investments risk*
- *Temporary defensive positions and large cash positions risk*
- *TIPS and inflation-linked bonds risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is J.P. Morgan Investment Management Inc. ("JPMorgan"), with principal offices at 383 Madison Avenue, New York, NY 10179. JPMorgan is an indirect subsidiary of JPMorgan Chase & Co., a publicly held bank holding company and global financial services firm. JPMorgan manages assets for governments, corporations, endowments, foundations, and individuals worldwide.

The Fund has a portfolio management team that is responsible for the day-to-day management of the Fund.

The portfolio management team is led by Michael Sais, Managing Director of JPMorgan. Mr. Sais is a Fixed Income Fund Manager for the Insurance Asset Management Team responsible for managing investments consistent with the unique requirements of insurance industry clients. Additionally, he is a member of the Columbus Taxable Bond Team where he has served as lead manager for the JPMorgan Ultra Short-Term Bond Fund since 1995 and Government Bond Products since 1996. Mr. Sais joined the firm in 1994 as a senior fixed-income research analyst responsible for the valuation and analysis of the mortgage-backed securities market. Prior to this, he served as senior investment portfolio manager of Valley National Bank of Phoenix, where he was responsible for the management of the bank's \$2.2 billion investment portfolio. Mr. Sais began his career with Citibank in San Juan, Puerto Rico, as an asset/liability manager and eurodollar trader. He obtained a B.S. and an M.B.A, both in finance, from Indiana University. Mr. Sais is also a CFA charterholder and member of The CFA Institute as well as the CFA Society of Columbus.

Robert Manning, Managing Director, is a member of the Global Fixed Income, Currency & Commodities (GFICC) group. Based in Columbus, he is a portfolio manager and is responsible for managing investments consistent with the unique requirements of insurance industry clients. Previously, he was a member of the Fixed Income Portfolio Management Group that supports Mid-Institutional Portfolios. Prior to joining the firm in 1999, Robert was a mortgage banking specialist at Ohio Savings Bank. He holds a B.S. in business management from Wittenberg University, an M.B.A. from The Ohio State University and is a CFA charterholder.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/JPMorgan U.S. Value Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is capital growth over the long-term.

Principal Investment Strategies. Under normal circumstances, the Fund invests at least 80% of its net assets (plus the amount of borrowings for investment purposes) in common stocks. J.P. Morgan Investment Management, Inc. (“Sub-Adviser”) applies an active equity management style focused on identifying attractively valued securities given their growth potential over a long-term time horizon. The securities held by the Fund will predominantly be of companies with market capitalizations similar to those within the universe of the Morningstar® US Large-Mid Cap Broad Value Index[□] (“Index”), which includes both large cap and mid cap companies. As of the reconstitution of the Index on December 31, 2021, the market capitalizations of the companies in the Index ranged from \$547.81 billion to \$25.91 million.

The Fund may sell a security for several reasons, including a change in the company’s fundamentals or if the Sub-Adviser believes the security is no longer attractively valued. Investments may also be sold if the Sub-Adviser identifies a stock that it believes offers a better investment opportunity.

The Fund emphasizes companies which it believes are leaders within their sectors. The Fund will also emphasize companies it believes have attractive valuations and low price-to-cash flows ratios. Some but not all of the companies may regularly pay dividends.

The Sub-Adviser employs a bottom-up approach to stock selection, constructing portfolios based on company fundamentals and proprietary fundamental analysis. The Sub-Adviser looks for undervalued companies with durable franchises, strong management and the ability to grow their intrinsic value per share.

While common stocks are the Fund’s primary investment, the Fund may also invest in real estate investment trusts (“REITs”) and depositary receipts. Depositary receipts are financial instruments representing a foreign company’s publicly traded securities. A depositary receipt trades on a stock exchange in a country different from the company’s local market.

Derivatives, which are instruments that have a value based on another instrument, exchange rate or index, may be used as substitutes for securities in which the Fund can invest. To the extent the Fund uses derivatives, the Fund will primarily use futures contracts to more effectively gain targeted equity exposure from its cash positions.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Market risk*
- *Investment style risk*
- *Large-capitalization investing risk*
- *Mid-capitalization investing risk*
- *Derivatives risk*
- *Foreign securities risk*
- *Real estate investment risk*
- *Liquidity risk*
- *Redemption risk*
- *Managed portfolio risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The Fund may invest in other types of securities and use a variety of investment techniques and strategies which are not described in this Prospectus. These securities and techniques may subject the Fund to additional risks.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Small-capitalization investing risk*
- *Company risk*
- *Stock risk*
- *Temporary defensive positions and large cash positions risk*
- *Cybersecurity risk*
- *Securities lending risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is J.P. Morgan Investment Management Inc. ("JPMorgan"), with principal offices at 383 Madison Avenue, New York, NY 10179. JPMorgan is an indirect subsidiary of JPMorgan Chase & Co., a publicly held bank holding company and global financial services firm. JPMorgan manages assets for governments, corporations, endowments, foundations, and individuals worldwide.

Clare A. Hart, Managing Director, is a portfolio manager in JPMorgan's U.S. Equity Group. An employee since 1999, Ms. Hart is the lead portfolio manager of the JPMorgan Equity Income Fund and the JPMorgan U.S. Value Fund. Prior to joining the team, Ms. Hart was with Salomon Smith Barney's equity research division as a research associate covering Real Estate Investment Trusts. Ms. Hart began her career at Arthur Andersen, working as a public accountant. Ms. Hart holds a B.A. in political science from the University of Chicago, an M.S.A. from DePaul University and a C.P.A. granted by the State of Illinois.

Andrew Brandon, Managing Director, is a portfolio manager in JPMorgan's U.S. Equity Group. An employee since 2000, Mr. Brandon joined the investment team in 2012 as an investment analyst on the JPMorgan Equity Income Fund and Growth and Income Fund. Prior to joining the team, Mr. Brandon was a member of JPMorgan's US equity research team covering the financial industry. Mr. Brandon has also worked in the JPMorgan Private Bank supporting portfolio managers of both the U.S. large cap core equity product, and the U.S. large cap value product. Mr. Brandon obtained a B.A. in economics from the University of Virginia, and an M.B.A. from the University of Florida. He is a CFA charterholder.

David Silberman, Managing Director, is a portfolio manager in JPMorgan's U.S. Equity Group. An employee since 1989, Mr. Silberman assumed his current role in 2019 and is a portfolio manager of the JPMorgan Equity Income Fund and the JPMorgan U.S. Value Fund. Prior to his current role, Mr. Silberman was the Head of the Equity Investment Director and Corporate Governance teams globally and the lead U.S. Equity Investment Director since 2008. Previously, Mr. Silberman was a portfolio manager in JPMorgan's U.S. Equity Group where he managed equity portfolios for private clients, endowments and foundations. He has also worked in JPMorgan's Emerging Markets Derivatives Group and attended the J.P. Morgan training program. Mr. Silberman holds a B.A. in economics and political science from the State University of New York at Binghamton and an M.B.A. from the Stern School of Business at New York University.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Lazard International Strategic Equity Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation.

Principal Investment Strategies. Under normal market conditions, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities, principally common stocks, of non-U.S. companies whose principal activities are located in countries represented by the Morningstar® Developed Markets ex-North America Target Market Exposure Index□ that Lazard Asset Management LLC, the Fund's sub-adviser (the "Sub-Adviser"), believes are undervalued based on their earnings, cash flow or asset values. The Sub-Adviser utilizes a bottom-up stock selection process, seeking attractive investments on an individual company basis. The Sub-Adviser believes that stock returns over time are driven by the sustainability and direction of financial productivity, balanced by valuation. However, the Sub-Adviser believes that financial markets will sometimes evaluate these factors inefficiently, presenting investment opportunities balanced by financial productivity.

As of the date of this prospectus, the countries represented by the Morningstar Developed Markets ex-North America Target Market Exposure Index include: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Poland, Portugal, Singapore, Spain, Sweden, Switzerland and the United Kingdom. The Fund may also invest in other developed countries, including Canada, that are not represented in the index.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Currency risk*
- *Sector risk*
- *Equity securities risk*
- *Depository receipts risk*
- *Concentration risk*
- *Company risk*
- *European investment risk*
- *Financial services risk*
- *Foreign securities risk*
- *Government regulatory risk*
- *Accounting risk*
- *Investment strategy risk*
- *Investment style risk*
- *Managed portfolio risk*
- *Small-capitalization investing risk*
- *Stock risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). While the portfolio may engage in foreign currency transactions primarily for hedging purposes, it may also use these transactions to increase returns. However, there is a risk that these transactions may reduce returns or increase volatility.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*

- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Lazard Asset Management LLC (“Lazard”), located at 30 Rockefeller Plaza, New York, New York 10112. Lazard is a subsidiary of Lazard Frères & Co. LLC, a New York limited liability company, which provides its clients which a wide variety of investment banking, brokerage and related services. Lazard and its affiliates provide investment management services to client discretionary accounts of both individuals and institutions.

The portfolio managers of the Sub-Adviser responsible for the oversight of the Fund are Messrs. Mark Little, Michael A. Bennett, Robin O. Jones, and John R. Reinsberg. Information regarding the portfolio managers of the Fund is set forth below.

Mark Little is a Managing Director and Portfolio Manager/Analyst on various international and global equity teams. He began working in the investment field in 1992. Prior to joining Lazard in 1997, he was a manager in the corporate finance practice of Coopers & Lybrand and earned his ACA qualification with Rees Pollock Chartered Accountants. Mr. Little has an MA in Economics from Clare College, Cambridge University.

Michael A. Bennett is a Managing Director and a Portfolio Manager/Analyst on various international and global equity teams. He also coordinates the activities of Lazard's Investment Council. Mr. Bennett began working in the investment field in 1986. Prior to joining Lazard in 1992, Mr. Bennett was with General Electric Investment Corporation, Keith Lippert Associates and became a CPA while at Arthur Andersen & Company. He has an MBA from the University of Chicago and a BS in Accounting from New York University.

Robin O. Jones is a Managing Director and Portfolio Manager/Analyst on the International Strategic Equity, International Compounders, and Global Strategic Equity teams. Mr. Jones began working in the investment field in 2002 at Lazard, before leaving in 2006 for Bluecrest Capital Management where he worked as a Portfolio Manager. Mr. Jones rejoined Lazard in 2007. He has a BA (Hons) in Economics from Durham University and a PGCE in Mathematics from Cambridge University.

John R. Reinsberg is a Deputy Chairman of Lazard LLC and Head of International Global Strategies. He is also a Portfolio Manager/Analyst on the Global Equity and International Equity portfolio teams. He began working in the investment field in 1981. Prior to joining Lazard in 1992, Mr. Reinsberg was Executive Vice President of General Electric Investment Corporation and Trustee of the General Electric Pension Trust. He was also previously with Jardine Matheson (Hong Kong) and Hill & Knowlton, Inc. Mr. Reinsberg has an MBA from Columbia University and a BA from the University of Pennsylvania. He is an Overseer of the University of Pennsylvania School of Arts and Sciences, Chairman of the University of Pennsylvania Huntsman Program Advisory Board, a Trustee of the NPR Foundation (National Public Radio), a Member of the Board of Directors of the Alliance for Cancer Gene Therapy, and a Member of the Board of Directors of the US Institute (Institutional Investor).

Jimmie Bork is a Senior Vice President of Lazard. He is also a Portfolio Manager/Analyst on the Lazard's Global Equity Income, International Strategic Equity and Global Strategic Equity teams. Mr. Bork joined the Lazard in 2016 and has been working in the investment field since 2011. Prior to Joining Lazard, Mr. Bork was an Equity Analyst with Legal & General and Credit Suisse.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Loomis Sayles Global Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term growth of capital.

Principal Investment Strategies. Under normal market conditions, the Fund will invest primarily in equity securities, including common stocks and depositary receipts. The Fund will invest in securities that provide exposure to no fewer than three countries, which will include the U.S. In addition, the Fund will invest at least 40% of its assets in securities of companies that maintain their principal place of business or conduct their principal business activities outside the U.S., companies that have their securities traded on non-U.S. exchanges, or companies that have been formed under the laws of non-U.S. countries. Notwithstanding the foregoing, a security is not considered to be foreign if it is included in the U.S. equity indices published by S&P Global Ratings or Russell Investments or if the security's "country of risk" defined by Bloomberg is the United States. The Fund may also invest up to 30% of its assets in emerging markets securities. The Fund considers a security to be an emerging markets security if its "country of risk" is included within the Morningstar® Emerging Markets Index□. The Fund focuses on stocks of large capitalization companies, but the Fund may invest in companies of any size.

The Fund normally invests across a wide range of sectors and industries. Loomis, Sayles & Company, L.P., the Fund's sub-adviser ("Sub-Adviser") employs a growth style of equity management, which means that the Fund seeks to invest in companies with sustainable competitive advantages versus others, long-term structural growth drivers that will lead to above-average future cash flow growth, attractive cash flow returns on invested capital, and management teams focused on creating long-term value for shareholders. The Sub-Adviser also aims to invest in companies when they trade at a significant discount to the estimate of intrinsic value (i.e. companies with share prices trading significantly below what the portfolio manager believes the share price should be).

The Fund will consider selling a portfolio investment when the Sub-Adviser believes an unfavorable structural change occurs within a given business or the markets in which it operates, a critical underlying investment assumption is flawed, when a more attractive reward-to-risk opportunity becomes available, when the current price fully reflects intrinsic value, or for other investment reasons which the Sub-Adviser deems appropriate.

The Fund may also engage in foreign currency transactions (including foreign currency forwards and foreign currency futures) for hedging purposes, invest in options for hedging and investment purposes and invest in securities issued pursuant to Rule 144A under the Securities Act of 1933 ("Rule 144A securities"). Under normal market conditions, the Sub-Adviser does not intend to hedge currency risk, which may cause the Fund to incur losses that would not have been incurred had the risk been hedged. Except as provided above, the Fund is not limited in the percentage of its assets that it may invest in these instruments.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Market risk*
- *Issuer risk*
- *Company risk*
- *Managed portfolio risk*
- *Non-diversification risk*
- *Foreign securities risk*
- *Depositary receipts risk*
- *Rule 144A securities risk*
- *Liquidity risk*
- *Currency risk*
- *Emerging markets and less developed countries risk*
- *China risk*
- *Large-capitalization investing risk*
- *Mid-capitalization investing risk*

- *Small-capitalization investing risk*
- *Counterparty risk*
- *Derivatives risk*
- *Leverage risk*
- *Credit risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Forward and futures contract risk*
- *Government regulatory risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Loomis, Sayles & Company, L.P., (“Loomis Sayles”). Loomis Sayles is located at One Financial Center Boston, Massachusetts 02111. Loomis Sayles is a Delaware limited partnership, registered as an investment adviser that provides investment advice to retirement and pension plans, institutional and corporate clients, insurance companies, mutual funds and high net worth individuals. Loomis Sayles is registered as an investment adviser under the Investment Advisers Act. Loomis Sayles was founded in 1926 and is one of the oldest investment advisory firms in the United States.

Aziz V. Hamzaogullari, CFA is the chief investment officer and founder of the Growth Equity Strategies Team and Loomis Sayles. He is the portfolio manager of the Loomis Sayles large cap, global and all cap growth and international growth strategies, including the Loomis Sayles Growth, Global Growth and International Growth mutual funds and products outside the US, as well as the Sakorum Long/Short Equity Fund. Mr. Hamzaogullari is also an executive vice president and a member of Loomis Sayles’ Board of Directors. Mr. Hamzaogullari joined Loomis Sayles in 2010 from Evergreen Investments where he was a senior portfolio manager. He joined Evergreen in 2001, was promoted to director of research in 2003 and portfolio manager in 2006. Mr. Hamzaogullari was head of Evergreen’s Berkeley Street Growth Equity team and was the founder of the research and investment process. Prior to Evergreen, Mr. Hamzaogullari was a senior equity analyst and portfolio manager at Manning & Napier Advisors. He has 28 years of investment industry experience. He earned a BS from Bilkent University, Turkey, and an MBA from George Washington University. He is also a member of CFA Society Boston.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL/Lord Abbett Short Duration Income Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek a high level of income consistent with preservation of capital.

Principal Investment Strategies. The Fund invests in various types of short duration debt (or fixed income) securities. Under normal conditions, the Fund pursues its investment objective by investing at least 65% of its net assets in investment grade debt securities of various types. Investment-grade debt securities are securities that are rated within the four highest grades assigned by an independent rating agency such as Moody's Investors Service, Inc. (Aaa, Aa, A, Baa), S&P Global Ratings (AAA, AA, A, BBB), or Fitch Ratings (AAA, AA, A, BBB), or are unrated but determined by Lord, Abbett & Co. LLC ("Sub-Adviser") to be of comparable quality. Such investments include:

- Corporate debt securities of U.S. issuers;
- Corporate debt securities of non-U.S. (including emerging market) issuers that are denominated in U.S. dollars;
- Mortgage-backed, mortgage-related and other asset-backed securities, including privately issued mortgage-related securities and commercial mortgage-backed securities ("CMBS");
- Securities issued or guaranteed by the U.S. Government, its agencies and instrumentalities; and
- Inflation-linked investments.

The Fund may invest in Treasury Inflation Protected Securities ("TIPS"), which are U.S. Government bonds whose principal automatically is adjusted for inflation as measured by the Consumer Price Index for All Urban Consumers ("CPI-U"), and other inflation-indexed securities issued by the U.S. Department of Treasury. The Fund may invest up to 35% of its net assets in any one or a combination of the following types of fixed income securities and other instruments:

- High-yield debt securities (commonly referred to as "lower-rated" or "junk" bonds);
- Debt securities of non-U.S. (including emerging market) issuers that are denominated in foreign currencies;
- Senior loans, including bridge loans, novations, assignments, and participations;
- Convertible securities, including convertible bonds and preferred stocks; and
- Structured securities and other hybrid instruments, including collateralized loan obligations ("CLOs").

The Fund seeks to manage interest rate risk through its management of the average duration of the securities it holds in its portfolio. Duration is a mathematical concept that measures a portfolio's exposure to interest rate changes. The duration of a security takes into account the pattern of all expected payments of interest and principal on the security over time, including how these payments are affected by changes in interest rates. The longer a portfolio's duration, the more sensitive it is to interest rate risk. The shorter a portfolio's duration, the less sensitive it is to interest rate risk. For example, the price of a portfolio with a duration of five years would be expected to fall approximately five percent if interest rates rose by one percentage point and a portfolio with a duration of two years would be expected to fall approximately two percent if interest rates rose by one percentage point. Under normal conditions, the Fund will maintain its average dollar-weighted duration range between one and three years.

High-yield debt securities are debt securities that are rated BB/Ba or lower by an independent rating agency, or are unrated but determined by the Sub-Adviser to be of comparable quality. High-yield debt securities typically pay a higher yield than investment grade debt securities, but present greater risks.

The investment-grade and high-yield debt securities described above may include mortgage-backed, mortgage-related and other asset-backed securities, which directly or indirectly represent a participation in, or are secured by and payable from, mortgage loans, real property, or other assets. Mortgage-related securities include mortgage pass-through securities, collateralized mortgage obligations ("CMOs"), commercial mortgage-backed securities ("CMBS"), mortgage dollar rolls, stripped mortgage-backed securities ("SMBS") and other securities that directly or indirectly represent a participation in, or are secured by and payable from, mortgage loans on real property. The Fund will not invest more than 25% of its total assets in any industry; however, this limitation does not apply to mortgage-backed securities, privately issued mortgage-related securities, or securities issued by the U.S. Government, its agencies and instrumentalities. The Fund may, and typically does, invest substantially in CMBS, including lower-rated CMBS.

The Fund may invest in convertible securities, such as preferred stocks or bonds, which are exchangeable at the option of the holder for a fixed number of other securities, usually common stocks, at a set price or formula. Convertible securities may provide investors the opportunity to participate in rising markets and potential protection in declining markets.

The Fund may invest in floating or adjustable rate loans, including bridge loans, novations, assignments, and participations. The interest rates on floating or adjustable rate loans periodically are adjusted to a generally recognized base rate such as the London Interbank Offered Rate ("LIBOR") or the prime rate as set by the Federal Reserve. The Fund's investments in loans may include senior loans, second lien, or other subordinated loans.

The Fund may use derivatives to hedge against risk or to gain investment exposure. Derivatives are financial instruments that derive their value from the value of an underlying asset, reference rate, or index. The Fund may use derivatives for hedging purposes, including protecting the Fund's unrealized gains by hedging against possible adverse fluctuations in the securities markets or changes in interest rates or currency exchange rates that may reduce the market value of the Fund's investment portfolio.

The Fund also may use derivatives for non-hedging purposes to seek to enhance the Fund's returns, spreads or gains, or to efficiently invest excess cash or quickly gain market exposure. For example, the Fund may invest in or sell short U.S. Treasury futures, securities index futures, other futures, and/or currency forwards to adjust the Fund's exposure to the direction of interest rates or for other portfolio management reasons. The Fund may engage in derivative transactions on an exchange or in the over-the-counter ("OTC") market.

The types of derivative instruments that the Fund may use include:

- **Futures and Options on Futures.** The Fund may enter into futures contracts and options on futures contracts, which involve the purchase or sale of a contract to buy or sell a specified security or other financial instrument at a specific future date and price on an exchange or the OTC market. An option on a futures contract gives the purchaser the right to buy or sell a futures contract in exchange for the payment of a premium. The Fund may enter into such contracts as a substitute for taking a position in any underlying asset or to increase returns.
- **Foreign Currency Forward Contracts and Options.** The Fund may use foreign currency forward contracts and options to hedge the risk to the portfolio that foreign exchange price movements will be unfavorable for U.S. investors. Under some circumstances, the Fund may commit a substantial portion or the entire value of its portfolio to the completion of forward contracts. Generally, these instruments allow the Fund to lock in a specified exchange rate for a period of time. Foreign currency forward contracts also may be used to increase the Fund's exposure to foreign currencies that the Sub-Adviser believes may rise in value relative to the U.S. dollar or to shift the Fund's exposure to foreign currency fluctuations from one country to another.
- **Options.** The Fund may purchase call and put options and write (i.e., sell) covered call and put option contracts in accordance with its investment objective and policies. A "call option" is a contract sold for a price giving its holder the right to buy a specific number of securities at a specific price prior to a specified date. A "covered call option" is a call option issued on securities already owned by the writer of the call option for delivery to the holder upon the exercise of the option. A "put option" gives the purchaser of the option the right to sell, and obligates the writer to buy, the underlying securities at the exercise price at any time during the option period. A put option sold by the Fund is covered when, among other things, the Fund segregates permissible liquid assets having a value equal to or greater than the exercise price of the option to fulfill the obligation undertaken or otherwise covers the transaction.

The Fund may purchase and sell call and put options in respect of specific securities (or groups or "baskets" of specific securities) or securities indices, currencies or futures. The Fund also may enter into OTC options contracts, which are available for a greater variety of securities, and a wider range of expiration dates and exercise prices, than are exchange-traded options. Successful use by the Fund of options and options on futures will depend on the Sub-Adviser's ability to predict correctly movements in the prices of individual securities, the relevant securities market generally, foreign currencies or interest rates.

- **Swaps.** The Fund may enter into interest rate, equity index, credit, currency and total return swap agreements, and swaptions (options on swaps) and similar transactions. The Fund may enter into these swap transactions for hedging purposes or in an attempt to obtain a particular return when it is considered desirable to do so. An OTC swap transaction involves an agreement between two parties to exchange different cash flows based on a specified or "notional" amount. The cash flows exchanged in a specific transaction may be, among other things, payments that are the equivalent of interest on a principal amount, payments that would compensate the purchaser for losses on a defaulted security or basket of securities, or payments reflecting the performance of one or more specified currencies, securities or indices. The Fund may enter into OTC swap transactions with counterparties that generally are banks, securities dealers or their respective affiliates. Certain types of swaps, such as interest rate swaps, are cleared through clearing houses.

The Fund's sub-adviser, Lord, Abbett & Co. LLC ("Sub-Adviser"), buys and sells securities using a relative value-oriented investment process, meaning the Fund generally seeks more investment exposure to securities believed to be undervalued and less investment exposure to securities believed to be overvalued. The portfolio management team combines top-down and bottom-up analysis to construct its portfolio, using a blend of quantitative and fundamental research. As part of its top-down analysis, the Sub-Adviser evaluates global economic conditions, including monetary, fiscal, and regulatory policy, as well as the political and geopolitical environment, in order to identify and assess opportunities and risks across different segments of the fixed income market. The Sub-Adviser employs bottom-up analysis to identify and select securities for investment by the Fund based on in-depth company, industry, and market research and analysis. The Sub-Adviser applies proprietary filters to this analysis to determine security selection, sector exposure, and term structure. The Sub-Adviser may actively rotate sector exposure based on its assessment of relative value. The Fund may engage in active and frequent trading of its portfolio securities.

The Fund may sell a security if it no longer meets the Fund's investment criteria or for a variety of other reasons, such as to secure gains, limit losses, maintain its duration, redeploy assets into opportunities believed to be more promising, increase cash, or satisfy

redemption requests, among others. The Fund will not be required to sell a security that has been downgraded after purchase; however, in these cases, the Fund will monitor the situation to determine whether it is advisable for the Fund to continue to hold the security. In considering whether to sell a security, the Fund may evaluate factors including, but not limited to, the condition of the economy, changes in the issuer's competitive position or financial condition, changes in the outlook for the issuer's industry, the Fund's valuation target for the security, and the impact of the security's duration on the Fund's overall duration.

The Fund seeks to remain fully invested in accordance with its investment objective. However, in an attempt to respond to adverse market, economic, political, or other conditions, the Fund may take a temporary defensive position that is inconsistent with its principal investment strategies by holding some or all of its assets in short-term investments. These investments include cash, commercial paper, money market instruments, repurchase agreements, and U.S. Government securities. The Fund also may hold these types of investments while looking for suitable investment opportunities or to manage liquidity. Taking a temporary defensive position could prevent the Fund from achieving its investment objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Managed portfolio risk*
- *Market risk*
- *Fixed-income risk*
- *Currency risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Credit risk*
- *Interest rate risk*
- *Liquidity risk*
- *U.S. Government securities risk*
- *Mortgage-related and other asset-backed securities risk*
- *Commercial mortgage-backed securities risk*
- *Convertible securities risk*
- *TIPS and inflation-linked bonds risk*
- *Foreign securities risk*
- *Emerging markets and less developed countries risk*
- *Senior loans risk*
- *LIBOR replacement risk*
- *Collateralized loan obligations risk*
- *Derivatives risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Investment strategy risk*
- *Company risk*
- *Debt securities ratings risk*
- *Cybersecurity risk*
- *Hedging transactions risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Lord, Abbett & Co. LLC (“Lord Abbett”), located at 90 Hudson Street, Jersey City, NJ 07302-3973. Founded in 1929, Lord Abbett manages one of the nation’s oldest mutual fund complexes across a full range of mutual funds, institutional accounts, and separately managed accounts.

The Fund is managed by experienced portfolio managers responsible for investment decisions together with a team of investment professionals who provide issuer, industry, sector and macroeconomic research and analysis.

Andrew H. O’Brien, CFA, is Partner and Portfolio Manager at Lord Abbett. Mr. O’Brien is the lead Portfolio Manager for Lord Abbett’s taxable fixed income strategies with a focus on corporate securities. Mr. O’Brien also serves as Co-Head of the firm’s Partnership Committee. Mr. O’Brien joined Lord Abbett in 1998 and was named Partner in 2008. Prior to his current role, he served various roles on the taxable fixed income portfolio management team. He has worked in the financial services industry since 1998. He earned an AB in economics from Princeton University and is a holder of the Chartered Financial Analyst® (CFA) designation.

Kewjin Yuoh is Partner and Portfolio Manager at Lord Abbett. Mr. Yuoh is the lead Portfolio Manager for Lord Abbett’s taxable-fixed income strategies with a focus on liquid and securitized securities. Mr. Yuoh joined Lord Abbett in 2010 and was named Partner in 2012. His previous experience includes serving as Portfolio Manager of Structured Products at Sanford Bernstein; Portfolio Manager of Agency Mortgage-Backed Securities at Credit Suisse Asset Management; and Senior VP, Director of Fundamental Research for Liquid and Structured Products at AllianceBernstein. He has worked in the financial services industry since 1994. He earned a BS in operations research and industrial engineering from the Cornell University College of Engineering.

Steven F. Rocco, CFA, is Partner and Co-Head of Taxable Fixed Income at Lord Abbett. Mr. Rocco is responsible for oversight of all of Lord Abbett’s taxable fixed income investment activities, including portfolio management, global credit research, and trading. He also serves as the lead Portfolio Manager for Lord Abbett’s High Yield and Multi Sector fixed income strategies. Mr. Rocco is also a member of the Investment Leadership Team, as well as the Strategic Allocation Committee. In addition, he serves on Lord Abbett Steering Committee, which provides strategic direction and decides on the priorities of the organization. Mr. Rocco joined Lord Abbett in 2004 and was named Partner in 2011. Prior to his current role, he served as Associate Portfolio Manager for Lord Abbett’s investment grade fixed income strategies. He has worked in the financial services industry since 2001. He earned a BA in economics from Cornell University and is a holder of the Chartered Financial Analyst® (CFA) designation.

Robert A. Lee is Partner and Co-Head of Taxable Fixed Income at Lord Abbett. Mr. Lee is the Chief Investment Officer responsible for providing broad management and strategic oversight for all of Lord Abbett’s investment, research, and trading teams. In addition, Mr. Lee is a member of the Strategic Allocation Committee. He also serves on Lord Abbett Steering Committee, which provides strategic direction and decides on the priorities of the organization. Mr. Lee joined Lord Abbett in 1997 and was named Partner in 2002. Prior to his current role, Mr. Lee served as Deputy Chief Investment Officer and oversaw the firm’s taxable and tax-exempt fixed income strategies. In addition, he held the role of Fixed Income Portfolio Manager for Mortgage- and Asset-Backed Securities. His previous experience includes serving as Fixed Income Portfolio Manager at ARM Capital Advisors; Assistant Portfolio Manager/Assistant Vice President at Kidder Peabody Asset Management; and Fixed Income Portfolio Strategies Analyst at First Boston Corporation. He has worked in the financial services industry since 1991. He earned a BS in economics from the Wharton School of Business at the University of Pennsylvania.

Adam Castle, CFA, is Managing Director and Portfolio Manager at Lord Abbett. Mr. Castle is responsible for contributing to the management for the firm’s taxable-fixed income strategies with a focus on asset-backed securities. Mr. Castle joined Lord Abbett in 2015. His previous experience includes serving as Vice President, Securitized Products Group at Credit Suisse; Assistant Vice President and Research Analyst, Securitized Assets at AllianceBernstein; and Analyst, Fixed Income Rotational Program at AllianceBernstein. He has worked in the financial services industry since 2008. He earned a BS in biology from Cornell University and is a holder of the Chartered Financial Analyst® (CFA) designation.

Harris Trifon, is Managing Director and Portfolio Manager at Lord Abbett. Mr. Trifon is responsible for contributing to the management for the firm’s taxable-fixed income strategies with a focus on real estate debt. Mr. Trifon joined Lord Abbett in 2021. His previous experience includes serving as Co-Head of Mortgage and Consumer Credit at Western Asset Management; Director of Fixed Income Research, Global Head of CRE Debt at Deutsche Bank; and Director of Structured Finance at Standard & Poors. He has worked in the financial services industry since 2000. Mr. Trifon is on the boards of the Commercial Real Estate Finance Council and the University of Florida’s Bergstrom Center for Real Estate, and was voted on the Institutional Investor All-Star list for two years

prior to moving to the buy-side. He earned a BA in economics from the University of Florida and an MS in real estate from New York University.

Yoana N. Koleva, CFA, is Managing Director and Portfolio Manager at Lord Abbett. Ms. Koleva is responsible for contributing to the management for the firm's taxable-fixed income strategies with a focus on corporate securities. In addition, she serves on the firm's Global Corporate Citizenship Committee. Ms. Koleva joined Lord Abbett in 2011. Prior to her current role, she worked as a research analyst on the credit research team. Her previous experience includes serving as Midcap Banks Research Associate at Morgan Stanley; Quantitative Analysis & Risk Associate at BlackRock; and Business Analyst in Private Wealth Management at Morgan Stanley. She has worked in the financial services industry since 2003. She earned a BA in finance and business administration from the College of Saint Elizabeth and is a holder of the Chartered Financial Analyst® (CFA) designation.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Mellon Emerging Markets Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Feeder Fund”) is to track the performance of the Morningstar® Emerging Markets Target Market Exposure Index□ (Net), which is a rules-based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the emerging markets equity markets through exclusive investment in shares of the JNL Emerging Markets Index Fund (“Master Fund”).

Principal Investment Strategies. The Fund operates as a “feeder fund” and seeks to achieve its goal by investing all of its assets in Class I shares of the Master Fund. The Master Fund seeks to invest under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities included in the Morningstar® Emerging Markets Target Market Exposure Index□ (Net) (“Index”), including depositary receipts representing securities of the Index; which may be in the form of American Depository receipts (“ADRs”), Global Depository receipts (“GDRs”) and European Depository receipts (“EDRs”). The Index is a rules-based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the Emerging Markets equity markets. Morningstar Indexes classifies Brazil, Chile, Colombia, Mexico, Peru, China, India, Indonesia, South Korea, Malaysia, Pakistan, Philippines, Taiwan, Thailand, Czech Republic, Greece, Hungary, Russia, Turkey, Egypt, Qatar, South Africa, Saudi Arabia, and United Arab Emirates as Emerging Markets. Morningstar Indexes reviews the market classification annually and consecutively updates the list.

There is no specific tilt based on region. While the Index will contain securities from China and Russia, their weights are determined solely in accordance with their float market capitalization. As of December 31, 2021, total percentage weight of securities from China was 31.29% and that from Russia was 3.24%.

The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and is effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and is effective the following Monday.

As of December 31, 2021, the Index had 1,418 constituents and the full market capitalization range was \$67.02 million to \$1,905.98 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Master Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through representative sampling. The Master Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Master Fund attempts to replicate the Index by investing all or substantially all of its assets in the securities that comprise the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

Emerging market issuers may not be subject to accounting, auditing, legal and financial reporting standards comparable to those in developed markets, and emerging markets generally have less diverse and less mature economic structures, as well as less stable political systems, than those of developed countries. Because the Fund seeks to track an index comprised of foreign securities, it may be more susceptible to such risks than a Fund that seeks to track an index comprised of domestic securities.

The Master Fund will generally give the same weight to a given security as the Index does. However, when Mellon Investments Corporation (“Sub-Adviser”) believes it is in the best interest of the Master Fund, such as to avoid purchasing odd-lots (i.e., purchasing less than the usual number of shares traded for a security), for tax considerations, or to address liquidity considerations with respect to a stock, the Sub-Adviser may cause the Master Fund’s weighting of a security to be more or less than the Index’s weighting of the security. The Master Fund may sell securities that are represented in the Index in anticipation of their removal from the Index or buy securities that are not yet represented in the Index in anticipation of their addition to the Index. The Master Fund does not hedge its exposure to foreign currencies. However, the Master Fund may use forward contracts to lock-in exchange rates for portfolio securities that are purchased or sold, but awaiting settlement. These transactions establish a rate of exchange that can be expected to be received upon settlement of the securities.

When attempting to replicate the Index, portfolio turnover is typically limited to what the index adds and deletes, contract owner contributions and withdrawals, fund of fund purchases and redemptions, and reinvestment income. The replicated portfolio does not require rebalancing as a result of market movement. The Master Fund stays aligned with the Index automatically with the change in share price, due to the close similarity between the holdings of the Index and those of the Master Fund. The Master Fund will rebalance on or about the date that the Index rebalances.

In the event that all the securities comprising the Index cannot be purchased, the Master Fund may purchase a representative sample of securities from each economic sector included in the Index in proportion to the weighting in the Index. To the extent that the Master Fund seeks to replicate the Index using such sampling techniques, a close correlation between the Master Fund’s performance and the performance of the Index may be anticipated in both rising and falling markets. The Master Fund’s ability to achieve significant

correlation between Master Fund and Index performance may be affected by changes in securities markets and changes in the composition of the Index.

The Master Fund will use to a significant degree derivative instruments, such as options, futures, and options on futures (including those relating to securities, indexes, foreign currencies and interest rates), forward contracts, swaps and hybrid instruments (typically structured notes), as a substitute for investing directly in equities, bonds and currencies in connection with its investment strategy. The Master Fund also may use such derivatives as part of a hedging strategy or for other purposes related to the management of the Master Fund. Derivatives may be entered into on established exchanges or through privately negotiated transactions referred to as over-the-counter derivatives. The Master Fund also may purchase or sell securities on a forward commitment (including “TBA” (to be announced) basis). These transactions involve a commitment by the Master Fund to purchase or sell particular securities with payment and delivery taking place at a future date and permit the Master Fund to lock in a price or yield on a security it owns or intends to purchase, regardless of future changes in interest rates or market conditions.

The Master Fund may invest in derivative securities to manage cash flows and equitize dividend accruals. In addition, the Master Fund may also invest in exchange-traded funds (“ETFs”). ETFs may be used in the Master Fund to invest cash until such time as the Master Fund purchases local securities. ETFs may also be used to gain exposure to local markets that may be closed, or that are expensive or difficult to trade in local shares.

The Master Fund may concentrate its investments in an industry or group of industries to the extent that the Index the Master Fund is designed to track is also so concentrated.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund’s investment in any particular type of security, or assurance of the Master Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund’s investment adviser otherwise failing to achieve the Master Fund’s investment objective.

The principal risks of investing in the Fund include:

- *Emerging markets and less developed countries risk*
- *Foreign securities risk*
- *Equity securities risk*
- *Currency risk*
- *Market risk*
- *Passive investment risk*
- *China risk*
- *Russia investment risk*
- *Liquidity risk*
- *Concentration risk*
- *Counterparty risk*
- *Depository receipts risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Forward and futures contract risk*
- *Index investing risk*
- *Tracking error risk*
- *Clearance and settlement risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*

- *Investment strategy risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Jackson National Asset Management, LLC (“JNAM”) located at 225 W. Wacker Drive, Chicago, Illinois 60606. JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

Sub-Adviser to the Master Fund

Mellon Investments Corporation (formerly, BNY Mellon Asset Management North America Corporation) (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Master Fund and directs the purchase and sale of the Master Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Master Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Master Fund's investment objectives.

The Master Fund's and the Feeder Fund's annual management fee and expenses, expressed as a percentage of each Fund's average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.20%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.03%
Total Annual Portfolio Operating Expenses	0.23%

Feeder Fund	
Class A	
Management Fee	0.45%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.18%
Total Annual Fund Operating Expenses	0.93%

Feeder Fund	
Class I	
Management Fee	0.45%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.18%
Total Annual Fund Operating Expenses	0.63%

Information regarding the effect of any waiver on the Master Fund's total annual operating expenses can be found in this prospectus.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by Mellon. Pursuant to its investment advisory and management agreement with the Trust, JNAM will provide those services for the Feeder Fund that are normally provided by a fund's investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund's other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund's average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund's assets are invested in its respective Master Fund's portfolio, which is managed by Mellon, the Master Fund's sub-adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund's investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a "feeder fund."

Portfolio Management of the Master Fund. Mellon supervises and manages the investment portfolio of the Master Fund and directs the purchase and sale of the Master Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Master Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Master Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Master Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College

and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/Mellon S&P 500 Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to track the performance of the S&P 500® Index to provide long-term capital growth.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in large-capitalization company securities. The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the S&P 500 Index through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the target index by investing all or substantially all of its assets in the stocks that make up the S&P 500 Index. As of December 31, 2021, the market capitalization range of the S&P 500 Index is \$2.74 billion to \$2.77 trillion. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term. The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the S&P 500 Index in proportion to their market capitalization weighting in the S&P 500 Index. This approach is called “replication.” When attempting to replicate a capitalization-weighted index such as the S&P 500 Index, portfolio turnover is reduced to what the index adds and deletes, investor contributions and withdrawals, and reinvestment income. The replicated portfolio does not require rebalancing as a result of market movement. The Fund is managed to reflect the composition of the Index and will rebalance as needed to reflect changes in the composition of the Index.

In the event that all the stocks comprising the S&P 500 Index cannot be purchased, the Fund may purchase a representative sample of stocks from each economic sector included in the S&P 500 Index in proportion to the weighting in the S&P 500 Index. To the extent that the Fund seeks to replicate the S&P 500 Index using such sampling techniques, a close correlation between the Fund’s performance and the performance of the S&P 500 Index may be anticipated in both rising and falling markets. The Fund’s ability to achieve significant correlation between Fund and S&P 500 Index performance may be affected by changes in securities markets and changes in the composition of the S&P 500 Index.

The Fund may invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its Index, to assist with Index rebalances, and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund may hold up to 25% of its value in S&P 500 Index futures contracts.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As an indexed portfolio, the Fund may not achieve its investment objective for a variety of reasons, the inability to purchase certain securities in the index, including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or country specific factors that would prevent the Fund from achieving its investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Large-capitalization investing risk*
- *License termination risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Financial services risk*
- *Index investing risk*
- *Passive investment risk*
- *Tracking error risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *The S&P 500 Index.* The S&P 500 Index is composed of 500 common stocks that are selected by Standard & Poor's to capture the price performance of a large cross-section of the U.S. publicly traded stock market. Stocks included in the S&P 500 Index are chosen with the aim of achieving a representative portfolio from the various components of the U.S. economy. A limited percentage of the S&P 500 Index may include foreign securities traded on U.S. exchanges. Aggregate market value and trading activity also are considered in the selection process. While these stocks do not necessarily represent the 500 largest corporations in the United States, the S&P 500 Index is recognized for its emphasis toward large stocks. The 500 securities, most of which trade on the New York Stock Exchange, currently represent approximately 80% of the market value of all U.S. common stocks. Each stock in the S&P 500 Index is weighted by its float adjusted market capitalization. The inclusion of a stock in the S&P 500 Index in no way implies that Standard & Poor's believes the stock to be an attractive investment, nor is Standard & Poor's in any way affiliated with the Fund.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Leverage risk*
- *Market risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Settlement risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Mellon S&P 400 MidCap Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund ("Fund" or "Feeder Fund") is to track the performance of the S&P MidCap 400 Index to provide long-term capital growth by investing in equity securities of medium capitalization-weighted domestic corporations through exclusive investment in shares of the JNL Mid Cap Index Fund ("Master Fund").

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class I shares of the Master Fund.

The Master Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the S&P MidCap 400 Index in proportion to their market capitalization weighting in the S&P MidCap 400 Index.

The Master Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the S&P MidCap 400 Index through representative sampling. The Master Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Master Fund attempts to replicate the target index by investing all or substantially all of its assets in the stocks that make up the S&P MidCap 400 Index. As of December 31, 2021, the market capitalization range of the S&P MidCap 400 Index is \$1.37 billion to \$18.58 billion. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long term.

When attempting to replicate a capitalization-weighted index such as the S&P MidCap 400 Index, portfolio turnover is reduced to what the index adds and deletes, contract owner contributions and withdrawals, and reinvestment of income. The replicated portfolio does not require rebalancing as a result of market movement. It is rebalanced automatically with the change in share prices of the securities owned. The Master Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

In the event that all the stocks comprising the S&P MidCap 400 Index cannot be purchased, the Master Fund may purchase a representative sample of securities from each economic sector included in the S&P MidCap 400 Index in proportion to the weighting in the S&P MidCap 400 Index. To the extent that the Master Fund seeks to replicate the S&P MidCap 400 Index using such sampling techniques, a close correlation between the Master Fund's performance and the performance of the S&P MidCap 400 Index may be anticipated in both rising and falling markets. The Master Fund's ability to achieve significant correlation between the Master Fund and S&P MidCap 400 Index performance may be affected by changes in securities markets and changes in the composition of the S&P MidCap 400 Index.

The Master Fund may invest in exchange-traded funds ("ETFs") and cash to maintain correlation of its index, to assist with fund rebalances, and to meet redemption or purchase requests.

The Master Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Master Fund's objective. The Master Fund may hold up to 25% of its value in S&P 400 Index futures contracts.

For temporary defensive purposes during unusual economic or market conditions, for liquidity purposes and /or in response to asset flows in the Master Fund, the Feeder Fund may hold a percentage of its assets in cash. Such holdings may impact the Feeder Fund's ability to achieve its investment objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund's investment in any particular type of security, or assurance of the Master Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund's investment adviser otherwise failing to achieve the Master Fund's investment objective.

The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Mid-capitalization investing risk*
- *License termination risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Financial services risk*
- *Index investing risk*

- *Large-capitalization investing risk*
- *Passive investment risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *The S&P MidCap 400 Index.* The S&P MidCap 400 Index consists of 400 domestic stocks that are selected by Standard & Poor's to capture the price performance of a large cross section of the U.S. publicly traded stock market. Stocks included in the S&P MidCap 400 Index are chosen with the aim of achieving a representative portfolio from the various components of the U.S. economy. Aggregate market value and trading activity are also considered in the selection process. Each stock in the S&P MidCap 400 Index is weighted by its float adjusted market capitalization (or the stock's price multiplied by the number of shares outstanding adjusted for float, as the S&P MidCap 400 Index is considered a capitalization-weighted index.) The inclusion of a stock in the S&P MidCap 400 Index in no way implies that Standard & Poor's believes the stock to be an attractive investment, nor is Standard & Poor's in any way affiliated with the Fund.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Leverage risk*
- *Market risk*
- *Redemption risk*
- *Portfolio turnover risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Jackson National Asset Management, LLC (“JNAM”) located at 225 W. Wacker Drive, Chicago, Illinois 60606. JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

Sub-Adviser to the Master Fund

Mellon Investments Corporation (formerly, BNY Mellon Asset Management North America Corporation) (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Master Fund and directs the purchase and sale of the Master Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Master Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Master Fund's investment objectives.

The Master Fund's and the Feeder Fund's annual management fee and expenses, expressed as a percentage of each Fund's average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.20%
Distributions and/or Service (12b-1) Fee	0.00%

Other Expenses	0.03%
Total Annual Portfolio Operating Expenses	0.23%

Feeder Fund	
Class A	
Management Fee	0.34%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.13%
Total Annual Fund Operating Expenses	0.77%

Feeder Fund	
Class I	
Management Fee	0.34%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.13%
Total Annual Fund Operating Expenses	0.47%

Information regarding the effect of any waiver on the Master Fund's total annual operating expenses can be found in this prospectus.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by Mellon. Pursuant to its investment advisory and management agreement with the Trust, JNAM will provide those services for the Feeder Fund that are normally provided by a fund's investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund's other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund's average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund's assets are invested in its respective Master Fund's portfolio, which is managed by Mellon, the Master Fund's sub-adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund's investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a “feeder fund.”

Portfolio Management of the Master Fund. Mellon supervises and manages the investment portfolio of the Master Fund and directs the purchase and sale of the Master Fund’s investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Master Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Master Fund’s investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Master Fund’s portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/Mellon Small Cap Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Feeder Fund”) is to track the performance of the S&P SmallCap 600 Index to provide long-term growth of capital by investing in equity securities of small- to mid-size domestic companies through exclusive investment in shares of the JNL Small Cap Index Fund (“Master Fund”).

Principal Investment Strategies. The Fund operates as a “feeder fund” and seeks to achieve its goal by investing all of its assets in Class I shares of the Master Fund. The Master Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the S&P SmallCap 600 Index in proportion to their market capitalization weighting in the S&P SmallCap 600 Index. The S&P SmallCap 600 Index is a quarterly-rebalanced, float-adjusted market cap weighted index comprised of approximately 600 U.S. common equities and REITs that meet the index provider’s criteria for market capitalization, public float, financial viability, liquidity, price reasonableness, and sector representation. The S&P SmallCap 600 Index may invest across all GICS sectors and may include investments in financial services companies.

The Master Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the S&P SmallCap 600 Index through representative sampling. The Master Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Master Fund attempts to replicate the S&P SmallCap 600 Index by investing all or substantially all of its assets in the stocks that make up the S&P SmallCap 600 Index. As of December 31, 2021, the market capitalization range for the S&P SmallCap 600 Index was \$188.65 million to \$7.93 billion.

When attempting to replicate a capitalization-weighted index such as the S&P SmallCap 600 Index, portfolio turnover is reduced to what the index adds and deletes, contract owner contributions and withdrawals, and reinvestment of income. The replicated portfolio does not require rebalancing as a result of market movement. It is rebalanced automatically with the change in share prices of the securities owned.

In the event that all the stocks comprising the S&P SmallCap 600 Index cannot be purchased, the Master Fund may purchase a representative sample of securities from each economic sector included in the S&P SmallCap 600 Index in proportion to the weighting in S&P SmallCap 600 Index. To the extent that the Master Fund seeks to replicate the S&P SmallCap 600 Index using such sampling techniques, a close correlation between the Master Fund’s performance and the performance of the S&P SmallCap 600 Index may be anticipated in both rising and falling markets. The Master Fund’s ability to achieve significant correlation between the Master Fund and S&P SmallCap 600 Index performance may be affected by changes in securities markets and changes in the composition of the S&P SmallCap 600 Index.

The Master Fund may invest in exchange-traded funds (“ETFs”) to assist with fund re-balances and to meet redemption or purchase requests. The Master Fund’s holdings are rebalanced on a quarterly basis to reflect changes in the composition of the S&P SmallCap 600 Index.

The Master Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Master Fund’s objective. The Master Fund may hold up to 25% of its value in S&P SmallCap 600 Index futures contracts. The Master Fund may lend its securities to increase its income.

For temporary defensive purposes during unusual economic or market conditions, for liquidity purposes and /or in response to asset flows in the Master Fund, the Feeder Fund may hold a percentage of its assets in cash. Such holdings may impact the Feeder Fund’s ability to achieve its investment objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund’s investment in any particular type of security, or assurance of the Master Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund’s investment adviser otherwise failing to achieve the Master Fund’s investment objective.

The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Small-capitalization investing risk*
- *License termination risk*
- *Derivatives risk*

- *Exchange-traded funds investing risk*
- *Financial services risk*
- *Index investing risk*
- *Market risk*
- *Passive investment risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *S&P® SmallCap 600 Index.* The S&P SmallCap 600® Index is a market cap-weighted index that captures and measures the performance of 600 small size companies in U.S. with a market capitalization of \$188.65 million to \$7.93 billion, reflecting this market segment’s distinctive risk and return characteristics. The index is designed to track companies that meet specific inclusion criteria to ensure that they are liquid and financially viable as this segment of the market is typically known for less liquidity and potentially less financial stability than large caps.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Leverage risk*
- *Liquidity risk*
- *Mid-capitalization investing risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Jackson National Asset Management, LLC (“JNAM”) located at 225 W. Wacker Drive, Chicago, Illinois 60606. JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

Sub-Adviser to the Master Fund

Mellon Investments Corporation (formerly, BNY Mellon Asset Management North America Corporation) (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Master Fund and directs the purchase and sale of the Master Fund’s investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Master Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Master Fund’s investment objectives.

The Master Fund’s and the Feeder Fund’s annual management fee and expenses, expressed as a percentage of each Fund’s average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund

Management Fee	0.20%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.03%
Total Annual Portfolio Operating Expenses	0.23%

Feeder Fund	
Class A	
Management Fee	0.34%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.13%
Total Annual Fund Operating Expenses	0.77%

Feeder Fund	
Class I	
Management Fee	0.34%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.13%
Total Annual Fund Operating Expenses	0.47%

Information regarding the effect of any waiver on the Master Fund's total annual operating expenses can be found in this prospectus.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by Mellon. Pursuant to its investment advisory and management agreement with the Trust, JNAM will provide those services for the Feeder Fund that are normally provided by a fund's investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund's other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund's average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund's assets are invested in its respective Master Fund's portfolio, which is managed by Mellon, the Master Fund's sub-adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund's investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a “feeder fund.”

Portfolio Management of the Master Fund. Mellon supervises and manages the investment portfolio of the Master Fund and directs the purchase and sale of the Master Fund’s investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Master Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Master Fund’s investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Master Fund’s portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/Mellon International Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Feeder Fund”) is to track the performance of the Morningstar® Developed Markets ex-North America Target Market Exposure Index□ (Net) (“Index”) to provide long-term capital growth by investing in international equity securities through exclusive investment in shares of the JNL International Index Fund (“Master Fund”).

Principal Investment Strategies. The Fund operates as a “feeder fund” and seeks to achieve its goal by investing all of its assets in Class I shares of the Master Fund. The Fund seeks to achieve this investment objective by utilizing a passive investment approach, called indexing, which attempts to track the investment performance of the Index through representative sampling. The Master Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective approach to gaining diversified market exposure over the long term.

The Master Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the Index or derivative securities economically related to the Index, a rules-based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the Developed Markets ex-North America equity markets. As of December 31, 2021, the Index included equities listed in Austria, Australia, Belgium, Switzerland, Germany, Denmark, Spain, Finland, France, Great Britain, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, Norway, New Zealand, Poland, Portugal, Sweden, Singapore, and the U.S. (the sole current U.S. holding is a British entity listed in the U.S.).

The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and is effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and is effective the following Monday.

As of December 31, 2021, the Index had 974 constituents and the full market capitalization range was \$350 million to \$471.31 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

To the extent that the Master Fund seeks to replicate the Index using sampling techniques, a close correlation between the Master Fund’s performance and the performance of the Index may be anticipated in both rising and falling markets.

To implement this strategy, the Master Fund may invest up to 50% of its net asset value in financial futures, a type of derivative, to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Master Fund’s objective. The Master Fund may hold up to 25% of its value in baskets of local futures contracts (DAX, Cac 40, Euro Stoxx, Topix, FTSE, etc.) and/or Index futures contracts. In addition, the Master Fund may use foreign currency forward contracts, a type of derivative, to maintain the approximate currency exposure of the Index.

The Master Fund may invest in exchange-traded funds (“ETFs”) to assist with fund rebalances and to meet redemption or purchase requests. The Master Fund’s holdings are rebalanced on a quarterly basis to reflect changes in the composition of the Index.

For temporary defensive purposes during unusual economic or market conditions, for liquidity purposes and /or in response to asset flows in the Master Fund, the Feeder Fund may hold a percentage of its assets in cash. Such holdings may impact the Feeder Fund’s ability to achieve its investment objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund’s investment in any particular type of security, or assurance of the Master Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund’s investment adviser otherwise failing to achieve the Master Fund’s investment objective.

The principal risks of investing in the Fund include:

- *Foreign securities risk*
- *Equity securities risk*
- *License termination risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Financial services risk*
- *Forward and futures contract risk*

- *Index investing risk*
- *Passive investment risk*
- *Tracking error risk*
- *Asian investment risk*
- *Currency risk*
- *European investment risk*
- *Market risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Leverage risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Jackson National Asset Management, LLC (“JNAM”) located at 225 W. Wacker Drive, Chicago, Illinois 60606. JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

Sub-Adviser to the Master Fund

Mellon Investments Corporation (formerly, BNY Mellon Asset Management North America Corporation) (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Master Fund and directs the purchase and sale of the Master Fund’s investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Master Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Master Fund’s investment objectives.

The Master Fund’s and the Feeder Fund’s annual management fee and expenses, expressed as a percentage of each Fund’s average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.20%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.02%
Total Annual Portfolio Operating Expenses	0.22%

	Feeder Fund
	Class A
Management Fee	0.35%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.17%
Total Annual Fund Operating Expenses	0.82%

	Feeder Fund
	Class I
Management Fee	0.35%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.17%
Total Annual Fund Operating Expenses	0.52%

Information regarding the effect of any waiver on the Master Fund's total annual operating expenses can be found in this prospectus.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by Mellon. Pursuant to its investment advisory and management agreement with the Trust, JNAM will provide those services for the Feeder Fund that are normally provided by a fund's investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund's other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund's average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund's assets are invested in its respective Master Fund's portfolio, which is managed by Mellon, the Master Fund's sub-adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund's investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a "feeder fund."

Portfolio Management of the Master Fund. Mellon supervises and manages the investment portfolio of the Master Fund and directs the purchase and sale of the Master Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Master Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Master Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Master Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/Mellon Bond Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund ("Fund" or "Feeder Fund") is to track the performance of the Bloomberg U.S. Aggregate Bond Index to provide a moderate rate of income by investing in domestic fixed-income investments through exclusive investment in shares of the JNL Bond Index Fund ("Master Fund").

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class I shares of the Master Fund. The Master Fund seeks to achieve its objective by utilizing a passive investment approach called indexing, which seeks to track the investment performance of the Bloomberg U.S. Aggregate Bond Index ("Index"). Bonds are selected based on their characteristics to create a portfolio that profiles the Index. The Master Fund does not employ traditional methods of active investment management such as actively buying and selling bonds based upon interest rate bets or sector rotation. Indexing offers a cost-effective approach to gaining diversified market exposure over the long-term.

The Master Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in fixed-income securities that seek to track the performance and characteristics of the Index that Mellon Investments Corporation ("Mellon" or "Master Fund's Sub-Adviser") believes to be important such as Option Adjusted Duration, Maturity, Average Quality Rating, Sector/Industries, and Yield to worst. The Index includes Treasuries, government-related credit, mortgage-backed securities (agency fixed-rate pass-throughs), asset-backed securities and commercial mortgage backed securities (agency and non-agency). Research and experience indicates that it is impractical to fully replicate most broad fixed-income indices. This Index includes thousands of issues, many of which may be illiquid and unavailable in the secondary market. Additionally, reinvestment of cash flows would be costly in a full replication environment, as it would entail trading many issues in uneven amounts. Given these difficulties, the Master Fund's Sub-Adviser utilizes a representative sampling approach that combines analysis and the experience and judgment of its investment professionals.

Through the representative sampling approach, the Master Fund's Sub-Adviser selects what it believes is a representative basket of securities in order to track the important risk characteristics of the Index. Given this fixed income index cannot be fully replicated, the Master Fund uses a representative sampling approach to select bonds that match the important risk characteristics of the Index. Buy and sell decisions are based primarily on portfolio characteristic overweightings and underweightings. The Master Fund's holdings are rebalanced on a monthly basis to reflect changes in the composition of the Index. The Master Fund's rebalancing is typically done by using cash flows from accruals and contract owner contributions and withdrawals.

The Master Fund can invest in a number of different kinds of "derivative" instruments to hedge investment risks. It does not do so currently to a significant degree. In general terms, a derivative instrument is one where value depends on (or is derived from) the value of an underlying asset, interest rate or index. Options, futures and forward contracts are examples of derivatives.

For temporary defensive purposes during unusual economic or market conditions, for liquidity purposes and /or in response to asset flows in the Master Fund, the Feeder Fund may hold a percentage of its assets in cash. Such holdings may impact the Feeder Fund's ability to achieve its investment objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund's investment in any particular type of security, or assurance of the Master Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund's investment adviser otherwise failing to achieve the Master Fund's investment objective.

The principal risks of investing in the Fund include:

- *Interest rate risk*
- *Fixed-income risk*
- *Passive investment risk*
- *U.S. Government securities risk*
- *Credit risk*
- *Mortgage-related and other asset-backed securities risk*
- *Extension risk*
- *Tracking error risk*
- *Foreign securities risk*
- *Index investing risk*
- *Market risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *Investment strategy risk*
- *Leverage risk*
- *Portfolio turnover risk*
- *Prepayment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Jackson National Asset Management, LLC (“JNAM”) located at 225 W. Wacker Drive, Chicago, Illinois 60606. JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

Sub-Adviser to the Master Fund

Mellon Investments Corporation (formerly, BNY Mellon Asset Management North America Corporation) (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Master Fund and directs the purchase and sale of the Master Fund’s investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Master Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Master Fund’s investment objectives.

The Master Fund’s and the Feeder Fund’s annual management fee and expenses, expressed as a percentage of each Fund’s average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.20%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.01%
Acquired Fund Fees and Expenses	0.01%
Total Annual Portfolio Operating Expenses	0.22%

Feeder Fund	
Class A	
Management Fee	0.36%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.11%

Acquired Fund Fees and Expenses	0.01%
Total Annual Fund Operating Expenses	0.78%

Feeder Fund	
Class I	
Management Fee	0.36%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.11%
Acquired Fund Fees and Expenses	0.01%
Total Annual Fund Operating Expenses	0.48%

Information regarding the effect of any waiver on the Master Fund's total annual operating expenses can be found in this prospectus.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by Mellon. Pursuant to its investment advisory and management agreement with the Trust, JNAM will provide those services for the Feeder Fund that are normally provided by a fund's investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund's other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund's average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund's assets are invested in its respective Master Fund's portfolio, which is managed by Mellon, the Master Fund's sub-adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund's investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a "feeder fund."

Portfolio Management of the Master Fund. Mellon supervises and manages the investment portfolio of the Master Fund and directs the purchase and sale of the Master Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Master Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Master Fund's investment

objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Master Fund's portfolio are:

Nancy G. Rogers, CFA is a Managing Director, Head of Fixed Income Portfolio Management at Mellon. Ms. Rogers joined Mellon in 1987 and is responsible for the management of domestic and international portfolios, including separate, commingled and mutual fund accounts. Prior experience includes management of aggregate, government, credit and custom indices as well as trading, performance measurement and portfolio accounting. Ms. Rogers attained the Chartered Financial Analyst ("CFA") designation. Ms. Rogers graduated with an M.B.A. from Drexel University, Investments. Ms. Rogers has been in the investment industry and at BNY Mellon affiliates since 1987.

Gregg A. Lee, CFA is Director, Senior Portfolio Manager, Fixed Income at Mellon. He joined Mellon in 1989 as an equity indexing portfolio manager and after just over a year, transferred to the fixed-income department. Mr. Lee is responsible for domestic and international fixed income portfolios. He oversees the MBS/securitized sector and helps with the refinement and implementation of the portfolio management process. Mr. Lee also manages global aggregate portfolios including all components and custom indexes, and fixed income ETFs. Prior experience includes managing and trading domestic and international active fixed-income portfolios with a focus on the Active Core and Core Plus strategies. Mr. Lee graduated with a B.S. from University of California at Davis in Managerial Economics. Mr. Lee has been in the investment industry since 1989. Mr. Lee is a member of the CFA Institute and the CFA Society of San Francisco.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/Mellon U.S. Stock Market Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to track the performance of the Morningstar® US Market IndexSM to provide long-term capital appreciation.

Principal Investment Strategies. The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities in the Morningstar® US Market Index[□] (“Index”). The Index measures the performance of U.S. securities and targets 97% market capitalization coverage of the investable universe. It is a diversified broad market index. The Index is float market capitalization weighted.

The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and is effective the following Monday. The index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and is effective the following Monday.

As of December 31, 2021, the Index had 1,647 constituents and the full market capitalization range was \$531.72 million to \$2,913.28 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long term. The Fund is managed to reflect the composition of the Index and will rebalance as needed to reflect changes in the composition of the Index.

When attempting to replicate a capitalization-weighted index such as the Index, portfolio turnover is reduced to what the index adds and deletes, contract owner contributions and withdrawals, and reinvestment of income. The replicated portfolio does not require rebalancing as a result of market movement. It is rebalanced automatically with the change in share prices of the securities owned. The Fund's holdings are rebalanced as needed to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may invest in exchange-traded funds (“ETFs”) to assist with Fund rebalances and to meet redemption or purchase requests.

Mellon Investments Corporation, the Fund's sub-adviser (“Sub-Adviser”), uses a “passive” or “indexing” approach to try to achieve the Fund's investment objective. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Index investing risk*
- *Market risk*
- *Large-capitalization investing risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Passive investment risk*
- *Tracking error risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2020.

JNL/Mellon DowSM Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to track the performance of the Dow Jones Industrial Average to provide total return through a combination of capital appreciation and dividend income.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the thirty securities which comprise the Dow Jones Industrial Average (“DJIA”), with the weight of each security in the Fund substantially corresponding to the weight of such security in the DJIA. The thirty securities are adjusted from time to time to conform to periodic changes to the identity and/or relative weightings in the DJIA. Changes to the DJIA are made on an as-needed basis. There is no annual or semi-annual reconstitution. However, changes in response to corporate actions and market developments can be made at any time. The DJIA covers all industries except transportation and utilities.

Certain provisions of the 1940 Act may limit the ability of the Fund to invest in certain securities beyond certain percentage limitations.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may invest in securities issued by companies in the financial services sector.

The Fund is “non-diversified,” as defined in the 1940 Act, and may invest more of its assets in securities of fewer issuers than would a “diversified” mutual fund.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Non-diversification risk*
- *License termination risk*
- *Derivatives risk*
- *Financial services risk*
- *Index investing risk*
- *Limited management, trading cost and rebalance risk*
- *Market risk*
- *Passive investment risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). To effectively manage cash inflows and outflows, the Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Fund may also invest in money market instruments.

The performance of the Fund depends on the Sub-Adviser's ability to effectively implement the investment strategies of this Fund and will also depend on the performance of the stocks selected that meet the stock selection criteria.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Concentration risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

JNL/Mellon World Index Fund

Class A Class I

Investment Objective. The investment objective of the Fund is to track the performance of the Morningstar® Developed Markets Target Market Exposure Index□ (Net) to provide long-term capital growth.

Principal Investment Strategies. The Fund seeks to achieve this investment objective by utilizing a passive investment approach, called indexing, which attempts to track the investment performance of the Morningstar® Developed Markets Target Market Exposure Index□ (Net) ("Index") through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective approach to gaining diversified market exposure over the long term.

The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the Index or derivative securities economically related to the Index, a rules based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the Developed Markets equity markets. Morningstar Indexes classifies Canada, United States, Australia, Hong Kong, Japan, New Zealand, Singapore, Austria, Belgium, Denmark, Finland, France, Germany, Ireland, Italy, Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland, United Kingdom and Israel as Developed Markets. Morningstar Indexes reviews these classifications annually. The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and is effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and is effective the following Monday.

As of December 31, 2021, the Index had 1,695 constituents and the full market capitalization range was \$350 million to \$2,913.28 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution. To the extent that the Fund seeks to replicate the Index using sampling techniques, a close correlation between the Fund's performance and the performance of the Index may be anticipated in both rising and falling markets. The Fund's holdings are rebalanced on a quarterly basis to reflect changes in the composition of the Index.

To implement this strategy, the Fund may invest up to 50% of its net asset value in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index. The Fund may hold up to 25% of its value in baskets of local futures contracts (DAX, Cac 40, Euro Stoxx, Topix, FTSE, etc.) and/or Index futures contracts. In addition, the Fund may use foreign currency forward contracts, a type of derivative, to maintain the approximate currency exposure of the Index.

The Fund may obtain exposure to non-U.S. companies through investment in depositary receipts such as ADRs, GDRs, and EDRs.

Certain provisions of the 1940 Act and the Internal Revenue Code may limit the ability of the Fund to invest in certain securities beyond certain percentage limitations.

The Fund may invest in securities issued by companies in the financial services sector.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Foreign securities risk*
- *European investment risk*
- *Depositary receipts risk*
- *Derivatives risk*
- *Forward and futures contract risk*
- *Financial services risk*
- *Index investing risk*
- *License termination risk*
- *Passive investment risk*

- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Concentration risk*
- *Currency risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Mellon Nasdaq® 100 Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to track the performance of the Nasdaq 100 Index to provide total return.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in the 100 securities which comprise the NASDAQ-100 Index® (“Index”). The Fund selects a portfolio of securities selected from securities included in the Index. The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the Index in proportion to their market capitalization weighting in the Index.

The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through representative sampling.

The Index includes 100 of the largest non-financial domestic and international securities listed on the Nasdaq Stock Market. The Index reflects companies across high-growth industry groups including computer hardware and software, telecommunications, retail/wholesale trade and biotechnology.

The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

Certain provisions of the Investment Company Act of 1940, as amended (the “1940 Act”) may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. For example, because exchange-traded funds (“ETFs”) are investment companies, investment in ETFs would, absent exemptive relief, be limited under applicable federal statutory provisions. Those provisions generally restrict a fund’s investment in the shares of another investment company to, as determined immediately after a purchase is made, not more than 5% of its total assets (which may represent no more than 3% of the outstanding voting stock of such other investment company) and limit aggregate investments in all investment companies to 10% of total assets.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may invest in the securities of non-U.S. issuers.

The Fund is “non-diversified” under the 1940 Act and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Large-capitalization investing risk*
- *Non-diversification risk*
- *Derivatives risk*
- *Foreign securities risk*
- *Index investing risk*
- *Market risk*
- *Passive investment risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). To effectively manage cash inflows and outflows, the Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Fund may also invest in money market instruments.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Concentration risk*
- *Cybersecurity risk*
- *Expense risk*
- *Financial services risk*
- *Investment strategy risk*
- *Investment style risk*
- *License termination risk*
- *Limited management, trading cost and rebalance risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll

earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Mellon Communication Services Sector Fund

Class A

Class I

Investment Objective. The objective of the Fund is to track the performance of the Morningstar® US Communication Services Index[□] to provide total return through capital appreciation and dividend income.

Principal Investment Strategies. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Morningstar US Communication Services Index (“Index”). The Index measures the performance of U.S. companies that provide communication services using fixed-line networks or those that provide wireless access and services. The Index is float market capitalization weighted. The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and effective the following Monday. As of December 31, 2021, the Index had 79 constituents and the full market capitalization range was \$547.69 million to \$919.40 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the Index in proportion to their market capitalization weighting in the Index. When replicating a capitalization-weighted index such as the Index, portfolio turnover is reduced to what the index adds and deletes, rebalancing, contract owner contributions and withdrawals, and reinvestment of income. The Fund’s ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index. Indexing may eliminate the chance that a Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection.

The Fund will utilize the replication investment approach set forth above at all times except for circumstances in which the market capitalization weightings of the Index will violate the diversification requirements of the Internal Revenue Code. In such cases, the excess weight of any security that will cause the Fund to be in violation of the diversification requirements will be allocated to the other securities in the Fund.

The Fund may also invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

Certain provisions of the 1940 Act may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. For example, because ETFs are investment companies, investment in ETFs would, absent exemptive relief, be limited under applicable federal statutory provisions. Those provisions generally restrict a fund’s investment in the shares of another investment company to, as determined immediately after a purchase is made, not more than 5% of its total assets (which may represent no more than 3% of the outstanding voting stock of such other investment company) and limit aggregate investments in all investment companies to 10% of total assets.

The Fund may lend its securities to increase its income.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund’s investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund’s use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is “non-diversified” under the 1940 Act and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Sector risk*
- *Non-diversification risk*

- *Concentration risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Index investing risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Passive investment risk*
- *Small-capitalization investing risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The market for communications products and services is characterized by rapidly changing technology, rapid product obsolescence or loss of patent protection, cyclical market patterns, evolving industry standards and frequent new product introductions. Certain communications/bandwidth companies are subject to substantial governmental regulation that, among other things, regulates permitted rates of return and the kinds of services that a company may offer. The communications industry has experienced substantial deregulation in recent years. Deregulation may lead to fierce competition for market share and can have a negative impact on certain companies. Competitive pressures are intense and communications company stocks can experience rapid volatility.

To effectively manage cash inflows and outflows, the Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Fund may also invest in money market instruments.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to them.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *License termination risk*
- *Limited management, trading cost and rebalance risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. JNL/Mellon Consumer Discretionary Sector Fund

Class A

Class I

Investment Objective. The objective of the Fund is to track the performance of the Morningstar® US Consumer Cyclical Sector IndexSM to provide total return through capital appreciation and dividend income.

Principal Investment Strategies. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Morningstar US Consumer Cyclical Sector Index (“Index”). The Index measures the performance of retail stores, auto and auto parts manufacturers, companies engaged in residential construction, lodging facilities, restaurants and entertainment companies. The Index is float market capitalization weighted. The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and effective the following Monday. As of December 31, 2021, the Index had 212 constituents and the full market capitalization range was \$1,385.12 million to \$1,691 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the Index in proportion to their market capitalization weighting in the Index. When replicating a capitalization-weighted index such as the Index, portfolio turnover is reduced to what the index adds and deletes, rebalancing, contract owner contributions and withdrawals, and reinvestment of income. The Fund’s ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index. Indexing may eliminate the chance that a Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection.

The Fund will utilize the replication investment approach set forth above at all times except for circumstances in which the market capitalization weightings of the Index will violate the diversification requirements of the Internal Revenue Code. In such cases, the excess weight of any security that will cause the Fund to be in violation of the diversification requirements will be allocated to the other securities in the Fund.

The Fund may also invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

Certain provisions of the 1940 Act may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. For example, because ETFs are investment companies, investment in ETFs would, absent exemptive relief, be limited under applicable federal statutory provisions. Those provisions generally restrict a fund’s investment in the shares of another investment company to, as determined immediately after a purchase is made, not more than 5% of its total assets (which may represent no more than 3% of the outstanding voting stock of such other investment company) and limit aggregate investments in all investment companies to 10% of total assets.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund’s investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund’s use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is “non-diversified” under the 1940 Act, and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Sector risk*
- *Non-diversification risk*
- *Concentration risk*

- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Index investing risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Passive investment risk*
- *Small-capitalization investing risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). General risks of consumer goods companies include cyclicalities of revenues and earnings, economic recession, currency fluctuations, changing consumer tastes, extensive competition, product liability litigation and increased governmental regulation. Generally, spending on consumer goods is affected by the economic health of consumers. A weak economy and its effect on consumer spending would adversely affect consumer goods companies.

To effectively manage cash inflows and outflows, the Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Fund may also invest in money market instruments.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *License termination risk*
- *Limited management, trading cost and rebalance risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund’s investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund’s investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund’s portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Mellon Consumer Staples Sector Fund

Class A

Class I

Investment Objective. The objective of the Fund is to track the performance of the Morningstar® US Consumer Defensive Sector IndexSM to provide total return through capital appreciation and dividend income.

Principal Investment Strategies. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Morningstar US Consumer Defensive Sector Index (“Index”). The Index measures the performance of companies engaged in the manufacturing of food, beverages, household and personal products, packaging, or tobacco. The Index is float market capitalization weighted. The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and effective the following Monday. As of December 31, 2021, the Index had 80 constituents and the full market capitalization range was \$596.61 million to \$403.47 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the Index in proportion to their market capitalization weighting in the Index. The consumer staples sector currently consists of companies representing food and staples retailing, food, beverage, and tobacco companies, and household and personal product companies. The Fund may concentrate in certain industries in the consumer staples sector to the extent such industries are represented in the Index. When replicating a capitalization-weighted index such as the Index, portfolio turnover is reduced to what the index adds and deletes, rebalancing, contract owner contributions and withdrawals, and reinvestment of income. The Fund’s ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index. Indexing may eliminate the chance that the Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection.

The Fund will utilize the replication investment approach set forth above at all times except for circumstances in which the market capitalization weightings of the Index will violate the diversification requirements of the Internal Revenue Code of 1986, as amended. In such cases, the excess weight of any security that will cause the Fund to be in violation of the diversification requirements will be allocated to the other securities in the Fund.

The Fund may also invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

Certain provisions of the 1940 Act may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective.

The Fund is “non-diversified” under the 1940 Act, as amended, and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Sector risk*
- *Non-diversification risk*
- *Concentration risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Index investing risk*
- *Investment in other investment companies risk*

- *Market risk*
- *Mid-capitalization investing risk*
- *Passive investment risk*
- *Small-capitalization investing risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). General risks of consumer staples companies include currency fluctuations, increased competition, increased governmental regulation, accommodative monetary policy and stimulative fiscal policy. Generally, spending on consumer staples is affected by the economic health of consumers. Improving global economic growth may adversely affect consumer staples companies. To effectively manage cash inflows and outflows, the Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Fund may also invest to some degree in money market instruments.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *License termination risk*
- *Limited management, trading cost and rebalance risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing

portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Mellon Energy Sector Fund

Class A

Class I

Investment Objective. The objective of the Fund is to track the performance of the Morningstar® US Energy Index[□] to provide total return through capital appreciation and dividend income.

Principal Investment Strategies. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Morningstar US Energy Index (“Index”). The Index measures the performance of U.S. companies that produce or refine oil and gas, oil field services and equipment companies, and pipeline operators. The Index is float market capitalization weighted. The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and effective the following Monday. As of December 31, 2021, the Index had 55 constituents and the full market capitalization range was \$1,367.53 million to \$259.05 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the Index in proportion to their market capitalization weighting in the Index. When replicating a capitalization-weighted index such as the Index, portfolio turnover is reduced to what the index adds and deletes, rebalancing, contract owner contributions and withdrawals, and reinvestment of income. The Energy Sector Fund’s ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index. Indexing may eliminate the chance that a Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection.

The Fund will utilize the replication investment approach set forth above at all times except for circumstances in which the market capitalization weightings of the Index will violate the diversification requirements of the Internal Revenue Code. In such cases, the excess weight of any security that will cause the Fund to be in violation of the diversification requirements will be allocated to the other securities in the Fund.

The Fund may also invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

Certain provisions of the 1940 Act may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. For example, because ETFs are investment companies, investment in ETFs would, absent exemptive relief, be limited under applicable federal statutory provisions. Those provisions generally restrict a fund’s investment in the shares of another investment company to, as determined immediately after a purchase is made, not more than 5% of its total assets (which may represent no more than 3% of the outstanding voting stock of such other investment company) and limit aggregate investments in all investment companies to 10% of total assets.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of assets, consistent with the Fund’s investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund’s use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is a “non-diversified” fund, as defined in the 1940 Act, and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Sector risk*
- *Non-diversification risk*
- *Concentration risk*

- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Index investing risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Passive investment risk*
- *Small-capitalization investing risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). General problems of the energy industry include volatile fluctuations in price and supply of energy fuels, international politics, reduced demand as a result of increases in energy efficiency and energy conservation, the success of exploration projects, clean-up and litigation costs relating to oil spills and environmental damage, and tax and other regulatory policies of various governments. Oil production and refining companies are subject to extensive federal, state and local environmental laws and regulations regarding air emissions and the disposal of hazardous materials. In addition, declines in U.S. crude oil production likely will lead to a greater world dependence on oil from the Organization of the Petroleum Exporting Countries, which may result in more volatile oil prices.

To effectively manage cash inflows and outflows, the Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Fund may also invest in money market instruments.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *License termination risk*
- *Limited management, trading cost and rebalance risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Mellon Financial Sector Fund

Class A

Class I

Investment Objective. The objective of the Fund is to track the performance of the Morningstar® US Financial Services Sector IndexSM to provide total return through capital appreciation and dividend income.

Principal Investment Strategies. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Morningstar US Financial Services Sector Index (“Index”). The Index measures the performance of companies that provide financial services, which include banks, savings and loans, asset management companies, credit services, investment brokerage firms, and insurance companies. The Index is float market capitalization weighted. The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and effective the following Monday. As of December 31, 2021, the Index had 226 constituents and the full market capitalization range was \$1,176.55 million to \$667.78 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities in the Index in proportion to their market capitalization weighting in the Index. When replicating a capitalization-weighted index such as the Index, portfolio turnover is reduced to what the index adds and deletes, rebalancing, contract owner contributions and withdrawals, and reinvestment of income. The Fund’s ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index. Indexing may eliminate the chance that a Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection.

The Fund will utilize the replication investment approach set forth above at all times except for circumstances in which the market capitalization weightings of the Index will violate the diversification requirements of the Internal Revenue Code. In such cases, the excess weight of any security that will cause the Fund to be in violation of the diversification requirements will be allocated to the other securities in the Fund.

Certain provisions of the 1940 Act and the Bank Holding Company Act of 1953, as amended, may limit the ability of the Financial Sector Fund to invest in certain securities in excess of certain percentage limitations. For example, because ETFs are investment companies, investment in ETFs would, absent exemptive relief, be limited under applicable federal statutory provisions. Those provisions generally restrict a fund’s investment in the shares of another investment company to, as determined immediately after a purchase is made, not more than 5% of its total assets (which may represent no more than 3% of the outstanding voting stock of such other investment company) and limit aggregate investments in all investment companies to 10% of total assets.

The Fund may also invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund’s investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund’s use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is a “non-diversified” fund, as defined in the 1940 Act, and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Sector risk*
- *Financial services risk*

- *Non-diversification risk*
- *Concentration risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Index investing risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Passive investment risk*
- *Small-capitalization investing risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The financial services industry continues to evolve as banks and insurers expand their businesses through innovative products and services. Banks, thrifts and their holding companies are especially subject to the adverse effects of economic recession; volatile interest rates; portfolio concentrations in geographic markets and in commercial and residential real estate loans; and competition from new entrants in their fields of business. Although legislation repealed most of the barriers which separated the banking, insurance and securities industries, these industries are still extensively regulated at both the federal and state level and may be adversely affected by increased regulation.

Bank and thrift risks. Banks and thrifts face increased competition from non-traditional lending sources as regulatory changes, such as the financial services overhaul legislation, permit new entrants to offer various financial products. Technological advances such as the Internet allow these non-traditional lending sources to cut overhead and permit the more efficient use of customer data.

Financial service provider risks. Broker-dealers, investment banks, finance companies and mutual fund companies also are financial services providers. These companies can compete with banks and thrifts to provide financial service products in addition to their traditional services, such as brokerage and investment advice. In addition, all financial service companies face shrinking profit margins due to new competitors, the cost of new technology and the pressure to compete globally.

Insurance company risks. Insurance company profits are affected by many factors, including interest rate movements, the imposition of premium rate caps, competition and pressure to compete globally. Property and casualty insurance profits may also be affected by weather catastrophes and other disasters. Life and health insurance companies’ profits may also be adversely affected by increased government regulations or tax law changes.

To effectively manage cash inflows and outflows, the Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Fund may also invest in money market instruments.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *License termination risk*
- *Limited management, trading cost and rebalance risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

JNL/Mellon Healthcare Sector Fund

Class A Class I

Investment Objective. The objective of the Fund is to track the performance of the Morningstar® US Healthcare Sector IndexSM to provide total return through capital appreciation and dividend income.

Principal Investment Strategies. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Morningstar US Healthcare Sector Index (“Index”). The Index measures the performance of companies of biotechnology, pharmaceuticals, research services, home healthcare, hospitals, long-term care facilities, and medical equipment and supplies. The Index is float market capitalization weighted. The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and effective the following Monday. As of December 31, 2021, the Index had 240 constituents and the full market capitalization range was \$531.72 million to \$472.94 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities in the Index in proportion to their market capitalization weighting in the Index. When replicating a capitalization-weighted index such as the Index, portfolio turnover is reduced to what the index adds and deletes, rebalancing, contract owner contributions and withdrawals, and reinvestment of income. The Healthcare Sector Fund’s ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index. Indexing may eliminate the chance that a Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection.

The Fund will utilize the replication investment approach set forth above at all times except for circumstances in which the market capitalization weightings of the Index will violate the diversification requirements of the Internal Revenue Code. In such cases, the excess weight of any security that will cause the Fund to be in violation of the diversification requirements will be allocated to the other securities in the Fund.

The Fund may also invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a quarterly basis to reflect changes in the composition of the Index.

Certain provisions of the 1940 Act may limit the ability of the Fund to invest in certain securities beyond certain percentage limitations. For example, because ETFs are investment companies, investment in ETFs would, absent exemptive relief, be limited under applicable federal statutory provisions. Those provisions generally restrict a fund’s investment in the shares of another investment company to, as determined immediately after a purchase is made, not more than 5% of its total assets (which may represent no more than 3% of the outstanding voting stock of such other investment company) and limit aggregate investments in all investment companies to 10% of total assets.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is a “non-diversified” fund, as defined in the 1940 Act, and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Sector risk*
- *Non-diversification risk*

- *Concentration risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Index investing risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Passive investment risk*
- *Small-capitalization investing risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The pharmaceutical and healthcare industries continuously evolve, and as a result, pharmaceutical and healthcare companies need to keep pace with this constant change, in order to be successful. Pharmaceutical and healthcare companies are subject to changing government regulation, including price controls, national health insurance, managed care regulation and tax incentives or penalties related to medical insurance premiums, which could have a negative effect on the price and availability of their products and services. Healthcare facility operators may be affected by the demand for services, efforts by government or insurers to limit rates, restriction of government financial assistance and competition from other providers. In addition, such companies face increasing competition from generic drug sales, the termination of their patent protection for certain drugs and technological advances which render their products or services obsolete. The research and development costs required to bring a drug to market are substantial and may include a lengthy review by the government, with no guarantee that the product will ever go to market or show a profit. In addition, the potential for an increased amount of required disclosure of proprietary scientific information could negatively impact the competitive position of these companies. Many of these companies may not offer certain drugs or products for several years and, as a result, may have significant losses of revenue and earnings.

To effectively manage cash inflows and outflows, the Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Fund may also invest in money market instruments.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *License termination risk*
- *Limited management, trading cost and rebalance risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund’s investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they

deem appropriate in the pursuit of the Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Mellon Industrials Sector Fund

Class A

Class I

Investment Objective. The objective of the Fund is to track the performance of the Morningstar® US Industrials Sector IndexSM to provide total return through capital appreciation and dividend income.

Principal Investment Strategies. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Morningstar US Industrials Sector Index (“Index”). The Index measures the performance of companies that manufacture machinery, hand-held tools and industrial products. This sector also includes aerospace and defense firms as well as companies engaged in transportation and logistic services. The Index is float market capitalization weighted. The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and effective the following Monday. As of December 31, 2021, the Index had 236 constituents and the full market capitalization range was \$1,539.03 million to \$161.96 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the Index in proportion to their market capitalization weighting in the Index. The Fund may concentrate in certain industries in the industrials sector to the extent such industries are represented in the Index. When replicating a capitalization-weighted index such as the Index, portfolio turnover is reduced to what the index adds and deletes, rebalancing, contract owner contributions and withdrawals, and reinvestment of income. The Fund’s ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index. Indexing may eliminate the chance that the Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection.

The Fund will utilize the replication investment approach set forth above at all times except for circumstances in which the market capitalization weightings of the Index will violate the diversification requirements of the Internal Revenue Code of 1986, as amended. In such cases, the excess weight of any security that will cause the Fund to be in violation of the diversification requirements will be allocated to the other securities in the Fund.

The Fund may also invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a quarterly basis to reflect changes in the composition of the Index.

Certain provisions of the 1940 Act may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Sector risk*
- *Concentration risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Index investing risk*
- *Investment in other investment companies risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Passive investment risk*

- *Small-capitalization investing risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The industrial sector is characterized by a variety of markets, with companies spanning the quality spectrum in terms of competitive advantage, growth prospects, and exposure to economic cycles. General risks of industrial companies include high cyclicalities, fiscal austerity measures, and a stronger U.S. dollar, which may adversely affect exports and U.S. industrial company profitability. To effectively manage cash inflows and outflows, the Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Fund may also invest to some degree in money market instruments.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *License termination risk*
- *Limited management, trading cost and rebalance risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Mellon Information Technology Sector Fund

Class A

Class I

Investment Objective. The objective of the Fund is to track the performance of the Morningstar® US Technology Sector IndexSM to provide total return through capital appreciation and dividend income.

Principal Investment Strategies. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Morningstar US Technology Sector Index (“Index”). The Index measures the performance of companies engaged in the design, development, and support of computer operating systems and applications. This sector also includes companies that provide computer technology consulting services engaged in the manufacturing of computer equipment, data storage products, networking products, semiconductors, and components. The Index is float market capitalization weighted. The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and effective the following Monday. As of December 31, 2021, the Index had 283 constituents and the full market capitalization range was \$1,360.33 million to \$2,913.33 trillion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund does not employ traditional methods of active investment management, which involve the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the Index in proportion to their market capitalization weighting in the Index. When replicating a capitalization-weighted index such as the Index, portfolio turnover is reduced to what the index adds and deletes, rebalancing, contract owner contributions and withdrawals, and reinvestment of income. The Fund’s ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index. Indexing may eliminate the chance that a Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection.

The Fund will utilize the replication investment approach set forth above at all times except for circumstances in which the market capitalization weightings of the Index will violate the diversification requirements of the Internal Revenue Code. In such cases, the excess weight of any security that will cause the Fund to be in violation of the diversification requirements will be allocated to the other securities in the Fund.

The Fund may also invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a quarterly basis to reflect changes in the composition of the Index.

Certain provisions of the 1940 Act may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. For example, because ETFs are investment companies, investment in ETFs would, absent exemptive relief, be limited under applicable federal statutory provisions. Those provisions generally restrict a fund’s investment in the shares of another investment company to, as determined immediately after a purchase is made, not more than 5% of its total assets (which may represent no more than 3% of the outstanding voting stock of such other investment company) and limit aggregate investments in all investment companies to 10% of total assets.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund’s investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund’s use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is a “non-diversified” fund, as defined in the 1940 Act, and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Sector risk*

- *Non-diversification risk*
- *Concentration risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Index investing risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Passive investment risk*
- *Small-capitalization investing risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The technology industry is among the fastest growing and fastest changing industries in the world. However, it is important to note that technology companies are generally subject to risks of rapidly changing technologies; short product life cycles; fierce competition; aggressive pricing and reduced profit margins; the loss of patent, copyright and trademark protections; cyclical market patterns; evolving industry standards and frequent new product introductions. Technology companies may be smaller and less experienced companies, with limited product lines, markets or financial resources and fewer experienced management or marketing personnel. Technology company stocks, especially those which are Internet-related, have experienced extreme price and volume fluctuations that are often unrelated to their operating performance. Also, the stocks of many Internet companies sometimes have had exceptionally high price-to-earnings ratios with little or no earnings history.

To effectively manage cash inflows and outflows, the Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Fund may also invest in money market instruments.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *License termination risk*
- *Limited management, trading cost and rebalance risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Mellon Materials Sector Fund

Class A

Class I

Investment Objective. The objective of the Fund is to track the performance of the Morningstar® US Basic Materials Sector IndexSM to provide total return through capital appreciation and dividend income.

Principal Investment Strategies. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Morningstar US Basic Materials Sector Index (“Index”). The Index measures the performance of companies that manufacturer chemicals, building materials and paper products. This sector also includes companies engaged in commodities exploration and processing. The Index is float market capitalization weighted. The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and effective the following Monday. As of December 31, 2021, the Index had 63 constituents and the full market capitalization range was \$1,667.57 million to \$177.56 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the Index in proportion to their market capitalization weighting in the Index. The Fund may concentrate in certain industries in the materials sector to the extent such industries are represented in the Index. When replicating a capitalization-weighted index such as the Index, portfolio turnover is reduced to what the index adds and deletes, rebalancing, contract owner contributions and withdrawals, and reinvestment of income. The Fund’s ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index. Indexing may eliminate the chance that the Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection.

The Fund will utilize the replication investment approach set forth above at all times except for circumstances in which the market capitalization weightings of the Index will violate the diversification requirements of the Internal Revenue Code of 1986, as amended. In such cases, the excess weight of any security that will cause the Fund to be in violation of the diversification requirements will be allocated to the other securities in the Fund.

The Fund may also invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a quarterly basis to reflect changes in the composition of the Index.

Certain provisions of the 1940 Act may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective.

The Fund is “non-diversified” under the 1940 Act and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Sector risk*
- *Non-diversification risk*
- *Concentration risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Index investing risk*
- *Investment in other investment companies risk*
- *Market risk*

- *Mid-capitalization investing risk*
- *Passive investment risk*
- *Small-capitalization investing risk*
- *Tracking error risk*
- *Portfolio turnover risk*
- *Foreign securities risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). Commodity prices are a key determinant of materials companies’ earnings. General risks of materials companies include high cyclicalities, reduction in demand for processes commodities, increased labor costs, and a stronger U.S. dollar, which may adversely affect exports and U.S. materials company profitability. To effectively manage cash inflows and outflows, the Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Fund may also invest to some degree in money market instruments.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *License termination risk*
- *Limited management, trading cost and rebalance risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund’s investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund’s investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund’s portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing

portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Mellon Real Estate Sector Fund

Class A

Class I

Investment Objective. The objective of the Fund is to track the performance of the Morningstar® US Real Estate Sector IndexSM to provide total return through capital appreciation and dividend income.

Principal Investment Strategies. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Morningstar US Real Estate Sector Index (“Index”). The Index measures the performance of mortgage companies, property management companies and REITs in the United States. The Index is float market capitalization weighted. The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and effective the following Monday. As of December 31, 2021, the Index had 116 constituents and the full market capitalization range was \$2,225.62 million to \$133.21 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the Index in proportion to their market capitalization weighting in the Index. The Fund may concentrate in certain industries in the real estate sector to the extent such industries are represented in the Index. When replicating a capitalization-weighted index such as the Index, portfolio turnover is reduced to what the index adds and deletes, rebalancing, contract owner contributions and withdrawals, and reinvestment of income. The Fund’s ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index. Indexing may eliminate the chance that the Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection.

The Fund will utilize the replication investment approach set forth above at all times except for circumstances in which the market capitalization weightings of the Index will violate the diversification requirements of the Internal Revenue Code of 1986, as amended. In such cases, the excess weight of any security that will cause the Fund to be in violation of the diversification requirements will be allocated to the other securities in the Fund.

The Fund may also invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a quarterly basis to reflect changes in the composition of the Index.

Certain provisions of the 1940 Act may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective.

The Fund is “non-diversified” under the 1940 Act and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Sector risk*
- *Non-diversification risk*
- *Real estate investment risk*
- *Concentration risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Index investing risk*
- *Investment in other investment companies risk*

- *Market risk*
- *Mid-capitalization investing risk*
- *Passive investment risk*
- *Tracking error risk*
- *Small-capitalization investing risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). To effectively manage cash inflows and outflows, the Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Fund may also invest to some degree in money market instruments.

In addition, the performance of the Fund depends on the Sub-Adviser’s ability to effectively implement the investment strategies of the Fund.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *License termination risk*
- *Limited management, trading cost and rebalance risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund’s investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund’s investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund’s portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL S&P 500 Index Fund
Class I

Investment Objective. The investment objective of the Fund is to track the performance of the S&P 500[®] Index to provide long-term capital growth.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in large-capitalization company securities. The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the S&P 500 Index through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the target index by investing all or substantially all of its assets in the stocks that make up the S&P 500 Index. As of December 31, 2021, the market capitalization range of the S&P 500 Index is \$2.74 billion to \$2.77 trillion. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the S&P 500 Index in proportion to their market capitalization weighting in the S&P 500 Index. This approach is called “replication.” When attempting to replicate a capitalization-weighted index such as the S&P 500 Index, portfolio turnover is reduced to what the index adds and deletes, investor contributions and withdrawals, and reinvestment of income. The replicated portfolio does not require rebalancing as a result of market movement. The Fund is managed to reflect the composition of the Index and will rebalance as needed to reflect changes in the composition of the Index.

In the event that all the stocks comprising the S&P 500 Index cannot be purchased, the Fund may purchase a representative sample of stocks from each economic sector included in the S&P 500 Index in proportion to the weighting in the S&P 500 Index. To the extent that the Fund seeks to replicate the S&P 500 Index using such sampling techniques, a close correlation between the Fund’s performance and the performance of the S&P 500 Index may be anticipated in both rising and falling markets. The Fund’s ability to achieve significant correlation between Fund and S&P 500 Index performance may be affected by changes in securities markets and changes in the composition of the S&P 500 Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund may hold up to 25% of its value in S&P 500 Index futures contracts.

The Fund may invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its Index, to assist with Index rebalances, and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest in securities issued by companies in the financial services sector.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As an indexed portfolio, the Fund may not achieve its investment objective for a variety of reasons, the inability to purchase certain securities in the index, including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or country specific factors that would prevent the Fund from achieving its investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *License termination risk*
- *Large-capitalization investing risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Financial services risk*
- *Index investing risk*
- *Passive investment risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *The S&P 500 Index.* The S&P 500 Index is composed of 500 common stocks that are selected by Standard & Poor's to capture the price performance of a large cross-section of the U.S. publicly traded stock market. Stocks included in the S&P 500 Index are chosen with the aim of achieving a representative portfolio from the various components of the U.S. economy. A limited percentage of the S&P 500 Index may include foreign securities traded on U.S. exchanges. Aggregate market value and trading activity also are considered in the selection process. While these stocks do not necessarily represent the 500 largest corporations in the United States, the S&P 500 Index is recognized for its emphasis toward large stocks. The 500 securities, most of which trade on the New York Stock Exchange, currently represent approximately 80% of the market value of all U.S. common stocks. Each stock in the S&P 500 Index is weighted by its float adjusted market capitalization. The inclusion of a stock in the S&P 500 Index in no way implies that Standard & Poor's believes the stock to be an attractive investment, nor is Standard & Poor's in any way affiliated with the Fund.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Leverage risk*
- *Market risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Settlement risk*
- *Securities lending risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Mellon Utilities Sector Fund

Class A

Class I

Investment Objective. The objective of the Fund is to track the performance of the Morningstar® US Utilities Sector IndexSM to provide total return through capital appreciation and dividend income.

Principal Investment Strategies. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Morningstar US Utilities Sector Index (“Index”). The Index measures the performance of electric, gas, and water utilities. The Index is float market capitalization weighted. The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and effective the following Monday. As of December 31, 2021, the Index had 57 constituents and the full market capitalization range was \$1,158.41 million to \$183.19 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the Index in proportion to their market capitalization weighting in the Index. The Fund may concentrate in certain industries in the utilities sector to the extent such industries are represented in the Index. When replicating a capitalization-weighted index such as the Index, portfolio turnover is reduced to what the index adds and deletes, rebalancing, contract owner contributions and withdrawals, and reinvestment of income. The Fund’s ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index.

The Fund will utilize the replication investment approach set forth above at all times except for circumstances in which the market capitalization weightings of the Index will violate the diversification requirements of the Internal Revenue Code of 1986, as amended. In such cases, the excess weight of any security that will cause the Fund to be in violation of the diversification requirements will be allocated to the other securities in the Fund.

The Fund may also invest in a combination of exchange-traded funds (“ETFs”) and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a quarterly basis to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective.

The Fund is “non-diversified” under the 1940 Act, as amended, and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Sector risk*
- *Non-diversification risk*
- *Government regulatory risk*
- *Concentration risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Index investing risk*
- *Investment in other investment companies risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Passive investment risk*

- *Small-capitalization investing risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). General problems of the energy industry include volatile fluctuations in price and supply of energy fuels, international politics, reduced demand as a result of increases in energy efficiency and energy conservation, the success of exploration projects, clean-up and litigation costs relating to oil spills and environmental damage, and tax and other regulatory policies of various governments. Oil production and refining companies are subject to extensive federal, state and local environmental laws and regulations regarding air emissions and the disposal of hazardous materials. In addition, declines in U.S. crude oil production likely will lead to a greater world dependence on oil from OPEC nations, which may result in more volatile oil prices.

To effectively manage cash inflows and outflows, the Utilities Sector Fund may maintain a cash position of up to 5% of net assets under normal circumstances primarily consisting of shares of money market mutual funds including the affiliated JNL Government Money Market Fund and investments in other investment companies (such as exchange traded funds) to the extent permitted under the 1940 Act. The Utilities Sector Fund may also invest to some degree in money market instruments.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *License termination risk*
- *Limited management, trading cost and rebalance risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing

portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/MFS Mid Cap Value Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is capital appreciation.

Principal Investment Strategies. The Fund seeks to meet its objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in issuers with medium market capitalizations.

MFS generally defines medium market capitalization issuers as issuers with market capitalizations similar to those included in the Russell Midcap® Value Index over the last 13 months at time of purchase. As of December 31, 2021, the capitalization range of the Russell Midcap® Value Index was between approximately \$739.3 million and \$73.8 billion. Issuers whose market capitalizations fall outside this definition after purchase continue to be considered to have a medium market capitalization for purposes of the 80% policy.

MFS normally invests the Fund's assets primarily in equity securities. Equity securities include common stocks, equity interests in real estate investment trusts (REITs), and other securities that represent an ownership interest (or right to acquire an ownership interest) in a company or other issuer.

MFS focuses on investing the Fund's assets in the stocks of companies it believes are undervalued compared to their perceived worth (value companies). Value companies tend to have stock prices that are low relative to their earnings, dividends, assets, or other financial measures.

MFS may invest the Fund's assets in foreign securities.

MFS normally invests the Fund's assets across different industries and sectors, but MFS may invest a significant percentage of the Fund's assets in issuers in a single industry or sector.

MFS uses an active bottom-up investment approach to buying and selling investments for the Fund. Investments are selected primarily based on fundamental analysis of individual issuers and their potential in light of their financial condition, and market, economic, political, and regulatory conditions. Factors considered may include analysis of an issuer's earnings, cash flows, competitive position, and management ability. MFS may also consider environmental, social, and governance (ESG) factors in its fundamental investment analysis where MFS believes such factors could materially impact the economic value of an issuer. ESG factors considered may include, but are not limited to, climate change, resource depletion, an issuer's governance structure and practices, data protection and privacy issues, and diversity and labor practices. Quantitative screening tools that systematically evaluate an issuer's valuation, price and earnings momentum, earnings quality, and other factors may also be considered.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Managed portfolio risk*
- *Investment strategy risk*
- *Equity securities risk*
- *Market risk*
- *Stock risk*
- *Company risk*
- *Investment style risk*
- *Mid-capitalization investing risk*
- *Foreign securities risk*
- *Real estate investment risk*
- *Concentration risk*
- *Liquidity risk*
- *Financial services risk*
- *Accounting risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Credit risk*
- *Currency risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Interest rate risk*
- *Investments in IPOs risk*
- *Leverage risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Massachusetts Financial Services Company (d/b/a MFS Investment Management) (“MFS”), located at 111 Huntington Avenue, Boston, MA 02199.

Kevin Schmitz, an Investment Officer of MFS, has co-managed the Fund since April 2017. He has been employed in the investment area of MFS since 2002.

Brooks Taylor, an Investment Officer of MFS, has co-managed the Fund since April 2017. He has been employed in the investment area of MFS since 1996.

Richard Offen, an Investment Officer of MFS, has co-managed the Fund since June 2021. He has been employed in the investment area of MFS since 2011.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL/Morningstar PitchBook Listed Private Equity Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to provide long-term capital growth by seeking to track the performance of the Morningstar® PitchBook Developed Markets Listed Private Equity IndexSM (“Index”).

Principal Investment Strategies. The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the Index. The Index tracks the performance of public companies with significant private equity exposure that are listed in developed markets countries. More specifically, the Index is comprised of companies whose primary industry is classified by PitchBook Data, Inc. as private equity and are involved in venture capital, private equity buyouts or growth and mezzanine financing as well as companies with substantial private equity investments. The Index constituents may include direct private equity investors, alternative asset managers, funds-of-funds, holding companies, and closed-end funds with significant private equity exposures. While the Index may include funds of funds, the Fund will not invest in those constituents. The weight of each security in the Index is based on float market capitalization, adjusted for a purity score and subjected to investment stage and maximum security weight constraints. The Index is reconstituted annually and implemented after the close of business on the third Friday of December and is effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and is effective the following Monday. As of December 31, 2021, the Index had 61 constituents and the full market capitalization range was \$121.32 million to \$88.87 billion. The number of stocks in the Index is subject to the selection and eligibility criteria at the time of reconstitution. As this is a rule-based index, private securities are not a part of the Index by rule. As of December 31, 2021, the total percentage weight of the Index in foreign securities (non-U.S.) was 61.11%.

The Fund may concentrate its investments in the capital markets industry to the extent that the Index the Fund is designed to track is also so concentrated. As such, the Fund's investments may be concentrated in the private equity/venture capital industry.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index.

When attempting to replicate a capitalization-weighted index, such as the Index, portfolio turnover is reduced to what the index adds and deletes, contract owner contributions and withdrawals, and reinvestment income. The replicated portfolio does not require rebalancing as a result of market movement. The Fund stays aligned with the benchmark automatically with the change in share price, due to the close similarity between the holdings of the Index and those of the Fund. The Fund is managed and rebalanced to reflect the composition of the Index.

In the event that all the stocks comprising the Index cannot be purchased, the Fund may purchase a representative sample of securities from each economic sector included in the Index in proportion to the weighting in the Index. To the extent that the Fund seeks to replicate the Index using such sampling techniques, a close correlation between the Fund's performance and the performance of the Index may be anticipated in both rising and falling markets. The Fund's ability to achieve significant correlation between Fund and Index performance may be affected by changes in securities markets and changes in the composition of the Index.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is a “non-diversified” fund, as defined in the Investment Company Act of 1940, as amended (the “1940 Act”), and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*

- *Large-capitalization investing risk*
- *License termination risk*
- *Concentration risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Foreign securities risk*
- *Index investing risk*
- *Liquidity risk*
- *Mezzanine securities risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Passive investment risk*
- *Sector risk*
- *Small-capitalization investing risk*
- *Tracking error risk*
- *Non-diversification risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *The Morningstar PitchBook Developed Markets Listed Private Equity Index.* The Morningstar® PitchBook Developed Markets Listed Private Equity IndexSM tracks the performance of public companies with significant private equity exposure. The index consists of securities listed on developed-market exchanges that meet certain size and liquidity thresholds.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Market risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Settlement risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund’s investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund’s investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund’s portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms.

Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2020.

JNL/Morningstar U.S. Sustainability Index Fund
(formerly, JNL/Mellon MSCI KLD 400 Social Index Fund)

Class A
Class I

Investment Objective. The investment objective of the Fund is to seek to track the performance of the Morningstar® US Sustainability Index□, which is designed to provide broad US equity market exposure with lower environmental, social and governance (“ESG”) risk.

Principal Investment Strategies. The Fund, under normal circumstances, seeks to invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities included in the Morningstar US Sustainability Index (the “Index”), including depositary receipts representing securities of the Index. The Fund seeks to track the investment results of the Index, which is designed to provide broad U.S. equity market exposure with lower ESG risk. The Index includes large- and mid-capitalization companies and employs a best-in-class stock selection process to reduce exposure to companies with high ESG risk relative to their sector peers, targeting coverage of 50% of the Morningstar US Large-Mid Cap Index (the “parent index”) by float-adjusted market capitalization. Sector constraints are applied to preserve market-like exposure. The Fund’s investments may be concentrated in certain industries to the extent such industries are represented in the Index.

As of December 31, 2021, the Index consisted of 374 constituents identified by Morningstar Indexes (the “Index Provider”) and the full market capitalization range was \$298 million to \$2.14 billion. The number of constituents in the Index is subject to the selection and eligibility criteria at the time of reconstitution. The Index is reconstituted semi-annually and implemented after the close of business on the third Friday of June and December and is effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and is effective the following Monday. If Monday is a holiday, reconstitution or rebalancing is effective on the following business day.

The Index Provider defines sustainable investing as an approach that takes into account ESG factors and their impact throughout the investment process.

All constituents within the Index must meet the following criteria in sequence: (i) the security must have a current Sustainalytics ESG Risk Rating and Sustainalytics Controversy Score, (ii) the security’s Controversy Score must be 3 out of 5, or lower, (iii) the security must not have a ‘Severe’ Sustainalytics ESG Risk Rating, and (iv) the company must not derive more than 50% of its revenue from tobacco products, not have any involvement in the production of controversial weapons (land mines, for example) as defined by third-party Sustainalytics Global Compact Compliance Service exclusionary lists, not have any involvement in the manufacturing and sale of firearms to civilian customers, and not have any involvement in the manufacturing and sale of key components of small arms. The Index Provider selects the best-in-class companies in priority order of their Sustainalytics ESG Risk Ratings until they reach 50% coverage by float-adjusted market capitalization of the parent index. The companies with the lowest possible ESG Risk Ratings are selected for the Index, subject to sector weight constraints relative to the parent index.

Sustainalytics’ ESG Risk Ratings are designed to help investors identify and understand financially material ESG risks in their portfolio companies. Sustainalytics’ ESG Risk Ratings measure the degree to which a company’s economic value is driven by the magnitude of a company’s unmanaged ESG risks. Sustainalytics’ ESG Risk Ratings are composed of three building blocks that contribute to a company’s overall rating. These building blocks include Corporate Governance, material ESG issues (“MEIs”), and idiosyncratic ESG issues. To be considered relevant in the ESG Risk Ratings, an issue must have a potentially substantial impact on the economic value of a company and, hence, its financial risk- and return profile from an investment perspective. The ESG Risk Rating is forward looking in the sense that it identifies these issues based on the typical business model and business environment a company is operating in. The final ESG Risk Rating score is calculated as the sum of all unmanaged risk. To determine unmanaged risk, Sustainalytics reviews three building blocks: Corporate Governance, MEIs’, and idiosyncratic ESG issues. Based on their quantitative scores, companies are grouped into one of five risk categories (negligible, low, medium, high, severe) per the chart below. A low score indicates a low level of ESG risk.

ESG Risk Rating	Quantitative Score
Negligible	0 - 9.99
Low	10 - 19.99
Medium	20 - 29.99
High	30 - 39.99
Severe	40+

Mellon Investments Corporation, the Fund’s sub-adviser (“Sub-Adviser”), does not apply its own ESG screening criteria. The Sub-Adviser relies on the Index Provider to apply its screening criteria to portfolio companies included in the Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through full replication or representative sampling. The Fund does not employ traditional methods of active investment

management, which involves the buying and selling of securities based upon fundamental security analysis. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index.

When attempting to replicate an index such as the Index, portfolio turnover is generally reduced to security additions or deletions to the index, contract owner contributions and withdrawals, and reinvestment income. The Fund stays aligned with the benchmark automatically with the change in share price, due to the close similarity between the holdings of the Index and those of the Fund such that the replicated portfolio does not require rebalancing as a result of market movement. The Fund is managed and rebalanced to reflect the composition of the Index.

Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long term.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to the Index to assist with the Index rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of exchange-traded derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As an indexed portfolio, the Fund may not achieve its investment objective for a variety of reasons, the inability to purchase certain securities in the index, including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or country specific factors that would prevent the Fund from achieving its investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *ESG (Environmental, Social & Governance) investment strategy risk*
- *Equity securities risk*
- *Concentration risk*
- *Sector risk*
- *Issuer risk*
- *Passive investment risk*
- *Index investing risk*
- *Tracking error risk*
- *Large-capitalization investing risk*
- *Mid-capitalization investing risk*
- *License termination risk*
- *Exchange-traded funds investing risk*
- *Derivatives risk*
- *Depository receipts risk*
- *Non-diversification risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Currency risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Redemption risk*

- *Regulatory investment limits risk*
- *Securities lending risk*
- *Small-capitalization investing risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Morningstar Wide Moat Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to provide total return by tracking the performance, net of expenses, of the Morningstar® Wide Moat Focus IndexSM.

Principal Investment Strategies. The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities in the Morningstar® Wide Moat Focus Index[□] (“Index”).

The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index. The Index is equal weighted and provides exposure to companies with Morningstar Economic Moat Ratings of “Wide” that are trading at the lowest current market price/fair value ratios. Moat ratings and fair value estimates are determined through independent research conducted by the Morningstar Equity Research team (“Morningstar Research”).

Wide-moat companies are those in which Morningstar Research has very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. Morningstar Research defines excess profits as returns on invested capital (ROICs), above their estimate of a firm’s cost of capital, or weighted average cost of capital (WACC). Without a moat, profits are more susceptible to competition. Morningstar Research has identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale. To assess the sustainability of excess profits, analysts perform ongoing assessments of what Morningstar Research calls the “moat trend.” A firm’s moat trend is positive in cases where Morningstar Research believes its sources of competitive advantage are growing stronger; stable where they do not anticipate changes to competitive advantages over the next several years; or negative when they see signs of deterioration.

Morningstar Research uses a standardized, proprietary valuation model to assign fair values to potential Index constituents’ common stock. Morningstar’s equity research team estimates the issuer’s future free cash flows and then calculates an enterprise value using weighted average costs of capital as the discount rate. Morningstar Research then assigns each issuer’s common stock a fair value by adjusting the enterprise value to account for net debt and other adjustments.

The Index employs a staggered rebalance methodology and is divided into two sub-portfolios. Each typically contains 40 stocks. However, if securities fall short of the selection and eligibility criteria or if securities are added or deleted as a result of corporate actions after reconstitution, the sub-portfolio can hold more or fewer than 40 companies. In addition, securities that are deleted from the Morningstar US Market Index after June and December reconstitutions are simultaneously deleted from the Index. One sub-portfolio reconstitutes in December and June, the other in March and September. At each reconstitution, the 40 securities representing the lowest current market price/fair value are selected from the list of eligible securities for the sub-portfolio. A buffer rule is applied to the current Index constituents. Current constituents ranked within the top 150% of the target count in the eligible universe based on current market price/fair value ratio are retained in the Index. The maximum weight of an individual sector in the Index is capped at 10% more than its corresponding weight in the Morningstar® US Market IndexSM at the time of reconstitution, or 40%, whichever is higher. Due to the staggered rebalance methodology, constituents and weightings may vary between sub-portfolios. As a rule, adjustments to one sub-portfolio are performed after the close of business on the third Friday of March and September and adjustments to the other sub-portfolio are performed after the close of business on the third Friday of June and December, and all adjustments are effective on the following Monday. If the Monday is a market holiday, reconstitution and rebalancing occurs on the Tuesday immediately following. In addition to the quarterly staggered reconstitution of sub-portfolios, the sub-portfolio weights are reset to 50% every June and December and distributed among the securities within them in proportion to their weight.

The aggregate portfolio can contain between 40 and 80 constituents.

The Fund intends to hold the same number of securities as the Index. As of December 31, 2021, the Index included 46 securities of companies with a market capitalization range of between approximately \$1,738.71 million to \$2525.08 billion and a weighted average market capitalization of \$235.90 billion. These amounts are subject to change.

Rebalancing data, including constituent weights and related information, is posted on Morningstar’s website (indexes.morningstar.com) at the end of each quarter-end month. Target weights of the constituents are not otherwise adjusted between quarters except in the event of certain types of corporate actions.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund’s use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may invest in exchange-traded funds (“ETFs”) to assist with Fund rebalances and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

Mellon Investments Corporation, the Fund's sub-adviser ("Sub-Adviser"), uses a "passive" or "indexing" approach to try to achieve the Fund's investment objective. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis.

The Fund may concentrate its investments in an industry or group of industries to the extent the Index that the Fund is designed to track is also concentrated.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *License termination risk*
- *Concentration risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Index investing risk*
- *Large-capitalization investing risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Passive investment risk*
- *Sector risk*
- *Tracking error risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Settlement risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Neuberger Berman Commodity Strategy Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek total return.

Principal Investment Strategies. The Fund seeks to achieve its goal by investing under normal circumstances in commodity-linked derivative instruments and fixed-income instruments. Commodities are assets that have tangible properties, such as oil, natural gas, agricultural products or metals.

The Fund seeks to gain long and short exposure to the commodity markets by investing, directly or indirectly, in futures contracts on individual commodities and other commodity-linked derivative instruments. The performance of these commodity-linked derivative instruments is expected to correspond to the performance of the commodity underlying the derivative instrument, without requiring the Fund to invest directly in commodities.

Companies with similar characteristics may be grouped together in broad categories called sectors. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund.

Fund assets not invested in commodity-linked derivative instruments will be invested in fixed income securities, cash or cash equivalent instruments, or money market mutual funds.

The Fund may hold commodity-linked derivative instruments that provide leveraged exposure to commodities so that the Fund's investment exposure to commodities (through their use of commodity-linked derivative instruments) may, at times, equal or slightly exceed the Fund's net assets.

In managing the Fund's commodity investments, the Fund's sub-adviser, Neuberger Berman Investment Advisers LLC (the "Sub-Adviser") seeks to identify investment opportunities using quantitative investment models and fundamental analyses with an emphasis on risk management in an attempt to take advantage of both short-term and long-term opportunities in commodity markets. By managing a broadly diversified portfolio of commodity investments with an active investment approach, the Sub-Adviser seeks to provide returns that are not highly correlated with other major asset classes. The Fund may take short positions in one or more separate commodities. The short positions used by the Fund primarily involve buying a derivative on a commodity in anticipation that the price of the commodity will decline.

The Sub-Adviser will use various quantitative models employing strategies intended to identify investment opportunities and determine portfolio weightings in different commodity sectors and markets. These strategies include: (i) a risk-balancing strategy that considers the total portfolio risk the Sub-Adviser believes to be associated with each commodity; (ii) a strategy that endeavors to assess top down macro variables among various commodity sectors (such as, energy, industrial, precious metals, agricultural, livestock and softs (e.g., sugar, cotton, cocoa and coffee)); and/or (iii) a strategy that endeavors to assess the outlook for individual commodities within each commodity sector.

From time to time, the Fund's investment program may emphasize a particular sector of the commodities markets. If the Fund emphasizes one or more sectors the performance of investments in the Fund will likely be affected by events affecting the performance of those sectors.

The Fund's fixed income investments will be mainly in investment grade fixed income securities and are intended to provide liquidity and preserve capital and may serve as collateral for the Fund's derivative instruments. These may include fixed income securities issued by the U.S. Government and its agencies and instrumentalities, bank certificates of deposit, mortgage backed securities, asset-backed securities, and corporate securities. The Fund considers fixed income securities to be investment grade if, at the time of investment, they are rated within the four highest categories by at least one independent credit rating agency or, if unrated, are determined by the Sub-Adviser to be of comparable quality.

The Fund may invest in cash or cash equivalent instruments. Because the Fund will use derivatives to gain exposure to commodities and because derivatives may not require the Fund to deposit the full notional amount of the investment, the Fund may invest a significant amount of its assets in money market mutual funds or other fixed income instruments, as described above. The Fund's use of commodity-linked derivative instruments to obtain long and short exposure to the commodity markets may result in leverage, which amplifies the risks that are associated with the commodities underlying the derivative instruments. The Fund's aggregate investment exposure, as measured on a notional basis, may be greater than 100% of the Fund's total assets from time to time.

Although the Fund invests primarily in domestic securities and other instruments, it may also invest in foreign securities and other instruments.

In an effort to achieve its goal, the Fund may engage in active and frequent trading.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Asset-based securities risk*
- *Call risk*
- *Clearance and settlement risk*
- *Commodities regulatory risk*
- *Commodity risk*
- *Commodity-linked derivatives risk*
- *Counterparty risk*
- *Credit risk*
- *Currency risk*
- *Derivatives risk*
- *Extension risk*
- *Fixed-income risk*
- *Foreign securities risk*
- *Forward and futures contract risk*
- *Interest rate risk*
- *Investment in other investment companies risk*
- *Investment strategy risk*
- *Issuer risk*
- *Leverage risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market direction risk*
- *Market risk*
- *Model risk*
- *Mortgage-related and other asset-backed securities risk*
- *Prepayment risk*
- *Sector risk*
- *Short sales risk*
- *U.S. Government securities risk*
- *Volatility risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment in money market funds risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Neuberger Berman Investment Advisers LLC (“NBIA”), located at 1290 Avenue of the Americas, New York, New York 10104. NBIA is responsible for choosing the Fund's investments and handling its day-to-day business as required by the investment advisory agreement between the Adviser, JNAM, and NBIA; however, certain services may be performed by affiliates of NBIA. NBIA carries out its duties subject to the policies established by the Board of Trustees. Together, NBIA and its affiliates (collectively, “Neuberger Berman”) continue an asset management history that began in 1939.

The portfolio managers of the Sub-Adviser responsible for the oversight of the Fund are Messrs. Hakan Kaya, Michael Foster, and David Yi Wan. Information regarding the portfolio managers of the Fund is set forth below.

Hakan Kaya, PhD, Managing Director, joined the firm in 2008. Dr. Hakan is a Senior Portfolio Manager on the Quantitative and Multi-Asset Class (“QMAC”) team responsible for Global Risk Balanced Portfolios and Commodities. He contributes to asset allocation research with a focus on risk management and has a record of publishing research in both refereed journals and white papers on timely investment issues. Prior to joining the firm, he was a consultant with Mount Lucas Management Corporation where he developed weather risk and statistical relative value models for commodities investment. Dr. Kaya received BS degrees summa cum laude in Mathematics and Industrial Engineering from Koc University in Istanbul, Turkey and holds a PhD in Operations Research & Financial Engineering from Princeton University.

David Yi Wan, Senior Vice President, joined the firm in 2001. Mr. Wan is a Portfolio Manager on the Quantitative and Multi-Asset Class (“QMAC”) team responsible for Global Risk Balanced Portfolios and Commodities. He focuses on research and development of asset allocation and commodities investment strategies. In addition, he is responsible for the day-to-day portfolio management and implementation of these strategies. Prior to joining the firm, Mr. Wan was an Assistant Vice President with the Information Management department at Lehman Brothers. Previously, he was deputy director of the Science & Technology Office with Chongqing Cheng-Yu Expressway Company Limited in China. David received a BS in Engineering Mechanics from Tongji University (China), an MS in Computer Science from the City College of New York and an MBA from New York University Stern Business School.

Michael Foster is a Managing Director of the Manager. He has been a Portfolio Manager of the Fund since May 2021. Mr. Foster has been a portfolio manager at the firm since 2004.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Neuberger Berman Gold Plus Strategy Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek total return.

Principal Investment Strategies. Under normal conditions, the Fund will primarily invest in gold futures contracts that provide investment exposure to gold and in fixed-income instruments. The Fund may also invest in exchange-traded funds (“ETFs”) that provide investment exposure to physical gold. The Fund concentrates its investments in the metals and mining industry and therefore invests 25% or more of its total assets in such industry. The Fund may also invest in derivatives and ETFs that provide investment exposure to precious metals, including, but not limited to, silver, platinum, and palladium.

Because gold is a commodity, the Fund seeks to gain long exposure to the commodity markets by investing, directly or indirectly, in futures contracts on individual commodities and other commodity-linked derivative instruments. The performance of these commodity-linked derivative instruments is expected to correspond to the performance of the commodity underlying the derivative instrument, without requiring the Fund to invest directly in commodities. For purposes of calculating the Fund’s exposure to gold, the Fund’s investments in gold futures contracts are based on the notional value.

Fund assets not invested in commodity-linked derivative instruments, other commodity-related instruments or exchange-traded funds that provide investment exposure to commodities will be invested in fixed income securities, cash or cash equivalent instruments, or money market mutual funds.

The Fund may hold commodity-linked derivative instruments that provide leveraged exposure to commodities so that the Fund’s investment exposure to commodities (through their use of commodity-linked derivative instruments) may, at times, equal or slightly exceed the Fund’s net assets.

In managing the Fund’s commodity investments, the Fund’s sub-adviser, Neuberger Berman Investment Advisers LLC (the “Sub-Adviser”) primarily seeks exposure to the gold commodity. The Sub-Adviser will also incorporate a marginal mix of investments with exposures to precious metal commodities and cash-settled bitcoin futures traded on the Chicago Mercantile Exchange (“CME”) to seek to diversify its investment exposure. To gain exposure to gold and other precious metals commodities, the Fund will invest in futures contracts that are typically within 1 year to expiration. To gain exposure to bitcoin, the Fund may invest in cash-settled futures contracts traded on the CME that are typically within 1 year to expiration.

The Fund may invest up to 5% of its total assets in cash-settled bitcoin futures traded on the CME, which is currently the only futures exchange registered with the Commodity Futures Trading Commission (“CFTC”) with respect to bitcoin futures. Bitcoin is a digital currency, which is a means of payment that exists in a purely electronic form and is accounted for and transferred using online systems. Due to market appreciation or other fluctuations in the Fund’s net asset level, the Fund’s investments in cash-settled bitcoin futures traded on the CME will be rebalanced on a monthly basis. **The Fund will not directly invest in bitcoin or other cryptocurrencies.**

The Fund’s fixed income investments will be mainly in investment grade fixed income securities and are intended to provide liquidity and limit downside risk to capital and may serve as collateral for the Fund’s derivative instruments. These may include fixed income securities issued by the U.S. Government and its agencies and instrumentalities, bank certificates of deposit, mortgage-backed securities, asset-backed securities, and corporate securities. The Fund considers fixed income securities to be investment grade if, at the time of investment, they are rated within the four highest categories by at least one independent credit rating agency or, if unrated, are determined by the Sub-Adviser to be of comparable quality.

The Fund may invest in cash or cash equivalent instruments. Because the Fund will use derivatives to gain exposure to gold and other precious metals, as well as cash-settled bitcoin futures traded on the CME, and because derivatives may not require the Fund to deposit the full notional amount of the investment, the Fund may invest a significant amount of its assets in money market mutual funds or other fixed income instruments, as described above. The Fund’s use of commodity-linked derivative instruments to obtain long exposure to the commodity markets may result in leverage, which amplifies the risks that are associated with the commodities underlying the derivative instruments. The Fund’s aggregate investment exposure, as measured on a notional basis, may be greater than 100% of the Fund’s total assets from time to time.

In an effort to achieve its goal, the Fund may engage in active and frequent trading.

The Fund is a “non-diversified” fund, as defined in the Investment Company Act of 1940, as amended (the “1940 Act”), and may invest more of its assets in fewer issuers than “diversified” mutual funds.

In managing the Fund’s commodity investments, the Sub-Adviser seeks to identify investment opportunities using quantitative investment models and fundamental analyses with an emphasis on risk management in an attempt to take advantage of both short-term and long-term opportunities in commodity markets.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Bitcoin capacity risk*
- *Bitcoin futures risk*
- *Call risk*
- *Commodities regulatory risk*
- *Commodity risk*
- *Commodity-linked derivatives risk*
- *Concentration risk*
- *Counterparty risk*
- *Credit risk*
- *Currency risk*
- *Cryptocurrency risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Extension risk*
- *Fixed-income risk*
- *Forward and futures contract risk*
- *Interest rate risk*
- *Investment in money market funds risk*
- *Investment in other investment companies risk*
- *Investment strategy risk*
- *Issuer risk*
- *Leverage risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market risk*
- *Model risk*
- *Mortgage-related and other asset-backed securities risk*
- *Non-diversification risk*
- *Precious metals-related securities risk*
- *Prepayment risk*
- *U.S. Government securities risk*
- *Volatility risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Neuberger Berman Investment Advisers LLC (“NBIA”), located at 1290 Avenue of the Americas, New York, New York 10104. NBIA is responsible for choosing the Fund's investments and handling its day-to-day business as required by the investment advisory agreement between the Adviser, JNAM, and NBIA; however, certain services may be performed by affiliates of NBIA. NBIA carries out its duties subject to the policies established by the Board of Trustees. Together, NBIA and its affiliates (collectively, “Neuberger Berman”) continue an asset management history that began in 1939.

The portfolio managers of the Sub-Adviser responsible for the oversight of the Fund are Messrs. Hakan Kaya, David Yi Wan, and Michael Foster. Information regarding the portfolio managers of the Fund is set forth below.

Hakan Kaya, PhD, Managing Director, joined the firm in 2008. Dr. Hakan is a Senior Portfolio Manager on the Quantitative and Multi-Asset Class (“QMAC”) team responsible for Global Risk Balanced Portfolios and Commodities. He contributes to asset allocation research with a focus on risk management and has a record of publishing research in both refereed journals and white papers on timely investment issues. Prior to joining the firm, he was a consultant with Mount Lucas Management Corporation where he developed weather risk and statistical relative value models for commodities investment. Dr. Kaya received BS degrees summa cum laude in Mathematics and Industrial Engineering from Koc University in Istanbul, Turkey and holds a PhD in Operations Research & Financial Engineering from Princeton University.

David Yi Wan, Senior Vice President, joined the firm in 2001. Mr. Wan is a Portfolio Manager on the Quantitative and Multi-Asset Class (“QMAC”) team responsible for Global Risk Balanced Portfolios and Commodities. He focuses on research and development of asset allocation and commodities investment strategies. In addition, he is responsible for the day-to-day portfolio management and implementation of these strategies. Prior to joining the firm, Mr. Wan was an Assistant Vice President with the Information Management department at Lehman Brothers. Previously, he was deputy director of the Science & Technology Office with Chongqing Cheng-Yu Expressway Company Limited in China. David received a BS in Engineering Mechanics from Tongji University (China), an MS in Computer Science from the City College of New York and an MBA from New York University Stern Business School.

Michael Foster is a Managing Director of the Manager. He has been a Portfolio Manager of the Fund since April 2022. Mr. Foster has been a portfolio manager at the firm since 2004.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Neuberger Berman Strategic Income Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek high current income with a secondary objective of long-term capital appreciation.

Principal Investment Strategies. To pursue its investment objective, the Fund invests primarily in a diversified mix of fixed rate and floating rate debt securities. The Fund's investments may include securities issued by domestic and foreign governments, corporate entities, and trust structures. The Fund may invest in a broad array of securities, including: securities issued or guaranteed as to principal or interest by the U.S. Government or any of its agencies or instrumentalities; corporate bonds; commercial paper; currencies and non-U.S. securities; mortgage-backed securities and other asset-backed securities; and loans. Securities in which the Fund may invest may be structured as fixed rate debt; floating rate debt; and debt that may not pay interest at the time of issuance.

The Fund may invest in debt securities across the credit spectrum, including investment grade securities, below investment grade securities ("high yield bonds," commonly called "junk bonds") and unrated securities. The Fund may invest without limit in below investment grade securities. The Fund considers debt securities to be below investment grade if, at the time of investment, they are rated below the four highest categories by at least one independent credit rating agency or, if unrated, are deemed by the Neuberger Berman Investment Advisers LLC ("NBIA" or "Sub-Adviser") to be of comparable quality. The Fund does not normally invest in or continue to hold securities that are in default or have defaulted with respect to the payment of interest or repayment of principal, but may do so depending on market conditions. The Fund may invest in securities whose ratings imply an imminent risk of default with respect to such payments.

The Fund may also invest without limit in derivative instruments as a means of hedging risk and/or for investment purposes, which may include altering the Fund's exposure to interest rates, sectors and individual issuers. These derivative instruments may include, but are not limited to, futures, forward foreign currency contracts, and swaps, such as total return swaps, credit default swaps and interest rate swaps.

The Fund may also invest without limit in foreign securities, but normally will not invest more than 50% of its total assets at the time of investment in obligations of issuers in emerging market countries. The Fund considers emerging market countries to be countries included in the JPMorgan Emerging Markets Bond Index - Global Diversified, the JPMorgan Corporate Emerging Markets Bond Index - Diversified, the JPMorgan Emerging Local Markets Index or the JPMorgan Government Bond Index - Emerging Markets Global Diversified, as well as those countries which are not defined as a High Income Organization for Economic Cooperation and Development (OECD) member country by the World Bank.

Additionally, the Fund may invest in convertible securities and preferred securities. The Fund may also engage in when-issued and delayed delivery transactions (such as to-be-announced mortgage-backed securities), which involve a commitment by the Fund to purchase securities that will be issued at a later date. The Fund may also hold short-term securities including cash, cash equivalents and other debt obligations.

The Fund may invest in debt securities of any maturity and does not have a target average duration.

In an effort to achieve its investment objective, the Fund may engage in active and frequent trading.

The Fund has the ability to invest in other investment companies, such as exchange-traded funds, money market funds, unit investment trusts, and open-end and closed-end funds, including affiliated investment companies.

Investment Philosophy and Process. The Sub-Adviser's investment philosophy is rooted in the belief that positive results can be achieved through a consistently applied, risk-managed approach to portfolio management that leverages the unique strengths of its proprietary fundamental research capabilities, decision-making frameworks, and quantitative risk management tools. The Sub-Adviser employs an integrated investment process in managing the Fund.

- Portfolio Strategy: The Global Investment Strategy Team, which consists of the portfolio management team and other senior investment professionals, establishes the investment profile for the Fund, which its monitors on an ongoing basis, including exposures to sectors (such as government, structured debt, credit, etc.) and duration/yield curve positioning, utilizing internally generated data that are produced by specialty sector investment teams in conjunction with asset allocation tools.
- Strategy Implementation: Once the Global Investment Strategy Team establishes the investment profile for the Fund, the research teams and the portfolio management team determine industry/sub-sector weightings and make securities selections within the types of securities that the Fund can purchase, such as investment grade securities, below investment grade securities, emerging market securities and non-U.S. dollar denominated securities.

When assessing the worth of a particular security, the team utilizes internally generated research and proprietary quantitatively driven tools and frameworks to a) establish an internal outlook, b) evaluate the market's outlook as it is reflected in asset prices, and c) contrast the two. The goal is to identify and evaluate investment opportunities that other may have missed.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Call risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Credit risk*
- *Currency risk*
- *Currency transaction risk*
- *Debt securities ratings risk*
- *Derivatives risk*
- *Distressed securities risk*
- *Emerging markets and less developed countries risk*
- *Exchange-traded funds investing risk*
- *Extension risk*
- *Fixed-income risk*
- *Foreign securities risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Interest rate risk*
- *Investment in money market funds risk*
- *Investment in other investment companies risk*
- *Issuer risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Mortgage-related and other asset-backed securities risk*
- *Portfolio turnover risk*
- *Prepayment risk*
- *Sector risk*
- *Settlement risk*
- *Sovereign debt risk*
- *Structured investments risk*
- *TIPS and inflation-linked bonds risk*
- *U.S. Government securities risk*
- *When-issued and delayed delivery securities and forward commitments risk*
- *LIBOR replacement risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Inflation-indexed securities risk*
- *Investment strategy risk*
- *Latin America concentration risk*

- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Senior loans risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Neuberger Berman Investment Advisers LLC (“NBIA”), located at 1290 Avenue of the Americas, New York, New York 10104. NBIA is responsible for choosing the Fund's investments and handling its day-to-day business as required by the investment advisory agreement between the Adviser, JNAM, and NBIA; however, certain services may be performed by affiliates of NBIA. NBIA carries out its duties subject to the policies established by the Board of Trustees. Together, NBIA and its affiliates (collectively, “Neuberger Berman”) continue an asset management history that began in 1939.

The Fund is managed by a team consisting of the following Portfolio Managers:

Thanos Bardas, PhD, Managing Director, joined the firm in 1998. Mr. Bardas is the Global Co-Head of Investment Grade and serves as a Senior Portfolio Manager on Global Investment Grade and Multi-Sector Fixed income strategies. He sits on the firm's Asset Allocation Committee and Fixed Income's Investment Strategy Committee, and is a member of the Fixed Income Multi-Sector Group. Mr. Bardas also leads the Global Rates team in determining rates exposure across various portfolio strategies and oversees both inflation and LDI investments. He graduated with honors from Aristotle University, Greece, earned his MS from the University of Crete, Greece, and holds a PhD in Theoretical Physics from State University of New York at Stony Brook. He holds FINRA Series 7 and Series 66 licenses.

David M. Brown, CFA, Managing Director, rejoined the firm in 2003. Dave is Global Co-Head of Investment Grade and acts as Senior Portfolio Manager on both Global Investment Grade and Multi-Sector Fixed Income strategies. He is a member of the Fixed Income Investment Strategy Committee and the Fixed Income Multi-Sector Group. Mr. Brown also leads the Investment Grade Credit team in determining credit exposures across both Global Investment Grade and Multi-Sector Fixed Income strategies. Mr. Brown initially joined the firm in 1991 after graduating from the University of Notre Dame with a BA in Government and subsequently received his MBA in Finance from Northwestern University. Prior to his return, he was a senior credit analyst at Zurich Scudder Investments and later a credit analyst and portfolio manager at Deerfield Capital. Mr. Brown has been awarded the Chartered Financial Analyst designation.

Ashok K. Bhatia, CFA, Managing Director, joined the firm in 2017. Mr. Bhatia is the Deputy Chief Investment Officer for Fixed Income. He is a lead portfolio manager on multi-sector fixed income strategies and is also a member of the Multi-Asset Class portfolio management team, the Fixed Income Investment Strategy Committee and the firm's Asset Allocation Committee. Previously, Mr. Bhatia has held senior investment and leadership positions in several asset management firms and hedge funds, including Wells Fargo Asset Management, Balyasny Asset Management, and Stark Investments. He has had investment responsibilities across global fixed income and currency markets. Mr. Bhatia began his career in 1993 as an investment analyst at Morgan Stanley. He received a BA with high honors in Economics from the University of Michigan, Ann Arbor, and an MBA with high honors from the University of Chicago. He has been awarded the Chartered Financial Analyst designation.

Bradley C. Tank, Managing Director, joined the firm in 2002 and is the Chief Investment Officer and Global Head of Fixed Income. He is a member of Neuberger Berman's Operating, Investment Risk, Asset Allocation Committees and Fixed Income's Investment Strategy Committee, and leads the Fixed Income Multi-Sector Group. From inception in 2008 through 2015, Mr. Tank was also Chief Investment Officer of Neuberger Berman's Multi-Asset Class Investment business and remains an important member of that team along with the firm's other CIOs. From 1990 to 2002, Mr. Tank was director of fixed income for Strong Capital Management in Wisconsin. He was also a member of the Office of the CEO and headed institutional and intermediary distribution. In 1997, he was named “Runner Up” for Morningstar Mutual Fund Manager of the Year. From 1982 to 1990, he was a vice president at Salomon Brothers in the government, mortgage and financial institutions areas. Mr. Tank earned a BBA and an MBA from the University of Wisconsin.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Newton Equity Income Fund
(formerly, JNL/Mellon Equity Income Fund)

Class A
Class I

Investment Objective. The investment objective of the Fund is to seek total return (consisting of capital appreciation and income).

Principal Investment Strategies. Under normal market conditions the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings for made investment purposes) in equity securities. The Fund seeks to focus on dividend-paying stocks and other investments and investment techniques that provide income, including covered call strategies. Newton Investment Management North America, LLC, the Fund's sub-adviser (the "Sub-Adviser"), chooses stocks through a disciplined investment process that combines computer modeling techniques, fundamental analysis, and risk management. The Fund will emphasize those stocks with value characteristics, although it may also purchase growth stocks. The Sub-Adviser's investment process is designed to provide investors with investment exposure to sector weightings and risk characteristics generally similar to those of the S&P 500 Value Index. The S&P 500 Value Index is a market-capitalization-weighted index developed by Standard and Poor's consisting of those stocks within the S&P 500 Index that exhibit strong value characteristics. The Fund's equity investments may include common stocks, preferred stocks, convertible securities, and American Depository Receipts ("ADRs"), including those purchased in initial public offerings. The Fund may also invest in fixed income securities and money market instruments.

In selecting securities, the Sub-Adviser uses a proprietary computer model to identify and rank stocks within an industry or sector, based on several characteristics, including (i) value, or how a stock is priced relative to its perceived intrinsic worth; (ii) growth, in this case the sustainability or growth of earnings; and (iii) financial profile, which measures the financial health of the company.

Next, based on fundamental analysis, the Sub-Adviser generally selects the most attractive of the higher ranked securities, drawing on a variety of sources, including internal as well as Wall Street research, and company management.

Finally, the Sub-Adviser manages risk by diversifying across companies and industries, seeking to limit the potential adverse impact from any one stock or industry. The Fund at times may overweight certain sectors in attempting to achieve higher yields.

The Fund may, but is not required to, use derivatives, such as options, futures, and options on futures (including those relating to stocks, indices, and interest rates), as a substitute for investing directly in an underlying asset, to increase returns or income, or as a part of a hedging strategy.

The Fund may invest in securities issued by companies in the financial services sector.

The Fund primarily invests in securities of U.S. companies and does not currently intend to invest more than 15% in foreign securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Equity securities risk*
- *Investment style risk*
- *Stock risk*
- *Company risk*
- *Accounting risk*
- *Financial services risk*
- *Portfolio turnover risk*
- *Depository receipts risk*
- *Convertible securities risk*
- *Options risk*
- *Derivatives risk*
- *Issuer risk*
- *Investments in IPOs risk*
- *Managed portfolio risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Banking industry investment risk*
- *Cybersecurity risk*
- *Cyclical opportunities risk*
- *Expense risk*
- *Interest rate risk*
- *Investment strategy risk*
- *Large-capitalization investing risk*
- *Liquidity risk*
- *Mid-capitalization investing risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Newton Investment Management North America, LLC (“Newton”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Newton is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Newton supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund’s investment securities. Newton utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The teams adjust holdings in the portfolio as they deem appropriate in the pursuit of the Fund’s investment objectives.

The portfolio manager of the Sub-Adviser responsible for the oversight of the Fund is Mr. John C. Bailer, CFA. Information regarding the portfolio manager of the Fund is set forth below.

Mr. Bailer is Deputy Head of Equity Income team and is the lead portfolio manager for dividend-focused Large Cap Value strategies. He is responsible for creating the Income Stock strategy to meet demand from clients seeking attractively valued higher dividend income while not sacrificing dividend growth. He is also the lead portfolio manager for the Equity Income strategy, which emphasizes dividend growth stocks, and a senior research analyst on the Dynamic Large Cap Value strategy.

Mr. Bailer joined Newton in September 2021, following the integration of Mellon Investments Corporation’s equity and multi-asset capabilities into the Newton Investment Management Group. Before joining Newton, he was a senior portfolio manager and analyst at Mellon Investments Corporation and The Boston Company Asset Management (both BNY Mellon group companies). He has managed dividend strategies for the firm since 2005. Previously, he was Chair of Mellon Investment Corporation’s Proxy & Governance committee.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL/PIMCO Income Fund

Class A

Class I

Investment Objective. The primary investment objective of the Fund is to maximize current income. Long-term capital appreciation is a secondary objective.

Principal Investment Strategies. The Fund seeks to achieve its investment objectives by investing, under normal circumstances, at least 65% of its total assets in a multi-sector portfolio of Fixed-Income Instruments of varying maturities, which may be represented by forwards or derivatives such as options, futures contracts or swap agreements. “Fixed-Income Instruments” include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities. The Fund will seek to maintain a high and consistent level of dividend income by investing in a broad array of fixed-income sectors and utilizing income efficient implementation strategies. The capital appreciation sought by the Fund generally arises from decreases in interest rates or improving credit fundamentals for a particular sector or security.

The Fund will generally allocate its assets among several investment sectors, without limitation, which may include: (i) high yield securities (“junk bonds”) and investment grade corporate bonds of issuers located in the United States and non-U.S. countries, including emerging market countries; (ii) fixed-income securities issued by U.S. and non-U.S. governments (including emerging market governments), their agencies and instrumentalities; (iii) mortgage-related and other asset backed securities; and (iv) foreign currencies, including those of emerging market countries. However, the Fund is not required to gain exposure to any one investment sector, and the Fund’s exposure to any one investment sector will vary over time. The average portfolio duration of this Fund normally varies from zero to eight years based on Pacific Investment Management Company LLC’s (“PIMCO”) forecast for interest rates. Duration is a measure used to determine the sensitivity of a security’s price to changes in interest rates. The longer a security’s duration, the more sensitive it will be to changes in interest rates.

The Fund may invest up to 50% of its total assets in high yield securities rated below investment grade by Moody’s Investors Service, Inc. (“Moody’s”), or equivalently rated by S&P Global Ratings (“S&P”) or Fitch, Inc. (“Fitch”), or if unrated, determined by PIMCO to be of comparable quality (except such 50% limitation shall not apply to the Fund’s investments in mortgage- and asset-backed securities). In addition, the Fund may invest, without limitation, in securities denominated in foreign currencies. The Fund may invest up to 20% of its total assets in securities and instruments that are economically tied to emerging market countries (this limitation does not apply to investment grade sovereign debt denominated in the local currency with less than 1 year remaining to maturity, which means the Fund may invest in such instruments without limitation subject to any applicable legal or regulatory limitation). The Fund will normally limit its foreign currency exposure (from non-U.S. dollar denominated securities or currencies) to 10% of its total assets.

The Fund may invest, without limitation, in derivative instruments, such as options, futures contracts or swap agreements, or in mortgage- or asset backed securities, subject to applicable law and any other restrictions described in the Fund’s prospectus or Statement of Additional Information.

The Fund may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis and may engage in short sales. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buy backs or dollar rolls). The Fund may also invest up to 10% of its total assets in preferred securities.

Consistent with the Fund’s investment policies, the Fund may invest in “Fixed-Income Instruments,” which as used in this Prospectus includes:

- Securities issued or guaranteed by the U.S. Government, its agencies or government-sponsored enterprises (“U.S. Government Securities”);
- Corporate debt securities of U.S. and non-U.S. issuers, including convertible securities and corporate commercial paper;
- Mortgage-backed and other asset-backed securities;
- Inflation-indexed bonds issued both by governments and corporations;
- Structured notes, including hybrid or “indexed” securities, event-linked bonds;
- Bank capital and trust preferred securities;
- Loan participations and assignments;
- Delayed funding loans and revolving credit facilities;
- Bank certificates of deposit, fixed time deposits and bankers’ acceptances;
- Repurchase agreements on Fixed-Income Instruments and reverse repurchase agreements on Fixed-Income Instruments;
- Debt securities issued by states or local governments and their agencies, authorities and other government-sponsored enterprises;
- Obligations of non-U.S. governments or their subdivisions, agencies and government-sponsored enterprises; and
- Obligations of international agencies or supranational entities.

The Fund may invest in derivatives based on Fixed-Income Instruments.

Mortgage-related securities include mortgage pass-through securities, collateralized mortgage obligations (“CMOs”), commercial mortgage backed securities, mortgage dollar rolls, CMO residuals, stripped mortgage backed securities (“SMBSS”) and other securities that directly or indirectly represent a participation in, or are secured by and payable from, mortgage loans on real property.

The value of some mortgage- or asset-backed securities may be particularly sensitive to changes in prevailing interest rates. Early repayment of principal on some mortgage-related securities may expose a Fund to a lower rate of return upon reinvestment of principal. When interest rates rise, the value of a mortgage-related security generally will decline; however, when interest rates are declining, the value of mortgage-related securities with prepayment features may not increase as much as other fixed income securities. The rate of prepayments on underlying mortgages will affect the price and volatility of a mortgage-related security, and may shorten or extend the effective maturity of the security beyond what was anticipated at the time of purchase. If unanticipated rates of prepayment on underlying mortgages increase the effective maturity of a mortgage-related security, the volatility of the security can be expected to increase. The value of these securities may fluctuate in response to the market’s perception of the creditworthiness of the issuers.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Call risk*
- *Credit risk*
- *Currency risk*
- *Derivatives risk*
- *Emerging markets and less developed countries risk*
- *Equity securities risk*
- *Foreign securities risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Interest rate risk*
- *Issuer risk*
- *Leverage risk*
- *Managed portfolio risk*
- *Market risk*
- *Mortgage-related and other asset-backed securities risk*
- *Portfolio turnover risk*
- *Short sales risk*
- *Sovereign debt risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Expense risk*
- *Extension risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Prepayment risk*
- *Redemption risk*
- *Regulatory investment limits risk*

- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Pacific Investment Management Company LLC (“PIMCO”), 650 Newport Center Drive, Newport Beach, California 92660. PIMCO is a majority owned subsidiary of Allianz Asset Management with minority interests held by certain of its current and former officers, by Allianz Asset Management of America LLC, and PIMCO Partners, LLC, a California limited liability company. PIMCO Partners, LLC is owned by certain current and former officers of PIMCO. Through various holding company structures, Allianz Asset Management is majority owned by Allianz SE.

Alfred T. Murata is a managing director and portfolio manager in the Newport Beach office, managing income-oriented, multi-sector credit, opportunistic and securitized strategies. Morningstar named him Fixed-Income Fund Manager of the Year (U.S.) for 2013. Prior to joining PIMCO in 2001, he researched and implemented exotic equity and interest rate derivatives at Nikko Financial Technologies. He has 22 years of investment experience and holds a Ph.D. in engineering-economic systems and operations research from Stanford University. He also earned a J.D. from Stanford Law School and is a member of the State Bar of California.

Daniel J. Ivascyn is Group Chief Investment Officer and a managing director in the Newport Beach office. He is lead portfolio manager for the firm's income strategies and credit hedge fund and mortgage opportunistic strategies. He is a member of PIMCO's Executive Committee and a member of the Investment Committee. Morningstar named him Fixed-Income Fund Manager of the Year (U.S.) for 2013. Prior to joining PIMCO in 1998, he worked at Bear Stearns in the asset-backed securities group, as well as T. Rowe Price and Fidelity Investments. He has 30 years of investment experience and holds an MBA in analytic finance from the University of Chicago Graduate School of Business and a bachelor's degree in economics from Occidental College.

Josh Anderson is a managing director and portfolio manager on the income team in the Newport Beach office. He also leads the global ABS (asset-backed securities) portfolio management team and supports the firm's opportunistic strategies. Previously at PIMCO, he oversaw PIMCO's European opportunistic investments across public and private mortgage, real estate and specialty finance markets, and earlier he was a structured product portfolio manager in the Newport Beach office. Prior to joining PIMCO in 2003, he was an analyst at Merrill Lynch covering both the residential ABS and collateralized debt obligation sectors and was ranked as one of the top analysts by Institutional Investor magazine. He was previously a portfolio manager at Merrill Lynch Investment Managers. He has 26 years of investment experience and holds an MBA from the State University of New York, Buffalo.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/PIMCO Investment Grade Credit Bond Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek maximum total return, consistent with preservation of capital and prudent investment management.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of investment grade fixed income securities of varying maturities, which may be represented by forwards, repurchase agreements, reverse repurchase agreements or loan participations and assignments or derivatives such as options, futures contracts or swap agreements. Assets not invested in investment grade corporate fixed income securities may be invested in other types of Fixed Income Instruments. "Fixed Income Instruments" include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public-or private-sector entities. The average portfolio duration of the Fund is anticipated to vary within two years (plus or minus) of the duration of the Bloomberg U.S. Credit Index, as calculated by Pacific Investment Management Company LLC, the Fund's sub-adviser (the "Sub-Adviser"). Duration is a measure of the expected life of a fixed income security that is used to determine the sensitivity of a security's price to changes in interest rates.

The Fund invests primarily in investment grade debt securities, but may invest up to 15% of its total assets in high yield securities ("junk bonds"), as rated by Moody's Investors Service, Inc. ("Moody's"), Standard and Poor's Ratings Services ("S&P") or Fitch, Inc. ("Fitch"), or, if unrated, determined by the Sub-Adviser to be of comparable quality. The Fund may invest up to 30% of its total assets in securities denominated in foreign currencies, and may invest beyond this limit in U.S. dollar-denominated securities of foreign issuers. The Fund may invest up to 30% of its total assets in securities and instruments that are economically tied to emerging market countries. The Fund will normally limit its foreign currency exposure (from non-U.S. dollar-denominated securities or currencies) to 20% of its total assets.

The Fund may invest, without limitation, in derivative instruments, such as options, futures contracts or swap agreements, or in mortgage- or asset-backed securities, subject to applicable law and any other restrictions described in the Fund's Prospectus or SAI. The Fund may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis and may engage in short sales. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buy backs or dollar rolls). The "total return" sought by the Fund consists of income earned on the Fund's investments, plus capital appreciation, if any, which generally arises from decreases in interest rates, foreign currency appreciation, or improving credit fundamentals for a particular sector or security. The Fund may also invest up to 10% of its total assets in preferred securities.

Consistent with the Fund's investment policies, the Fund may invest in "Fixed Income Instruments," which as used in this Prospectus includes:

- Securities issued or guaranteed by the U.S. Government, its agencies or government-sponsored enterprises ("U.S. Government Securities");
- Corporate debt securities of U.S. and non-U.S. issuers, including convertible securities and corporate commercial paper;
- Mortgage-backed and other asset-backed securities;
- Inflation-indexed bonds issued both by governments and corporations;
- Structured notes, including hybrid or "indexed" securities, event-linked bonds;
- Bank capital and trust preferred securities;
- Loan participations and assignments;
- Delayed funding loans and revolving credit facilities;
- Bank certificates of deposit, fixed time deposits and bankers' acceptances;
- Repurchase agreements on Fixed Income Instruments and reverse repurchase agreements on Fixed Income Instruments;
- Debt securities issued by states or local governments and their agencies, authorities and other government-sponsored enterprises;
- Obligations of non-U.S. Governments or their subdivisions, agencies and government-sponsored enterprises; and
- Obligations of international agencies or supranational entities.

Securities issued by U.S. Government agencies or government-sponsored enterprises may not be guaranteed by the U.S. Treasury.

The Fund may invest in derivatives based on Fixed Income Instruments such as options, futures contracts or swap agreements, or in mortgage- or asset-backed, subject to applicable law and any other restrictions described in the Fund's Prospectus and SAI.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its

investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Call risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Counterparty risk*
- *Credit risk*
- *Currency risk*
- *Debt securities ratings risk*
- *Derivatives risk*
- *Emerging markets and less developed countries risk*
- *Equity securities risk*
- *Extension risk*
- *Fixed-income risk*
- *Foreign securities risk*
- *Forward and futures contract risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Interest rate risk*
- *Investment strategy risk*
- *Issuer risk*
- *Leverage risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market risk*
- *Mortgage-related and other asset-backed securities risk*
- *Options risk*
- *Portfolio turnover risk*
- *Preferred stock risk*
- *Prepayment risk*
- *Repurchase agreements, purchase and sale contracts risk*
- *Reverse repurchase agreements risk*
- *Settlement risk*
- *Short sales risk*
- *Sovereign debt risk*
- *Structured investments risk*
- *Swaps risk*
- *When-issued and delayed delivery securities and forward commitments risk*
- *LIBOR replacement risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Pacific Investment Management Company LLC (“PIMCO”), 650 Newport Center Drive, Newport Beach, California 92660. PIMCO is a majority owned subsidiary of Allianz Asset Management with minority interests held by certain of its current and former officers, by Allianz Asset Management of America LLC, and PIMCO Partners, LLC, a California limited liability company. PIMCO Partners, LLC is owned by certain current and former officers of PIMCO. Through various holding company structures, Allianz Asset Management is majority owned by Allianz SE.

Amit Arora is an executive vice president and portfolio manager in the Newport Beach office and a member of the credit and liability-driven portfolio management teams. He manages credit portfolios focusing on investment grade and long credit. He was previously a senior member of PIMCO's global risk management team. Prior to joining PIMCO in 2009, he was an executive director, responsible for credit hybrids and exotics trading at J.P. Morgan. Mr. Arora was previously with Bear Stearns as a managing director on the structured credit trading desk, responsible for credit derivative products in investment grade and high yield credits. He has also worked on the foreign exchange Treasury desk at Citibank. He has 24 years of investment experience and holds an MBA from NYU Stern School of Business and a bachelor's degree in mechanical engineering from the Indian Institute of Technology (IIT Bombay). He is a Certified Financial Risk Manager (FRM).

Mohit Mittal is a managing director and portfolio manager in the Newport Beach office. He manages multi-sector portfolios and is a senior member of LDI, Total Return, Dynamic Bond, and Credit portfolio management teams. He also serves as executive sponsor and steering committee member for PIMCO Multicultural. Morningstar named him winner of the 2020 U.S. Morningstar Award for Investing Excellence in the Rising Talent category. He is a member of the Treasury Borrowing Advisory Committee (TBAC), which is an advisory committee governed by federal statute that meets quarterly with the Treasury Department. Mr. Mittal also serves on the board of Orangewood Foundation. He joined PIMCO in 2007 and holds an MBA from the Wharton School of the University of Pennsylvania and an undergraduate degree in computer science from Indian Institute of Technology (IIT) in Delhi, India.

Mark R. Kiesel is CIO Global Credit and a managing director in the Newport Beach office. He is a member of the Investment Committee, a generalist portfolio manager and the global head of corporate bond portfolio management, with oversight for the firm's investment grade, high yield, bank loan, municipal and insurance business as well as credit research and PIMCO's actively managed equity business. Morningstar named him Fixed-Income Fund Manager of the Year in 2012 and a finalist in both 2010 and 2017. He has written extensively on the topic of global credit markets, founded the firm's Global Credit Perspectives publication and regularly appears in the financial media. He joined PIMCO in 1996 and previously served as PIMCO's global head of investment grade corporate bonds and as a senior credit analyst. He has 29 years of investment experience and holds an MBA from the University of Chicago's Graduate School of Business. He received his undergraduate degree from the University of Michigan.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/PIMCO Real Return Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek maximum real return, consistent with preservation of real capital and prudent investment management.

Principal Investment Strategies. The Fund seeks its investment objective by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in inflation-indexed bonds of varying maturities issued by the U.S. and non-U.S. governments, their agencies or instrumentalities, and corporations, which may be represented by forwards or derivatives such as options, futures contracts, or swap agreements. Assets not invested in inflation-indexed bonds may be invested in other types of Fixed-income Instruments. “Fixed-income Instruments” include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities. Inflation-indexed bonds are fixed-income securities that are structured to provide protection against inflation. The value of the bond's principal or the interest income paid on the bond is adjusted to track changes in an official inflation measure. The U.S. Treasury uses the Consumer Price Index for All Urban Consumers (“CPI-U”) as the inflation measure. Inflation-indexed bonds issued by a foreign government are generally adjusted to reflect a comparable inflation index, calculated by that government. “Real return” equals total return less the estimated rate of inflation, which is typically measured by the change in an official inflation measure, such as the CPI-U. The average portfolio duration of this Fund normally varies within three years (plus or minus) of the duration of the Bloomberg U.S. TIPS Index, as calculated by PIMCO. For these purposes, in calculating the Fund's average portfolio duration, PIMCO includes the real duration of inflation-indexed portfolio securities and the nominal duration of non-inflation-indexed portfolio securities.

The Fund invests primarily in investment grade securities, but may invest up to 10% of its total assets in high yield securities (“junk bonds”) rated B or higher by Moody's or equivalently rated by S&P Global Ratings or Fitch, Inc., or, if unrated, determined by PIMCO to be of comparable quality (except that within such 10% limitation, the Fund may invest in mortgage-related securities rated below B). The Fund also may invest up to 30% of its total assets in securities denominated in foreign currencies, and may invest beyond this limit in U.S. dollar denominated securities of foreign issuers. The Fund may invest up to 15% of its total assets in securities and instruments that are economically tied to emerging market countries. Foreign currency exposure (from non-U.S. dollar-denominated securities or currencies) normally will be limited to 20% of the Fund's total assets. The Fund is non-diversified, which means it may concentrate its assets in a smaller number of issuers than a diversified portfolio.

The Fund may invest all of its assets in derivative instruments, such as futures, options, or swap agreements, or in mortgage or asset-backed securities. The Fund may purchase or sell securities on a when-issued basis, delayed delivery or forward commitment basis and may engage in short sales. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buybacks or dollar rolls). The Fund may also invest up to 10% of its total assets in preferred securities.

The Fund may not invest more than 5% of its net assets in any combination of mortgage-related and/or other asset-backed inverse floater, interest-only or principal-only securities. To the extent permitted by the Fund's investment objectives and general investment policies, the Fund may invest in residual interest bonds without limitation. The term “residual interest bonds” generally includes tender option bond trust residual interest certificates and instruments designed to receive residual interest payments or other excess cash flows from collateral pools once other interest holders and expenses have been paid.

Consistent with the Fund's investment policies, the Fund may invest in “fixed-income instruments,” which as used by this Fund include:

- Securities issued or guaranteed by the U.S. Government, its agencies or government-sponsored enterprises (“U.S. Government Securities”);
- Corporate debt securities of U.S. and non-U.S. issuers, including convertible securities and corporate commercial paper;
- Mortgage-backed and other asset-backed securities;
- Inflation-indexed bonds issued both by governments and corporations;
- Structured notes, including hybrid or “indexed” securities, and event-linked bonds;
- Bank capital and trust preferred securities;
- Loan participations and assignments;
- Delayed funding loans and revolving credit facilities;
- Bank certificates of deposit, fixed time deposits and bankers' acceptances;
- Repurchase agreements on Fixed-Income Instruments and reverse repurchase agreements on Fixed-Income Instruments;
- Debt securities issued by states or local governments and their agencies, authorities and other government-sponsored enterprises;
- Obligations of non-U.S. governments or their subdivisions, agencies and government-sponsored enterprises; and
- Obligations of international agencies or supranational entities.

The Fund may invest in derivatives based on Fixed-Income Instruments.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Call risk*
- *Credit risk*
- *Currency risk*
- *Debt securities ratings risk*
- *Derivatives risk*
- *Emerging markets and less developed countries risk*
- *Equity securities risk*
- *Extension risk*
- *Fixed-income risk*
- *Foreign securities risk*
- *Forward and futures contract risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Inflation-indexed securities risk*
- *Interest rate risk*
- *Investment strategy risk*
- *Issuer risk*
- *Leverage risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Mortgage-related and other asset-backed securities risk*
- *Options risk*
- *Prepayment risk*
- *Short sales risk*
- *Swaps risk*
- *U.S. Government securities risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Asset-based securities risk*
- *Convertible securities risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Counterparty risk*
- *Currency management strategies risk*
- *Cybersecurity risk*
- *Expense risk*
- *Market risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*

- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Pacific Investment Management Company LLC (“PIMCO”), 650 Newport Center Drive, Newport Beach, California 92660. PIMCO is a majority owned subsidiary of Allianz Asset Management with minority interests held by certain of its current and former officers, by Allianz Asset Management of America LLC, and PIMCO Partners, LLC, a California limited liability company. PIMCO Partners, LLC is owned by certain current and former officers of PIMCO. Through various holding company structures, Allianz Asset Management is majority owned by Allianz SE.

Stephen A. Rodosky is a managing director in the Newport Beach office and a portfolio manager for real return and U.S. long duration strategies. He serves as head of talent management for portfolio management in the U.S. and previously led the firm's U.S. rates team. Prior to joining PIMCO in 2001, Mr. Rodosky was vice president of institutional sales with Merrill Lynch. He has 24 years of investment experience and holds a master's degree in financial markets from Illinois Institute of Technology. He received an undergraduate degree from Villanova University.

Daniel He is a senior vice president and portfolio manager in the Newport Beach office. He is a member of the liquid products group specializing in real return and mortgage-backed securities. Prior to joining PIMCO in 2011, Mr. He structured and traded derivative strategies for a global macro hedge fund. He previously developed trading strategies at a hedge fund that focused on foreign exchange volatility. He has 14 years of investment experience and holds an MBA from the University of Chicago Booth School of Business. He also holds a master's degree in financial engineering and an undergraduate degree in computer science from the National University of Singapore.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/PPM America Floating Rate Income Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek to provide a high level of current income.

Principal Investment Strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in income-producing floating rate instruments, including, floating rate loans, floating rate notes, other floating rate debt securities, structured products (including commercial mortgage-backed securities, asset-backed securities, and collateralized loan obligations, which are debt securities typically issued by special purpose vehicles and secured by loans) and repurchase agreements.

Additionally, for purposes of satisfying the 80% requirement, the Fund has the ability to invest in other investment companies, such as exchange-traded funds (“ETFs”) comprised of the securities described above, short-term bond funds and floating rate funds. The Fund generally uses ETFs as a tool to obtain exposure to the securities in which it primarily invests. Money market holdings with a remaining maturity of less than 60 days will be deemed floating rate assets for purposes of the 80% requirement.

The Fund invests primarily in U.S. dollar denominated senior floating rate loans of domestic and foreign borrowers (“Senior Loans”). Senior Loans typically are of below investment grade quality and have below investment grade credit ratings, which ratings are associated with securities having high risk and speculative characteristics, and are commonly known as “junk bonds.”

The Fund may also invest in secured and unsecured subordinated loans, second lien loans and subordinated bridge loans (“Junior Loans”), debtor-in-possession loans, mezzanine loans, corporate bonds, fixed-income debt obligations and money market instruments. Junior Loans typically are of below investment grade quality and have below investment grade credit ratings which ratings are associated with securities having high risk and speculative characteristics. Money market holdings with a remaining maturity of less than 60 days will be deemed floating rate assets.

The Fund may invest up to 20% of its assets in cash and non-floating rate debt securities, including lower-rated debt securities (“high yield” securities), commonly known as “junk bonds,” and equity securities. Below investment grade securities typically offer a higher yield, but generally carry more risks than higher rated securities with similar maturities. As a result, an investment in below investment grade securities is considered speculative.

While not a principal investment strategy, the Fund may invest, without limitation, in derivative or other synthetic instruments. For purposes of satisfying the 80% requirement, the Fund may invest in derivative or other synthetic instruments that have economic characteristics similar to the floating rate instruments mentioned above. Although the Fund may invest in derivatives transactions of any kind, the Fund currently anticipates that it may invest in the LCDX index (an unfunded index of 100 equally weighted loan credit default swaps (“LCDS”)) and individual LCDS as a substitute for the purchase of floating rate loans. The Fund may also use futures and swaps to hedge against fluctuations in interest rates on the Fund’s investments in non-floating rate securities. The Fund’s derivative exposure will vary from time to time depending upon market conditions, inflows and outflows of investments in the Fund and other factors considered by the Sub-Adviser from time to time.

The Sub-Adviser’s large, dedicated and experienced analyst team is organized by industry with coverage across the ratings spectrum and capital structure. Utilizing an independent, fundamental, bottom-up research process, in buying and selling securities for the Fund, the Sub-Adviser relies on fundamental credit analysis of each issuer and its ability to pay principal and interest given its current financial condition, its industry position and economic and market conditions. The Sub-Adviser’s upfront credit selection and ongoing credit monitoring focuses on issuers that it believes (i) have the ability to generate positive cash flow, (ii) have reasonable debt multiples and equity capital, and (iii) have sufficient liquidity sources. The Sub-Adviser also evaluates each security’s structural and security characteristics, underlying collateral, covenant protection and price compared to its long-term value.

In anticipation of, or in response to, adverse market or other conditions, or atypical circumstances such as unusually large cash inflows or redemptions and sub-adviser transitions, the Sub-Adviser may depart from the Fund’s principal investment strategies by temporarily investing for defensive purposes.

Certain investments and investment techniques have additional risks. The Fund may also invest in equity securities and may hold rights and warrants received in connection with other investments. The Fund may invest in TIPS and inflation-linked bonds, and U.S. Government securities risk which involve special risk considerations. The Fund’s investment activities may also generate portfolio turnover risk.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance,

reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Credit risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Senior loans risk*
- *Second lien loans risk*
- *Issuer risk*
- *Settlement risk*
- *Consumer discretionary risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Market risk*
- *Prepayment risk*
- *Interest rate risk*
- *Debt securities ratings risk*
- *LIBOR replacement risk*
- *Income risk*
- *Leverage risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Counterparty risk*
- *Foreign securities risk*
- *Temporary defensive positions and large cash positions risk*
- *Exchange-traded funds investing risk*
- *Investment in other investment companies risk*
- *Investment in money market funds risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The Fund may use futures and swaps to hedge against fluctuations in interest rates on the Fund's investments in non-floating rate securities. The Fund's derivative exposure will vary from time to time depending upon market conditions, inflows and outflows of investments in the Fund and other factors considered by the Sub-Adviser from time to time.

Certain investments and investment techniques have additional risks, such as the potential use of asset-based securities. The Fund has the ability to invest in other investment companies, such as exchange-traded funds, unit investment trusts, and open-end and closed-end funds, including affiliated investment companies.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Investment strategy risk*
- *Call risk*
- *Derivatives risk*
- *Distressed debt risk*
- *Regulatory investment limits risk*
- *Portfolio turnover risk*
- *Mezzanine securities risk*
- *Mortgage-related and other asset-backed securities risk*
- *Redemption risk*
- *Rule 144A securities risk*
- *Securities lending risk*
- *TIPS and inflation-linked bonds risk*
- *U.S. Government securities risk*
- *Equity securities risk*

- *When-issued and delayed delivery securities and forward commitments risk*
- *Cybersecurity risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is PPM America, Inc. (“PPM”), located at 225 West Wacker Drive, Chicago, Illinois 60606. PPM, an affiliate of the investment adviser to the Trust, manages assets, including those of Jackson National Life Insurance Company and of other affiliated and unaffiliated companies. PPM is an indirect, wholly owned subsidiary of Jackson Financial Inc. (“Jackson”), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

PPM utilizes a team-based approach to manage the assets of the Fund. Portfolio managers work closely with asset class specialists, research analysts and traders to generate ideas and to gain greater insight on the market environment as they make investment decisions. Adam Spielman is primarily responsible for the day-to-day management of the Fund.

Adam Spielman is a senior managing director and the head of leveraged credit on the fixed income team at PPM. In this role, he oversees the bank loan and high yield teams and is responsible for investment and allocation decisions for several of the firm's fixed income strategies, including high yield core and floating rate income which are managed on behalf of investors globally. Prior to his current role, he was head of fixed income research and managed a team of individuals focused on corporate credit and structured security analysis. Prior to joining PPM in 2001, Mr. Spielman worked in the investment group at a Chicago-based software company. Previously, he was an investment banker with Lehman Brothers and started his career at Peterson Consulting. Mr. Spielman earned a master's degree in accounting and finance from the University of Chicago and a bachelor's degree in economics from Indiana University.

David Wagner is a senior managing director and portfolio manager on the fixed income team at PPM. He is responsible for investment and allocation decisions for the firm's floating rate income strategy and collateralized loan obligations, which are managed on behalf of investors globally. Prior to joining PPM in 2000, Mr. Wagner was vice president at First Source Financial, Inc. where he underwrote and analyzed a diverse portfolio of bank loan investments and managed a team of underwriting and portfolio analysts. Previously, he was a manager at Household Commercial Financial Services, Inc. where he managed bank loan investments, including troubled debt restructurings. Mr. Wagner earned a master's degree in management and marketing from Northwestern University and a bachelor's degree in finance and marketing from the University of Wisconsin.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/PPM America High Yield Bond Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to maximize current income. As a secondary objective, the Fund seeks capital appreciation.

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in high-yield, high-risk debt securities (“junk bonds”) and related investments rated below investment grade (i.e., rated below BBB- or Baa3) by at least one major credit rating agency or, if not rated by any credit rating agency, determined to be below investment-grade quality by the Sub-Adviser. Below investment grade securities could include split-rated securities, which are securities that are rated as investment grade by at least one credit rating agency but rated below investment grade by another agency. Below investment grade securities offer a higher yield, but generally carry more risks than higher rated securities with similar maturities. As a result, an investment in below investment grade securities is considered speculative. The Fund may also invest up to 20% of its total assets in equity securities (other than preferred stock, in which the Fund may invest without limit). The Fund may invest in securities sold pursuant to Rule 144A of the Securities Act of 1933, as amended. Rule 144A securities are restricted securities that can be resold to qualified institutional buyers but not to the general public. The Fund may also invest in bank loans. The Fund may also invest up to 35% of its total assets in securities of foreign issuers. To the extent that the Fund invests in emerging market debt, this will be considered as an investment in a high-yield security for purposes of the 80% investment minimum requirement.

The Fund also has the ability to invest in other investment companies, such as exchange-traded funds (“ETFs”), money market funds, unit investment trusts and open-end and closed-end funds, including affiliated investment companies. For purposes of satisfying the 80% requirement, the Fund may invest in high yield ETFs comprised of junk bonds as described above. The Fund generally uses high yield ETFs as a tool to obtain exposure to the securities in which it primarily invests.

Further, while not a principal investment strategy, the Fund may invest in derivatives transactions such as futures contracts or swap agreements, including credit default swaps. For purposes of satisfying the 80% investment minimum, the Fund may invest in derivative instruments that have economic characteristics similar to the fixed income instruments mentioned above.

The Sub-Adviser’s large, dedicated and experienced analyst team is organized by industry with coverage across the ratings spectrum and capital structure. Utilizing an independent, fundamental, bottom-up research process, the Sub-Adviser determines the best relative value investment opportunities across various debt sectors by analyzing overall economic conditions within and among these sectors. In pursuing capital appreciation, the Sub-Adviser looks for those companies that the Sub-Adviser believes have the highest potential for improving credit fundamentals.

In light of the risks associated with such securities, the Sub-Adviser takes various factors into consideration in evaluating the creditworthiness of an issuer. For corporate debt securities, these typically include the issuer’s financial resources, its sensitivity to economic conditions and trends, the operating history of the issuer, and the experience and track record of the issuer’s management. With respect to derivative instruments, the Sub-Adviser also takes into consideration the creditworthiness of the counterparty to the transaction. For sovereign debt instruments, these typically include the economic and political conditions within the issuer’s country, the issuer’s overall and external debt levels and debt service ratios, the issuer’s access to capital markets and other sources of funding, and the issuer’s debt service payment history. The Sub-Adviser also reviews the ratings, if any, assigned to the security by any recognized rating agencies, although the Sub-Adviser’s judgment as to the quality of a debt security may differ from that suggested by the rating published by a rating service. The Fund’s ability to achieve its investment objectives may be more dependent on the Sub-Adviser’s credit analysis than would be the case if it invested in higher quality debt securities.

The Sub-Adviser selects individual securities by considering factors such as credit quality, the security’s risk-return profile, the security’s maturity and its market liquidity. While the Fund typically diversifies its assets broadly across various sectors, the Fund may overweight certain sectors and minimize exposures to others as relative value opportunities arise. In anticipation of, or in response to, adverse market or other conditions, or atypical circumstances such as unusually large cash inflows or redemptions, the Sub-Adviser may depart from the Fund’s principal investment strategies by temporarily investing for defensive purposes.

Certain investments and investment techniques have additional risks. The Fund may invest without limit in zero coupon securities, pay-in-kind bonds, deferred payment securities, and, TIPS and inflation-linked bonds which involve special risk considerations. In particular, zero coupon securities fluctuate more in value in response to a change in interest rates than do bonds that pay current interest. Certain of the Fund’s investments are also subject to extension risk and the Fund’s investment activity may generate portfolio turnover risk. The Fund may invest in fixed- and floating-rate loans, including loan participations and assignments. The Fund may invest up to 10% of its total assets in limited partnership interests.

The Sub-Adviser has discretion to select the range of maturities of the fixed-income securities in which the Fund may invest.

The Fund may lend securities to increase its income.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Credit risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Issuer risk*
- *Market risk*
- *Liquidity risk*
- *Distressed debt risk*
- *Income risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Senior loans risk*
- *Managed portfolio risk*
- *Debt securities ratings risk*
- *Equity securities risk*
- *Interest rate risk*
- *Foreign securities risk*
- *Exchange-traded funds investing risk*
- *Call risk*
- *Rule 144A securities risk*
- *Second lien loans risk*
- *Prepayment risk*
- *Settlement risk*
- *Leverage risk*
- *Mezzanine securities risk*
- *LIBOR replacement risk*
- *Investment in money market funds risk*
- *Investment in other investment companies risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). Certain investments and investment techniques have additional risks. The Fund may invest in foreign securities, such as obligations issued or guaranteed by foreign governmental authorities, debt obligations of supranational organizations and fixed-income securities of foreign corporate issuers.

The Fund may invest in fixed- and floating-rate loans including loan participations and assignments.

The Sub-Adviser has discretion to select the range of maturities of the fixed-income securities in which the Fund may invest.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Investment strategy risk*
- *Derivatives risk*
- *Regulatory investment limits risk*
- *Currency transaction risk*
- *Currency risk*
- *Counterparty risk*
- *Cybersecurity risk*
- *Mortgage-related and other asset-backed securities risk*

- *Emerging markets and less developed countries risk*
- *Redemption risk*
- *Convertible securities risk*
- *TIPS and inflation-linked bonds risk*
- *U.S. Government securities risk*
- *Sovereign debt risk*
- *Temporary defensive positions and large cash positions risk*
- *When-issued and delayed delivery securities and forward commitments risk*
- *Extension risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is PPM America, Inc. (“PPM”), located at 225 West Wacker Drive, Chicago, Illinois 60606. PPM, an affiliate of the investment adviser to the Trust, manages assets, including those of Jackson National Life Insurance Company and of other affiliated and unaffiliated companies. PPM is an indirect, wholly owned subsidiary of Jackson Financial Inc. (“Jackson”), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

PPM utilizes a team-based approach to manage the assets of the Fund. Portfolio managers work closely with asset class specialists, research analysts and traders to generate ideas and to gain greater insight on the market environment as they make investment decisions. Adam Spielman is primarily responsible for the day-to-day management of the Fund.

Adam Spielman is a senior managing director and the head of leveraged credit on the fixed income team at PPM. In this role, he oversees the bank loan and high yield teams and is responsible for investment and allocation decisions for several of the firm's fixed income strategies, including high yield core and floating rate income which are managed on behalf of investors globally. Prior to his current role, he was head of fixed income research and managed a team of individuals focused on corporate credit and structured security analysis. Prior to joining PPM in 2001, Mr. Spielman worked in the investment group at a Chicago-based software company. Previously, he was an investment banker with Lehman Brothers and started his career at Peterson Consulting. Mr. Spielman earned a master's degree in accounting and finance from the University of Chicago and a bachelor's degree in economics from Indiana University.

Karl Petrovich is a managing director and portfolio manager on the fixed income team at PPM. He is responsible for investment and allocation decisions for the firm's high yield strategies, which are managed on behalf of investors globally. Mr. Petrovich joined the portfolio management team in 2008 from PPM's performance and attribution group. Prior to joining PPM in 2006, he managed the Financial Reporting Group for Nuveen Asset Management where he oversaw staff, processes and systems associated with the preparation of financial statements, SEC filings, and other performance and portfolio analytics-related information. Mr. Petrovich earned a bachelor's degree in finance from the University of Wyoming.

John Broz is a managing director and portfolio manager on the fixed income team at PPM. He is responsible for investment and allocation decisions for the firm's high yield strategies which are managed on behalf of investors globally. Mr. Broz joined the portfolio management team in 2017 from PPM's fixed income research team, where he covered P&C insurance, insurance brokerage, Yankee banks, and investment management companies, as well as quasi-governmental organizations. Prior to joining PPM in 2013, he worked in the external audit group at Deloitte & Touche. Mr. Broz earned a master's degree in business administration from the University of Chicago, as well as both a master's degree and a bachelor's degree in accountancy from the University of Illinois. He is a Certified Public Accountant (inactive).

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/PPM America Total Return Fund

Class A **Class I**

Investment Objective. The investment objective of the Fund is to realize maximum total return, consistent with the preservation of capital and prudent investment management.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of fixed-income investments of U.S. and foreign issuers such as government, corporate, mortgage and other asset-backed securities and cash equivalents. The Fund's average portfolio duration normally varies within two years (plus or minus) of the duration of the Bloomberg U.S. Aggregate Bond Index ("Index"), which as of December 31, 2021, was 6.67 years. Duration is a measure of a bond price's sensitivity to a change in interest rates. Generally, the longer a bond's duration, the greater its price sensitivity to a change in interest rates. For example, portfolio duration of two years means that if interest rates increased by one percent, the value of the portfolio would decrease by approximately two percent. The Fund seeks to manage duration versus the duration of the Index as a reflection of its expectation for future changes in interest rates.

The Fund may invest up to 20% of its assets in securities rated below investment grade (sometimes referred to as "high yield" securities or "junk bonds"), including floating rate loans and securities of distressed companies. High yield or junk bonds are bonds that are rated below investment grade (i.e., rated below BBB- or Baa3) by at least one major credit rating agency or, if not rated by any credit rating agency, deemed to be below investment grade quality by Sub-Adviser. Investment grade securities could include split-rated securities, which are securities that are rated as investment grade by at least one credit rating agency but rated below investment grade by another agency. Below investment grade securities typically offer a higher yield, but generally carry more risks than higher rated securities with similar maturities. As a result, an investment in below investment grade securities is considered speculative. The Fund may invest up to 30% of its total assets in securities denominated in foreign currencies, of which up to 15% may include securities of issuers based in emerging markets. Emerging market countries are generally considered to be countries with developing economies or markets and may include any country recognized to be an emerging market country by the International Monetary Fund, Morningstar, Inc. or Standard & Poor's Corporation or recognized to be a developing country by the United Nations. The Fund may invest without limit in U.S. dollar-denominated securities of foreign issuers. The Fund will generally seek to hedge foreign currency exposure (from non-U.S. dollar-denominated securities or currencies) such that foreign currency exposure will normally be limited to 10% of the Fund's total assets.

For purposes of satisfying the 80% requirement, the Fund may also invest in derivative instruments that have economic characteristics similar to the fixed income instruments mentioned above such as futures contracts or swap agreements. Specifically, the Fund may use futures to hedge duration or to increase or decrease the Fund's exposure to interest rate or yield curve risk. The Fund may also use credit default swaps or credit default swap indices (CDX) to increase or decrease the Fund's exposure to credit risk or to hedge credit risk in a particular name, industry or sector. The Fund may invest without limitation in derivative instruments. The Fund may lend its portfolio securities to brokers, dealers and other financial institutions to earn income. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into purchase and sale contracts of mortgage pools or by using other investment techniques (such as dollar rolls). Additionally, the Fund has the ability to invest in money market funds.

The Sub-Adviser's large, dedicated and experienced analyst team is organized by industry with coverage across the ratings spectrum and capital structure. Utilizing an independent, fundamental, bottom-up research process, the team looks across various debt sectors to identify what it believes to be the best relative value investment opportunities generated by market inefficiencies. The Sub-Adviser analyzes:

- predictability and stability of cash flows through economic cycles as a measure of business risk; and
- the amount of leverage and debt structure as a measure of financial risk.

The Sub-Adviser also performs 'stress-testing' to gauge potential credit deterioration under downside scenarios, specifically assessing the impact of:

- possible declines in cash flow generation; and
- shareholder friendly activities and asset value available to support debtholders.

Each security is then assigned a proprietary internal credit rating and a relative value recommendation. The Sub-Adviser then selects individual securities by considering factors such as credit quality, the security's risk-return profile, the security's maturity and its market liquidity. While the Fund typically diversifies its assets broadly across various sectors, the Fund may overweight certain sectors and minimize exposures to others as relative value opportunities arise. In choosing investments, the Sub-Adviser determines the allocations to investment grade and high yield securities based on its outlook for risk-adjusted returns from those types of securities. In anticipation of, or in response to, adverse market or other conditions, or atypical circumstances such as unusually large cash inflows or redemptions, the Sub-Adviser may depart from the Fund's principal investment strategies by temporarily investing for defensive purposes.

The Fund seeks to consistently add value relative to the Index. In managing the Fund, the Sub-Adviser generally makes investment decisions based on its view of longer-term (three- to five-year) trends and non-economic factors that may affect interest rates, while seeking to maintain a portfolio duration within two years (plus or minus) the duration of the Index.

Certain investments and investment techniques have additional risks such as the potential investment in equity securities and rights and warrants received in connection with other investments.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Interest rate risk*
- *Credit risk*
- *Mortgage-related and other asset-backed securities risk*
- *U.S. Government securities risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Income risk*
- *Issuer risk*
- *Prepayment risk*
- *Call risk*
- *Asset-based securities risk*
- *Derivatives risk*
- *Debt securities ratings risk*
- *Liquidity risk*
- *Extension risk*
- *Managed portfolio risk*
- *Foreign securities risk*
- *When-issued and delayed delivery securities and forward commitments risk*
- *Leverage risk*
- *Counterparty risk*
- *Portfolio turnover risk*
- *Rule 144A securities risk*
- *Settlement risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Investment strategy risk*
- *Convertible securities risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Currency risk*
- *Currency transaction risk*
- *Emerging markets and less developed countries risk*
- *Mezzanine securities risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Second lien loans risk*
- *Senior loans risk*

- *Sovereign debt risk*
- *LIBOR replacement risk*
- *Investment in money market funds risk*
- *Investment in other investment companies risk*
- *Temporary defensive positions and large cash positions risk*
- *Securities lending risk*
- *Cybersecurity risk*
- *TIPS and inflation-linked bonds risk*
- *Equity securities risk*
- *Distressed debt risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is PPM America, Inc. (“PPM”), located at 225 West Wacker Drive, Chicago, Illinois 60606. PPM, an affiliate of the investment adviser to the Trust, manages assets, including those of Jackson National Life Insurance Company and of other affiliated and unaffiliated companies. PPM is an indirect, wholly owned subsidiary of Jackson Financial Inc. (“Jackson”), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

PPM utilizes a team-based approach to manage the assets of the Fund. Portfolio managers work closely with asset class specialists, research analysts and traders to generate ideas and to gain greater insight on the market environment as they make investment decisions. Michael Kennedy is primarily responsible for the day-to-day management of the Fund.

Mike Kennedy is a senior managing director and portfolio manager on the fixed income team at PPM. He is responsible for investment and allocation decisions for several of the firm's fixed income strategies, including core plus fixed income and credit, which are managed on behalf of investors globally. Prior to joining PPM in 2006, Mr. Kennedy was a senior vice president and portfolio manager at Columbia Management Group (formerly Stein Roe & Farnham) where he managed fixed income mutual funds and institutional client portfolios. Previously, Mr. Kennedy was the assistant director of portfolio management for Homewood Federal Savings & Loan. Mr. Kennedy earned a master's degree from Northwestern University and a bachelor's degree in business administration from Marquette University. He is a CFA® charterholder.

Josh Settle is a senior managing director and portfolio manager on the fixed income team at PPM. He is responsible for investment and allocation decisions for the firm's core plus fixed income strategy, which is managed on behalf of investors globally. Prior to his current role, Mr. Settle was a senior managing director and head of credit trading, responsible for overseeing a team of credit traders and for trade execution in the utility, retail, consumer goods, leisure, services, healthcare, taxable municipals and CDX/ETF industries. Prior to joining PPM in 2010, he was a corporate bond trader at Northern Trust. Mr. Settle earned a bachelor's degree in finance and economics from the University of Iowa. He is a CFA® charterholder.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/RAFI® Fundamental U.S. Small Cap Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to track the performance of the RAFI® Fundamental U.S. Small Company Index.

Principal Investment Strategies. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the component securities (“Component Securities”) of the RAFI Fundamental U.S. Small Company Index (the “Index”). The Fund may invest the remainder of its assets in cash, securities, and instruments that are not Component Securities but which Mellon Investments Corporation, the Fund’s sub-adviser (“Sub-Adviser”), believes will help the Fund track its Index. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

The Index is constructed by RAFI Indices, LLC (the “Index Provider”). The Index Provider uses a fundamental weighting approach to construct the Index, which includes a diversified universe of U.S. small companies. The Index Provider weights companies based on fundamental measures of company size (as measured by accounting variables) rather than their market capitalization.

The universe for the Index construction process starts with all common equity securities traded on primary exchanges, which meet and pass minimum liquidity and investability (capacity) requirements, issued by companies that are assigned to the United States by the Index Provider. The Index Provider assigns companies to countries and promulgates that assignment to securities. Eligible securities are then determined by selecting companies based on fundamental weight, calculated using four accounting measures from company financial statements: (i) de-levered sales, calculated as company sales averaged over the past five years multiplied by the ratio of average equity to average assets; (ii) cash flow, taken as the company operating cash flow averaged over the past five years; (iii) dividends plus buybacks, calculated using the average dividends paid and share buybacks over the past five years; and (iv) book value, taken as the most recent company book value. Next, the Index Provider selects companies by cumulative free-float adjusted fundamental weight. Companies in the top 98% cumulative adjusted fundamental weight, excluding those companies in the top 86%, constitute the small company size universe.

As of December 31, 2021, the Index consisted of 804 Component Securities. The Index is reconstituted annually and rebalanced on a quarterly staggered basis on the last business day of March, June, and September and the third Friday of December. The Index is split into four equal parts (tranches), and each tranche has equal weight at the March rebalance. Each tranche is rebalanced once a year to target weights determined for that quarter.

The Sub-Adviser uses a “passive” or “indexing” approach to try to achieve the Fund’s investment objective. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

The Fund may also invest in exchange-traded funds ("ETFs") to assist with index rebalances and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest, without limitation, in U.S. equity and equity-related securities, including common and preferred securities. In addition to futures, as described above, the Fund may also invest in other derivative instruments, such as options or swap agreements.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Small-capitalization investing risk*
- *License termination risk*
- *Passive investment risk*
- *Index investing risk*
- *Tracking error risk*
- *Limited management, trading cost and rebalance risk*

- *Market risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Credit risk*
- *Cybersecurity risk*
- *Investment strategy risk*
- *Issuer risk*
- *Liquidity risk*
- *Leverage risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (formerly, BNY Mellon Asset Management North America Corporation) (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund’s investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund’s investment objective. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund’s portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll

earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/RAFI® Multi-Factor U.S. Equity Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to track the performance of the RAFI® Multi-Factor U.S. Index.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the component securities (“Component Securities”) of the RAFI Multi-Factor U.S. Index (the “Index”). The Fund may invest the remainder of its assets in cash, securities, and instruments that are not Component Securities but which Mellon Investments Corporation, the Fund’s sub-adviser (“Sub-Adviser”), believes will help the Fund track its Index. The Index is designed to provide long-only exposure to multiple equity factors that seek to produce attractive long-term returns, and which may lower risk compared to less diversified strategies. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

The Index is constructed by RAFI Indices, LLC (the “Index Provider”). The Index Provider uses a rules-based approach to construct factor portfolios within the Index. The universe for the Index construction process starts with all common equity securities traded on primary exchanges, which meet and pass minimum liquidity and investability (capacity) requirements, issued by companies that are assigned to the United States by the Index Provider. The Index Provider assigns companies to countries and promulgates that assignment to securities. Eligible securities are then determined by selecting companies based on fundamental weight, calculated using four accounting measures from company financial statements: (i) de-levered sales, calculated as company sales averaged over the past five years multiplied by the ratio of average equity to average assets; (ii) cash flow, taken as the company operating cash flow averaged over the past five years; (iii) dividends plus buybacks, calculated using the average dividends paid and share buybacks over the past five years; and (iv) book value, taken as the most recent company book value.

The Index consists of “factor portfolios,” each of which emphasizes one of the following factors: value, low volatility, quality, momentum, and size.

- The value factor emphasizes companies with high ratio of company fundamental weight to its market capitalization weight.
- The low volatility factor emphasizes companies with low risk measure calculated as the variance of a company’s daily excess return over five years explained by global, local country groups, and global industry excess returns.
- The quality factor emphasizes companies that are high in profitability and low in investment spending.
- The momentum factor emphasizes stocks with high momentum.
- The size factor is the equal weight of the small company portions, based on a company’s fundamental weight, of the other four factors. A company’s fundamental weight may be adjusted by a “free float factor,” which is the ratio of the total market capitalization of the shares of the company in free float to the total market capitalization of the company.

For the value, low volatility, and quality “factor portfolios,” eligible securities are ranked by their factor score, and the top 25% of companies by fundamental weight are selected for inclusion within that “factor portfolio.” For the momentum “factor portfolio,” eligible securities are ranked by their momentum score and the top 50% of companies by fundamental weight are selected for inclusion.

The Index is reconstituted on an annual basis and rebalanced on a quarterly basis. As of December 31, 2021, the Index consisted of 877 Component Securities. The Index allocates an equal weight to each factor at each quarterly rebalance.

Each factor (other than momentum) is reconstituted annually on the last business day of March and rebalanced on a quarterly staggered basis on the last business day of March, June, and September and the third Friday of December. For example, a single factor will be divided into four similar tranches. At the first quarterly rebalance, the first tranche (i.e., 25% of the factor) is rebalanced, but the remaining three tranches (i.e., the other 75% of the factor) are not rebalanced and will continue to drift until the next quarterly rebalance. At the next quarterly rebalance, the second tranche is rebalanced while the other three tranches (including the tranche that was rebalanced at the prior quarter-end) are not rebalanced. This staggered rebalancing is intended to diversify risk and decrease market impact. The momentum factor, unlike the other factors, is reconstituted and fully rebalanced quarterly. At each quarterly rebalance, trading controls are implemented to minimize turnover.

The Sub-Adviser uses a “passive” or “indexing” approach to try to achieve the Fund’s investment objective. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective.

The Fund may also invest in exchange-traded funds ("ETFs") to assist with index rebalances and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest, without limitation, in U.S. equity and equity-related securities, including common and preferred securities. In addition to futures, as described above, the Fund may also invest in other derivative instruments, such as options or swap agreements.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *License termination risk*
- *Index investing risk*
- *Passive investment risk*
- *Tracking error risk*
- *Limited management, trading cost and rebalance risk*
- *Small-capitalization investing risk*
- *Market risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Credit risk*
- *Cybersecurity risk*
- *Investment strategy risk*
- *Issuer risk*
- *Leverage risk*
- *Liquidity risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (formerly, BNY Mellon Asset Management North America Corporation) ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objective. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms.

Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/T. Rowe Price Balanced Fund

Class I

Class A

Investment Objectives. The investment objective of the Fund is to seek capital growth, current income, and preservation of capital through a portfolio of stocks and fixed-income securities.

Principal Investment Strategies. The Fund normally invests approximately 65% of its total assets in common stocks and 35% in fixed income securities, money market securities, and cash reserves. The Fund may invest up to 35% of its total assets in foreign securities.

The Fund has significant flexibility to invest in a broad range of equity, fixed income, and alternative asset classes in the U.S. and other markets throughout the world, both developed and emerging.

T. Rowe Price Associates, Inc. (“Sub-Adviser”) may decide to overweight and underweight a particular asset class based on its outlook for the economy and financial markets. Under normal conditions, the Fund’s allocation to the broad asset classes will be within the following ranges, each as a percentage of the Fund’s net assets: stocks (55%-75%), and fixed income securities, money market securities, and cash reserves (25%-45%). When deciding upon allocations within these prescribed limits, the Sub-Adviser may favor fixed income securities if the economy is expected to slow sufficiently to hurt corporate profit growth. When strong economic growth is expected, the Sub-Adviser may favor stocks. The Fund will invest in bonds, including foreign issues, which are primarily investment grade (i.e., assigned one of the four highest credit ratings by established credit rating agencies) and are chosen from across the entire government, corporate, and asset- and mortgage-backed securities markets. Maturities generally reflect the Sub-Adviser’s outlook for interest rates. The Fund may at times invest significantly in certain sectors.

When selecting particular stocks, the Sub-Adviser will examine relative values and prospects among growth- and value-oriented stocks, domestic and international stocks, small- to large-cap stocks, and stocks of companies involved in activities related to commodities and other real assets. Domestic stocks are drawn from the overall U.S. market and international stocks are selected primarily from large companies in developed countries, although stocks in emerging markets may also be purchased. This process draws heavily upon the Sub-Adviser’s proprietary stock research expertise. While the Fund maintains a well-diversified portfolio, the Sub-Adviser may at a particular time shift stock selection toward markets or market sectors that appear to offer attractive value and appreciation potential.

A similar security selection process applies to bonds. When deciding whether to adjust duration, credit risk exposure, or allocations among the various sectors (for example, high yield “junk” bonds, mortgage- and asset-backed securities, international bonds and emerging market bonds), the Sub-Adviser weighs such factors as the outlook for inflation and the economy, corporate earnings, expected interest rate movements and currency valuations, and the yield advantage that lower-rated bonds may offer over investment grade bonds.

In pursuing its investment objective, the Fund has the discretion to deviate from its normal investment criteria. These situations might arise when the Sub-Adviser believes a security could increase in value for a variety of reasons, including an extraordinary corporate event, a new product introduction or innovation, a favorable competitive development, or a change in management.

Securities may be sold for a variety of reasons, including to effect a change in asset allocation, realize gains, limit losses, or redeploy assets into more promising opportunities.

The Fund also may invest in other securities and debt instruments, such as preferred stocks, convertible securities, and bank loans, as well as use derivatives, such as forward contracts, futures contracts and swaps, that are consistent with its investment program. The Fund may invest in foreign fixed income securities, including securities of emerging market issuers. In addition, the Fund may invest a portion of its assets in other investment companies that invest in common stock and/or fixed income securities, including investment companies affiliated with the Sub-Adviser.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Fixed-income risk*
- *Interest rate risk*

- *Extension risk*
- *Prepayment risk*
- *Credit risk*
- *Foreign securities risk*
- *Liquidity risk*
- *Emerging markets and less developed countries risk*
- *Sector risk*
- *Investment style risk*
- *Managed portfolio risk*
- *Large-capitalization investing risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Accounting risk*
- *Mortgage-related and other asset-backed securities risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Derivatives risk*
- *Forward and futures contract risk*
- *Call risk*
- *Currency risk*
- *Preferred stock risk*
- *Sovereign debt risk*
- *Convertible securities risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's and Sub-Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is T. Rowe Price Associates, Inc. (“T. Rowe”), located at 100 East Pratt Street, Baltimore, Maryland 21202. T. Rowe was founded in 1937. T. Rowe and its affiliates provide investment advisory services to individual and institutional investor accounts. T. Rowe is a wholly owned subsidiary of T. Rowe Price Group, Inc., a publicly traded company the principal business of which is investment management services.

T. Rowe Price Investment Management, Inc. (“Price Investment Management”) serves as a sub-sub-adviser to the Fund. Price Investment Management is a wholly-owned subsidiary of T. Rowe Price and its address is 100 East Pratt Street, Baltimore, MD 21202.

Charles Shriver is a Vice President of T. Rowe Price Group, Inc., and T. Rowe Price. He is a portfolio manager for several asset allocation portfolios within the T. Rowe Price Multi-Asset Division Group. Mr. Shriver is a member of T. Rowe Price Multi-Asset Division Committee and has been with the firm since 1991. Mr. Shriver earned a B.A. in economics and rhetoric/communications studies from the University of Virginia, an M.S.F. in finance from Loyola University Maryland, and a graduate diploma in public economics from Stockholm University. He has earned the Chartered Financial Analyst designation.

Toby Thompson is a Vice President of T. Rowe Price Group, Inc., and T. Rowe Price. He is a portfolio manager within the T. Rowe Price Multi-Asset Division Group. He serves as co-portfolio manager of the T. Rowe[®] ActivePlus Portfolios and Price Managed Volatility Strategies and is a member of the Investment Advisory Committees of the Global Allocation Fund, Balanced Fund, Personal Strategy Funds, and Spectrum Funds. Prior to joining the firm in 2007, Mr. Thompson served as director of investments of the I.A.M.

National Pension Fund. Before joining the I.A.M. National Pension Fund, Mr. Thompson was a principal with Brown Investment Advisory, where he worked in fixed income research, served as director of open architecture and asset allocation, and was a member of the firm's Strategic Investment Committee. Mr. Thompson earned a B.S. in business and economics from Towson University and an M.B.A. in finance from Loyola University Maryland. He has earned his Chartered Financial Analyst (CFA) and Chartered Alternative Investment Analyst (CAIA) designations.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/T. Rowe Price Capital Appreciation Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation by investing primarily in common stocks. It may also hold fixed income and other securities to help preserve principal value.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 50% of its total assets in common stocks. The remaining assets are generally invested in convertible securities, corporate and government debt (including mortgage- and asset-backed securities), bank loans (which represent an interest in amounts owed by a borrower to a syndicate of lenders), and foreign securities, in keeping with the Fund's objective. The Fund has significant flexibility to invest in a broad range of equity and fixed income securities. The Fund may invest up to 25% of its total assets in foreign securities.

The Fund's investments in common stocks generally fall into one of two categories: the larger category comprises long-term core holdings whose prices when T. Rowe Price Associates, Inc., the Fund's sub-adviser ("Sub-Adviser") buys them are considered low in terms of company assets, earnings, or other factors; the smaller category comprises opportunistic investments whose prices the Sub-Adviser expects to rise in the short term but not necessarily over the long term. There are no limits on the market capitalization of the issuers of the stocks in which the Fund may invest. Because the Sub-Adviser attempts to prevent losses as well as achieve gains, the Sub-Adviser typically uses a value approach in selecting investments. The Sub-Adviser's research team seeks to identify companies that seem undervalued by various measures, such as price/book value, and may be temporarily out of favor but the Sub-Adviser believes have good prospects for capital appreciation. The Sub-Adviser may establish relatively large positions in companies it finds particularly attractive. The Fund may at times invest significantly in certain sectors.

The Sub-Adviser seeks to reduce risk and to maximize gains and may seek to realize gains rather than lose them in market declines. In addition, the Sub-Adviser searches for attractive risk/reward values among all types of securities. The portion of the Fund invested in a particular type of security, such as common stocks, results largely from case-by-case investment decisions, and the size of the Fund's cash reserves may reflect the Sub-Adviser's ability to find companies that meet its valuation criteria rather than its market outlook.

The Fund may purchase bonds, convertible securities and bank loans for their income or other features or to gain additional exposure to a company. Maturity and quality are not necessarily major considerations, and there are no limits on the maturities or credit ratings of the debt instruments in which the Fund may invest. The Fund may not invest more than 30% of its total assets in below investment-grade debt securities ("junk bonds") and bank loans combined. If a security is split rated (i.e., rated investment grade by at least one rating agency and noninvestment grade by another rating agency), the higher rating will be used for purposes of this requirement. The Fund may invest up to 10% of total assets in mortgage- and asset-backed securities. The Fund may also write (i.e., sell) call options, primarily in an effort to protect against downside risk or to generate additional income.

The Fund may sell securities for a variety of reasons, including to realize gains, limit losses, or redeploy assets into what the Sub-Adviser believes are more promising opportunities.

The Fund may also invest in hybrid instruments (up to 10% of total assets), illiquid securities, and registered investment companies.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Stock risk*
- *Market risk*
- *Investment style risk*
- *Fixed-income risk*
- *Credit risk*
- *Interest rate risk*
- *LIBOR replacement risk*
- *Convertible securities risk*
- *Sector risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Options risk*

- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Foreign securities risk*
- *Managed portfolio risk*
- *Accounting risk*
- *Company risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *Financial services risk*
- *Forward and futures contract risk*
- *Hedging instruments risk*
- *Investment strategy risk*
- *Large-capitalization investing risk*
- *Leverage risk*
- *Liquidity risk*
- *Mid-capitalization investing risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Small-capitalization investing risk*
- *Temporary defensive positions and large cash positions risk*
- *Volatility risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's and Sub-Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is T. Rowe Price Associates, Inc. ("T. Rowe"), located at 100 East Pratt Street, Baltimore, Maryland 21202. T. Rowe was founded in 1937. T. Rowe and its affiliates provide investment advisory services to individual and institutional investor accounts. T. Rowe is a wholly owned subsidiary of T. Rowe Price Group, Inc., a publicly traded company the principal business of which is investment management services.

T. Rowe Price Investment Management, Inc. ("Price Investment Management") serves as a sub-sub-adviser to the Fund. Price Investment Management is a wholly-owned subsidiary of T. Rowe Price and its address is 100 East Pratt Street, Baltimore, MD 21202.

The portfolio manager of the Sub-Adviser responsible for the oversight of the Fund is Mr. David R. Giroux. Information regarding the portfolio manager of the Fund is set forth below.

David R. Giroux, CFA, is a vice president of T. Rowe Price Group, Inc. and T. Rowe Price Associates, Inc. Mr. Giroux is a portfolio manager, Chief Investment Officer, U.S. Equity Multi-Discipline, and president and chairman of the Investment Advisory Committee. Mr. Giroux joined the firm in 1998 and, until 2006, had analytical responsibility for the firm’s investments in the industrials and automotive sectors. As an analyst, Mr. Giroux covered the automotive sector. Mr. Giroux has a B.A. in Finance and Political Economy from Hillsdale College. Mr. Giroux is also a chartered financial analyst.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/T. Rowe Price Established Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term capital growth through investments in stocks.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing generally in common stocks of large-capitalization companies. T. Rowe Price Associates, Inc. (“T. Rowe” or “Sub-Adviser”) generally seeks investments in stocks of large-capitalization companies, which the Sub-Adviser defines as a company whose market capitalization is larger than the median market capitalization of companies in the Russell 1000 Growth Index, and that has one or more of the following characteristics: strong cash flow and an above-average rate of earnings growth; the ability to sustain earnings momentum during economic downturns; and occupation of a lucrative niche in the economy and the ability to expand even during times of slow economic growth. The Sub-Adviser believes that when a company increases its earnings faster than both inflation and the overall economy, the market will eventually reward it with a higher stock price. While the Fund invests typically in U.S. common stocks, other securities may also be purchased, including foreign stocks, futures and options, in keeping with Fund objectives. The Fund may invest up to 30% of its total assets (excluding reserves) in foreign securities, including securities and instruments that are economically tied to emerging markets. The Fund may at times invest significantly in technology stocks.

The Fund's investments may include holdings in companies that only recently began to trade publicly.

The Fund is a “non-diversified” fund, as defined in the Investment Company Act of 1940, as amended (the “1940 Act”), and may invest more of its assets in fewer issuers than “diversified” mutual funds.

In pursuing its investment objective, the Fund’s Sub-Adviser has the discretion to deviate from its normal investment criteria, as described above, and purchase securities that it believes may provide an opportunity for substantial appreciation. These situations might arise when the Fund’s Sub-Adviser believes a security could increase in value for a variety of reasons including a change in management, an extraordinary corporate event, a new product introduction or innovation, or a favorable competitive development.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Stock risk*
- *Investment style risk*
- *Large-capitalization investing risk*
- *Concentration risk*
- *Foreign securities risk*
- *Managed portfolio risk*
- *Privately placed securities risk*
- *Investments in IPOs risk*
- *Liquidity risk*
- *Emerging markets and less developed countries risk*
- *Forward and futures contract risk*
- *Options risk*
- *Accounting risk*
- *Market risk*
- *Company risk*
- *Investment strategy risk*
- *Non-diversification risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The Fund invests most of its assets in common stocks of U.S. companies. However, the Fund may invest in other securities, including foreign securities, convertible securities, warrants, preferred stocks, derivatives, hybrid instruments (up to 10% of the Fund's total assets), other investment companies, REITs, partnerships, and corporate and government debt obligations, in keeping with Fund objectives.

The Fund may sell securities for a variety of reasons, including to realize gains, limit losses, or redeploy assets into more promising opportunities.

A Fund's performance may be affected by risks specific to certain types of investments, such as foreign securities, derivative investments, non-investment grade debt securities, initial public offerings ("IPOs") or companies with relatively small market capitalizations. IPOs and other investment techniques may have magnified performance impact on a Fund with a small asset base. A Fund may not experience similar performance as its assets grow.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Derivatives risk*
- *ESG (Environmental, Social & Governance) investment strategy risk*
- *Sector risk*
- *Volatility risk*
- *Counterparty risk*
- *Leverage risk*
- *Redemption risk*
- *Expense risk*
- *Financial services risk*
- *Investments in IPOs risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*
- *Cybersecurity risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is T. Rowe Price Associates, Inc. ("T. Rowe"), located at 100 East Pratt Street, Baltimore, Maryland 21202. T. Rowe was founded in 1937. T. Rowe and its affiliates provide investment advisory services to individual and institutional investor accounts. T. Rowe is a wholly owned subsidiary of T. Rowe Price Group, Inc., a publicly traded company the principal business of which is investment management services.

The Fund has an Investment Advisory Committee. Joseph B. Fath, CPA is chairman of the Investment Advisory Committee, and has day-to-day portfolio management responsibilities over the Fund. Mr. Fath joined T. Rowe Price in 2002. He is a vice president of T. Rowe Price Group, Inc., and T. Rowe Price Associates, Inc., and a portfolio manager in the Equity Division. He is the portfolio manager and chairman of the Investment Advisory Committee of the T. Rowe Price Growth Stock Fund. Mr. Fath graduated, with honors, with a B.S. in accounting from the University of Illinois at Urbana-Champaign. He earned an M.B.A., with honors, in finance and entrepreneurial management from the Wharton School, University of Pennsylvania. Mr. Fath also has earned the certified public accountant accreditation.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/T. Rowe Price Mid-Cap Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term growth of capital.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes), under normal circumstances, in a broadly diversified portfolio of common stocks of medium-sized (mid-capitalization) companies whose earnings T. Rowe Price Associates, Inc., the Fund's sub-adviser ("Sub-Adviser"), expects to grow at a faster rate than the average company.

The Sub-Adviser defines mid-capitalization companies as those whose market capitalization, at the time of acquisition by the Fund, falls within the capitalization range of companies in the S&P Mid Cap 400 Index or Russell MidCap® Growth Index. The market capitalization of companies in the Fund's portfolio and the Standard & Poor's and Russell indices changes over time. As of December 31, 2021, the market capitalization range for the S&P Mid Cap 400 is \$1.74 billion to \$33.68 billion. As of December 31, 2021, the market capitalization range for the Russell MidCap Growth is \$1.22 billion to \$58.76 billion. However, the Fund will not automatically sell or cease to purchase stock of a company it already owns just because the company's market capitalization subsequently grows or otherwise falls outside these ranges. As a growth investor, the Sub-Adviser believes that when a company increases its earnings faster than both inflation and the overall economy, the market will eventually reward it with a higher stock price.

The Fund may at times invest significantly in certain sectors.

In addition, the Fund on occasion will purchase stocks of some larger and smaller companies that have qualities consistent with the portfolio's core characteristics but whose market capitalization is outside the capitalization range of mid-capitalization companies (as defined above) at the time of purchase. The Fund may also invest up to 25% of its total assets (excluding reserves) in foreign securities, including securities and instruments that are economically tied to emerging markets, and 10% of its assets in futures.

Stock selection is based on a combination of fundamental bottom-up analysis in an effort to identify companies with superior long-term appreciation prospects. In addition, a portion of the portfolio will be invested using T. Rowe Price's fundamental research. The Fund will be broadly diversified, and this should help to mitigate the downside risk attributable to any single poorly performing security on overall fund performance.

The Fund's Sub-Adviser generally favors companies with one or more of the following selects stocks using a growth approach and looks for companies that have:

- A demonstrated potential to sustain earnings growth;
- A record of above-average earnings growth;
- Connection to an industry experiencing increasing demand;
- Proven products or services; or
- Stock prices that appear to undervalue their growth prospects.

In pursuing its investment objective, the Fund's Sub-Adviser has the discretion to deviate from its normal investment criteria, as described above, and purchase securities that it believes may provide an opportunity for a substantial appreciation. These situations might arise when the Fund's Sub-Adviser believes a security could increase in value for a variety of reasons including a change in management, an extraordinary corporate event, a new product introduction or innovation, or a favorable competitive development.

The Fund's investments may include holdings in companies that only recently began to trade publicly.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Mid-capitalization investing risk*
- *Investment style risk*
- *Market risk*
- *Sector risk*
- *Foreign securities risk*
- *Equity securities risk*

- *Stock risk*
- *Managed portfolio risk*
- *Privately placed securities risk*
- *Investments in IPOs risk*
- *Liquidity risk*
- *Investment strategy risk*
- *Accounting risk*
- *Company risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The Fund may also invest in securities other than U.S. common stocks, including foreign securities (up to 25% of its assets, excluding reserves), futures and options, convertible securities, preferred stock, registered investment companies, REITs, partnerships, illiquid securities, and warrants, in keeping with Fund objectives. The Fund may also invest in hybrid instruments (up to 10% of total assets).

The Fund may sell securities for a variety of reasons, including to realize gains, limit losses or redeploy assets into more promising opportunities.

A Fund's performance may be affected by risk specifics to certain types of investments, such as foreign securities, derivative investments, non-investment grade debt securities, initial public opportunities ("IPOs") or companies with relatively small market capitalizations. IPOs and other investment techniques may have magnified performance impact on a Fund with a small asset base. A Fund may not experience similar performance as its assets grow.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Volatility risk*
- *Redemption risk*
- *Derivatives risk*
- *Leverage risk*
- *Counterparty risk*
- *Expense risk*
- *Financial services risk*
- *Investments in IPOs risk*
- *Portfolio turnover risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*
- *Cybersecurity risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's and Sub-Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is T. Rowe Price Associates, Inc. ("T. Rowe"), located at 100 East Pratt Street, Baltimore, Maryland 21202. T. Rowe was founded in 1937. T. Rowe and its affiliates provide investment advisory services to individual and institutional investor accounts. T. Rowe is a wholly owned subsidiary of T. Rowe Price Group, Inc., a publicly traded company the principal business of which is investment management services.

T. Rowe Price Investment Management, Inc. ("Price Investment Management") serves as a sub-sub-adviser to the Fund. Price Investment Management is a wholly-owned subsidiary of T. Rowe Price and its address is 100 East Pratt Street, Baltimore, MD 21202.

The Fund has an Investment Advisory Committee chaired by Brian W.H. Berghuis. Brian W.H. Berghuis, CFA, is Chairman of the Investment Advisory Committee for the JNL/T. Rowe Price Mid-Cap Growth Fund. He is a Vice President of T. Rowe Price Group, Inc., and T. Rowe Price Associates, Inc., and a Portfolio Manager in the Equity Division. He is the Chairman of the T. Rowe Price Mid-Cap Growth Fund's Investment Advisory Committee. He joined the firm in 1985. Brian earned an A.B. from Princeton University and an M.B.A. from Harvard Business School. He is a past President of the Baltimore Security Analysts Society. Brian has also earned the Chartered Financial Analyst accreditation.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/T. Rowe Price Short-Term Bond Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is a high level of income consistent with minimal fluctuation in principal value and liquidity.

Principal Investment Strategies. The Fund will invest in a diversified portfolio of short- and intermediate-term investment-grade corporate, government, and asset- and mortgage-backed securities. The Fund may also invest in money market securities, bank obligations, collateralized mortgage obligations, and foreign securities, including securities of issuers in emerging markets. Normally, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in bonds. The Fund's average effective maturity will normally not exceed three (3) years. The Fund will only purchase securities that are rated within one of the four highest credit categories (e.g. AAA, AA, A, BBB, or equivalent) at the time of purchase by at least one major credit rating agency or, if unrated, deemed by T. Rowe Price Associates, Inc. ("T. Rowe" or "Sub-Adviser") to be of comparable quality. The Fund may continue to hold a security that has been downgraded or loses its investment grade rating after purchase. Junk bond debt is not a principal investment risk for the Fund.

Within this broad structure, investment decisions generally reflect the Sub-Adviser's outlook for interest rates and the economy as well as the prices, yields and credit quality of the various securities. For example, if the Sub-Adviser expects interest rates to fall, the Sub-Adviser may purchase longer-term securities (within the framework of the Fund's investment program) in an attempt to seek higher yields and/or capital appreciation. Conversely, if the Sub-Adviser expects interest rates to rise, the Fund may seek securities with shorter maturities.

In keeping with the Fund's objective, it may also invest in other securities and use futures, options, swaps, and other derivative-type instruments. Call or put options may be purchased or sold on securities, futures, financial indices, and foreign currencies. Fund investments may be made in interest rate, index, total return, credit default, and other types of swap agreements, as well as options on swaps (swaptions). Futures, options, and swaps may be used for a variety of purposes including but not limited to, manage exposure to changes in interest rates, bond prices, foreign currencies, and credit quality; as an efficient means of increasing or decreasing overall fund exposure to a specific part or broad segment of the U.S. market or a foreign market; in an effort to enhance income; to protect the value of portfolio securities; to serve as a cash management tool; and to adjust portfolio duration or credit exposure.

The Fund may sell holdings for a variety of reasons, such as to adjust the portfolio's average maturity, duration, or credit quality or to shift assets into and out of higher-yielding or lower-yielding securities or different sectors.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Fixed-income risk*
- *Interest rate risk*
- *Extension risk*
- *Foreign securities risk*
- *Credit risk*
- *Derivatives risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *LIBOR replacement risk*
- *Mortgage-related and other asset-backed securities risk*
- *Swaps risk*
- *Income risk*
- *U.S. Government securities risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the

risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The Fund may also invest in foreign securities (including Yankee bonds), registered investment companies and illiquid securities. The Fund may also invest in hybrid instruments (up to 10% of total assets).

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Issuer risk*
- *Market risk*
- *Leverage risk*
- *Foreign exchange and currency derivatives trading risk*
- *Forward and futures contract risk*
- *Non-hedging foreign currency trading risk*
- *Inflation-indexed securities risk*
- *Counterparty risk*
- *Asset-based securities risk*
- *Currency management strategies risk*
- *Currency risk*
- *Investment in money market funds risk*
- *Stock risk*
- *Repurchase agreements, purchase and sale contracts risk*
- *Second lien loans risk*
- *Securities lending risk*
- *Senior loans risk*
- *Settlement risk*
- *Prepayment risk*
- *Investment strategy risk*
- *Municipal securities risk*
- *Temporary defensive positions and large cash positions risk*
- *TIPS and inflation-linked bonds risk*
- *Cybersecurity risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is T. Rowe Price Associates, Inc. ("T. Rowe"), located at 100 East Pratt Street, Baltimore, Maryland 21202. T. Rowe was founded in 1937. T. Rowe and its affiliates provide investment advisory services to individual and institutional investor accounts. T. Rowe is a wholly owned subsidiary of T. Rowe Price Group, Inc., a publicly traded company the principal business of which is investment management services.

The Fund has an Investment Advisory Committee Co-Chaired by Michael F. Reinartz, CFA. Mr. Reinartz has day-to-day responsibility for managing the portfolio and work with the Investment Advisory Committee in developing and executing the Fund's investment program. Mr. Reinartz has been chairman of the committee since 2015. Mr. Reinartz joined T. Rowe Price in 1996. Prior to his current role, he was a member of the Short-Term Bond, Strategic Income, and Quantitative Research teams and provided portfolio modeling and analysis support to portfolio managers. He also worked as a senior mutual fund accountant and an investment liaison in the Fixed Income Division.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/T. Rowe Price U.S. High Yield Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek total return, and secondarily, current income.

Principal Investment Strategies. The Fund normally invests at least 80% of its net assets (including any borrowings for investment purposes) in U.S. high yield instruments (commonly referred to as “junk” bonds), which are debt instruments that are, at the time of purchase, rated below investment grade by a credit rating agency (i.e., Baa3 by Moody’s Investors Service, Inc. or below BBB- by S&P Global Ratings or Fitch Ratings, Inc.), or, if not rated by any major credit rating agency, deemed by T. Rowe Price Associates, Inc. (“Sub-Adviser”) to be below investment grade. The Fund considers U.S. high yield instruments to include noninvestment-grade bonds, bank loans, and other debt instruments issued by U.S. issuers, as well as bonds denominated in U.S. dollars that are issued by foreign banks and corporations and registered with the SEC for sale in the U.S. (such as Yankee bonds). If a holding is split rated (i.e., rated investment grade by at least one rating agency and below investment grade by another rating agency), the lower rating will be used for purposes of the Fund’s 80% investment policy. The Fund focuses its investments on high yield corporate bonds but may also invest in other income producing instruments including bank loans, convertible securities, and preferred stocks. In selecting bonds, the Sub-Adviser generally evaluates the income provided by the bond and the bond’s appreciation potential, as well as the issuer’s ability to make income and principal payments.

High yield instruments tend to provide high income in an effort to compensate investors for their higher risk of default, which is the failure to make required interest or principal payments. High yield bond issuers include small or relatively new companies lacking the history or capital to merit investment grade status, former blue-chip companies downgraded because of financial problems, companies electing to borrow heavily to finance or avoid a takeover or buyout, and firms with heavy debt loads.

While high yield corporate bonds are typically issued with a fixed interest rate, bank loans have floating interest rates that reset periodically (typically quarterly or monthly). Bank loans represent amounts borrowed by companies or other entities from banks and other lenders. In many cases, the borrowing companies have significantly more debt than equity and the loans have been issued in connection with recapitalizations, acquisitions, leveraged buyouts, or refinancings. The loans held by the Fund may be senior or subordinate obligations of the borrower.

The Fund may purchase securities of any maturity, and its weighted average maturity and duration will vary with market conditions. In selecting investments, the Fund relies extensively on rigorous credit research and analysis.

While most assets will typically be invested in U.S. issued instruments and U.S. dollar-denominated instruments, the Fund may also invest in non-U.S. dollar-denominated bonds of foreign issuers (including securities of issuers in emerging markets). The Fund may invest up to 20% of its total assets in non-U.S. dollar-denominated foreign instruments.

While most assets will typically be invested directly in bonds and other debt instruments, the Fund may buy or sell credit default swaps involving a specific issuer or an index in order to adjust the Fund’s overall credit quality, to protect against fluctuations in the prices of certain holdings, to gain exposure to a particular issuer or security, or to manage certain investment risks such as changes in an issuer’s creditworthiness.

The Fund may sell holdings for a variety of reasons, such as to adjust the portfolio’s average maturity, duration, or overall credit quality, to shift assets into and out of higher-yielding instruments, or to reduce its exposure to certain instruments.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Credit risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Fixed-income risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Interest rate risk*
- *Call risk*
- *Foreign securities risk*
- *Derivatives risk*
- *Liquidity risk*

- *Convertible securities risk*
- *Portfolio turnover risk*
- *Managed portfolio risk*
- *Preferred stock risk*
- *LIBOR replacement risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *ESG (Environmental, Social & Governance) investment strategy risk*
- *Market risk*
- *Mortgage-related and other asset-backed securities risk*
- *Leverage risk*
- *Cybersecurity risk*
- *Investment strategy risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s and Sub-Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is T. Rowe Price Associates, Inc. (“T. Rowe”), located at 100 East Pratt Street, Baltimore, Maryland 21202. T. Rowe was founded in 1937. T. Rowe and its affiliates provide investment advisory services to individual and institutional investor accounts. T. Rowe is a wholly owned subsidiary of T. Rowe Price Group, Inc., a publicly traded company the principal business of which is investment management services.

T. Rowe Price Investment Management, Inc. (“Price Investment Management”) serves as a sub-sub-adviser to the Fund. Price Investment Management is a wholly-owned subsidiary of T. Rowe Price and its address is 100 East Pratt Street, Baltimore, MD 21202.

Kevin Loome, Vice President of T. Rowe Price Group, Inc. and T. Rowe Price, is the Executive Vice President and Portfolio Manager of the Philadelphia-based T. Rowe Price U.S. High Yield Fund and is chairman of its Investment Advisory Committee. Mr. Loome joined the T. Rowe Price in 2017 through T. Rowe Price’s acquisition of the Henderson High Yield Opportunities Fund. Prior to joining the firm, Mr. Loome had worked with the Henderson team since 2013, most recently as head of U.S. credit and manager of the high yield team. Before that, Mr. Loome worked for Delaware Investments, where he was head of high yield Investments and a senior portfolio manager. Mr. Loome began his career at Morgan Stanley as an investment banking analyst and later served as an analyst and portfolio manager at T. Rowe Price. Mr. Loome earned a B.S. in commerce from the University of Virginia and an M.B.A. from the Tuck School of Business at Dartmouth. Mr. Loome also has earned the Chartered Financial Analyst designation.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL/T. Rowe Price Value Fund

Class A Class I

Investment Objective. The investment objective of the Fund is to provide long-term capital appreciation by investing in common stocks believed to be undervalued. Income is a secondary objective.

Principal Investment Strategies. At least 65% of the Fund's total assets will normally be invested in common stocks T. Rowe Price Associates, Inc. ("T. Rowe" or "Sub-Adviser") regards as undervalued. Stock holdings are expected to consist primarily of large-company stocks, but may also include mid-cap and small-cap companies. In taking a value approach to investment selection, the Sub-Adviser's research team seeks to identify companies that appear to be undervalued by various measures and may be temporarily out of favor, but the Sub-Adviser believes have good prospects for capital appreciation. In selecting investments, the Sub-Adviser generally looks for one or more of the following:

- Low price/earnings, price/book value, price/sales or price/cash flow ratios relative to the S&P 500 Index, the company's peers, or its own historic norm;
- Low stock price relative to a company's underlying asset values;
- Companies that may benefit from restructuring activities; and/or
- A sound balance sheet and other positive financial characteristics.

The Fund may invest up to 25% of its total assets (excluding reserves) in foreign securities, including securities and instruments that are economically tied to emerging markets. The Fund may at times invest significantly in certain sectors.

In keeping with the Fund's objective, it may also invest in other securities and use futures, options, swaps, and other derivative-type instruments.

In pursuing its investment objective, the Fund's Sub-Adviser has the discretion to deviate from its normal investment criteria, as described above, and purchase securities that it believes may provide an opportunity for substantial appreciation. These situations might arise when the Fund's Sub-Adviser believes a security could increase in value for a variety of reasons including a change in management, an extraordinary corporate event, a new product introduction or innovation, or a favorable competitive development.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Investment style risk*
- *Large-capitalization investing risk*
- *Market risk*
- *Stock risk*
- *Sector risk*
- *Foreign securities risk*
- *Managed portfolio risk*
- *Portfolio turnover risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Investment strategy risk*
- *Derivatives risk*
- *Company risk*
- *Accounting risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *Other investments.* Although the Fund will invest primarily in common stocks, the Fund may invest in

any type of security or instrument (including certain potentially high-risk derivatives) whose investment characteristics are consistent with the Fund's investment program. These may include:

- Futures and options;
- Preferred stocks;
- Convertible securities and warrants;
- Fixed-income securities, including lower quality (high-yield, high-risk bonds) commonly referred to as "junk bonds" (up to 10% of total assets), and bank debt;
- Hybrid instruments (up to 10% of total assets) which combine the characteristics of securities, futures and options;
- Registered investment companies; and
- Private placements.

A Fund's performance may be affected by risks specific to certain types of investments, such as foreign securities, derivative investments, non-investment grade debt securities, initial public offerings ("IPOs") or companies with relatively small market capitalizations. IPOs and other investment techniques may have magnified performance impact on a Fund with a small asset base. A Fund may not experience similar performance as its assets grow.

The Fund may sell securities for a variety of reasons, including to realize gains, limit losses, or redeploy assets into more promising opportunities.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Financial services risk*
- *Preferred stock risk*
- *Options risk*
- *Convertible securities risk*
- *Fixed-income risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Investment in other investment companies risk*
- *Privately placed securities risk*
- *Cybersecurity risk*
- *ESG (Environmental, Social & Governance) investment strategy risk*
- *Expense risk*
- *Securities lending risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is T. Rowe Price Associates, Inc. ("T. Rowe"), located at 100 East Pratt Street, Baltimore, Maryland 21202. T. Rowe was founded in 1937. T. Rowe and its affiliates provide investment advisory services to individual and institutional investor accounts. T. Rowe is a wholly owned subsidiary of T. Rowe Price Group, Inc., a publicly traded company the principal business of which is investment management services.

The Fund has an Investment Advisory Committee, chaired by Mark S. Finn, CFA, CPA. Mr. Finn joined T. Rowe in 1990 and his investment experience dates from 1998. Mark Finn is a vice president of T. Rowe Price Group, Inc., and T. Rowe Price Associates, Inc. He is a Portfolio Manager in the U.S. Equity Division. Mark is a vice president and Investment Advisory Committee member of the Equity Income Fund, New Era Fund, and Mid-Cap Value Fund. In 2005, he transferred to Equity from T. Rowe Price's Fixed Income Division where he covered utilities and power generation. From 1998 to 2001, Mark worked with the T. Rowe Price Recovery strategy team where he evaluated financially distressed companies. He began his career with the firm in 1990 in the Finance Division where he served as controller of T. Rowe Price Investment Services, Inc., and as the principal accounting officer for the T. Rowe Price Realty Income strategies. Prior to joining the firm, Mark had five years of auditing experience with Price Waterhouse LLP where he worked on engagements for both public and private companies. Mark earned a B.S. from the University of Delaware and has obtained the Chartered Financial Analyst and Certified Public Accountant accreditations.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Vanguard Moderate ETF Allocation Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital through investment in exchange-traded funds (“Underlying ETFs”).

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of Underlying ETFs. An ETF is an investment fund that is traded on a stock exchange and holds an underlying basket of securities generally designed to track an index. ETFs can be bought and sold through the trading day in the secondary market or at net asset value directly with an authorized participant. The Underlying ETFs are affiliated with The Vanguard Group, Inc.

The Underlying ETFs available as of the date of this Prospectus include:

The asset allocation of the Fund is determined through the use of a proprietary asset allocation model developed and managed by Jackson National Asset Management, LLC, the Fund's investment adviser ("JNAM" or "Adviser") in conjunction with third-party service providers. The asset allocation models provide initial guidance to specific asset allocations among various asset classes and sub-asset classes. Final allocations are determined by the Adviser through the use of both internal and external resources. Mellon Investments Corporation ("Mellon"), the Fund's sub-adviser ("Sub-Adviser"), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund's allocations are rebalanced periodically, generally monthly, based on the allocation instructions provided by the Adviser.

During the month, when cash inflows and outflows occur, the Sub-Adviser makes new purchases and sales based on the Fund's current existing market weights.

The Fund typically allocates assets among Underlying ETFs that invest in equity securities, fixed income securities, and cash alternatives. The Adviser may also allocate the Fund's assets to securities and derivative contracts to meet the Fund's allocation targets. The target allocations for the Fund's investment in Underlying ETFs and the corresponding allocation ranges of the primary asset classes are:

	Target Allocation	Minimum Allocation	Maximum Allocation
Equities	40%	30%	50%
Fixed income*	60%	50%	70%

*May include cash equivalents

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser. Generally, emerging markets include nations transitioning from less developed (often pre-industrial) economies with low per-capita incomes to modern industrial economies with higher standards of living.

There are no geographic limitations to the Underlying ETFs' investments, and the Underlying ETFs may invest in securities of companies located in developed or emerging markets. The Sub-Adviser may invest in ETFs in excess of the 1940 Act limits on investment in other investment companies as instructed by the Adviser (and in reliance on exemptive relief issued to the ETF by the SEC, provided that certain conditions are met). Because ETFs are investment companies, investment in ETFs would, absent exemptive relief, be limited under applicable federal statutory provisions. Those provisions generally restrict a fund's investment in the shares of another investment company to, as determined immediately after a purchase is made, not more than 5% of its total assets (which may represent no more than 3% of the outstanding voting stock of such other investment company) and limit aggregate investments in all investment companies to 10% of total assets.

The Fund may invest, directly or indirectly, in illiquid or thinly traded securities.

The Fund may invest, indirectly through ETFs, in bank loans.

The Fund may lend securities to increase its income.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective

for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Exchange-traded funds investing risk*
- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Equity securities risk*
- *Liquidity risk*
- *Settlement risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Emerging markets and less developed countries risk*

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The Fund is managed by William Harding, Sean Hynes, Mark Pliska, and Kyle Ottwell who are responsible for setting the allocations made to the Fund and application of the Fund's strategy.

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

Kyle Ottwell, CFA, CAIA, is Director, Investment Management for JNAM. Mr. Ottwell is responsible for manager research, portfolio construction, and asset allocation of Funds, joining the Investment Management team in October 2013. Mr. Ottwell originally joined JNAM in June of 2007 as a Fund Accountant, rising to the Supervisor position. Prior to JNAM he worked as a fund accountant for State Street. Mr. Ottwell holds a Bachelor of Science degree in Finance & Banking/Real Estate from the University of Missouri-Columbia. He is a CFA and CAIA charterholder.

The Sub-Adviser

Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

In its capacity as sub-adviser, Mellon monitors the investment allocations of the Fund and executes allocation instructions for the Fund as prepared by the Adviser. Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objective. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Vanguard Moderate Growth ETF Allocation Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital through investment in exchange-traded funds (“Underlying ETFs”).

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of Underlying ETFs. An ETF is an investment fund that is traded on a stock exchange and holds an underlying basket of securities generally designed to track an index. ETFs can be bought and sold through the trading day in the secondary market or at net asset value directly with an authorized participant. The Underlying ETFs are affiliated with The Vanguard Group, Inc.

The Underlying ETFs available as of the date of this Prospectus include:

Vanguard Admiral Funds

- Vanguard S&P 500 Value Index Fund
- Vanguard S&P 500 Growth Index Fund
- Vanguard S&P Mid-Cap 400 Index Fund
- Vanguard S&P Mid-Cap 400 Value Index Fund
- Vanguard S&P Mid-Cap 400 Growth Index Fund
- Vanguard S&P Small-Cap 600 Index Fund
- Vanguard S&P Small-Cap 600 Value Index Fund
- Vanguard S&P Small-Cap 600 Growth Index Fund

Vanguard Mega Cap Growth Index Fund
Vanguard Mega Cap Value Index Fund
Vanguard Utilities Index Fund

The asset allocation of the Fund is determined through the use of a proprietary asset allocation model developed and managed by Jackson National Asset Management, LLC, the Fund's investment adviser ("JNAM" or "Adviser") in conjunction with third-party service providers. The asset allocation models provide initial guidance to specific asset allocations among various asset classes and sub-asset classes. Final allocations are determined by the Adviser through the use of both internal and external resources. Mellon Investments Corporation ("Mellon"), the Fund's sub-adviser ("Sub-Adviser"), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund's allocations are rebalanced periodically, generally monthly, based on the allocation instructions provided by the Adviser.

During the month, when cash inflows and outflows occur, the Sub-Adviser makes new purchases and sales based on the Fund's current existing market weights.

The Fund typically allocates assets among Underlying ETFs that invest in equity securities, fixed income securities, and cash alternatives. The Adviser may also allocate the Fund's assets to securities and derivative contracts to meet the Fund's allocation targets. The target allocations for the Fund's investment in Underlying ETFs and the corresponding allocation ranges of the primary asset classes are:

	Target Allocation	Minimum Allocation	Maximum Allocation
Equities	60%	50%	70%
Fixed income*	40%	30%	50%

*May include cash equivalents

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser.

There are no geographic limitations to the Underlying ETFs' investments, and the Underlying ETFs may invest in securities of companies located in developed or emerging markets. Generally, emerging markets include nations transitioning from less developed (often pre-industrial) economies with low per-capita incomes to modern industrial economies with higher standards of living.

The Sub-Adviser may invest in ETFs in excess of the 1940 Act limits on investment in other investment companies as instructed by the Adviser (and in reliance on exemptive relief issued to the ETF by the SEC, provided that certain conditions are met). Because ETFs are investment companies, investment in ETFs would, absent exemptive relief, be limited under applicable federal statutory provisions. Those provisions generally restrict a fund's investment in the shares of another investment company to, as determined immediately after a purchase is made, not more than 5% of its total assets (which may represent no more than 3% of the outstanding voting stock of such other investment company) and limit aggregate investments in all investment companies to 10% of total assets.

The Fund may invest, directly or indirectly, in illiquid or thinly traded securities.

The Fund may invest, indirectly through ETFs, in bank loans.

The Fund may lend securities to increase its income.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its

investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Exchange-traded funds investing risk*
- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Equity securities risk*
- *Liquidity risk*
- *Settlement risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Emerging markets and less developed countries risk*
- *Foreign securities risk*
- *Investment in other investment companies risk*
- *Counterparty risk*
- *Currency risk*
- *Derivatives risk*
- *Leverage risk*
- *Securities lending risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Real estate investment risk*
- *Temporary defensive positions and large cash positions risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The Fund is managed by William Harding, Sean Hynes, Mark Pliska, and Kyle Ottwell who are responsible for setting the allocations made to the Fund and application of the Fund's strategy.

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. - *Derivatives risk*
- *Leverage risk*
- *Securities lending risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Portfolio turnover risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Temporary defensive positions and large cash positions risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The Fund is managed by William Harding, Sean Hynes, Mark Pliska, and Kyle Ottwell who are responsible for setting the allocations made to the Fund and application of the Fund's strategy.

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

Kyle Ottwell, CFA, CAIA, is Director, Investment Management for JNAM. Mr. Ottwell is responsible for manager research, portfolio construction, and asset allocation of Funds, joining the Investment Management team in October 2013. Mr. Ottwell originally joined JNAM in June of 2007 as a Fund Accountant, rising to the Supervisor position. Prior to JNAM he worked as a fund accountant for State Street. Mr. Ottwell holds a Bachelor of Science degree in Finance & Banking/Real Estate from the University of Missouri-Columbia. He is a CFA and CAIA charterholder.

The Sub-Adviser

Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

In its capacity as sub-adviser, Mellon monitors the investment allocations of the Fund and executes allocation instructions for the Fund as prepared by the Adviser. Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objective. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/WCM China Quality Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities of Chinese companies. WCM Investment Management, LLC ("WCM"), the Fund's sub-adviser (the "Sub-Adviser"), considers a company to be a Chinese company if it has been organized under the laws of, has its principal offices in, or has its securities principally traded in, China, or if the company derives at least 50% of its revenues, net profits or incremental revenue growth (typically over the past five years) from, or has at least 50% of assets or production capacities in, China. For purposes of the Fund's investments, China also includes its special administrative regions and other districts, such as Hong Kong and Taiwan.

The Fund may invest in A Shares of companies based in China that trade on the Shanghai Stock Exchange and the Shenzhen Stock Exchange through the Shanghai – Hong Kong and Shenzhen – Hong Kong Stock Connect programs ("Stock Connect"). Stock Connect is a mutual stock market access program designed to, among other things, enable foreign investments in China.

The Fund's investments in equity securities may include common stock, including A-Shares, and depository receipts. The Fund's investments in depository receipts may include American, European, Canadian, and Global Depository Receipts ("ADRs", "EDRs", "CDRs", and "GDRs", respectively). ADRs and CDRs are receipts that represent interests in foreign securities held on deposit by U.S. and Canadian banks or trust companies, respectively. EDRs and GDRs have the same qualities as ADRs, although they may be traded in several international trading markets. The Fund may also use participation certificates issued by foreign banks or brokers evidencing ownership of underlying stock issued by a foreign company. Participation certificates are used by foreign investors to access local markets and to gain exposure to, primarily, equity securities of issuers listed on a local exchange.

The Sub-Adviser uses a bottom-up approach that seeks to identify companies believed to be quality companies and have above-average potential for growth in assets and the rate of return on invested capital. The Sub-Adviser considers quality growth companies to: (i) have a history of predictable and consistent earnings growth, (ii) have regular, growing dividend payments, (iii) be industry leaders with sustainable competitive advantages, (iv) have corporate cultures emphasizing strong, quality and experienced management, (v) have little or no debt, (vi) have attractive relative valuations, and (vii) have potential for asset base growth. In selecting securities, the Sub-Adviser also considers other factors including, among others, political risk, monetary policy risk, and regulatory risk. The Sub-Adviser will generally hold the equity securities of approximately 30 to 50 issuers, and the Fund may invest in securities of any market capitalization. The Fund generally invests in companies in any sector, however, from time to time the Fund may invest a significant portion of its assets in the securities of companies in one or more sectors.

The Sub-Adviser may sell all or a portion of a portfolio holding of the Fund when, in its opinion, one or more of the following occurs, among other reasons: (1) the issuer's fundamentals deteriorate or the issuer's competitive advantage is no longer growing, (2) the Sub-Adviser's analysis determines the issuer's leadership abandoned its core values or the issuer's culture is challenged, (3) the Sub-Adviser identifies a more attractive investment opportunity for the Fund; or (4) the Fund requires cash to meet redemption requests.

Further, when the Sub-Adviser believes that current market, economic, political or other conditions are unsuitable and would impair the pursuit of the Fund's investment objective, the Fund may temporarily invest up to 100% of its assets in cash, or cash equivalents, including but not limited to, obligations of the U.S. government, money market fund shares, commercial paper, repurchase agreements, certificates of deposit and/or bankers' acceptances, as well as other interest bearing or discount obligations. When the Fund takes a temporary defensive position, it may not be seeking its investment objective.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Foreign securities risk*
- *China risk*
- *Hong Kong investment risk*

- *Taiwan investment risk*
- *Emerging markets and less developed countries risk*
- *Investing in China A Shares risk*
- *Investing through Stock Connect risk*
- *Depository receipts risk*
- *Investment style risk*
- *Currency risk*
- *Investment strategy risk*
- *Managed portfolio risk*
- *Liquidity risk*
- *Participation note risk*
- *Large-capitalization investing risk*
- *Sector risk*
- *Equity securities risk*
- *Non-diversification risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *Risks of Investments in China A-shares through the Connect Program.* The Connect Program is subject to daily quota limitations and an investor cannot purchase and sell the same security on the same trading day, which may restrict a Fund’s ability to invest in China A-shares through the Connect Program and to enter into or exit trades on a timely basis. The relevant China A-shares market may be open at a time when the Connect Program is not trading, with the result that prices of China A-shares may fluctuate at times when the Fund is unable to add to or exit its position.

Only certain China A-shares are eligible to be accessed through the Connect Program. Such securities may lose their eligibility at any time, in which case they could be sold but could no longer be purchased through the Connect Program. Because the Connect Program is new, the actual effect on the market for trading China A-shares with the introduction of large numbers of foreign investors is currently unknown. The Connect Program is subject to regulations promulgated by regulatory authorities for the relevant stock exchanges in mainland China and The Stock Exchange of Hong Kong Limited or other regulatory authorities of other stock exchanges in the future as permitted, and further regulations or restrictions, such as limitations on redemptions or suspension of trading, may adversely impact the Connect Program, if the authorities believe it necessary to assure orderly markets or for other reasons. There is no guarantee that the relevant exchanges will continue to support the Connect Program in the future.

Investments in China A-shares may not be covered by the securities investor protection programs of the relevant exchanges and, without the protection of such programs, will be subject to the risk of default by the broker. In the event that the depository of the relevant China stock exchange (“ChinaClear”) defaulted, a Fund may not be able to recover fully its losses from ChinaClear or may be delayed in receiving proceeds as part of any recovery process. In addition, because all trades on the Connect Program in respect of eligible China A-shares must be settled in Renminbi (RMB), the Chinese currency, the Funds investing through the Connect Program must have timely access to a reliable supply of offshore RMB, which cannot be guaranteed.

China A-shares purchased through the Connect Program are held in nominee name and not the Fund’s name as the beneficial owner. It is possible, therefore, that a Fund’s ability to exercise its rights as a shareholder and to pursue claims against the issuer of China A-shares may be limited because the nominee structure has not been tested in Chinese courts. In addition, a Fund may not be able to participate in corporate actions affecting China A-shares held through the Connect Program due to time constraints or for other operational reasons.

Trades on the Connect Program are subject to certain requirements prior to trading. If these requirements are not completed prior to the market opening, a Fund cannot sell the shares on that trading day. In addition, these requirements may limit the number of brokers that a Fund may use to execute trades. If an investor holds 5% or more of the total shares issued by a China A share issuer, the investor must return any profits obtained from the purchase and sale of those shares if both transactions occur within a six-month period. If a Fund holds 5% or more of the total shares of a China-A share issuer through its Connect Program investments, its profits may be subject to these limitations. All accounts managed by the Adviser and/or its affiliates will be aggregated for purposes of this 5% limitation, which makes it more likely that a Fund’s profits may be subject to these limitations.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Concentration risk*

- *Cybersecurity risk*
- *Issuer risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is WCM Investment Management, LLC (“WCM”), located at 281 Brooks Street, Laguna Beach, California 92651. WCM is an independent, employee-owned money management firm, founded in 1976. WCM provides investment management and sub-advisory services to public as well as various institutional and sub-advised accounts.

The portfolio managers of the Sub-Adviser responsible for the oversight of the Fund are Mr. Mike Tian and Ms. Yan Gao. Information regarding the portfolio managers of the Fund is set forth below.

Mike Tian, CFA, is a Portfolio Manager and Business Analyst. Mr. Tian joined WCM in 2012. He is a member firm's Investment Strategy Group (ISG) and his primary responsibilities include portfolio management and equity research. Since the start of his investment career in 2006, Mr. Tian's experience includes a position as Senior Equity Analyst and Equity Strategist at Morningstar, Inc. in Chicago. While there, he also managed the Morningstar Opportunistic Investor, a portfolio and newsletter focusing on special situations and growth companies, and additionally played an instrumental role in the development of Morningstar's economic moat trend methodology. Mr. Tian earned his B.S. in Finance from the University of Illinois at Urbana-Champaign and is also a CFA® charterholder.

Yan Gao is Associate Portfolio Manager and Business Analyst. Ms. Gao joined WCM in 2014. Ms. Gao's primary responsibilities include portfolio management and equity research. Since Ms. Gao began her investment career in 2008, her experience includes positions as Manager Research Associate at Wilshire Associates, as Fixed Income Investment Manager at Industrial & Commercial Bank of China in China, and as trainee in the UBS Graduate Training Program in Switzerland and Germany. Ms. Gao earned her B.A. and M.A. in Finance from The School of Finance at Renmin University of China, and her M.B.A. from the University of California, Irvine.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/WCM Focused International Equity Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation by investing primarily in companies located outside of the United States.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities.

The Fund's investments in equity securities may include common stocks, preferred stocks and warrants. The Fund invests primarily in equity securities or depositary receipts of non-U.S. domiciled companies located in developed countries, but may also invest in emerging markets and less developed countries.

The Fund's investments in depositary receipts may include American Depository Receipts ("ADRs"). ADRs are receipts that represent interests in foreign securities held on deposit by U.S. banks.

WCM Investment Management, LLC, the Fund's sub-adviser (the "Sub-Adviser") uses a bottom-up approach that seeks to identify companies with attractive fundamentals, such as long-term growth in revenue and earnings, and that show a high probability for superior future growth. The Sub-Adviser's investment process focuses on seeking industry leading companies that the Sub-Adviser believes possess growing competitive advantages; corporate cultures emphasizing strong, quality and experienced management; low or no debt; and attractive relative valuations. The Sub-Adviser also considers other factors in selecting securities, including political risk, monetary policy risk, and regulatory risk.

Although the Fund may invest in companies in any capitalization range, it will generally invest in large established multinational companies. The Fund generally will invest in securities of companies located in different regions and in at least three different countries. From time to time, the Fund may have a significant portion of its assets invested in the securities of companies in one or a few countries or regions.

The Sub-Adviser will generally reduce position size in the portfolio based on individual holding size, industry/sector weight, as well as other relevant factors. When performing a fundamental analysis, the Sub-Adviser views valuation as the most significant factor in managing position size. The key factors that the Sub-Adviser considers when determining whether to sell out of a position completely are its evaluation(s) of whether a company's competitive advantage is deteriorating or no longer expanding; there are more attractive names in an essentially similar industry; a company's leadership is not performing as expected; a company's culture is challenged; it deems valuation to be excessive; and/or there is material geopolitical or currency risk.

The Fund may also invest in A Shares of companies based in the People's Republic of China ("China") that trade on the Shanghai Stock Exchange and the Shenzhen Stock Exchange through the Shanghai – Hong Kong and Shenzhen – Hong Kong Stock Connect programs ("Stock Connect"). Stock Connect is a mutual stock market access program designed to, among other things, enable foreign investments in China.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Equity securities risk*
- *Foreign securities risk*
- *Concentration risk*
- *Currency risk*
- *Depositary receipts risk*
- *Emerging markets and less developed countries risk*
- *Issuer risk*
- *Managed portfolio risk*
- *Investing through Stock Connect risk*
- *Investing in China A Shares risk*
- *China risk*

- *Large-capitalization investing risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks).

Risks of Investments in China A-shares through the Connect Program. The Connect Program is subject to daily quota limitations and an investor cannot purchase and sell the same security on the same trading day, which may restrict a Fund’s ability to invest in China A-shares through the Connect Program and to enter into or exit trades on a timely basis. The relevant China A-shares market may be open at a time when the Connect Program is not trading, with the result that prices of China A-shares may fluctuate at times when the Fund is unable to add to or exit its position.

Only certain China A-shares are eligible to be accessed through the Connect Program. Such securities may lose their eligibility at any time, in which case they could be sold but could no longer be purchased through the Connect Program. Because the Connect Program is new, the actual effect on the market for trading China A-shares with the introduction of large numbers of foreign investors is currently unknown. The Connect Program is subject to regulations promulgated by regulatory authorities for the relevant stock exchanges in mainland China and The Stock Exchange of Hong Kong Limited or other regulatory authorities of other stock exchanges in the future as permitted, and further regulations or restrictions, such as limitations on redemptions or suspension of trading, may adversely impact the Connect Program, if the authorities believe it necessary to assure orderly markets or for other reasons. There is no guarantee that the relevant exchanges will continue to support the Connect Program in the future.

Investments in China A-shares may not be covered by the securities investor protection programs of the relevant exchanges and, without the protection of such programs, will be subject to the risk of default by the broker. In the event that the depository of the relevant China stock exchange (“ChinaClear”) defaulted, a Fund may not be able to recover fully its losses from ChinaClear or may be delayed in receiving proceeds as part of any recovery process. In addition, because all trades on the Connect Program in respect of eligible China A-shares must be settled in Renminbi (RMB), the Chinese currency, the Funds investing through the Connect Program must have timely access to a reliable supply of offshore RMB, which cannot be guaranteed.

China A-shares purchased through the Connect Program are held in nominee name and not the Fund’s name as the beneficial owner. It is possible, therefore, that a Fund’s ability to exercise its rights as a shareholder and to pursue claims against the issuer of China A-shares may be limited because the nominee structure has not been tested in Chinese courts. In addition, a Fund may not be able to participate in corporate actions affecting China A-shares held through the Connect Program due to time constraints or for other operational reasons.

Trades on the Connect Program are subject to certain requirements prior to trading. If these requirements are not completed prior to the market opening, a Fund cannot sell the shares on that trading day. In addition, these requirements may limit the number of brokers that a Fund may use to execute trades. If an investor holds 5% or more of the total shares issued by a China A share issuer, the investor must return any profits obtained from the purchase and sale of those shares if both transactions occur within a six-month period. If a Fund holds 5% or more of the total shares of a China-A share issuer through its Connect Program investments, its profits may be subject to these limitations. All accounts managed by the Adviser and/or its affiliates will be aggregated for purposes of this 5% limitation, which makes it more likely that a Fund’s profits may be subject to these limitations.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Small-capitalization investing risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is WCM Investment Management, LLC ("WCM"), located at 281 Brooks Street, Laguna Beach, California 92651. WCM is an independent, employee-owned money management firm, founded in 1976. WCM provides investment management and sub-advisory services to public as well as various institutional and sub-advised accounts.

The portfolio managers of the Sub-Adviser responsible for the oversight of the Fund are Messrs. Paul R. Black, Peter J. Hunkel, Michael B. Trigg, and Sanjay Ayer. Information regarding the portfolio managers of the Fund is set forth below.

Paul R. Black is a Portfolio Manager and CEO. Mr. Black joined WCM in 1989 and previously served as WCM's President and Co-CEO since December 2004. Mr. Black is a member of WCM's Investment Strategy Group ("ISG") and his primary responsibilities include portfolio management and equity research.

Peter J. Hunkel is a Portfolio Manager. Mr. Hunkel joined WCM in 2007. Mr. Hunkel has been a portfolio manager of the focused international growth strategy since December 2004. Mr. Hunkel is a member of the firm's ISG and his primary responsibilities include portfolio management and equity research. Prior to joining WCM, Mr. Hunkel served as Chief Operating Officer and Senior Portfolio Manager at Centurion Alliance from 2000 to June 2007.

Michael B. Trigg is a Portfolio Manager and President. Mr. Trigg joined WCM in 2005. Mr. Trigg is a member of the firm's ISG and his primary responsibilities include portfolio management and equity research. Since he began his investment career in 2001, Mr. Trigg's experience includes a position as equity analyst at Morningstar, Inc. in Chicago where, in addition to general equity analysis, he managed their Model Growth Portfolio.

Sanjay Ayer, CFA is a Portfolio Manager. Mr. Ayer joined WCM in 2007. He is a member firm's Investment Strategy Group (ISG) and his primary responsibilities include portfolio management and equity research. Prior to WCM, Mr. Ayer was an Equity Analyst at Morningstar, Inc. in Chicago from 2002 to 2006, where he covered the gaming, cruise and online travel industries.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Westchester Capital Event Driven Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek to provide attractive risk-adjusted returns with low relative volatility in virtually all market environments. Risk-adjusted return is a concept that considers not only an investment's return, but also the amount of potential risk involved in producing that return.

Principal Investment Strategies. The Fund primarily employs investment strategies designed to capture price movements generated by specific events, including, but not limited to, securities of companies involved in mergers, acquisitions, asset sales or other divestitures, restructurings, refinancings, recapitalizations, reorganizations or other special situations (referred to as "event-driven opportunities"). Among the investment strategies Westchester Capital Management, LLC ("Westchester" or "Sub-Adviser") may use on behalf of the Fund are the following:

Merger-Arbitrage Strategy: The Fund may purchase the securities of companies that are involved in publicly announced mergers, takeovers and other corporate reorganizations, and use one or more arbitrage strategies in connection with the purchase. Although a variety of strategies may be employed depending upon the nature of the reorganizations, the most common merger-arbitrage strategy involves purchasing the shares of an announced acquisition target at a discount to their expected value upon completion of the acquisition. The size of this discount, known as the arbitrage "spread," generally determines the Fund's potential profit on any given investment. In conjunction with investment in a target company, the Fund may employ a variety of hedging strategies to protect against issuer-related risk, including selling short the securities of the company that proposes to acquire the target company and/or the purchase and sale of put and call options. The merger-arbitrage strategy is designed to provide positive performance if the Adviser successfully evaluates the outcome of the event-driven opportunity notwithstanding the performance of the overall market because the Adviser seeks to profit from the "spread" described above upon the completion of a merger, takeover or other reorganization rather than the performance of the market overall or any one issuer.

Special Situations Strategy: The Fund may invest in the securities of issuers based upon the expectation of the Adviser that the price of such securities may change in the short term due to a special situation, such as a stock buy-back, spinoffs and split-offs, credit rating upgrade, the outcome of litigation or other dispute, a positive earnings report, legislative or regulatory changes or other catalyst-driven event. The Fund may seek to profit from special situations by employing one or more arbitrage sub-strategies, including, but not limited to, capital structure arbitrage and convertible arbitrage, or the Fund may seek to use such strategies independently.

Capital Structure Arbitrage: Capital structure arbitrage is an investment strategy that seeks to profit from relative pricing discrepancies between related securities, such as securities of different classes issued by the same issuer. For example, when the Adviser believes that unsecured debt securities are overvalued in relation to senior secured debt securities of the same issuer, the Fund may purchase the senior secured debt securities of the issuer and take a short position in the unsecured debt securities of the same issuer. In this example, the trade may be profitable if credit quality spreads widen or if the issuer went bankrupt and the recovery rate for the senior debt was higher than the expectations implicit in the prices of the securities at the time the Fund established its positions. Another example might involve the Fund purchasing one class of common stocks while selling short a different class of common stock of the same issuer.

Convertible Arbitrage: Convertible arbitrage is a strategy that seeks to profit from mispricings between a firm's convertible securities and the underlying equity securities. A common convertible arbitrage approach matches a long position in a convertible security with a short position in the underlying common stocks when an investor believes the convertible security is undervalued relative to the value of the underlying equity security. In such a case, the investor may seek to sell short shares of the underlying common stocks in order to hedge exposure to the issuer of the equity securities. Convertible arbitrage positions may be designed to earn income from coupon or dividend payments on the investment in the convertible securities.

The Fund may also invest in other special situations, such as initial public offerings, in privately placed securities of issuers, including those the Adviser expects to undertake an initial public offering, and other related liquidity events for current shareholders of an issuer. The Fund may also invest in issuers to capture special dividends or other distributions.

Distressed/Restructuring: The Fund may invest in securities, including debt securities, of financially distressed companies and companies undergoing or expected to undergo bankruptcy or other insolvency proceeding. The Fund may invest in corporate bonds, privately held loans and other securities or obligations of companies that are highly leveraged, experiencing financial difficulties or have filed for bankruptcy. The Fund may profit from its investments in such issuers if the issuer undergoes a successful restructuring or recapitalization, undertakes asset sales or participates in spin-off transactions. The Fund may also purchase securities in anticipation of a company's recovery or turnaround or the liquidation of all or some of the company's assets.

Option Income Strategies: The Fund may sell, or “write,” call options on its portfolio securities. The Fund may also write call options on one or more basket of stocks, such as the S&P 500 Index or an industry sub-group of the S&P 500 Index. The options written by the Fund are considered “covered” if the Fund owns the stocks or basket of stocks against which the options are written. The Adviser may determine to purchase shares and sell call options on those shares at approximately the same time, although the sale of options on the Fund’s portfolio securities may occur at any time or not at all. The Adviser may utilize the option writing strategy at any time, including in a relatively flat or declining market environment, to earn premium income. The Fund may sell call options on substantially all of its portfolio securities.

The Fund may utilize other options strategies, such as writing options on securities it does not currently own (known as “uncovered” options), buying or selling options when the Adviser believes they may be mispriced or may provide attractive opportunities to earn income, or engaging in risk-reversal transactions. In a risk-reversal transaction, the Adviser may buy put options and sell call options against a long stock position.

In implementing the Fund’s investment strategies, the Fund may invest in a wide variety of investments, such as equity securities of any kind, debt securities of any kind, including those that pay a fixed or floating rate of interest, warrants, convertible securities, master limited partnerships, derivative instruments of any kind, including options, futures, currency forwards and swaps. Derivative instruments may be used for hedging purposes, as a substitute for investments in the underlying securities, to increase or decrease exposure (leverage), or for the purpose of generating income. The Fund may also engage in forward commitments and reverse repurchase agreements. In pursuing the Fund’s investment objective and strategies, the Fund may invest in U.S. and foreign securities without limit. In addition, the Fund may lend its portfolio securities.

The Fund may purchase fixed and floating rate income investments of any credit quality or maturity, including corporate bonds, bank debt and preferred stock. Certain of the debt securities in which the Fund invests may carry non-investment-grade ratings (rated BB+ or lower by S&P Global Ratings, or comparably rated by another nationally recognized statistical rating organization), or may be unrated investments of comparable quality, commonly referred to as “high yield” or “junk” bonds. These securities are speculative investments that carry greater risks and are more susceptible to real or perceived adverse economic and competitive industry conditions than higher quality investments. This strategy may be utilized by the Adviser to generate income, to diversify the Fund’s investments or for other investing purposes.

The Fund may enter into derivative transactions and other instruments of any kind for hedging purposes, duration or volatility management purposes, or otherwise to gain, or reduce, long or short exposure to one or more asset classes or issuers. For example, the Fund may write call options on its portfolio securities or a market index that is representative of its portfolio with the expectation of generating additional income. The Adviser may seek to hedge the Fund’s portfolio against a decline in the value of its portfolio securities or a decline in the market generally by purchasing put options. A put option gives the Fund the right to sell, or “put,” a fixed number of shares of stock at a fixed price within a given time frame in exchange for the payment of a premium. The values of put options generally increase as stock prices decrease. The Fund also may use derivative transactions with the purpose or effect of creating investment leverage.

The Fund may invest in derivative instruments in any manner consistent with its investment strategies, including, for example, in the following situations: (i) the Fund may invest in futures contracts, options on futures contracts, or swap transactions as a substitute for a cash investment in an equity security, (ii) the Fund may invest in interest rate swaps, total return swaps, or futures contracts where the Adviser believes doing so is the most cost-efficient or liquid way to gain the desired investment exposure, (iii) the Fund may invest in options contracts, forward currency contracts, futures contracts and interest rate swaps to adjust the Fund’s investment or risk exposure, and (iv) the Fund may invest in futures transactions, option contracts and swap contracts, such as total return swaps and credit default swaps, to gain investment exposure beyond that which could be achieved by making only cash investments.

The Fund may invest in other investment companies, including exchange-traded funds (“ETFs”). Those investments may be made for the purpose of, among other things, gaining or hedging market exposure, hedging exposure to a particular industry, sector or component of an event-driven opportunity, or managing the Fund’s cash position. In addition, the Fund may invest in ETFs and other investment companies as part of an event-driven opportunity if such an investment is otherwise consistent with the Fund’s principal investment strategies. For example, the Fund may take a position in a narrowly based sector ETF as part of an investment thesis relating to how a regulatory event may affect companies operating in a particular sector or industry. The Fund may hold a significant portion of its assets in cash, money market investments, money market funds or other similar short-term investments for defensive purposes or to preserve the Fund’s ability to capitalize quickly on new market opportunities. During periods when the Fund is so invested, its investment returns may be lower than if it were not so invested and the Fund may not achieve its investment objective. The Fund may also invest in special purpose acquisition companies, a form of investment vehicle typically formed for the purpose of acquiring an operating business.

In making investments for the Fund, the Adviser is guided by the following general considerations:

- before an initial position in an event-driven opportunity is established, a preliminary analysis is made of the expected event to determine the probability and timing of the event;

- in deciding whether or to what extent to invest, the Adviser evaluates, among other things, the credibility, strategic motivation and financial resources of the relevant participants, and the liquidity of the securities involved in the transaction; and
- the risk-reward characteristics of each event-driven opportunity are assessed on an ongoing basis.

The Fund's holdings may be adjusted at any time. The Adviser may sell securities at any time, including if the Adviser's evaluation of the risk/reward ratio is no longer favorable, in order to take advantage of what the Adviser considers to be a better investment opportunity, when the Adviser believes the investment no longer represents a relatively attractive investment opportunity, or when the Adviser perceives deterioration in the credit fundamentals of the issuer.

Any percentage limitation and requirement as to investments will apply only at the time of an investment to which the limitation or requirement is applicable and shall not be considered violated unless an excess or deficiency occurs or exists immediately after and as a result of such investment. Additionally, any later increase or decrease resulting from a change in values, net assets or other circumstances will not be considered in determining whether any investment complies with the Fund's limitation or requirement.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Event driven and special situations risk*
- *Managed portfolio risk*
- *Company risk*
- *Market risk*
- *Equity securities risk*
- *Special purpose acquisition companies risk*
- *Distressed securities risk*
- *Credit risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Investment in other investment companies risk*
- *Leverage risk*
- *Options risk*
- *Derivatives risk*
- *Short sales risk*
- *Speculative exposure risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Master limited partnership risk*
- *Financial services risk*
- *Foreign securities risk*
- *Hedging instruments risk*
- *Accounting risk*
- *Large-capitalization investing risk*
- *Mid-capitalization investing risk*
- *Small-capitalization investing risk*
- *Concentration risk*
- *Interest rate risk*
- *Call risk*
- *Convertible securities risk*
- *Privately placed securities risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *Additional Event-Driven Strategies.* In addition to the above strategies, the Fund's Adviser may invest in other investments or utilize other strategies consistent with its investment objective. For example, the Fund may pursue other event-driven strategies, including investing in companies that may be subject to significant regulatory issues or changes or may be exploring strategic alternatives. The success of those strategies will depend upon, among other things, the Adviser's skill in evaluating the likelihood of the various potential outcomes and the market's reaction to those outcomes.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Investment strategy risk*
- *Cybersecurity risk*
- *Expense risk*
- *Regulatory investment limits risk*
- *Temporary defensive positions and large cash positions risk*
- *Redemption risk*
- *When-issued and delayed delivery securities and forward commitments risk*
- *Investments in IPOs risk*
- *LIBOR replacement risk*
- *Securities lending risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Westchester, 100 Summit Lake Drive, Valhalla, New York 10595, a registered investment adviser since 2010. Westchester and its affiliate manage merger-arbitrage programs and other investment strategies similar to the Fund's investment strategies for other institutional investors, including other registered open-end investment companies.

Mr. Roy D. Behren and Mr. Michael T. Shannon are primarily responsible for the day-to-day management of the Fund's portfolio. Mr. Behren has served as Co-President of Westchester since 2011, served as a research analyst for Westchester Capital Management, Inc. (Westchester's predecessor adviser) from 1994 until 2010 and as the Chief Compliance Officer of Westchester Capital Management, Inc. from 2004 until June 2010.

Mr. Shannon has served as Co-President of Westchester since 2011, and served as Westchester Capital Management Inc.'s Director of Research from May 1996 until April 2005. From April 2005 to April 2006, Mr. Shannon was Senior Vice President in charge of the Special Situations and Mergers Group of D.E. Shaw & Co. Mr. Shannon returned to Westchester in May 2006 as a research analyst and portfolio strategist.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Western Asset Global Multi-Sector Bond Fund
(formerly, JNL/Franklin Templeton Global Multisector Bond Fund)

Class A
Class I

Investment Objective. The investment objective of the Fund is to maximize total return through income and capital appreciation.

Principal Investment Strategies. Under normal market conditions, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of fixed-income instruments of varying maturities and quality across different industries and sectors of the fixed-income market.

The Fund invests in globally diversified fixed income securities and rotates portfolio allocations among global sectors, including, below-investment grade (*i.e.*, high yield securities or “junk” bonds) and investment grade corporate securities located in the United States and in non-U.S. developed and emerging markets; obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, banks and corporations and foreign governments, banks and corporations of developed and emerging markets; mortgage- and asset-backed securities; bank loans, structured notes, contingent convertible securities, common stock and warrants held as part of a corporate action.

The Fund will invest at least 40% of its assets, unless market conditions are not deemed favorable, in which case the Fund would invest at least 30% of its assets, in securities of non-U.S. issuers. A corporate issuer is considered to be from the country where it is headquartered or incorporated, where the majority of its assets are located or where it generates the majority of its operating income. The Fund will allocate its assets among no less than three countries.

The Fund may invest a substantial portion of total assets in securities denominated in foreign currencies and in U.S. dollar denominated securities of foreign issuers. In addition, the Fund may hedge its exposure to foreign currency. Both long and short currency exposures are permissible.

The Fund may invest up to 70% of its assets in below investment grade securities (*i.e.*, high yield securities or “junk” bonds) (“Ba” or lower by Moody’s Investment Service or the equivalent by S&P Global Ratings or Fitch, Inc./Fitch Ratings Ltd.). Mortgage- and asset-backed securities held by the Fund may include those backed by loans to subprime borrowers. An asset-backed security is a security backed by loans, leases, and other receivables. A mortgage-backed security is an interest in a pool of mortgage loans made by and packaged or “pooled” together by banks, mortgage lenders, various governmental agencies and other financial institutions for sale to investors to finance purchases of homes, commercial buildings and other real estate.

The average dollar-weighted effective duration of the Fund normally varies between zero and ten years. Duration measures the sensitivity of a fixed income security’s price to changes in interest rates. The longer a fixed income security’s duration, the more sensitive that security will be to changes in interest rates. Similarly, the longer the Fund’s dollar-weighted average duration, the more sensitive the Fund will be to interest rate changes than a fund with a shorter dollar-weighted average duration. Effective duration measures the price sensitivity of a bond or a bond fund to changes in interest rates taking into account embedded options and floating interest rates.

The Fund may use various types of derivative instruments for hedging and for investment purposes including, but not limited to, futures contracts and options on futures (including U.S. Treasury futures contracts and options on futures) to alter the duration of the Fund and increase potential returns; forward currency exchange contracts; currency futures and options thereon; interest rate swaps, floors and caps; and credit default swaps and currency swaps. The Fund may also use other types of derivative instruments, such as futures and options, contracts, forward contracts and swap agreements as a substitute for investing directly in an underlying asset, to increase returns, to manage market, foreign currency and/or duration or interest rate risk, or as part of a hedging strategy.

The Fund may invest its uninvested cash in high-quality, short-term debt securities, which may include repurchase agreements and high-quality money market instruments.

For purposes of satisfying the 80% requirement, the Fund may also invest in derivative instruments that have economic characteristics similar to the fixed-income instruments mentioned above.

The Fund is a “non-diversified” fund, as defined in the Investment Company Act of 1940, as amended (the “1940 Act”), and may invest more of its assets in fewer issuers than “diversified” mutual funds.

The Fund may use any of the above currency techniques or other derivative transactions for the purposes of enhancing Fund returns, increasing liquidity, gaining exposure to particular instruments in more efficient or less expensive ways and/or hedging risks relating to changes in currency exchange rates, interest rates and other market factors. By way of example, when the Sub-Adviser believes that the value of a particular foreign currency is expected to increase compared to the U.S. dollar, the Fund could enter into a forward contract to purchase that foreign currency at a future date. If at such future date the value of the foreign currency exceeds the then current amount of U.S. dollars to be paid by the Fund under the contract, the Fund will recognize a gain. When used for hedging

purposes, a forward contract or other derivative instrument could be used to protect against possible declines in a currency's value where a security held or to be purchased by the Fund is denominated in that currency, or it may be used to hedge the Fund's position by entering into a transaction on another currency expected to perform similarly to the currency of the security held or to be purchased (a "proxy hedge").

A currency forward contract is an obligation to purchase or sell a specific foreign currency at an agreed exchange rate (price) at a future date, which is typically individually negotiated and privately traded by currency traders and their customers in the interbank market. A cross currency forward is a forward contract to sell a specific foreign currency in exchange for another foreign currency and may be used when the Fund believes that the price of one of those foreign currencies will experience a substantial movement against the other foreign currency. A cross currency forward will tend to reduce or eliminate exposure to the currency that is sold, and add or increase exposure to the currency that is purchased, similar to when the Fund sells a security denominated in one currency and purchases a security denominated in another currency. When used for hedging purposes, a cross currency forward will protect the Fund against losses resulting from a decline in the hedged currency, but will cause the Fund to assume the risk of fluctuations in the value of the currency it purchases.

A futures contract is a standard binding agreement between two parties to buy or sell a specified quantity of an underlying instrument or asset, such as a specific security or currency, at a specified price at a specified later date that trade on an exchange. A "sale" of a futures contract means the acquisition of a contractual obligation to deliver the underlying instrument called for by the contract at a specified price on a specified date. A "purchase" of a futures contract means the acquisition of a contractual obligation to acquire the underlying instrument called for by the contract at a specified price on a specified date. The purchase or sale of a futures contract will allow the Fund to increase or decrease its exposure to the underlying instrument or asset. Although most futures contracts by their terms require the actual delivery or acquisition of the underlying instrument, some require cash settlement. The Fund may buy and sell futures contracts that trade on U.S. and foreign exchanges. Swap agreements, such as interest rate and credit default swaps, are contracts between the Fund and, typically, a brokerage firm, bank, or other financial institution (the swap counterparty) for periods ranging from a few days to multiple years. In a basic swap transaction, the Fund agrees with its counterparty to exchange the returns (or differentials in rates of return) earned or realized on a particular "notional amount" of underlying instruments. The notional amount is the set amount selected by the parties as the basis on which to calculate the obligations that they have agreed to exchange. The parties typically do not actually exchange the notional amount. Instead, they agree to exchange the returns that would be earned or realized if the notional amount were invested in given instruments or at given interest rates. For credit default swaps, the "buyer" of the credit default swap agreement is obligated to pay the "seller" a periodic stream of payments over the term of the agreement in return for a payment by the "seller" that is contingent upon the occurrence of a credit event with respect to an underlying reference debt obligation. As a "buyer" of the credit default swap, the Fund is purchasing the obligation of its counterparty to offset losses the Fund could experience if there was such a credit event. Generally, a credit event means bankruptcy, failure to timely pay interest or principal, obligation acceleration, or modified restructuring of the reference debt obligation. The contingent payment by the seller generally is the face amount of the debt obligation in exchange for the physical delivery of the reference debt obligation or a cash payment equal to the then current market value of that debt obligation. The Fund may be a buyer of credit default swaps. An interest rate swap is an agreement between two parties to exchange interest rate obligations, generally one based on an interest rate fixed to maturity while the other is based on an interest rate that changes in accordance with changes in a designated benchmark (for example, LIBOR, prime, commercial paper, or other benchmarks).

The Sub-Adviser considers various factors, such as availability and cost, in deciding whether to use a particular derivative instrument or strategy. Moreover, investors should bear in mind that the Fund is not obligated to actively engage in any derivative transactions.

The Fund also may invest a portion of its assets in corporate loans made to, or issued by, borrowers that are U.S. companies, foreign borrowers and U.S. subsidiaries of foreign borrowers and that typically have floating interest rates. Floating interest rates vary with and are periodically adjusted to a generally recognized base interest rate such as LIBOR or the Prime Rate.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Credit risk*
- *Fixed-income risk*
- *Market risk*
- *Volatility risk*
- *Interest rate risk*
- *Sovereign debt risk*

- Concentration risk
- Emerging markets and less developed countries risk
- Currency risk
- Currency management strategies risk
- Foreign exchange and currency derivatives trading risk
- Foreign securities risk
- High-yield bonds, lower-rated bonds, and unrated securities risk
- Investment strategy risk
- Market direction risk
- Asset-based securities risk
- Mortgage-related and other asset-backed securities risk
- Allocation risk
- Sector risk
- Issuer risk
- Banking industry investment risk
- Commercial mortgage-backed securities risk
- Corporate loan, sovereign entity loan, and bank loan risk
- Debt securities ratings risk
- Derivatives risk
- European investment risk
- Financial services risk
- Forward and futures contract risk
- Government regulatory risk
- Hedging instruments risk
- Income risk
- Latin America concentration risk
- Managed portfolio risk
- Russia investment risk
- Speculative exposure risk
- U.S. Government securities risk
- China risk
- Equity securities risk
- Convertible securities risk
- Liquidity risk
- LIBOR replacement risk
- Investment in money market funds risk
- Non-diversification risk

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- Asia ex-Japan concentration risk
- Asian investment risk
- Call risk
- China and India country specific risk
- Collateralized debt obligations risk
- Commodity risk
- Company risk
- Counterparty risk
- Consumer discretionary risk
- Currency transaction risk
- Cybersecurity risk

- *Distressed debt risk*
- *Extension risk*
- *Forward foreign currency exchange contracts risk*
- *Frontier market countries risk*
- *Investing in China A Shares risk*
- *Investing through Stock Connect risk*
- *Investment in other investment companies risk*
- *Investments in IPOs risk*
- *Large-capitalization investing risk*
- *Leverage risk*
- *Mezzanine securities risk*
- *Mid-capitalization investing risk*
- *Non-hedging foreign currency trading risk*
- *Options risk*
- *Pacific Rim investing risk*
- *Participation note risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Rule 144A securities risk*
- *Second lien loans risk*
- *Securities lending risk*
- *Structured investments risk*
- *Swaps risk*
- *TIPS and inflation-linked bonds risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's and Sub-Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Western Asset Management Company, LLC ("Western Asset"). Western Asset, established in 1971 and now a wholly owned subsidiary of Legg Mason, Inc. ("Legg Mason"), acts as investment adviser to institutional accounts, such as corporate pension plans, mutual funds and endowment funds. Legg Mason is a wholly owned subsidiary of Franklin Resources, Inc. ("Franklin"), which is a publicly traded company (BEN) that, through its subsidiaries, engages in the business of investment management on an international basis. Western Asset's address is 385 East Colorado Boulevard, Pasadena, California 91101.

The sub-sub-advisers to the Fund are Western Asset Management Company Limited ("Western Asset Ltd."), located at 10 Exchange Square, Primrose Street, London EC2A 2EN, and Western Asset Management Company Pte. Ltd. ("Western Asset Pte. Ltd."), located at 1 George Street #23-01, Singapore 049145.

Western Asset and Western Asset Ltd. utilize a team-based approach for the Fund's portfolio management team to ensure the Fund's benefit from the expertise of all their sector specialists. The portfolio managers responsible for the Fund are:

Ian R. Edmonds is a portfolio manager at Western Asset Ltd. Mr. Edmonds joined Western Asset Ltd. in 1994. With more than 31 years of experience, Mr. Edmonds is the lead portfolio manager of Western Asset Ltd.'s global multi-sector and European high-yield portfolios. He leads the European high-yield team, is a member of the global credit committee, and Chair of the Western Asset Ltd.'s unconstrained committee. He previously served as a part-qualified actuary at Bacon & Woodrow. Mr. Edmonds holds a Bachelor of Science degree from University College, London.

S. Kenneth Leech is Chief Investment Officer of Western Asset. Mr. Leech joined Western Asset in 1990 as Director of Portfolio Management. In this position, he oversaw interest rate strategy and led the Long Duration effort. In 1998, he was named Chief Investment Officer and spearheaded the performance and product development efforts that helped underpin Western Asset's global growth and success. After taking medical leave for much of 2008, Mr. Leech resumed investment duties in early 2009 and was named Chairman of the Global Strategy Committee. In this position, he directed the global portfolio management and the macro-strategy alternative efforts. In 2013, he became Co-Chief Investment Officer as part of the transition process before fully resuming the Chief Investment Officer role in April 2014. Prior to joining Western Asset, Mr. Leech spent much of his career focusing on proprietary

trading, most recently with Greenwich Capital (1988–1990) and the First Boston Corporation (1980–1988). In his four years at the University of Pennsylvania’s Wharton School, he obtained three degrees while graduating *summa cum laude*.

Michael C. Buchanan is Deputy Chief Investment Officer at Western Asset. Mr. Buchanan has been in the fixed-income industry since 1990. As Deputy Chief Investment Officer, Mr. Buchanan has direct oversight of Western Asset’s Global Credit Team, which covers U.S. and non-US investment-grade, high-yield and bank loan sectors. Mr. Buchanan also leads the Global Credit Committee, which ultimately determines overall firmwide credit themes. Prior to joining Western Asset in 2005, Mr. Buchanan served as Managing Director and Head of US Credit Products at Credit Suisse Asset Management and as Executive Vice President and Portfolio Manager at Janus Capital Management. Mr. Buchanan also worked at BlackRock Financial Management as Managing Director and Portfolio Manager and at Conseco Capital Management as Vice President and Portfolio Manager. Mr. Buchanan graduated with honors from Brown University. He holds a Bachelor of Arts in Economics, and is a CFA® charterholder.

Chia-Liang “CL” Lian is Head of Emerging Markets Debt at Western Asset. Mr. Lian joined Western Asset in 2011. Prior to joining Western Asset in 2011, Mr. Lian was with Pacific Investment Management Company for six years, where he served as Head of Emerging Asia Portfolio Management. Mr. Lian also spent eight years as a sovereign debt strategist at JPMorgan Chase and Merrill Lynch. Previously, Mr. Lian was at the Monetary Authority of Singapore (MAS) as Senior Economist responsible for formulating exchange rate policy. Mr. Lian holds a Bachelor of Social Sciences in Economics from the National University of Singapore, where he graduated as part of the MAS’ Finance Scholarship Programme. Mr. Lian is also a CFA® charterholder.

Gordon S. Brown is Co-Head of Global Portfolios at Western Asset Ltd. Mr. Brown has 27 years of industry experience. As a member of the Global Portfolios Team and the Global Investment Strategy Committee, Mr. Brown is responsible for the day-to-day management of global portfolios alongside the development and implementation of global investment strategy. He is also a member of the Global Multi-Sector Investment Team, Emerging Markets Team, and Unconstrained Asset Allocation Committee. Mr. Brown joined the Western Asset Ltd. in 2011 from Baillie Gifford & Co., where he was Senior Investment Manager in Emerging Market Rates and Currencies. Formerly, Mr. Brown served as Head of Global Fixed-Income in London at State Street Global Advisors, Senior Portfolio Manager at Commerz International Management, and Fixed-Income Analyst at Dunedin Fund Managers. Mr. Brown holds a Master of Science in Investment Analysis from the University of Stirling, a Master of Science in Business Economics from the University of Strathclyde, and a Master of Arts in Economic Science from the University of Aberdeen. Mr. Brown is also an Associate Member of the UK Society of Investment Professionals.

Annabel Rudebeck is Head of Non-US Credit at Western Asset Ltd. Ms. Rudebeck has 22 years of industry experience and works in the London office. Ms. Rudebeck is a member of the Western Asset Ltd.’s Global Investment Strategy Committee, Global Credit Committee and ESG Strategic Steering Committee. Ms. Rudebeck also leads the Global Credit Team in London. Ms. Rudebeck is responsible for the day-to-day management of the Western Asset Ltd.’s Global Credit portfolios alongside the development and implementation of global credit investment strategy. Ms. Rudebeck joined the Western Asset Ltd. in 2016 from Rogge Global Partners where she was a Senior Partner and Head of Global Investment-Grade Credit, working previously for J.P. Morgan Securities as a Credit Research Associate. Ms. Rudebeck graduated with a Masters in Economics and a Bachelor of Arts degree in Economics (with Honors) from the University of Cambridge.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL/William Blair International Leaders Fund
(formerly, JNL/Invesco International Growth Fund)

Class A
Class I

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation.

Principal Investment Strategies. Under normal market conditions, the Fund invests primarily in a diversified portfolio of equity securities, including common stocks and other forms of equity investments (e.g., securities convertible into common stocks) issued by companies of all sizes domiciled outside the United States that William Blair Investment Management, LLC, the Fund's sub-adviser (the "Sub-Adviser"), believes have above-average growth, profitability, and quality characteristics. Under normal market conditions, the Fund typically holds a limited number of securities (i.e., 40-70 securities).

The Sub-Adviser seeks investment opportunities in companies at different stages of development ranging from large, well-established companies to smaller companies at earlier stages of development that are leaders in their country, industry, or globally in terms of products, services, or execution. The Fund's investments are normally allocated among at least six different countries and no more than 50% of the Fund's equity holdings may be invested in securities of issuers in one country at any given time. Normally, the Fund's investments will be divided among Continental Europe, the United Kingdom, Canada, Japan, and the markets of the Pacific Basin. The Fund may invest up to 40% of its net assets in emerging markets, which include every country in the world except the United States, Canada, Japan, Australia, New Zealand, Hong Kong, Singapore, and most Western European countries.

In choosing investments, the Sub-Adviser performs fundamental company analysis and focuses on stock selection. The Sub-Adviser generally seeks equity securities, including common stocks of companies that historically have had superior growth, profitability and quality relative to local markets and relative to companies within the same industry worldwide and that are expected to continue such performance. The Sub-Adviser believes that such companies generally will exhibit superior business fundamentals, including leadership in their field, quality products or services, distinctive marketing and distribution, pricing flexibility and revenue from products or services consumed on a steady, recurring basis. These business characteristics should be accompanied by management that is shareholder return-oriented and that uses conservative accounting policies. Companies with above-average returns on equity, strong balance sheets, and consistent, above average earnings growth will be the primary focus. Stock selection will take into account both local and global comparisons.

The Sub-Adviser will vary the Fund's sector and geographic diversification based upon the Sub-Adviser's ongoing evaluation of economic, market, and political trends throughout the world. In making decisions regarding country allocation, the Sub-Adviser will consider such factors as the conditions and growth potential of various economies and securities markets, currency exchange rates, technological developments in the various countries, and other pertinent financial, social, national and political factors.

Investments in equity and equity-related securities in the Greater China region will expose the Fund to that country's market, currency, and other risks, including volatility and structural risks. As a result, investments in the Greater China region may be volatile.

For the avoidance of doubt, in appropriate circumstances, synthetic instruments, such as derivatives, and other investment companies may count toward the Fund's 80% investment policy if those instruments have economic characteristics similar to the other investments included in the 80% policy.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Market risk*
- *Foreign securities risk*
- *Currency risk*
- *Emerging markets and less developed countries risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Large-capitalization investing risk*
- *Investment style risk*
- *Concentration risk*
- *Sector risk*

- *Company risk*
- *Managed portfolio risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). In addition to common stocks, the Fund may also invest in other types of securities, such as preferred stocks, convertible securities, fixed-income securities. Fixed-income securities, including preferred stocks and convertible securities, are subject to credit risk and interest rate risk. Credit risk is the actual or perceived risk that the issuer will not make payments of principal or interest when due. A deterioration in the credit quality of an issuer of fixed-income securities will cause the price of those securities to fall. Interest rate risk is the risk that interest rates will rise, causing the prices of fixed-income securities, including those owned by the Fund, to fall.

Risks of Investments in China A-shares through the Connect Program. The Connect Program is subject to daily quota limitations and an investor cannot purchase and sell the same security on the same trading day, which may restrict a Fund’s ability to invest in China A-shares through the Connect Program and to enter into or exit trades on a timely basis. The relevant China A-shares market may be open at a time when the Connect Program is not trading, with the result that prices of China A-shares may fluctuate at times when the Fund is unable to add to or exit its position.

Only certain China A-shares are eligible to be accessed through the Connect Program. Such securities may lose their eligibility at any time, in which case they could be sold but could no longer be purchased through the Connect Program. Because the Connect Program is new, the actual effect on the market for trading China A-shares with the introduction of large numbers of foreign investors is currently unknown. The Connect Program is subject to regulations promulgated by regulatory authorities for the relevant stock exchanges in mainland China and The Stock Exchange of Hong Kong Limited or other regulatory authorities of other stock exchanges in the future as permitted, and further regulations or restrictions, such as limitations on redemptions or suspension of trading, may adversely impact the Connect Program, if the authorities believe it necessary to assure orderly markets or for other reasons. There is no guarantee that the relevant exchanges will continue to support the Connect Program in the future.

Investments in China A-shares may not be covered by the securities investor protection programs of the relevant exchanges and, without the protection of such programs, will be subject to the risk of default by the broker. In the event that the depository of the relevant China stock exchange (“ChinaClear”) defaulted, a Fund may not be able to recover fully its losses from ChinaClear or may be delayed in receiving proceeds as part of any recovery process. In addition, because all trades on the Connect Program in respect of eligible China A-shares must be settled in Renminbi (RMB), the Chinese currency, the Funds investing through the Connect Program must have timely access to a reliable supply of offshore RMB, which cannot be guaranteed.

China A-shares purchased through the Connect Program are held in nominee name and not the Fund’s name as the beneficial owner. It is possible, therefore, that a Fund’s ability to exercise its rights as a shareholder and to pursue claims against the issuer of China A-shares may be limited because the nominee structure has not been tested in Chinese courts. In addition, a Fund may not be able to participate in corporate actions affecting China A-shares held through the Connect Program due to time constraints or for other operational reasons.

Trades on the Connect Program are subject to certain requirements prior to trading. If these requirements are not completed prior to the market opening, a Fund cannot sell the shares on that trading day. In addition, these requirements may limit the number of brokers that a Fund may use to execute trades. If an investor holds 5% or more of the total shares issued by a China A share issuer, the investor must return any profits obtained from the purchase and sale of those shares if both transactions occur within a six-month period. If a Fund holds 5% or more of the total shares of a China-A share issuer through its Connect Program investments, its profits may be subject to these limitations. All accounts managed by the Adviser and/or its affiliates will be aggregated for purposes of this 5% limitation, which makes it more likely that a Fund’s profits may be subject to these limitations.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *China risk*
- *Investing in China A Shares risk*
- *Investing through Stock Connect risk*
- *China and India country specific risk*
- *Counterparty risk*
- *Credit risk*
- *Cybersecurity risk*
- *Derivatives risk*

- *Expense risk*
- *Government regulatory risk*
- *Interest rate risk*
- *Investment in other investment companies risk*
- *Leverage risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Tax risk*
- *Temporary defensive positions and large cash positions risk*
- *U.S. Government securities risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is William Blair Investment Management, LLC (“William Blair” or “Sub-Adviser”), located at 150 North Riverside Plaza, Chicago, Illinois 60606. William Blair is a global investment firm registered as an investment adviser with the SEC. William Blair is affiliated with William Blair & Company, L.L.C. (“William Blair & Company”), a firm that was founded in 1935 and is registered with the SEC as both an investment adviser and a securities broker-dealer. William Blair and William Blair & Company (each of which is a privately held company) are wholly owned subsidiaries of WBC Holdings, L.P., which is wholly owned by certain William Blair and William Blair & Company employees.

Alaina Anderson, CFA, is a Partner of William Blair. Ms. Anderson has co-managed William Blair's International Leaders strategy since 2021. Ms. Anderson has managed William Blair's International Leaders ADR strategy since 2019. Before that, Ms. Anderson covered multiple sectors as a research analyst for William Blair, including the Consumer and Health Care sectors, along with her most recent responsibilities covering real assets companies. Before joining William Blair in 2006, Ms. Andersen was a senior analyst in the investments department of the MacArthur Foundation, where she provided research support for internally managed portfolios and was involved in investment manager due diligence, selection and monitoring for the foundation's U.S., non-U.S., and hedge fund portfolios. Before joining the MacArthur Foundation, Ms. Andersen was an investor relations consultant with Ashton Partners and a financial advisor with UBS Painewebber. She is a member of the CFA Institute and the CFA Society Chicago. Education: B.S., Wharton School at the University of Pennsylvania and an M.B.A. from the University of Chicago's Booth School of Business.

Simon Fennell is a Partner of William Blair. Mr. Fennell has co-managed William Blair's International Growth strategy since 2013, its Institutional International Growth strategy since 2013, its International Leaders strategy since 2013 and its International Small Cap Growth strategy since 2017 along with associated separate accounts and commingled fund portfolios. He joined William Blair in 2011 as a research analyst, also focusing on idea generation and strategy more broadly. Prior to joining William Blair, Mr. Fennell was a Managing Director in the Equities division at Goldman Sachs in London and Boston, where he was responsible for institutional, equity research coverage for European and International stocks. Previously, he was in the Corporate Finance Group at Lehman Brothers in London and Hong Kong, working in the M&A and Debt Capital Markets Groups. Education: M.A., University of Edinburgh; M.B.A., Johnson Graduate School of Management, Cornell University.

Kenneth J. McAtamney is a Partner of William Blair. Mr. McAtamney has co-managed William Blair's Global Leaders strategy since 2008, its International Leaders strategy since its inception in 2012, its International Growth strategy since 2017 and its Institutional International Growth strategy since 2017 along with associated separate account and commingled fund portfolios. Mr. McAtamney joined William Blair in 2005 as an international stock analyst. From 1997 to 2005, he was with Goldman Sachs in various capacities, including as a Vice President representing both International and Domestic Equities. Education: B.A., Finance, Michigan State University; M.B.A., Indiana University.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/WMC Balanced Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is reasonable income and long-term capital growth.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing primarily in a diversified portfolio of common stocks and investment grade fixed-income securities. The Fund may invest in any type or class of security. The anticipated mix of the Fund's holdings is typically 60-70% of its assets in equities and 30-40% in fixed-income securities, including investment-grade corporate bonds, U.S. Treasury and government agency bonds, mortgage-backed securities, asset-backed securities, and commercial-backed securities. Cash and cash equivalents are included in the fixed income fund weighting. Changes between the two asset classes will generally be made gradually based on the managers' long-term perspective and assessment of business, economic, and market projections.

In choosing equity securities, the Sub-Adviser uses extensive research to find what it considers to be durable businesses at moderate valuations in primarily large companies. The Sub-Adviser considers a business to be durable if cash flows are resilient across a business cycle, and the business is able to achieve a superior level and duration of growth and/or income. The Fund typically focuses on dividend-paying companies.

With respect to fixed-income investments, the Fund emphasizes investment-grade, foreign fixed-income securities, including obligations of the U.S. Government and its agencies, corporate bonds, taxable municipal bonds, asset-backed securities, and mortgage-backed securities. The Fund may invest up to 35% of its net assets in non-investment grade securities ("junk bonds") rated at least Ca by Moody's Investor Service CC by S&P Global Ratings or CC by Fitch Inc. or, if unrated, determined by the Sub-Adviser to be of comparable quality.

The Fund may invest in derivatives to reduce fixed-income exposure to facilitate meeting the Fund's objective.

The Fund may invest up to 25% of its assets in foreign equity and fixed-income securities. Generally, the foreign fixed-income securities in which the Fund will invest will be dollar denominated bonds issued by foreign governments and corporations.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Accounting risk*
- *Company risk*
- *Credit risk*
- *Derivatives risk*
- *Equity securities risk*
- *Financial services risk*
- *Fixed-income risk*
- *Foreign securities risk*
- *Interest rate risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market risk*
- *Mortgage-related and other asset-backed securities risk*
- *Stock risk*
- *U.S. Government securities risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The JNL/WMC Balanced Fund invests primarily in common stocks and fixed-income securities. Certain investments and investment techniques have additional risks, such as the potential use of leverage by the Fund through borrowings, securities lending and other investment techniques.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Asset-based securities risk*
- *Banking industry investment risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Counterparty risk*
- *Cybersecurity risk*
- *Cyclical opportunities risk*
- *Debt securities ratings risk*
- *Government regulatory risk*
- *Inflation-indexed securities risk*
- *Investment style risk*
- *Issuer risk*
- *Large-capitalization investing risk*
- *Leverage risk*
- *Municipal securities risk*
- *Prepayment risk*
- *Sector risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*
- *Volatility risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Wellington Management Company LLP ("Wellington Management"). Wellington Management is a Delaware limited liability partnership with principal offices at 280 Congress Street, Boston, Massachusetts 02210. Wellington Management is a professional investment counseling firm which provides investment services to investment companies, employee benefit plans, endowments, foundations, and other institutions. Wellington Management and its predecessor organizations have provided investment advisory services for over 80 years. Wellington Management is owned by the partners of Wellington Management Group LLP, a Massachusetts limited liability partnership.

Loren L. Moran, CFA, Senior Managing Director and Fixed Income Portfolio Manager of Wellington Management, is involved in portfolio management and securities analysis for the Fund beginning in April 2018. Ms. Moran joined Wellington Management as an investment professional in 2014.

Daniel J. Pozen, Senior Managing Director and Equity Portfolio Manager of Wellington Management, is involved in portfolio management and securities analysis for the Fund beginning in September 2019. Mr. Pozen joined Wellington Management as an investment professional in 2006.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/WMC Equity Income Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is an above-average level of current income and reasonable long-term capital appreciation.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities.

The Fund invests mainly in common stocks of mid-size and large companies whose stocks typically pay above-average levels of dividend income and are, in the opinion of Wellington Management Company LLP (“Sub-Adviser”), undervalued relative to similar stocks. The Sub-Adviser generally considers mid-size and large companies to be those companies that, at the time of initial purchase, have market capitalizations of \$10 billion or higher. In addition, the Sub-Adviser generally looks for companies that it believes are committed to paying dividends consistently.

The Fund may invest up to 25% of its assets in foreign securities, either directly or through depositary receipts.

At the time of purchase by the Fund, a stock can be out of favor with the investment community. Stocks purchased by the Fund are generally expected to produce an above-average level of current income and to have the potential for long-term capital appreciation. The Sub-Adviser will sell a security when it believes the security is no longer as attractive as an alternative investment or if it is deemed to be in the best interest of the Fund.

The Sub-Adviser employs active investment management methods, which means that securities are bought and sold according to the Sub-Adviser’s evaluations of companies and their financial prospects, the prices of the securities, and the stock market and the economy in general. The Sub-Adviser employs a fundamental security analysis approach to identify desirable individual stocks, seeking those that typically offer above-average dividend yields, below-average valuations, and the potential for dividend increases in the future.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Investment style risk*
- *Stock risk*
- *Mid-capitalization investing risk*
- *Market risk*
- *Foreign securities risk*
- *Managed portfolio risk*
- *Concentration risk*
- *Large-capitalization investing risk*
- *Currency risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*

- *Depository receipts risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Expense risk*
- *Investment in money market funds risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Wellington Management Company LLP (“Wellington Management”). Wellington Management is a Delaware limited liability partnership with principal offices at 280 Congress Street, Boston, Massachusetts 02210. Wellington Management is a professional investment counseling firm which provides investment services to investment companies, employee benefit plans, endowments, foundations, and other institutions. Wellington Management and its predecessor organizations have provided investment advisory services for over 80 years. Wellington Management is owned by the partners of Wellington Management Group LLP, a Massachusetts limited liability partnership.

W. Michael Reckmeyer, III, CFA, Senior Managing Director, Partner, and Equity Portfolio Manager of Wellington Management, has been involved in portfolio management and securities analysis for the Fund since January 2008. Mr. Reckmeyer joined Wellington Management as an investment professional in 1994. Mr. Reckmeyer has a B.S. and M.B.A. from the University of Wisconsin. Effective June 30, 2022, Mr. Reckmeyer will be removed as a Portfolio Manager for the Fund.

Adam H. Illfelder, CFA, Senior Managing Director, Partner and Equity Portfolio Manager of Wellington Management, has been involved in portfolio management and securities analysis for the Fund since 2018. Mr. Illfelder joined Wellington Management as an investment professional in 2005.

Matthew C. Hand, CFA, Senior Managing Director, Partner and Equity Portfolio Manager, joined Wellington Management as an investment professional in 2004. Mr. Hand has a B.A. from the University of Pennsylvania.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/WMC Global Real Estate Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term total return.

Principal Investment Strategies. The Fund seeks to meet its objective by investing, normally, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities of real estate and real estate-related companies, including real estate investment trusts (“REITs”) and in derivatives and other instruments that have economic characteristics similar to such securities. The Fund's common stock investments may also include China A-shares (shares of companies based on mainland China that trade on the Shanghai Stock Exchange and the Shenzhen Stock Exchange). A REIT is a real estate company that pools funds for investment primarily in income-producing real estate or in real estate related loans (such as mortgages) or other interests. The principal type of securities purchased by the Fund is common stock, which is a type of equity security. The companies will be located in at least three different countries, including the United States. The Fund may invest up to 20% of its assets in securities of issuers located in emerging markets countries, i.e. those that are in the initial stages of their industrial cycles. These companies include REITs or other real estate operating companies.

The Fund considers a company to be a real estate or real estate-related company if at least 50% of its assets, gross income or net profits are attributable to ownership, construction, management or sale of residential, commercial or industrial real estate. These companies include (i) REITs or other real estate operating companies that (a) own property, (b) make or invest in short term construction and development mortgage loans, or (c) invest in long-term mortgages or mortgage pools, and (ii) companies whose products and services are related to the real estate industry, such as manufacturers and distributors of building supplies and financial institutions that issue or service mortgages.

The Fund may engage in short sales of securities. A short sale occurs when the Fund sells a security, but does not deliver a security it owns when the sale settles. Instead, it borrows that security for delivery when the sale settles. The Fund may engage in short sales with respect to securities it owns (short sales against the box) or securities it does not own. Generally, the Fund may sell a security short to (i) take advantage of an expected decline in the security price in anticipation of purchasing the same security at a later date at a lower price, or (ii) to protect a profit in a security that it owns (short sale against the box). The Fund will not sell a security short, if as a result of such short sale, the aggregate market value of all securities sold short exceeds 10% of the Fund's total assets.

The Fund can invest in derivative instruments including forward foreign currency contracts.

The Fund can use forward foreign currency contracts to hedge against adverse movements in the foreign currencies in which portfolio securities are denominated; though the Fund has not historically used these instruments.

The Fund may invest up to 10% of its total assets in non-investment grade debt-securities (commonly known as “junk bonds”) of real estate and real estate-related issuers.

The Fund may invest in securities of issuers of all capitalization sizes. Real estate companies tend to have smaller asset bases compared with other market sectors, therefore, the Fund may hold a significant amount of securities of small- and mid-capitalization issuers.

The Fund considers an issuer to be a small-capitalization issuer if it has a market capitalization, at the time of purchase, no larger than the largest capitalized issuer included in the Russell 2000® Index during the most recent 11-month period (based on month-end data) plus the most recent data during the current month. As of December 31, 2021, the capitalization of companies in the Russell 2000® Index ranged from \$25 million to \$20 billion.

The Fund considers an issuer to be a mid-capitalization issuer if it has a market capitalization, at the time of purchase, within the range of the largest and smallest capitalized companies included in the Russell Midcap® Index during the most recent 11-month period (based on month-end data) plus the most recent data during the current month. As of December 31, 2021, the capitalization of companies in the Russell Midcap® Index ranged from \$550 million to \$75 billion.

The Fund's sub-adviser's, Wellington Management Company LLP, (“Sub-Adviser”), approach to real estate investing is based on a bottom-up analysis of factors affecting individual securities combined with a top-down analysis of the real estate market. The Sub-Adviser uses intensive financial analysis and an evaluation of individual competitive position as part of bottom-up analysis to identify securities with the most attractive characteristics. The companies in which the Sub-Adviser invests typically possess the following characteristics: attractive valuation as measured by (1) the ratio between free-cash-flow multiple to future cash flow growth plus dividend yield, (2) the relative spread between the public and private market in terms of the following: net asset value (NAV), replacement cost, and earnings yield in the public market versus capitalization rates on private market transactions, and (3) market return expectations as measured by an internal rate of return (IRR). Additionally, the Sub-Adviser seeks out management teams with a disciplined investment strategy, a solid development and operating track record, and a clear understanding of their own cost of capital;

an ability to deliver high levels of same-unit rent growth and occupancy on a relative basis; and, a strong and flexible balance sheet in terms of the ability to fund future external growth and increase dividends.

Geographic diversification and sector weights are influenced by a top-down evaluation of the real estate market. Top-down analysis is based on three broad components: (1) Macroeconomic Trends: The Sub-Adviser monitors relevant trends affecting the supply and demand for real estate within the various regions, including demographic trends, employment growth, and building permit changes. (2) Capital Markets Messaging: Real estate is a hybrid asset class with equity and bond characteristics. Most real estate companies are dependent on access to the capital markets to fund future growth. Therefore, the Sub-Adviser tracks return expectations in both the broader equity market and bond market. The Sub-Adviser incorporates forecasts of long-term interest rates, which affect both the cost of capital of real estate companies and the relative attractiveness of high-yield stocks. The Sub-Adviser also considers equity multiples as a measure of real estate's relative return. (3) Private Real Estate Market Trends: The real estate market is predominantly privately owned and the sector continues to exhibit many commodities-like characteristics; therefore, a thorough understanding of private market investment spreads, mortgage spreads, and capital flows is necessary to assess public market company net asset values

Position sizes are conviction-weighted and built from the bottom-up. As a sector approach and given the intrinsic diversified nature of real estate securities, the Fund will be reasonably concentrated. Geographic diversification and sector weights are influenced by a top-down market evaluation. Based on the Sub-Adviser's identification of companies with attractive characteristics and the conclusion of the top-down analysis, the Sub-Adviser looks to build a concentrated global portfolio.

The Fund's investments in the types of securities described in this Prospectus vary from time to time, and at any time, the Fund may not be invested in all types of securities described in this Prospectus. Any percentage limitations with respect to assets of the Fund are applied at the time of purchase.

The Fund will concentrate its investments in the securities of domestic and foreign real estate and real estate-related companies. For purposes of this concentration, real estate and real estate-related companies shall consist of companies (i) where at least 50% of its assets, gross income or net profits are attributable to ownership, construction, management, or sale of residential, commercial or industrial real estate, including listed equity REITs that own property, and mortgage REITs which make short-term construction and development mortgage loans or which invest in long-term mortgages or mortgage pools, or (ii) whose products and services are related to the real estate industry, such as manufacturers and distributors of building supplies and financial institutions which issue or service mortgages.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Real estate investment risk*
- *Market risk*
- *Interest rate risk*
- *Foreign securities risk*
- *European investment risk*
- *Emerging markets and less developed countries risk*
- *Managed portfolio risk*
- *Company risk*
- *Concentration risk*
- *Accounting risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Investing in China A Shares risk*
- *Portfolio turnover risk*
- *Depository receipts risk*
- *Convertible securities risk*
- *Credit risk*
- *Derivatives risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Mortgage-related and other asset-backed securities risk*
- *Preferred stock risk*
- *Short sales risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Investment strategy risk*
- *Currency risk*
- *Regulatory investment limits risk*
- *Redemption risk*
- *Expense risk*
- *Cybersecurity risk*
- *Securities lending risk*
- *Leverage risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Wellington Management Company LLP (“Wellington Management”). Wellington Management is a Delaware limited liability partnership with principal offices at 280 Congress Street, Boston, Massachusetts 02210. Wellington Management is a professional investment counseling firm which provides investment services to investment companies, employee benefit plans, endowments, foundations, and other institutions. Wellington Management and its predecessor organizations have provided investment advisory services for over 80 years. Wellington Management is owned by the partners of Wellington Management Group LLP, a Massachusetts limited liability partnership.

Bradford D. Stoesser, Senior Managing Director, Partner, and Global Industry Analyst, of Wellington Management, has been involved in portfolio management and securities analysis for the Fund since 2021. Mr. Stoesser joined Wellington Management as an investment professional in 2005.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL/WMC Government Money Market Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to achieve as high a level of current income as is consistent with the preservation of capital and maintenance of liquidity.

Principal Investment Strategies. Under normal circumstances, the Fund seeks to achieve its investment objective by investing at least 99.5% of its total assets in cash, U.S. Government securities, and/or repurchase agreements that are “collateralized fully” (i.e., collateralized by cash or government securities). The government securities typically have a maximum remaining maturity of 397 calendar days and the repurchase agreements are collateralized by government securities with a maximum remaining maturity of 397 days. Under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in government securities or repurchase agreements collateralized by government securities. As a government money market fund, the Fund is exempt from requirements that permit money market funds to impose a liquidity fee and/or temporary redemption gate. While the Fund’s Board of Trustees may elect to subject the Fund to liquidity fee and gate requirements in the future, the Board of Trustees has not elected to do so at this time.

The Sub-Adviser’s investment approach combines top-down analysis with fundamental bottom-up security selection. The Sub-Adviser considers factors such as the anticipated level of interest rates and the maturity of individual securities to determine the Fund’s overall weighted average maturity.

The Fund seeks to maintain a stable net asset value of \$1.00 per share, neither the Federal Deposit Insurance Company, nor any other government agency insures or protects your investment.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Fixed-income risk*
- *Income risk*
- *Interest rate risk*
- *Managed portfolio risk*
- *Repurchase agreements, purchase and sale contracts risk*
- *U.S. Government securities risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Investment in money market funds risk*
- *Investment strategy risk*
- *Market risk*
- *Mortgage-related and other asset-backed securities risk*
- *Prepayment risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

Dividends:

The Fund intends to maintain, to the extent practicable, a constant per share net asset value of \$1.00. The Fund expects to declare dividends on a daily basis on each class so long as the income attributable to that class exceeds the expenses attributable to that class on each day. Such dividends will be paid monthly. If class expenses exceed class income on any day, the Fund will not pay a dividend on the class on that day and will resume paying dividends only when, on a future date, the accumulated net investment income of the class is positive. The Fund has adopted this policy because, in the current investment environment, it may find that on any given day or on a number of consecutive days, its investment returns may be less than the expenses attributable to a class. For a more complete description of this policy, which can result in the Fund not paying dividends on one or more classes for one or more periods that may be as short as a day or quite lengthy, see "Purchases, Redemptions and Pricing of Shares" in the SAI. For a description of the allocation of expenses among fund share classes, please refer to "Management of the Trust" section in this Prospectus.

The Fund is subject to a fee recapture program, whereby, the Adviser will waive fees and expenses to maintain, where practicable, a constant per share net asset value of \$1.00. When income is sufficient, the Fund may pay the Adviser its investment advisory fee, along with other Fund expenses. In addition, when the Fund receives income sufficient to pay a dividend, the Adviser may recapture previously waived fees and expenses for a period of 3 years.

The Sub-Adviser. The Sub-Adviser to the Fund is Wellington Management Company LLP ("Wellington Management"). Wellington Management is a Delaware limited liability partnership with principal offices at 280 Congress Street, Boston, Massachusetts 02210. Wellington Management is a professional investment counseling firm which provides investment services to investment companies, employee benefit plans, endowments, foundations, and other institutions. Wellington Management and its predecessor organizations have provided investment advisory services for over 80 years. Wellington Management is owned by the partners of Wellington Management Group LLP, a Massachusetts limited liability partnership.

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/WMC Value Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term growth of capital.

Principal Investment Strategies. The Fund seeks to meet its objective by investing under normal circumstances at least 65% of its total assets in common stocks of domestic companies. Although the Fund may invest in companies with a broad range of market capitalizations, the Fund will tend to focus on companies with large market capitalizations (generally above \$10 billion). The Fund may invest up to 20% of its total assets in the securities of foreign issuers. Foreign securities include (1) companies organized outside of the United States; (2) foreign governments and agencies or instrumentalities of foreign governments; and (3) issuers whose economic fortunes and risks are primarily linked with markets outside the United States. Using a value approach, the Fund seeks to invest in stocks that the Sub-Adviser believes are underpriced relative to other stocks. The Fund's investment approach is based on the fundamental analysis of companies with large market capitalizations and estimated below-average valuation ratios. Fundamental analysis may include the assessment of company-specific factors such as its business environment, management quality, financial statements and outlook, dividends and other related measures of value. The typical purchase candidate may be characterized as an overlooked or misunderstood company with sound fundamentals. Holdings are frequently in viable, growing businesses with solid financial strength in industries that are temporarily out of favor and under-researched by institutions, but which the Sub-Adviser believes provide the potential for above-average total returns and sell at below-average estimated price-to-earnings multiples. The Sub-Adviser relies on stock selection to achieve its results, rather than trying to time market fluctuations. Limited consideration is given to macroeconomic analysis in establishing sector and industry weightings.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Accounting risk*
- *Company risk*
- *Equity securities risk*
- *Financial services risk*
- *Foreign securities risk*
- *Investment style risk*
- *Large-capitalization investing risk*
- *Managed portfolio risk*
- *Market risk*
- *Stock risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The Fund may hold cash or cash equivalents such as high quality money market instruments pending investment and to retain flexibility in meeting redemptions and paying expenses. Certain investments and investment techniques have additional risks, such as the potential use of leverage by the Fund through borrowings, securities lending and other investment techniques.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Cyclical opportunities risk*
- *Expense risk*
- *Government regulatory risk*
- *Investment strategy risk*
- *Liquidity risk*

- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Sector risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*
- *Volatility risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Wellington Management Company LLP (“Wellington Management”). Wellington Management is a Delaware limited liability partnership with principal offices at 280 Congress Street, Boston, Massachusetts 02210. Wellington Management is a professional investment counseling firm which provides investment services to investment companies, employee benefit plans, endowments, foundations, and other institutions. Wellington Management and its predecessor organizations have provided investment advisory services for over 80 years. Wellington Management is owned by the partners of Wellington Management Group LLP, a Massachusetts limited liability partnership.

W. Michael Reckmeyer, III, CFA, Senior Managing Director, Partner, and Equity Portfolio Manager of Wellington Management, has been involved in portfolio management and securities analysis for the Fund since January 2008. Mr. Reckmeyer joined Wellington Management as an investment professional in 1994. Mr. Reckmeyer has a B.S. and M.B.A. from the University of Wisconsin. Effective June 30, 2022, Mr. Reckmeyer will be removed as a Portfolio Manager for the Fund.

Adam H. Illfelder, CFA, Senior Managing Director, Partner and Equity Portfolio Manager of Wellington Management, has been involved in portfolio management and securities analysis for the Fund since 2018. Mr. Illfelder joined Wellington Management as an investment professional in 2005.

Matthew C. Hand, CFA, Senior Managing Director, Partner and Equity Portfolio Manager, joined Wellington Management as an investment professional in 2004. Mr. Hand has a B.A. from the University of Pennsylvania.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

SUMMARY OF MAIN RISK CHARACTERISTICS OF JNL/GOLDMAN SACHS MANAGED FUNDS AND JNL ALLOCATION FUNDS BASED ON TYPICAL INVESTMENT HOLDINGS OF UNDERLYING FUNDS

The main risk characteristics of the JNL/Goldman Sachs Managed Funds and JNL Allocation Funds are summarized below. The extent of the risk exposure to each category of risk for each Fund depends on its allocation to Underlying Funds that invest in those categories of portfolio investments. It should be noted that the investment objectives and investment strategies of the JNL/Goldman Sachs Managed Funds and JNL Allocation Funds remain constant regardless of which Underlying Funds are invested in. Thus, the inherent risk characteristics of the JNL/Goldman Sachs Managed Funds and JNL Allocation Funds remain constant, although there may be variations in the degrees of exposure to each category of risk. Moreover, each Fund is subject to the risk of the Sub-Adviser's ability to identify or anticipate changes in market and economic conditions in connection with determining and revising the percentages of allocations among and the selection of appropriate Underlying Funds. Other risks and more detailed descriptions may be found in the descriptions of each of the JNL/Goldman Sachs Managed Funds and JNL Allocation Funds.

**JNL/Goldman Sachs
Managed Conservative Fund;
JNL/Goldman Sachs
Managed Moderate Fund;
JNL/Goldman Sachs
Managed Moderate Growth
Fund; JNL/Goldman Sachs
Managed Growth Fund; and
JNL/Goldman Sachs
Managed Aggressive Growth
Fund (the "JNL/Goldman
Sachs Managed Funds")**

As among the five JNL/Goldman Sachs Managed Funds, the difference in risk exposure results from the differing ranges of investments in equity securities versus fixed-income and money market securities of the Funds in which they invest. The JNL/Goldman Sachs Managed Conservative Fund is expected to invest the lowest percentage in equity securities (approximately 10% to 30%); the JNL/Goldman Sachs Managed Moderate Fund a slightly higher percentage (approximately 30% to 50%); the JNL/Goldman Sachs Managed Moderate Growth Fund a slightly higher percentage (approximately 50% to 70%); the JNL/Goldman Sachs Managed Growth Fund a slightly higher percentage (approximately 70% to 90%); and the JNL/Goldman Sachs Managed Aggressive Growth Fund the greatest percentage (approximately 80% to 100%). The anticipated investments in fixed-income, money market securities, and other investments generally vary in inverse relationship to the equity investments.

**JNL Conservative Allocation
Fund; JNL Moderate
Allocation Fund; JNL
Moderate Growth Allocation
Fund; JNL Growth
Allocation Fund; JNL
Aggressive Growth Allocation
Fund (the "JNL Allocation
Funds")**

As among the five JNL Allocation Funds, the difference in risk exposure results from the differing ranges of investments in equity securities versus fixed-income and money market securities of the Funds in which they invest. The JNL Conservative Allocation Fund is expected to invest the lowest percentage in equity securities (approximately 0% to 40%); the JNL Moderate Allocation Fund a slightly higher percentage (20% to 60%); the JNL Moderate Growth Allocation Fund a slightly higher percentage (approximately 40% to 80%); the JNL Growth Allocation Fund a slightly higher percentage (approximately 60% to 90%); and the JNL Aggressive Growth Allocation Fund the greatest percentage (approximately 70% to 90%). The anticipated investments in fixed-income, money market securities, and other investments generally vary in inverse relationship to the equity investments.

**Underlying Fund Portfolio
Securities Major Categories**

Stocks. All JNL/Goldman Sachs Managed Funds and JNL Allocation Funds. Because the Fund will invest in Underlying Funds that invest in stocks, its returns will fluctuate with changes in stock markets. In the U.S., stocks have historically outperformed other types of investments over the long term. Stocks, however, may fluctuate in value more dramatically than many other types of investments over the short term.

Smaller and Mid-Size Companies. All JNL/Goldman Sachs Managed Funds and JNL Allocation Funds. While smaller and midsize companies may offer substantial opportunities for capital growth, they also involve substantial risk and should be considered speculative. Historically, smaller and midsize company securities have been more volatile in price than larger company securities, especially over the short term.

Fixed-Income: Interest Rate Risk. All JNL/Goldman Sachs Managed Funds and JNL Allocation Funds. Interest rate risk is the risk that when interest rates increase, fixed-income securities will decline in value. Interest rate changes can be sudden and unpredictable. A fund's distributions to its shareholders may decline when interest rates fall, since a fund can only distribute what it earns. Debt securities that pay interest at a fixed rate tend to lose market value when interest rates rise and increase in value when interest rates decline. Long-term fixed-income securities will normally have more price volatility because of this risk than short-term fixed-income securities. A nominal interest rate can be described as the sum of a real interest rate and an expected inflation rate. Inflation-indexed securities, including treasury inflation-protected securities ("TIPS"), decline in value when real interest rates rise. In certain interest rate environments, such as when real interest rates are rising faster than nominal interest rates, inflation-indexed securities may experience greater losses than other fixed-income securities with similar durations.

Fixed-Income: Credit. All JNL/Goldman Sachs Managed Funds and JNL Allocation Funds.

Income securities, which may include indebtedness and participations, entail credit risk. An issuer may be unable to make interest payments or repay principal when due. Adverse changes in an issuer's financial strength or in a security's credit rating may reduce a security's value and, thus, impact performance. Subordinated debt securities are riskier than senior debt securities because their holders will be paid only after the holders of senior debt securities are paid. Debt securities that are rated below investment grade and comparable unrated securities generally have more risk, fluctuate more in price and are less liquid than higher-rated securities and can be considered speculative.

High-yield bonds, lower-rated bonds, and unrated securities. All JNL/Goldman Sachs Managed Funds and JNL Allocation Funds. High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds typically have a higher yield to compensate for a greater risk that the issuer might not make its interest and principal payments. In the event of an unanticipated default, the Fund would experience a reduction in its income, a decline in the market value of the securities so affected and a decline in the value of its shares. During an economic downturn or substantial period of rising interest rates, highly leveraged issuers may experience financial stress which could adversely affect their ability to service principal and interest payment obligations, to meet projected business goals and to obtain additional financing. The market prices of junk bonds are generally less sensitive to interest rate changes than higher-rated investments, but more sensitive to adverse economic or political changes, or individual developments specific to the issuer. Periods of economic or political uncertainty and change can be expected to result in volatility of prices of these securities.

Mortgage-related and other asset-backed securities risk. All JNL/Goldman Sachs Managed Funds and JNL Allocation Funds. A Fund that purchases mortgage-related securities and mortgage-backed securities is subject to certain additional risks. Rising interest rates tend to extend the duration of mortgage-related securities, making them more sensitive to changes in interest rates. As a result, in a period of rising interest rates, the Fund that holds mortgage-related and other asset-backed securities may exhibit additional volatility. This is known as extension risk. In addition, mortgage-related and other asset-backed securities are subject to prepayment risk. When interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the returns of the Fund because the Fund will have to reinvest that money at the lower prevailing interest rates. This is known as contraction risk. Investments in mortgage-backed and other asset-backed securities entail the uncertainty of the timing of cash flows resulting from the rate of prepayments on the underlying mortgages serving as collateral. An increase or decrease in prepayment rates (resulting primarily from a decrease or increase in mortgage interest rates) will affect the yield, average life, and price. The prices of mortgage-backed and other asset-backed securities, depending on their structure and the rate of prepayments, can be volatile. Some mortgage-backed and other asset-backed securities may also not be as liquid as other securities. The value of these securities also may change because of changes in the market's perception of the creditworthiness of the issuer. In addition, the mortgage and other asset-backed securities market in general may be adversely affected by changes in governmental regulation or tax policies.

Foreign Securities. All JNL/Goldman Sachs Managed Funds and JNL Allocation Funds.

Investing in foreign securities typically involves more risks than investing in U.S. securities. These risks can increase the potential for losses and may include, among others, currency risks (fluctuations in currency exchange rates and devaluations by governments), country risks (political, diplomatic, regional conflicts, terrorism, war; social and economic instability, currency devaluations and policies that have the effect of limiting or restricting foreign investment or the movement of assets), and company risks (unfavorable trading practices, less government supervision, less publicly available information, limited trading markets and greater volatility). With regard to currency risk many investments may be issued and traded in foreign currencies. Changes in the value of foreign currencies relative to the U.S. dollar can dramatically decrease (or increase) the value of foreign portfolio holdings. To the extent the currency risk is not hedged, or not successfully hedged, currency exchange rate changes can have a disproportionate impact on, even accounting for most of the gain or loss in a particular period.

Derivative Securities. All JNL/Goldman Sachs Managed Funds and JNL Allocation Funds.

Options, futures, swaps, structured securities and other derivative transactions involve special risks. The performance of derivative investments depends, in part, on the performance of an underlying asset, including the ability to correctly predict price movements. Derivatives involve costs, may be volatile, may involve a small investment relative to the risk assumed, and require correlation with other investments. Risks include delivery failure, default by the other party or the inability to close out a position because the trading market becomes illiquid.

Industry concentration risk. All JNL/Goldman Sachs Managed Funds and JNL Allocation Funds. When there is concentration in a certain industry, performance will be closely tied to, and affected by, the specific industry. Companies within an industry are often faced with the same obstacles, issues or regulatory burdens, and their common stock may react similarly and move in unison to these and other market conditions. As a result of these factors, there may be more volatility, and carry greater risk of adverse developments that can affect many of the companies in which the Underlying Funds invest, than a mixture of stocks of companies from a wide variety of industries.

Small-capitalization investing risk. JNL Allocation Funds. Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The companies in which the Underlying Fund is likely to invest may have limited product lines, markets or financial resources or may depend on the expertise of a few people and may be subject to more abrupt or erratic market movements than securities of larger, more established companies or the market averages in general. In addition, many small capitalization companies may be in the early stages of development. Also, since equity securities of smaller companies may not be traded as often as equity securities of larger, more established companies, it may be difficult or impossible for the portfolio to sell securities at a desirable price. Securities of such issuers may lack sufficient market liquidity to enable the Underlying Fund to effect sales at an advantageous time or without a substantial drop in price. Accordingly, an investment in the Fund may not be appropriate for all investors.

JNL/Goldman Sachs Managed Conservative Fund

Class A

Class I

Investment Objectives. The investment objective of the Fund is to seek current income. Capital growth is a secondary objective.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust.

Under normal circumstances, the Fund allocates approximately 10% to 30% of its assets to Underlying Funds that invest primarily in equity securities, 70% to 90% to Underlying Funds that invest primarily in fixed-income securities and 0% to 30% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds in the investment categories set forth below. Within these investment categories, the Fund remains flexible with respect to the percentage it will allocate among particular Underlying Funds.

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

The Fund does not take direct positions in derivatives, asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to derivatives, asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to derivatives, asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Glossary of Risks.”

Acting as Sub-Adviser, Goldman Sachs Asset Management, L.P. (“GSAM”) provides JNAM advice regarding the allocation of investments among the universe of Funds specified by JNAM and listed below. Among the considerations that GSAM uses to determine specific percentage allocations to any particular fund are market and economic conditions, historical performance of each Fund, expected performance of each Fund based on quantitative and qualitative investment analysis, as well as diversification requirements to control overall portfolio risk exposure. GSAM’s investment recommendations are periodically reviewed and revised based on changing market and economic conditions that may affect specific funds or investment categories.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by GSAM or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Because the Fund invests exclusively in the Underlying Funds, you should look elsewhere in the respective Prospectus for the JNL Series Trust for the particular information and the risks related to the Underlying Funds.

The following charts list the Underlying Funds available for investment as of the date of this Prospectus:

Domestic/Global Equity

JNL Multi-Manager Mid Cap Fund
 JNL Multi-Manager Small Cap Growth Fund
 JNL Multi-Manager Small Cap Value Fund

The JNL/Baillie Gifford U.S. Equity Growth Fund is not available as an Underlying Fund to this Fund.

The Fund seeks to achieve capital growth through its investments in Underlying Funds that invest primarily in equity securities. These investments may include Funds that invest in stocks of large established companies as well as those that invest in stocks of smaller companies with above-average growth potential.

The Fund seeks to achieve current income through its investments in Underlying Funds that invest primarily in fixed-income securities. These investments may include Underlying Funds that invest in foreign bonds denominated in currencies other than U.S. dollars as well as Underlying Funds that invest exclusively in bonds of U.S. issuers. The Fund may invest in Underlying Funds that invest exclusively in investment-grade securities, as well as Underlying Funds that invest in high-yield, high-risk bonds, commonly referred to as “junk bonds.”

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Investment strategy risk*
- *Investment style risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Equity securities risk*
- *Large-capitalization investing risk*
- *U.S. Government securities risk*
- *Mortgage-related and other asset-backed securities risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Foreign securities risk*
- *TIPS and inflation-linked bonds risk*
- *Mid-capitalization investing risk*
- *Small-capitalization investing risk*
- *Emerging markets and less developed countries risk*
- *Concentration risk*
- *Derivatives risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Company risk*
- *Expense risk*
- *Regulatory investment limits risk*
- *Accounting risk*
- *Financial services risk*
- *Temporary defensive positions and large cash positions risk*
- *Currency risk*
- *Leverage risk*
- *Settlement risk*
- *Securities lending risk*
- *Counterparty risk*
- *Liquidity risk*
- *Redemption risk*
- *Prepayment risk*
- *Cybersecurity risk*

- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks.

In addition, the performance of the Fund depends on the Underlying Funds' sub-advisers' abilities to effectively implement the investment strategies of the Underlying Funds.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Goldman Sachs Asset Management, L.P. (“GSAM”), 200 West Street, New York, New York, 10282. GSAM has been registered as an investment adviser since 1990 and is an affiliate of Goldman, Sachs & Co. LLC (“Goldman Sachs”).

Neill Nuttall, Michael Carapucci and Alexandra Wilson-Elizondo share the primary responsibility for the development of the investment allocations of Fund.

Mr. Carapucci is a portfolio manager within the Global Portfolio Solutions (GPS) Group in GSAM. He joined GSAM in 2019 as a vice president. Prior to joining GSAM, Mr. Carapucci served multiple roles at SPIAS. He was appointed Deputy Chief Investment Officer and Portfolio Manager, Multi-Asset in 2016. Prior to that, Mr. Carapucci was a Portfolio Manager with SPIAS since January 2012 and an Investment Officer from October 2010 to December 2011. Mr. Carapucci participated in establishing asset allocation strategies and fund recommendations to support multi-manager products. Prior to his appointment, he was an Analyst since April 2008 and Statistician since January 2005. Mr. Carapucci was primarily responsible for fund research to support multi-manager products. He holds a Masters in Business Administration from the Zicklin School of Business-Baruch College and a BS in Finance and Investments from The College of New Jersey.

Mr. Nuttall is the chief investment officer of the Multi-Asset Solutions (MAS) Group within Goldman Sachs Asset Management. The MAS Group provides multi-asset class products and solutions for institutional and individual investors, focusing on customized asset allocation, tactical implementation, risk management and portfolio construction. Mr. Nuttall joined Goldman Sachs as a managing director in Asset Management in 2014. Prior to joining the firm, he worked for almost 30 years at JPMorgan Asset Management (JPMAM) and its heritage firms, based for 14 years in Hong Kong and subsequently in London. From 2006, Mr. Nuttall served as chief investment officer and head of JPMAM’s Global Multi Asset Group (GMAG) and later as head of Asset Allocation for GMAG. Prior to joining GMAG, Mr. Nuttall served as a managing director and senior strategist within JPMAM’s Currency Group. Previous roles included senior investing positions at Jardine Fleming Investment Management in the International Multi-Asset Portfolios Group. Prior to joining, JPMAM, Mr. Nuttall worked for Standard Chartered Bank in Hong Kong and Thailand. Neill earned a BA (Hons) in Politics from the University of Exeter.

Mrs. Wilson-Elizondo is a portfolio manager within the Multi-Asset Solutions Group in GSAM. Prior to joining the GSAM in 2021, Mrs. Wilson-Elizondo was the Deputy Head of Global Credit and a Managing Director at MacKay Shields LLC, which she joined in 2015.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Goldman Sachs Managed Moderate Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is current income and capital growth.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust.

Under normal circumstances, the Fund allocates approximately 30% to 50% of its assets to Underlying Funds that invest primarily in equity securities, 50% to 70% to Underlying Funds that invest primarily in fixed-income securities and 0-25% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds in the investment categories set forth below. Within these investment categories, the Fund remains flexible with respect to the percentage it will allocate among particular Underlying Funds.

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

The Fund does not take direct positions in derivatives, asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to derivatives, asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to derivatives, asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Glossary of Risks.”

Acting as Sub-Adviser, Goldman Sachs Asset Management, L.P. (“GSAM”) provides JNAM advice regarding the allocation of investments among the universe of Funds specified by JNAM and listed below. Among the considerations that GSAM uses to determine specific percentage allocations to any particular fund are market and economic conditions, historical performance of each Fund, expected performance of each Fund based on quantitative and qualitative investment analysis, as well as diversification requirements to control overall portfolio risk exposure. GSAM’s investment recommendations are periodically reviewed and revised based on changing market and economic conditions that may affect specific funds or investment categories.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by GSAM or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Because the Fund invests exclusively in the Underlying Funds, you should look elsewhere in the respective Prospectus for the JNL Series Trust for the particular information and the risks related to the Underlying Funds.

The following charts list the Underlying Funds available for investment as of the date of this Prospectus:

The JNL/Baillie Gifford U.S. Equity Growth Fund is not available as an Underlying Fund to this Fund.

The Fund seeks to achieve capital growth through its investments in Underlying Funds that invest primarily in equity securities. These investments may include Funds that invest in stocks of large established companies as well as those that invest in stocks of smaller companies with above-average growth potential.

The Fund seeks to achieve current income through its investments in Underlying Funds that invest primarily in fixed-income securities. These investments may include Underlying Funds that invest in foreign bonds denominated in currencies other than U.S. dollars as well as Underlying Funds that invest exclusively in bonds of U.S. issuers. The Fund may invest in Underlying Funds that invest exclusively in investment-grade securities, as well as Underlying Funds that invest in high-yield, high-risk bonds, commonly referred to as “junk bonds.”

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Investment strategy risk*
- *Investment style risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Equity securities risk*

 JNL/JPMorgan Hedged Equity Fund
 JNL/Westchester Capital Event Driven Fund

The JNL/Baillie Gifford U.S. Equity Growth Fund is not available as an Underlying Fund to this Fund.

The Fund seeks to achieve capital growth through its investments in Underlying Funds that invest primarily in equity securities. These investments may include Funds that invest in stocks of large established companies as well as those that invest in stocks of smaller companies with above-average growth potential.

The Fund seeks to achieve current income through its investments in Underlying Funds that invest primarily in fixed-income securities. These investments may include Underlying Funds that invest in foreign bonds denominated in currencies other than U.S. dollars as well as Underlying Funds that invest exclusively in bonds of U.S. issuers. The Fund may invest in Underlying Funds that invest exclusively in investment-grade securities, as well as Underlying Funds that invest in high-yield, high-risk bonds, commonly referred to as “junk bonds.”

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Investment strategy risk*
- *Investment style risk*
- *Equity securities risk*
- *Large-capitalization investing risk*
- *Fixed-income risk*
- *Foreign securities risk*
- *Interest rate risk*
- *Credit risk*
- *Mortgage-related and other asset-backed securities risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *U.S. Government securities risk*
- *Emerging markets and less developed countries risk*
- *Mid-capitalization investing risk*
- *Small-capitalization investing risk*
- *TIPS and inflation-linked bonds risk*
- *Concentration risk*
- *Derivatives risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Company risk*
- *Expense risk*
- *Regulatory investment limits risk*
- *Accounting risk*
- *Financial services risk*
- *Temporary defensive positions and large cash positions risk*
- *Currency risk*
- *Leverage risk*
- *Settlement risk*
- *Securities lending risk*
- *Counterparty risk*
- *Liquidity risk*
- *Redemption risk*
- *Prepayment risk*
- *Cybersecurity risk*

- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks.

In addition, the performance of the Fund depends on the Underlying Funds' sub-advisers' abilities to effectively implement the investment strategies of the Underlying Funds.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Goldman Sachs Asset Management, L.P. (“GSAM”), 200 West Street, New York, New York, 10282. GSAM has been registered as an investment adviser since 1990 and is an affiliate of Goldman, Sachs & Co. LLC (“Goldman Sachs”).

Neill Nuttall, Michael Carapucci and Alexandra Wilson-Elizondo share the primary responsibility for the development of the investment allocations of Fund.

Mr. Carapucci is a portfolio manager within the Global Portfolio Solutions (GPS) Group in GSAM. He joined GSAM in 2019 as a vice president. Prior to joining GSAM, Mr. Carapucci served multiple roles at SPIAS. He was appointed Deputy Chief Investment Officer and Portfolio Manager, Multi-Asset in 2016. Prior to that, Mr. Carapucci was a Portfolio Manager with SPIAS since January 2012 and an Investment Officer from October 2010 to December 2011. Mr. Carapucci participated in establishing asset allocation strategies and fund recommendations to support multi-manager products. Prior to his appointment, he was an Analyst since April 2008 and Statistician since January 2005. Mr. Carapucci was primarily responsible for fund research to support multi-manager products. He holds a Masters in Business Administration from the Zicklin School of Business-Baruch College and a BS in Finance and Investments from The College of New Jersey.

Mr. Nuttall is the chief investment officer of the Multi-Asset Solutions (MAS) Group within Goldman Sachs Asset Management. The MAS Group provides multi-asset class products and solutions for institutional and individual investors, focusing on customized asset allocation, tactical implementation, risk management and portfolio construction. Mr. Nuttall joined Goldman Sachs as a managing director in Asset Management in 2014. Prior to joining the firm, he worked for almost 30 years at JPMorgan Asset Management (JPMAM) and its heritage firms, based for 14 years in Hong Kong and subsequently in London. From 2006, Mr. Nuttall served as chief investment officer and head of JPMAM’s Global Multi Asset Group (GMAG) and later as head of Asset Allocation for GMAG. Prior to joining GMAG, Mr. Nuttall served as a managing director and senior strategist within JPMAM’s Currency Group. Previous roles included senior investing positions at Jardine Fleming Investment Management in the International Multi-Asset Portfolios Group. Prior to joining, JPMAM, Mr. Nuttall worked for Standard Chartered Bank in Hong Kong and Thailand. Neill earned a BA (Hons) in Politics from the University of Exeter.

Mrs. Wilson-Elizondo is a portfolio manager within the Multi-Asset Solutions Group in GSAM. Prior to joining the GSAM in 2021, Mrs. Wilson-Elizondo was the Deputy Head of Global Credit and a Managing Director at MacKay Shields LLC, which she joined in 2015.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Goldman Sachs Managed Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek capital growth. Current income is a secondary objective.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust.

Under normal circumstances, the Fund allocates approximately 70% to 90% of its assets to Underlying Funds that invest primarily in equity securities, 10% to 30% to Underlying Funds that invest primarily in fixed-income securities and 0-15% to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds in the investment categories set forth below. Within these investment categories, the Fund remains flexible with respect to the percentage it will allocate among particular Underlying Funds.

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

The Fund does not take direct positions in derivatives, asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to derivatives, asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to derivatives, asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Glossary of Risks.”

Acting as Sub-Adviser, Goldman Sachs Asset Management, L.P. (“GSAM”) provides JNAM advice regarding the allocation of investments among the universe of Funds specified by JNAM and listed below. Among the considerations that GSAM uses to determine specific percentage allocations to any particular fund are market and economic conditions, historical performance of each Fund, expected performance of each Fund based on quantitative and qualitative investment analysis, as well as diversification requirements to control overall portfolio risk exposure. GSAM’s investment recommendations are periodically reviewed and revised based on changing market and economic conditions that may affect specific funds or investment categories.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by GSAM or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Because the Fund invests exclusively in the Underlying Funds, you should look elsewhere in the respective Prospectus for the JNL Series Trust for the particular information and the risks related to the Underlying Funds.

The following charts list the Underlying Funds available for investment as of the date of this Prospectus:

The JNL/Baillie Gifford U.S. Equity Growth Fund is not available as an Underlying Fund to this Fund.

The Fund seeks to achieve capital growth through its investments in Underlying Funds that invest primarily in equity securities. These investments may include Funds that invest in stocks of large established companies as well as those that invest in stocks of smaller companies with above-average growth potential.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Investment strategy risk*
- *Investment style risk*
- *Equity securities risk*
- *Large-capitalization investing risk*
- *Foreign securities risk*
- *Fixed-income risk*
- *Emerging markets and less developed countries risk*
- *Interest rate risk*
- *Credit risk*
- *Mid-capitalization investing risk*
- *Small-capitalization investing risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Mortgage-related and other asset-backed securities risk*
- *U.S. Government securities risk*
- *TIPS and inflation-linked bonds risk*
- *Concentration risk*
- *Derivatives risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Company risk*
- *Expense risk*
- *Regulatory investment limits risk*
- *Accounting risk*
- *Financial services risk*
- *Temporary defensive positions and large cash positions risk*
- *Currency risk*
- *Leverage risk*
- *Settlement risk*
- *Securities lending risk*
- *Counterparty risk*
- *Liquidity risk*
- *Redemption risk*
- *Prepayment risk*
- *Cybersecurity risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks.

In addition, the performance of the Fund depends on the Underlying Funds' sub-advisers' abilities to effectively implement the investment strategies of the Underlying Funds.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Goldman Sachs Asset Management, L.P. ("GSAM"), 200 West Street, New York, New York, 10282. GSAM has been registered as an investment adviser since 1990 and is an affiliate of Goldman, Sachs & Co. LLC ("Goldman Sachs").

Neill Nuttall, Michael Carapucci and Alexandra Wilson-Elizondo share the primary responsibility for the development of the investment allocations of Fund.

Mr. Carapucci is a portfolio manager within the Global Portfolio Solutions (GPS) Group in GSAM. He joined GSAM in 2019 as a vice president. Prior to joining GSAM, Mr. Carapucci served multiple roles at SPIAS. He was appointed Deputy Chief Investment Officer and Portfolio Manager, Multi-Asset in 2016. Prior to that, Mr. Carapucci was a Portfolio Manager with SPIAS since January 2012 and an Investment Officer from October 2010 to December 2011. Mr. Carapucci participated in establishing asset allocation strategies and fund recommendations to support multi-manager products. Prior to his appointment, he was an Analyst since April 2008 and Statistician since January 2005. Mr. Carapucci was primarily responsible for fund research to support multi-manager products. He holds a Masters in Business Administration from the Zicklin School of Business-Baruch College and a BS in Finance and Investments from The College of New Jersey.

Mr. Nuttall is the chief investment officer of the Multi-Asset Solutions (MAS) Group within Goldman Sachs Asset Management. The MAS Group provides multi-asset class products and solutions for institutional and individual investors, focusing on customized asset allocation, tactical implementation, risk management and portfolio construction. Mr. Nuttall joined Goldman Sachs as a managing director in Asset Management in 2014. Prior to joining the firm, he worked for almost 30 years at JPMorgan Asset Management (JPMAM) and its heritage firms, based for 14 years in Hong Kong and subsequently in London. From 2006, Mr. Nuttall served as chief investment officer and head of JPMAM's Global Multi Asset Group (GMAG) and later as head of Asset Allocation for GMAG. Prior to joining GMAG, Mr. Nuttall served as a managing director and senior strategist within JPMAM's Currency Group. Previous roles included senior investing positions at Jardine Fleming Investment Management in the International Multi-Asset Portfolios Group. Prior to joining, JPMAM, Mr. Nuttall worked for Standard Chartered Bank in Hong Kong and Thailand. Neill earned a BA (Hons) in Politics from the University of Exeter.

Mrs. Wilson-Elizondo is a portfolio manager within the Multi-Asset Solutions Group in GSAM. Prior to joining the GSAM in 2021, Mrs. Wilson-Elizondo was the Deputy Head of Global Credit and a Managing Director at MacKay Shields LLC, which she joined in 2015.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL Conservative Allocation Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek the generation of income through investment in other funds (the “Underlying Funds”).

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of Underlying Funds. The Underlying Funds in which the Fund may invest each are a separate series of the JNL Series Trust. Not all Funds of the JNL Series Trust are available as Underlying Funds.

Under normal circumstances, the Fund allocates approximately 0% to 40% of its assets to Underlying Funds that invest primarily in equity securities, 60% to 100% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

In determining allocations to any particular Underlying Fund, Jackson National Asset Management, LLC, the Fund’s investment adviser (“JNAM” or the “Adviser”) considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure. Allocations among the Underlying Funds are periodically reviewed and may be modestly revised, based on changing market and economic conditions that may affect specific Underlying Funds or asset classes.

Generally, any changes among asset classes will be strategic in nature within a modest range around the target allocation set for each Underlying Fund; however, the Adviser may at times make larger allocation changes if it believes market conditions warrant a larger change. Allocations are based not only on past asset class performance but on future risk/return expectations. The Adviser reserves the right to replace Underlying Funds or other securities in its asset allocation model at any time.

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Each Underlying Fund has its own investment objective and invests in certain types of securities or other assets in order to implement its investment strategy and seek to achieve its investment objective. Those types of securities or other assets include, but are not limited to: equity securities (such as common stock, preferred stock, and convertible securities), equity futures, equity swaps, currency forwards, currency futures, commodity futures and swaps, bond futures, fixed income swaps, interest rate swaps, and inflation swaps; U.S. and foreign government bonds, including inflation protected bonds (such as Treasury Inflation Protected Securities); bank loans; cash and cash equivalents, including but not limited to money market fund shares. These holdings can include investment exposure to both developed and emerging markets, and may be illiquid or thinly traded. Securities held by the Underlying Funds may be denominated in U.S. and/or non-U.S. currencies.

An “emerging market country” is a country that, at the time of investment, is classified as an emerging or developing country by any supranational organization such as an institution in the World Bank Group or the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

An Underlying Fund may be leveraged and therefore could be subject to a heightened risk of loss. The leverage involved in certain derivative transactions may result in an Underlying Fund’s net asset value being more sensitive to changes in the value of the related investment.

The Underlying Funds in which the Fund may invest may be changed from time to time at the discretion of the Adviser without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Because the Fund invests exclusively in the Underlying Funds, you should look elsewhere in the respective Prospectus for the JNL Series Trust for the particular information and the risks related to the Underlying Funds.

The following charts list the Underlying Funds available for investment as of the date of this Prospectus:

The Fund seeks to achieve the generation of income through its investment in Underlying Funds that invest primarily in fixed income securities and other income generating securities or strategies. Investments may include Underlying Funds that invest in fixed income securities, including bonds of U.S. issuers as well as foreign bonds from developed and emerging markets that may be denominated in currencies other than the U.S. dollar. The Fund may also invest in Underlying Funds that invest exclusively in investment-grade securities, as well as Underlying Funds that invest in high-yield, high-risk bonds, commonly referred to as “junk bonds.” Modest

allocations may also include Underlying Funds that invest in both domestic and international dividend-paying, equity securities and real estate investment trusts.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Equity securities risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Emerging markets and less developed countries risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Investment in other investment companies risk*
- *Settlement risk*
- *Foreign securities risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Commodity risk*
- *Currency risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Short sales risk*
- *Temporary defensive positions and large cash positions risk*
- *Portfolio turnover risk*

These and other risks associated with the Underlying Funds are described elsewhere in the prospectus. Since the Fund concentrates its investments in shares of the Underlying Funds, its performance is directly related to the ability of the Underlying Funds to meet their respective investment objectives, as well as JNAM's allocation among the Underlying Funds. The Fund's exposure to each category of risk varies as a result of changes in its percentage allocations to Underlying Funds that invest primarily in equity, fixed-income or money market securities. To the extent that the Fund has a higher percentage of investments in non-traditional investment categories, the Fund may incur more risk. Many of the Underlying Funds are classified as alternative investment funds and invest in non-traditional investment categories.

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks.

In addition, the performance of the Fund depends on the Underlying Funds' sub-advisers' abilities to effectively implement the investment strategies of the Underlying Funds.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The Fund is managed by William Harding, Sean Hynes, Mark Pliska, and Kyle Ottwell who are responsible for setting the allocations made to the Fund and application of the Fund's strategy.

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

Kyle Ottwell, CFA, CAIA, is Director, Investment Management for JNAM. Mr. Ottwell is responsible for manager research, portfolio construction, and asset allocation of Funds, joining the Investment Management team in October 2013. Mr. Ottwell originally joined JNAM in June of 2007 as a Fund Accountant, rising to the Supervisor position. Prior to JNAM he worked as a fund accountant for State Street. Mr. Ottwell holds a Bachelor of Science degree in Finance & Banking/Real Estate from the University of Missouri-Columbia. He is a CFA and CAIA charterholder.

The SAI provides additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund.

JNL Moderate Allocation Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek a balance between the generation of income and the long-term growth of capital through investment in other funds (the “Underlying Funds”).

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of Underlying Funds. The Underlying Funds in which the Fund may invest each are a separate series of the JNL Series Trust. Not all Funds of the JNL Series Trust are available as Underlying Funds.

Under normal circumstances, the Fund allocates approximately 20% to 60% of its assets to Underlying Funds that invest primarily in equity securities, 40% to 80% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

In determining allocations to any particular Underlying Fund, Jackson National Asset Management, LLC, the Fund’s investment adviser (“JNAM” or the “Adviser”) considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure. Allocations among the Underlying Funds are periodically reviewed and may be modestly revised, based on changing market and economic conditions that may affect specific Underlying Funds or asset classes.

Generally, any changes among asset classes will be strategic in nature within a modest range around the target allocation set for each Underlying Fund; however, the Adviser may at times make larger allocation changes if it believes market conditions warrant a larger change. Allocations are based not only on past asset class performance but on future risk/return expectations. The Adviser reserves the right to replace Underlying Funds or other securities in its asset allocation model at any time.

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Each Underlying Fund has its own investment objective and invests in certain types of securities or other assets in order to implement its investment strategy and seek to achieve its investment objective. Those types of securities or other assets include, but are not limited to: equity securities (such as common stock, preferred stock, and convertible securities), equity futures, equity swaps, currency forwards, currency futures, commodity futures and swaps, bond futures, fixed income swaps, interest rate swaps, and inflation swaps; U.S. and foreign government bonds, including inflation protected bonds (such as Treasury Inflation Protected Securities); bank loans; cash and cash equivalents, including but not limited to money market fund shares. These holdings can include investment exposure to both developed and emerging markets, and may be illiquid or thinly traded. Securities held by the Underlying Funds may be denominated in U.S. and/or non-U.S. currencies.

An “emerging market country” is a country that, at the time of investment, is classified as an emerging or developing country by any supranational organization such as an institution in the World Bank Group or the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

An Underlying Fund may be leveraged and therefore could be subject to a heightened risk of loss. The leverage involved in certain derivative transactions may result in an Underlying Fund’s net asset value being more sensitive to changes in the value of the related investment.

The Underlying Funds in which the Fund may invest may be changed from time to time at the discretion of the Adviser without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund seeks to achieve the generation of income through its investment in Underlying Funds that invest in fixed income securities and other income generating securities or strategies, as well as dividend paying equity securities. Investments may include Underlying Funds that invest in fixed income securities, including bonds of U.S. issuers, as well as foreign bonds from developed and emerging markets that may be denominated in currencies other than the U.S. dollar. The Fund may also invest in Underlying Funds that invest exclusively in investment-grade securities as well as Underlying Funds that invest in high-yield, high-risk bonds, commonly referred

to as “junk bonds.” Investments in Underlying Funds that invest in fixed income instruments are complemented by allocations to Underlying Funds that invest in both domestic and international dividend-paying, equity securities and real estate investment trusts.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Adviser investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Equity securities risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Emerging markets and less developed countries risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Investment in other investment companies risk*
- *Settlement risk*
- *Foreign securities risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Commodity risk*
- *Currency risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Short sales risk*
- *Temporary defensive positions and large cash positions risk*
- *Portfolio turnover risk*

These and other risks associated with the Underlying Funds are described elsewhere in the prospectus. Since the Fund concentrates its investments in shares of the Underlying Funds, its performance is directly related to the ability of the Underlying Funds to meet their respective investment objectives, as well as JNAM’s allocation among the Underlying Funds. The Fund’s exposure to each category of risk varies as a result of changes in its percentage allocations to Underlying Funds that invest primarily in equity, fixed-income or money market securities. To the extent that the Fund has a higher percentage of investments in non-traditional investment categories, the Fund may incur more risk. Many of the Underlying Funds are classified as alternative investment funds and invest in non-traditional investment categories.

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks.

In addition, the performance of the Fund depends on the Underlying Funds' sub-advisers' abilities to effectively implement the investment strategies of the Underlying Funds.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The Fund is managed by William Harding, Sean Hynes, Mark Pliska, and Kyle Ottwell who are responsible for setting the allocations made to the Fund and application of the Fund's strategy.

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

Kyle Ottwell, CFA, CAIA, is Director, Investment Management for JNAM. Mr. Ottwell is responsible for manager research, portfolio construction, and asset allocation of Funds, joining the Investment Management team in October 2013. Mr. Ottwell originally joined JNAM in June of 2007 as a Fund Accountant, rising to the Supervisor position. Prior to JNAM he worked as a fund accountant for State Street. Mr. Ottwell holds a Bachelor of Science degree in Finance & Banking/Real Estate from the University of Missouri-Columbia. He is a CFA and CAIA charterholder.

The SAI provides additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund.

JNL Moderate Growth Allocation Fund

Class A

Class I

Investment Objectives. The investment objective of the Fund is to seek capital growth. Current income is a secondary objective.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust.

Under normal circumstances, the Fund allocates approximately 40% to 80% of its assets to Underlying Funds that invest primarily in equity securities, 20% to 60% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds in the investment categories set forth below. Within these investment categories, the Fund remains flexible with respect to the percentage it will allocate among Underlying Funds.

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

Some of the Underlying Funds may invest in securities issued by companies located in countries outside the United States, including a range of developing and emerging market countries. An “emerging market country” is a country that, at the time of investment, is classified as an emerging or developing country by any supranational organization such as an institution in the World Bank Group or the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Because the Fund invests exclusively in the Underlying Funds, you should look elsewhere in the respective Prospectus for the JNL Series Trust for the particular information and the risks related to the Underlying Funds.

The following charts list the Underlying Funds available for investment as of the date of this Prospectus:

The Fund seeks to achieve capital growth through its investments in Underlying Funds that invest primarily in equity securities. These investments may include Funds that invest in stocks of large established companies as well as those that invest in stocks of smaller companies with above-average growth potential.

The Fund seeks to achieve current income through its investments in Underlying Funds that invest primarily in fixed-income securities. These investments may include Underlying Funds that invest in foreign bonds denominated in currencies other than U.S. dollars as well as Underlying Funds that invest exclusively in bonds of U.S. issuers. The Fund may invest in Underlying Funds that invest exclusively in investment-grade securities, as well as Underlying Funds that invest in high-yield, high-risk bonds, commonly referred to as “junk bonds.”

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Equity securities risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Emerging markets and less developed countries risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Investment in other investment companies risk*
- *Foreign securities risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Commodity risk*
- *Currency risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Short sales risk*
- *Temporary defensive positions and large cash positions risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks.

In addition, the performance of the Fund depends on the Underlying Funds’ sub-advisers’ abilities to effectively implement the investment strategies of the Underlying Funds.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The Fund is managed by William Harding, Sean Hynes, Mark Pliska, and Kyle Ottwell who are responsible for setting the allocations made to the Fund and application of the Fund's strategy.

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

Kyle Ottwell, CFA, CAIA, is Director, Investment Management for JNAM. Mr. Ottwell is responsible for manager research, portfolio construction, and asset allocation of Funds, joining the Investment Management team in October 2013. Mr. Ottwell originally joined JNAM in June of 2007 as a Fund Accountant, rising to the Supervisor position. Prior to JNAM he worked as a fund accountant for State Street. Mr. Ottwell holds a Bachelor of Science degree in Finance & Banking/Real Estate from the University of Missouri-Columbia. He is a CFA and CAIA charterholder.

The SAI provides additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund.

JNL Growth Allocation Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek capital growth and current income.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust.

Under normal circumstances, the Fund allocates approximately 60% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 40% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds in the investment categories set forth below. Within these investment categories, the Fund remains flexible with respect to the percentage it will allocate among Underlying Funds.

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

Some of the Underlying Funds may invest in securities issued by companies located in countries outside the United States, including a range of developing and emerging market countries. An “emerging market country” is a country that, at the time of investment, is classified as an emerging or developing country by any supranational organization such as an institution in the World Bank Group or the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Because the Fund invests exclusively in the Underlying Funds, you should look elsewhere in the respective Prospectus for the JNL Series Trust for the particular information and the risks related to the Underlying Funds.

The Fund seeks to achieve capital growth through its investments in Underlying Funds that invest primarily in equity securities. These investments may include Funds that invest in stocks of large established companies as well as those that invest in stocks of smaller companies with above-average growth potential.

The Fund seeks to achieve current income through its investments in Underlying Funds that invest primarily in fixed-income securities. These investments may include Underlying Funds that invest in foreign bonds denominated in currencies other than U.S. dollars as well as Underlying Funds that invest exclusively in bonds of U.S. issuers. The Fund may invest in Underlying Funds that invest exclusively in investment-grade securities, as well as Underlying Funds that invest in high-yield, high-risk bonds, commonly referred to as “junk bonds.”

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Equity securities risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Emerging markets and less developed countries risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Investment in other investment companies risk*
- *Foreign securities risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Commodity risk*
- *Currency risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Short sales risk*
- *Temporary defensive positions and large cash positions risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks.

In addition, the performance of the Fund depends on the Underlying Funds’ sub-advisers’ abilities to effectively implement the investment strategies of the Underlying Funds.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The Fund is managed by William Harding, Sean Hynes, Mark Pliska, and Kyle Ottwell who are responsible for setting the allocations made to the Fund and application of the Fund's strategy.

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

Kyle Ottwell, CFA, CAIA, is Director, Investment Management for JNAM. Mr. Ottwell is responsible for manager research, portfolio construction, and asset allocation of Funds, joining the Investment Management team in October 2013. Mr. Ottwell originally joined JNAM in June of 2007 as a Fund Accountant, rising to the Supervisor position. Prior to JNAM he worked as a fund accountant for State Street. Mr. Ottwell holds a Bachelor of Science degree in Finance & Banking/Real Estate from the University of Missouri-Columbia. He is a CFA and CAIA charterholder.

The SAI provides additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund.

JNL Aggressive Growth Allocation Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is capital growth.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust.

Under normal circumstances, the Fund allocates approximately 70% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 30% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to the investment categories set forth below. Within these investment categories, the Fund remains flexible with respect to the percentage it will allocate among Underlying Funds.

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

Some of the Underlying Funds may invest in securities issued by companies located in countries outside the United States, including a range of developing and emerging market countries. An “emerging market country” is a country that, at the time of investment, is classified as an emerging or developing country by any supranational organization such as an institution in the World Bank Group or the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Because the Fund invests exclusively in the Underlying Funds, you should look elsewhere in the respective Prospectus for the JNL Series Trust for the particular information and the risks related to the Underlying Funds.

The following charts list the Underlying Funds available for investment as of the date of this Prospectus:

Domestic/Global Equity

The Fund seeks to achieve capital growth through its investments in Underlying Funds that invest primarily in equity securities. These investments may include Funds that invest in stocks of large established companies as well as those that invest in stocks of smaller companies with above-average growth potential.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Equity securities risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Emerging markets and less developed countries risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Investment in other investment companies risk*
- *Foreign securities risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Commodity risk*
- *Currency risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Short sales risk*
- *Temporary defensive positions and large cash positions risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks.

In addition, the performance of the Fund depends on the Underlying Funds' sub-advisers' abilities to effectively implement the investment strategies of the Underlying Funds.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals

and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The Fund is managed by William Harding, Sean Hynes, Mark Pliska, and Kyle Ottwell who are responsible for setting the allocations made to the Fund and application of the Fund's strategy.

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

Kyle Ottwell, CFA, CAIA, is Director, Investment Management for JNAM. Mr. Ottwell is responsible for manager research, portfolio construction, and asset allocation of Funds, joining the Investment Management team in October 2013. Mr. Ottwell originally joined JNAM in June of 2007 as a Fund Accountant, rising to the Supervisor position. Prior to JNAM he worked as a fund accountant for State Street. Mr. Ottwell holds a Bachelor of Science degree in Finance & Banking/Real Estate from the University of Missouri-Columbia. He is a CFA and CAIA charterholder.

The SAI provides additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund.

JNL Bond Index Fund
Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Master Fund”) is to track the performance of the Bloomberg U.S. Aggregate Bond Index to provide a moderate rate of income by investing in domestic fixed-income investments.

Principal Investment Strategies. The Fund seeks to achieve its objective by utilizing a passive investment approach called indexing, which seeks to track the investment performance of the Bloomberg U.S. Aggregate Bond Index (“Index”). Bonds are selected based on their characteristics to create a portfolio that profiles the Index. The Fund does not employ traditional methods of active investment management such as actively buying and selling bonds based upon interest rate bets or sector rotation. Indexing offers a cost-effective approach to gaining diversified market exposure over the long-term.

The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in fixed-income securities that seek to track the performance and characteristics of the Index that Mellon Investments Corporation (“Mellon” or “Sub-Adviser”) believes to be important, such as Option Adjusted Duration, Maturity, Average Quality Rating, Sector/Industries, and Yield to worst. The Index includes Treasuries, government-related credit, mortgage-backed securities (agency fixed-rate pass-throughs), asset-backed securities and commercial mortgage backed securities (agency and non-agency). Research and experience indicates that it is impractical to fully replicate most broad fixed-income indices. The Index includes thousands of issues, many of which may be illiquid and unavailable in the secondary market. Additionally, reinvestment of cash flows would be costly in a full replication environment, as it would entail trading many issues in uneven amounts. Given these difficulties, the Sub-Adviser utilizes a representative sampling approach that combines analysis and the experience and judgment of its investment professionals.

Through the representative sampling approach, the Sub-Adviser selects what it believes is a representative basket of securities in order to track the important risk characteristics of the Index. Given this fixed income index cannot be fully replicated, the Fund uses a representative sampling approach to select bonds that match the important risk characteristics of the Index. Buy and sell decisions are based primarily on portfolio characteristic overweightings and underweightings. The Fund’s holdings are rebalanced on a monthly basis to reflect changes in the composition of the Index. The Fund’s rebalancing is typically done by using cash flows from accruals and contract owner contributions and withdrawals.

The Fund can invest in a number of different kinds of “derivative” instruments to hedge investment risks. It does not do so currently to a significant degree. In general terms, a derivative instrument is one where value depends on (or is derived from) the value of an underlying asset, interest rate or index. Options, futures and forward contracts are examples of derivatives.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As an indexed portfolio, the Fund may not achieve its investment objective for a variety of reasons, the inability to purchase certain securities in the index, including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or country specific factors that would prevent the Fund from achieving its investment objective. The principal risks of investing in the Fund include:

- *Interest rate risk*
- *Fixed-income risk*
- *Passive investment risk*
- *U.S. Government securities risk*
- *Credit risk*
- *Mortgage-related and other asset-backed securities risk*
- *Extension risk*
- *Tracking error risk*
- *Foreign securities risk*
- *Index investing risk*
- *Market risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *Investment strategy risk*
- *Leverage risk*
- *Portfolio turnover risk*
- *Prepayment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Nancy G. Rogers, CFA is a Managing Director, Head of Fixed Income Portfolio Management at Mellon. Ms. Rogers joined Mellon in 1987 and is responsible for the management of domestic and international portfolios, including separate, commingled and mutual fund accounts. Prior experience includes management of aggregate, government, credit and custom indices as well as trading, performance measurement and portfolio accounting. Ms. Rogers attained the Chartered Financial Analyst ("CFA") designation. Ms. Rogers graduated with an M.B.A. from Drexel University, Investments. Ms. Rogers has been in the investment industry and at BNY Mellon affiliates since 1987.

Gregg A. Lee, CFA is Director, Senior Portfolio Manager, Fixed Income at Mellon. He joined Mellon in 1989 as an equity indexing portfolio manager and after just over a year, transferred to the fixed-income department. Mr. Lee is responsible for domestic and international fixed income portfolios. He oversees the MBS/securitized sector and helps with the refinement and implementation of the portfolio management process. Mr. Lee also manages global aggregate portfolios including all components and custom indexes, and fixed income ETFs. Prior experience includes managing and trading domestic and international active fixed-income portfolios with a focus on the Active Core and Core Plus strategies. Mr. Lee graduated with a B.S. from University of California at Davis in Managerial Economics. Mr. Lee has been in the investment industry since 1989. Mr. Lee is a member of the CFA Institute and the CFA Society of San Francisco.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2020.

JNL Emerging Markets Index Fund
Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Master Fund”) is to track the performance of the Morningstar® Emerging Markets Target Market Exposure Index□ (Net), which is a rules-based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the emerging markets equity markets.

Principal Investment Strategies. The Fund seeks to invest under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities included in the Morningstar® Emerging Markets Target Market Exposure Index□ (Net) (“Index”), including depositary receipts representing securities of the Index; which may be in the form of American Depository receipts (“ADRs”), Global Depository receipts (“GDRs”) and European Depository receipts (“EDRs”). The Index is a rules-based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the Emerging Markets equity markets. Morningstar Indexes classifies Brazil, Chile, Colombia, Mexico, Peru, China, India, Indonesia, South Korea, Malaysia, Pakistan, Philippines, Taiwan, Thailand, Czech Republic, Greece, Hungary, Russia, Turkey, Egypt, Qatar, South Africa, Saudi Arabia, and United Arab Emirates as Emerging Markets. Morningstar Indexes reviews the market classification annually and consecutively updates the list.

There is no specific tilt based on region. While the Index will contain securities from China and Russia, their weights are determined solely in accordance with their float market capitalization. As of December 31, 2021, total percentage weight of securities from China was 31.29% and that from Russia was 3.24%.

The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and is effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and is effective the following Monday.

As of December 31, 2021, the Index had 1,418 constituents and the full market capitalization range was \$67.02 million to \$1,905.98 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the securities that comprise the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

Emerging market issuers may not be subject to accounting, auditing, legal and financial reporting standards comparable to those in developed markets, and emerging markets generally have less diverse and less mature economic structures, as well as less stable political systems, than those of developed countries. Because the Fund seeks to track an index comprised of foreign securities, it may be more susceptible to such risks than a Fund that seeks to track an index comprised of domestic securities.

The Fund will generally give the same weight to a given security as the Index does. However, when Mellon Investments Corporation (“Sub-Adviser”) believes it is in the best interest of the Fund, such as to avoid purchasing odd-lots (i.e., purchasing less than the usual number of shares traded for a security), for tax considerations, or to address liquidity considerations with respect to a stock, the Sub-Adviser may cause the Fund’s weighting of a security to be more or less than the Index’s weighting of the security. The Fund may sell securities that are represented in the Index in anticipation of their removal from the Index or buy securities that are not yet represented in the Index in anticipation of their addition to the Index. The Fund does not hedge its exposure to foreign currencies. However, the Fund may use forward contracts to lock-in exchange rates for portfolio securities that are purchased or sold, but awaiting settlement. These transactions establish a rate of exchange that can be expected to be received upon settlement of the securities.

When attempting to replicate the Index, portfolio turnover is typically limited to what the index adds and deletes, contract owner contributions and withdrawals, fund of fund purchases and redemptions, and reinvestment income. The replicated portfolio does not require rebalancing as a result of market movement. The Fund stays aligned with the Index automatically with the change in share price, due to the close similarity between the holdings of the Index and those of the Fund. The Fund will rebalance on or about the date that the Index rebalances.

In the event that all the securities comprising the Index cannot be purchased, the Fund may purchase a representative sample of securities from each economic sector included in the Index in proportion to the weighting in the Index. To the extent that the Fund seeks to replicate the Index using such sampling techniques, a close correlation between the Fund’s performance and the performance of the Index may be anticipated in both rising and falling markets. The Fund’s ability to achieve significant correlation between Fund and Index performance may be affected by changes in securities markets and changes in the composition of the Index.

The Fund will use to a significant degree derivative instruments, such as options, futures, and options on futures (including those relating to securities, indexes, foreign currencies and interest rates), forward contracts, swaps and hybrid instruments (typically structured notes), as a substitute for investing directly in equities, bonds and currencies in connection with its investment strategy.

The Fund also may use such derivatives as part of a hedging strategy or for other purposes related to the management of the Fund. Derivatives may be entered into on established exchanges or through privately negotiated transactions referred to as over-the-counter derivatives. The Fund also may purchase or sell securities on a forward commitment (including “TBA” (to be announced) basis). These transactions involve a commitment by the Fund to purchase or sell particular securities with payment and delivery taking place at a future date and permit the Fund to lock in a price or yield on a security it owns or intends to purchase, regardless of future changes in interest rates or market conditions.

The Fund may invest in derivative securities to manage cash flows and equitize dividend accruals.

In addition, the Fund may also invest in exchange-traded funds (“ETFs”). ETFs may be used in the Fund to invest cash until such time as the Fund purchases local securities. ETFs may also be used to gain exposure to local markets that may be closed, or that are expensive or difficult to trade in local shares.

The Fund may concentrate its investments in an industry or group of industries to the extent that the Index the Fund is designed to track is also so concentrated.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As an indexed portfolio, the Fund may not achieve its investment objective for a variety of reasons, the inability to purchase certain securities in the index, including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or country specific factors that would prevent the Fund from achieving its investment objective. The principal risks of investing in the Fund include:

- *Emerging markets and less developed countries risk*
- *Foreign securities risk*
- *Equity securities risk*
- *Currency risk*
- *Market risk*
- *Passive investment risk*
- *China risk*
- *Russia investment risk*
- *Liquidity risk*
- *Concentration risk*
- *Counterparty risk*
- *Depository receipts risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Forward and futures contract risk*
- *Index investing risk*
- *Tracking error risk*
- *Clearance and settlement risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2020.

JNL International Index Fund
Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Master Fund”) is to track the performance of the Morningstar® Developed Markets ex-North America Target Market Exposure Index□ (Net) (“Index”) to provide long-term capital growth by investing in international equity securities.

Principal Investment Strategies. The Fund seeks to achieve this investment objective by utilizing a passive investment approach, called indexing, which attempts to track the investment performance of the Index through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective approach to gaining diversified market exposure over the long term.

The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the Index or derivative securities economically related to the Index. The Fund seeks to track the performance and characteristics of the Index, a rules-based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the Developed Markets ex-North America equity markets. As of December 31, 2021, the Index included equities listed in Austria, Australia, Belgium, Switzerland, Germany, Denmark, Spain, Finland, France, Great Britain, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, Norway, New Zealand, Poland, Portugal, Sweden, Singapore, and the U.S. (the sole current U.S. holding is a British entity listed in the U.S.).

The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and is effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and is effective the following Monday.

As of December 31, 2021, the Index had 974 constituents and the full market capitalization range was \$350 million to \$417.31 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

To the extent that the Fund seeks to replicate the Index using sampling techniques, a close correlation between the Fund’s performance and the performance of the Index may be anticipated in both rising and falling markets.

To implement this strategy, the Fund may invest up to 50% of its net asset value in financial futures, a type of derivative, to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund may hold up to 25% of its value in baskets of local futures contracts (DAX, Cac 40, Euro Stoxx, Topix, FTSE, etc.) and/or Index futures contracts. In addition, the Fund may use foreign currency forward contracts, a type of derivative, to maintain the approximate currency exposure of the Index.

The Fund may invest in exchange-traded funds (“ETFs”) to assist with fund rebalances and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a quarterly basis to reflect changes in the composition of the Index.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As an indexed portfolio, the Fund may not achieve its investment objective for a variety of reasons, the inability to purchase certain securities in the index, including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or country specific factors that would prevent the Fund from achieving its investment objective. The principal risks of investing in the Fund include:

- *Foreign securities risk*
- *Equity securities risk*
- *License termination risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Financial services risk*
- *Forward and futures contract risk*
- *Index investing risk*
- *Passive investment risk*
- *Tracking error risk*
- *Asian investment risk*
- *Currency risk*
- *European investment risk*
- *Market risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *The Morningstar Developed Markets Ex North America Target Market Exposure Index (Net).* The Index is comprised of stocks including, but not limited to, the following countries: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, and the United Kingdom. The Morningstar Developed Markets ex-North America Target Market Exposure Index is a rule-based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the Developed Markets ex-North America equity markets.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Leverage risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation (“Mellon”) is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation (“BNY Mellon Corp.”). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund’s investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund’s investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund’s portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2020.

JNL Mid Cap Index Fund Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Master Fund”) is to track the performance of the S&P MidCap 400 Index to provide long-term capital growth by investing in equity securities of medium capitalization-weighted domestic corporations.

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the S&P MidCap 400 Index in proportion to their market capitalization weighting in the S&P MidCap 400 Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the S&P MidCap 400 Index through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the target index by investing all or substantially all of its assets in the stocks that make up the S&P MidCap 400 Index. As of December 31, 2021, the market capitalization range of the S&P MidCap 400 Index is \$1.37 billion to \$18.58 billion. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long term.

When attempting to replicate a capitalization-weighted index such as the S&P MidCap 400 Index, portfolio turnover is reduced to what the index adds and deletes, contract owner contributions and withdrawals, and reinvestment of income. The replicated portfolio does not require rebalancing as a result of market movement. It is rebalanced automatically with the change in share prices of the securities owned. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

In the event that all the stocks comprising the S&P MidCap 400 Index cannot be purchased, the Fund may purchase a representative sample of securities from each economic sector included in the S&P MidCap 400 Index in proportion to the weighting in the S&P MidCap 400 Index. To the extent that the Fund seeks to replicate the S&P MidCap 400 Index using such sampling techniques, a close correlation between the Fund's performance and the performance of the S&P MidCap 400 Index may be anticipated in both rising and falling markets. The Fund's ability to achieve significant correlation between the Fund and S&P MidCap 400 Index performance may be affected by changes in securities markets and changes in the composition of the S&P MidCap 400 Index.

The Fund may invest in exchange-traded funds (“ETFs”) and cash to maintain correlation of its index, to assist with fund re-balances, and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund may hold up to 25% of its value in S&P 400 Index futures contracts.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As an indexed portfolio, the Fund may not achieve its investment objective for a variety of reasons, the inability to purchase certain securities in the index, including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or country specific factors that would prevent the Fund from achieving its investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Mid-capitalization investing risk*
- *License termination risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Financial services risk*
- *Index investing risk*
- *Large-capitalization investing risk*
- *Passive investment risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *The S&P MidCap 400 Index.* The S&P MidCap 400 Index consists of 400 domestic stocks that are selected by Standard & Poor's to capture the price performance of a large cross section of the U.S. publicly traded stock market. Stocks included in the S&P MidCap 400 Index are chosen with the aim of achieving a representative portfolio from the various components of the U.S. economy. Aggregate market value and trading activity are also considered in the selection process. Each stock in the S&P MidCap 400 Index is weighted by its float adjusted market capitalization (or the stock's price multiplied by the number of shares outstanding adjusted for float, as the S&P MidCap 400 Index is considered a capitalization-weighted index.) The inclusion of a stock in the S&P MidCap 400 Index in no way implies that Standard & Poor's believes the stock to be an attractive investment, nor is Standard & Poor's in any way affiliated with the Fund.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Leverage risk*
- *Market risk*
- *Redemption risk*
- *Portfolio turnover risk*
- *Securities lending risk*
- *Settlement risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2020.

JNL Small Cap Index Fund Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Master Fund”) is to track the performance of the S&P SmallCap 600 Index to provide long-term growth of capital by investing in equity securities of small- to mid-size domestic companies.

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the S&P SmallCap 600 Index in proportion to their market capitalization weighting in the S&P SmallCap 600 Index. The S&P SmallCap 600 Index is a quarterly-rebalanced, float-adjusted market cap weighted index comprised of approximately 600 U.S. common equities and REITs that meet the index provider’s criteria for market capitalization, public float, financial viability, liquidity, price reasonableness, and sector representation. The S&P SmallCap 600 Index may invest across all GICS sectors and may include investments in financial services companies.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the S&P SmallCap 600 Index through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the S&P SmallCap 600 Index by investing all or substantially all of its assets in the stocks that make up the S&P SmallCap 600 Index. As of December 31, 2021, the market capitalization range for the S&P SmallCap 600 Index was \$188.65 million to \$7.93 billion.

When attempting to replicate a capitalization-weighted index such as the S&P SmallCap 600 Index, portfolio turnover is reduced to what the index adds and deletes, contract owner contributions and withdrawals, and reinvestment of income. The replicated portfolio does not require rebalancing as a result of market movement. It is rebalanced automatically with the change in share prices of the securities owned.

In the event that all the stocks comprising the S&P SmallCap 600 Index cannot be purchased, the Fund may purchase a representative sample of securities from each economic sector included in the S&P SmallCap 600 Index in proportion to the weighting in S&P SmallCap 600 Index. To the extent that the Fund seeks to replicate the S&P SmallCap 600 Index using such sampling techniques, a close correlation between the Fund’s performance and the performance of the S&P SmallCap 600 Index may be anticipated in both rising and falling markets. The Fund’s ability to achieve significant correlation between the Fund and S&P SmallCap 600 Index performance may be affected by changes in securities markets and changes in the composition of the S&P SmallCap 600 Index.

The Fund may invest in exchange-traded funds (“ETFs”) to assist with fund re-balances and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a quarterly basis to reflect changes in the composition of the S&P SmallCap 600 Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund may hold up to 25% of its value in S&P SmallCap 600 Index futures contracts. The Fund may lend its securities to increase its income.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As an indexed portfolio, the Fund may not achieve its investment objective for a variety of reasons, the inability to purchase certain securities in the index, including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or country specific factors that would prevent the Fund from achieving its investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Small-capitalization investing risk*
- *License termination risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*
- *Financial services risk*
- *Index investing risk*
- *Market risk*
- *Passive investment risk*
- *Tracking error risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the

risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *S&P® SmallCap 600 Index.* The S&P SmallCap 600® Index is a market cap-weighted index that captures and measures the performance of 600 small size companies in U.S. with a market capitalization of \$188.65 million to \$7.93 billion, reflecting this market segment's distinctive risk and return characteristics. The index is designed to track companies that meet specific inclusion criteria to ensure that they are liquid and financially viable as this segment of the market is typically known for less liquidity and potentially less financial stability than large caps.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Leverage risk*
- *Liquidity risk*
- *Mid-capitalization investing risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objectives. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Ms. Walker Smith, Mr. France, Mr. Frysinger, Ms. Sheremeta and Mr. Stoll review trades proposed by the portfolio managers, review and monitor accounts, and approve corporate action responses for all domestic and international equity indexing funds and each has the authority to approve transactions to the Fund.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2020.

MASTER-FEEDER STRUCTURE

Each of JNL/American Funds Balanced Fund, JNL/American Funds Bond Fund of America Fund, JNL/American Funds Capital Income Builder Fund, JNL/American Funds Capital World Bond Fund, JNL/American Funds Global Growth Fund, JNL/American Funds Global Small Capitalization Fund, JNL/American Funds Growth Fund, JNL/American Funds Growth-Income Fund, JNL/American Funds International Fund, JNL/American Funds New World Fund, and JNL/American Funds Washington Mutual Investors Fund (the “AF Feeder Funds”) and JNL/Mellon Bond Index Fund, JNL/Mellon Emerging Markets Index Fund, JNL/Mellon International Index Fund, JNL/Mellon S&P 400 MidCap Index Fund, and JNL/Mellon Small Cap Index Fund (each a “JNL Mellon Feeder Fund,” and collectively, the “JNL Mellon Feeder Funds”) operates as a “feeder fund” (each of the AF Feeder Funds and JNL Mellon Feeder Funds are referred to herein as a “Feeder Fund” and, collectively, as the “Feeder Funds”). A “feeder fund” is a fund that does not buy investment securities directly; instead, each feeder fund invests in a single registered investment company referred to as a “master fund.” The master fund purchases and manages a pool of investment securities. Each Feeder Fund’s investment objective and restrictions are the same as its corresponding master fund. Each master fund of the AF Feeder Funds is a series of the American Funds Insurance Series® (“AFIS” or “AF Master Funds”). Each master fund of the JNL Mellon Feeder Funds is a series of the Trust (“JNL Mellon Master Funds”) (each of the AF Master Funds and JNL Mellon Master Funds is referred to herein as a “Master Fund,” and collectively, as the “Master Funds”). This structure differs from the other Funds of the Trust and from other investment companies that invest directly in securities and are actively managed.

Each Feeder Fund bears its own operating expenses as well as its pro rata share of its corresponding Master Fund’s fees and expenses. Because each Feeder Fund invests all or substantially all of its assets in a Master Fund, its shareholders will bear the fees and expenses of both the Feeder Fund and the Master Fund in which it invests. Thus, the Feeder Fund’s expenses could be higher than those of mutual funds that invest directly in securities. Each Master Fund may have other shareholders, each of whom, like each Feeder Fund, will pay their proportionate share of the Master Fund’s expenses. Each Master Fund may also have shareholders that are not Feeder Funds, but are separate accounts of insurance companies or qualified retirement plans. The expenses and, correspondingly, the returns of the other shareholders of the Master Funds may differ from those of the Feeder Funds. The Master Funds pay distributions to each Master Fund shareholder, including the Feeder Funds. Also, a large-scale redemption by another feeder fund or any other large investor may increase the proportionate share of the costs of a Master Fund borne by the remaining feeder fund and other shareholders, including the applicable Feeder Fund.

Under the master/feeder structure, each Feeder Fund may withdraw its investment in the corresponding Master Fund if the Board determines that it is in the best interest of the Feeder Fund and its shareholders to do so. The Master Fund may fulfill a large withdrawal by a distribution in-kind of portfolio securities, as opposed to a cash distribution. A Feeder Fund could incur brokerage fees or other transaction costs in converting such securities to cash. The Board would consider when authorizing the withdrawal what action might be taken, including the investment of all of the assets of the Feeder Fund in another pooled investment entity, having JNAM manage the Feeder Fund’s assets either directly or with a sub-adviser, or taking other appropriate action.

Investment of each Feeder Fund’s assets in its corresponding Master Fund is not a fundamental investment policy of any Feeder Fund and a shareholder vote is not required for any Feeder Fund to withdraw its investment from its corresponding Master Fund.

Each AF Feeder Fund’s master fund is listed below:

JNL Series Trust Feeder Fund	American Funds Master Fund
JNL/American Funds Balanced Fund	Asset Allocation Fund (Class 1 shares)
JNL/American Funds Bond Fund of America Fund	The Bond Fund of America Fund (Class 1 shares)
JNL/American Funds Capital Income Builder Fund	Capital Income Builder (Class 1 shares)
JNL/American Funds Capital World Bond Fund	Capital World Bond Fund (Class 1 shares)
JNL/American Funds Global Growth Fund	Global Growth Fund (Class 1 shares)
JNL/American Funds Global Small Capitalization Fund	Global Small Capitalization Fund (Class 1 shares)
JNL/American Funds Growth Fund	Growth Fund (Class 1 shares)
JNL/American Funds Growth-Income Fund	Growth-Income Fund (Class 1 shares)
JNL/American Funds International Fund	International Fund (Class 1 shares)
JNL/American Funds New World Fund	New World Fund® (Class 1 shares)

JNL Series Trust Feeder Fund	American Funds Master Fund
JNL/American Funds Washington Mutual Investors Fund	Washington Mutual Investors Fund (Class 1 shares)

Capital Research and Management CompanySM (“CRMC”) serves as investment adviser to the AF Master Funds. CRMC is a wholly owned subsidiary of The Capital Group Companies, Inc. Information about the American Funds and CRMC is provided with their permission and based on information provided by CRMC or derived from the AF Master Funds’ prospectus. The summary prospectus for each AF Master Fund is delivered together with this prospectus. To obtain a copy of the statutory prospectus for each AF Master Fund, you may go to www.capitalgroup.com/afis, call 1-800-421-9900 ext. 65413, or write to the Secretary at 333 South Hope Street, Los Angeles, California 90071.

JNL/Mellon S&P 400 MidCap Index Fund	JNL Mid Cap Index Fund

MORE ABOUT THE FUNDS

The investment objectives of the respective Funds are not fundamental and may be changed by the Board of Trustees without shareholder approval.

Certain of the Funds have adopted non-fundamental operating policies that require at least 80% of the Fund's assets (net assets plus the amount of any borrowings made for investment purposes) be invested, under normal circumstances, in securities of the type connoted by the name of the Fund. Although these 80% requirements are non-fundamental operating policies that may be changed by the Board of Trustees without shareholder approval, the Board of Trustees has adopted a policy requiring not less than 60 days' written notice be provided to shareholders, in the manner required by Rule 35d-1 under the 1940 Act, before the effective date of any change in such a policy by a Fund which is subject to that Rule.

The Adviser and the Trust, together with other investment companies of which the Adviser is investment adviser, has been granted an exemption from the SEC that allows the Funds to invest in other registered investment companies and unit investment trusts that are within or outside the same group of investment companies. A Fund may invest cash balances in shares of investment companies, including affiliated investment companies, which are funds managed by the Trust's investment adviser or its affiliates. As a shareholder in an investment company, a Fund would bear its pro rata share of that investment company's expenses, which could result in duplication of certain fees, including management and administrative fees.

Certain investment restrictions, such as a required minimum or maximum investment in a particular type of security, are measured at the time the Fund purchases a security. The status, market value, maturity, credit quality, or other characteristics of the Fund's securities may change after they are purchased, and this may cause the amount of the Fund's assets invested in such securities to fall outside the parameters described in the first paragraph above. If any of these changes occur, it would not be considered a violation of the investment restriction. However, purchases by the Fund during the time it is above or below the stated percentage restriction would be made in compliance with applicable restrictions. The Sub-Advisers may execute transactions in a manner to cause the least disruption to the Fund when attempting to bring the Fund into compliance with such restrictions, which could affect performance.

Performance. The performance information presented above for each of the Funds does not reflect the fees and charges imposed under the insurance contract for which the Funds serve as an investment option for the separate accounts of the issuing insurance company. For more information about the charges and performance, see the Prospectus for the insurance contract.

Temporary Defensive Positions and Large Cash Positions. In anticipation of, or in response to, adverse market or other conditions, or atypical circumstances such as unusually large cash inflows or redemptions, or during a rebalance period, a Fund may temporarily hold all or a significant portion of its assets in cash, cash equivalents, affiliated and unaffiliated money market funds, or high quality debt instruments. A Fund reserves the right to invest without limitation in such instruments. During periods in which a Fund employs such a temporary defensive strategy or holds large cash positions, a Fund will not be pursuing, and will not achieve, its investment objective. Taking a defensive or large cash position may reduce the potential for appreciation of a Fund's portfolio and may affect a Fund's performance.

Additional Information About the Principal Investment Strategies, Other Investments and Risks of the JNL/Mellon Funds (Other than Principal Risks). It usually will be impossible for the Funds sub-advised by Mellon Investments Corporation ("JNL/Mellon Funds") to be 100% invested in the prescribed mix of securities at any time. To the extent that the JNL/Mellon Funds are not fully invested, the interests of the interest holders may be diluted and total return may not directly track the investment results of the prescribed mix of securities. To minimize this effect, the Sub-Adviser attempts to maintain, to the extent practicable, a small cash position, ordinarily not more than 5% of net assets at all times. Normally, the only cash items held by the JNL/Mellon Funds will be amounts expected to be deducted as expenses, amounts reserved for withdrawals and amounts too small to purchase additional round lots of the securities selected for the Funds' portfolios.

Section 817(h) of the Internal Revenue Code provides that, in order for a variable annuity contract that allocates funds to a Fund to qualify as an annuity contract, the Fund must be adequately diversified in accordance with regulations issued thereunder. To be adequately diversified under current regulations, a Fund must have: (a) no more than 55% of the value of its total assets represented by any one investment; (b) no more than 70% of the value of its total assets represented by any two investments; (c) no more than 80% of its total assets represented by any three investments; and (d) no more than 90% of the value of its total assets represented by any four investments. The Sub-Adviser may depart from a JNL/Mellon Fund's investment strategy to the extent necessary to maintain compliance with these requirements, and, with respect to the Regulated Investment Company Funds (as defined below), to maintain compliance with the diversification requirements applicable to regulated investment companies under the Internal Revenue Code.

Restrictions on the Use of Futures Contracts. Rule 4.5 under the Commodity Exchange Act ("CEA") permits the advisers of registered investment companies to rely on an exclusion from registration under the CEA as a commodity pool operator ("CPO"). Among other conditions, under amended Rule 4.5, the adviser to a registered investment company can claim exclusion from registration as a CPO only if the fund uses commodity interests solely for "bona fide hedging purposes," or limits its use of commodity interests for non-bona fide hedging purposes to certain minimal amounts.

With respect to each Fund of the Trust, other than JNL Multi-Manager Alternative Fund, JNL/Neuberger Berman Commodity Strategy Fund, and JNL/Neuberger Berman Gold Plus Strategy Fund, JNAM has filed with the NFA a notice claiming an exclusion from the definition of the term “commodity pool operator” under the CEA (the “exclusion”). Accordingly, JNAM is not subject to registration or regulation as a “commodity pool operator” under the CEA with respect to these Funds. To remain eligible for the exclusion, each of these Funds will be limited in its ability to use certain instruments regulated under the CEA (“commodity interests”), including futures and options on futures and certain swaps transactions. In the event that such a Fund’s investments in commodity interests are not within the thresholds set forth in the exclusion, JNAM may be required to act in a registered CPO capacity with respect to that Fund. JNAM’s eligibility to claim the exclusion with respect to a Fund will be based upon, among other things, the level of the Fund’s investment in commodity interests, the purposes of such investments, and the manner in which the Fund holds out its use of commodity interests. The ability of each Fund other than JNL Multi-Manager Alternative Fund, JNL/Neuberger Berman Commodity Strategy Fund, and JNL/Neuberger Berman Gold Plus Strategy Fund to invest in commodity interests (including, but not limited to, futures and swaps on broad-based securities indices and interest rates) may be limited by JNAM’s intention to operate the Fund in a manner that would permit JNAM to continue to claim the exclusion, which may adversely affect the Fund’s total return.

For Each of the JNL/Mellon Sub-Advised Funds (excluding the JNL/Goldman Sachs 4 Fund co-Sub-Advised Fund and JNL/Goldman Sachs Managed Funds). The Sub-Adviser is a subsidiary of The Bank of New York Mellon Corporation, the owner of a number of asset managers and a diversified global financial institution. Through this ownership structure and through other entities owned by the Sub-Adviser’s direct and indirect owners, the Sub-Adviser has various financial industry affiliations. As a result of the business activities of the Sub-Adviser and its affiliates, the Sub-Adviser may be prohibited or limited from effecting transactions on behalf of the Fund due to rules in the marketplace in which the Sub-Adviser trades, foreign laws or the Sub-Adviser’s own policies and procedures. By way of illustration only, in certain cases, the Sub-Adviser may face trading limitations or prohibitions because of aggregation issues due to its relationships with affiliated investment advisory firms, position limits imposed by regulators or foreign laws such as mandatory takeover offer requirements (which it will need to avoid). However, if the Sub-Adviser cannot invest in a security directly, the Fund may, instead, invest in the relevant American Depository Receipt (ADR). In any case, the Fund may invest in securities of affiliates of the Fund and the Sub-Adviser to the extent permissible under applicable U.S. laws and regulations and exemptions granted by the SEC.

Portfolio Turnover. Portfolio turnover rates also may be increased by purchases or redemptions of a Fund’s shares because of the need to invest new cash resulting from purchases of shares or the need to sell portfolio securities owned in order to meet redemption requests. Increased portfolio turnover necessarily results in correspondingly higher costs, which can include brokerage commissions, and other transaction costs on the sale of securities and reinvestment in other securities. The rebalance of certain of the Funds on a periodic basis may also increase portfolio turnover.

Derivatives Risk – Asset Segregation. As an open-end investment company registered with the SEC, a Fund is subject to the Federal Securities Laws including the 1940 Act, related rules, and various SEC and CFTC staff positions. In accordance with these positions with respect to certain kinds of derivatives, a Fund may be required to “set aside” on its books (referred to sometimes as “asset segregation” or “coverage”) liquid assets, or engage in other SEC or CFTC staff approved measures, while the derivatives contracts are open. For example, the Funds enter into certain kinds of derivative transactions that involve obligations to make future payments to third parties including, but not limited to, futures, forward contracts, swap contracts, the purchase of securities on a when issued or delayed delivery basis, or reverse repurchase agreements. In such transactions, the Funds may be required to “set aside” or segregate liquid assets, or engage in other measures, to cover open purchases and derivatives positions, in accordance with federal securities laws, rules thereunder, or interpretations thereof, including positions that the SEC or its staff have taken. In such situations, the Funds set aside liquid assets on either of two bases. Where a derivatives contract does not require cash settlement, the Funds must set aside liquid assets on the basis of the contract’s full notional value. Where a derivatives contract does require cash settlement, the Funds are permitted to set aside assets on the basis of daily marked-to-market net obligations (i.e., a Fund’s daily net liability or unrealized loss, if any), rather than the contract’s full notional value. In the latter situation, a Fund may employ leverage to a greater extent than under the former situation and the use of leverage involves certain risks. Futures contracts and forward contracts that settle physically will be treated as cash settled for asset segregation purposes when the Fund has entered into a contractual arrangement with a third-party futures commission merchant or other counterparty to off-set the Fund’s exposure under the contract and, failing that, to assign its delivery obligation under the contract to the counterparty. Each Fund reserves the right to change its procedures for setting aside assets in order to comply with any change in governing law, rules, interpretations, or SEC or CFTC staff positions.

Investments in Private Companies. Investing in private companies can involve greater risks than those associated with investing in publicly traded companies. Securities of a private company may be subject to the risk that market conditions, developments within the company, investor perception, or regulatory decisions may delay or prevent the company from ultimately offering its securities to the public. Generally, these investments are considered to be illiquid until a company’s public offering. As such, no Fund may invest in any equity or equity-related securities issued by a private company, unless approved by JNAM. For a Fund that invested in equity or equity-related securities issued by a private company before December 9, 2015, the Fund’s Sub-Adviser is allowed to continue to hold or sell that security, and in limited circumstances, subject to certain funding commitments, may acquire additional issuances of existing private equity securities. Private equity investments are subject to its sub-advisory agreement, the policies and procedures for the Fund, and the oversight of JNAM.

Commodities Tax Risk. In order for a Fund (or if a Fund is a partnership for federal income tax purposes, certain mutual funds that invest in such Fund) to qualify as a RIC under Subchapter M, it must derive at least 90% of its gross income each taxable year from “qualifying income,” which is described in more detail in the SAI. Income and gains from certain commodity-linked instruments do not constitute “qualifying income” to a RIC for purposes of the 90% gross income test. The tax treatment of some other commodity-linked instruments in which a Fund might invest is not certain, in particular with respect to whether income or gains from such instruments constitute “qualifying income” to a RIC. If the IRS publishes an adverse determination relating to the treatment of such income and gain, certain Funds that invest directly or indirectly in commodity-linked derivative instruments would likely need to significantly change their investment strategies in order to qualify as a RIC under the Internal Revenue Code.

Dodd-Frank (Regulatory) Risk. The Dodd-Frank Wall Street Reform and Consumer Protection Act (“Dodd-Frank Act”) made a number of changes to the regulatory framework in the financial services industry, including regulations applicable to banks, insurance companies, and other firms. The Dodd-Frank Act also made a number of regulatory changes to the oversight and treatment of various investments, in particular, derivatives. The impact of these regulatory changes will be felt across industries for a number of years and will impact the Funds’ investments and the administration of the Funds. Instruments in which the Funds invest may incur increased regulatory compliance costs, and could be subject to regulatory action. The Funds may incur Dodd-Frank regulatory compliance costs, which could impact performance.

Lending of Portfolio Securities. A Fund may engage in securities lending. Securities lending involves the lending of securities owned by a Fund to financial institutions such as certain broker-dealers. The borrowers are required to secure their loans continuously with cash, cash equivalents, U.S. Government securities or letters of credit that meet certain guidelines. Cash collateral may be invested by a Fund in money market-type investments or short-term liquid investments. To the extent that cash collateral is so invested, such collateral will be subject to market depreciation or appreciation, and a Fund will be responsible for any loss that might result from its investment of the borrowers’ collateral.

A Fund may lend its securities to increase its income. A Fund may, however, experience delay in the recovery of its securities or incur a loss if the institution with which it has engaged in a portfolio loan transaction breaches its agreement with the Fund or becomes insolvent. There is the risk that the price of the securities will increase while they are on loan and the collateral will not adequately cover their value. There is also a risk that securities on loan will not be recalled in a timely manner to facilitate proxy voting.

Cash and Cash Equivalents. The Funds may hold cash or invest in cash equivalents. Cash equivalents include, but are not limited to: (a) commercial paper (for example, short-term notes with maturities typically up to 12 months in length issued by corporations, governmental bodies or bank/corporation sponsored conduits (asset-backed commercial paper)); (b) short-term bank obligations (for example, certificates of deposit, time deposits, bankers’ acceptances (time drafts on a commercial bank where the bank accepts an irrevocable obligation to pay at maturity)) or bank notes; (c) savings association and savings bank obligations (for example, bank notes and certificates of deposit issued by savings banks or savings associations); (d) securities of the U.S. Government, its agencies or instrumentalities (including U.S. treasury bills) that mature, or may be redeemed, in one year or less; and (e) corporate bonds and notes that mature, or that may be redeemed, in one year or less.

“Savings association obligations” include certificates of deposit (interest-bearing time deposits) issued by savings banks or savings and loan associations.

Cash Position. The Funds may invest cash balances in shares of affiliated money market funds and unaffiliated money market funds. For temporary, defensive purposes, and where purchases and redemptions (cash-flows) require a Fund may invest without limitation in such securities. This reserve position provides flexibility in meeting redemptions, expenses, and the timing of new investments, rebalances, and serves as a short-term defense during periods of unusual market volatility.

Market Events. Turmoil in domestic and international markets may cause extreme volatility in the equity and debt markets, in the prices of individual securities and in the world economy. In response, governments throughout the world may respond with a variety of significant fiscal and monetary policy changes, including but not limited to, direct capital infusions into companies, new monetary programs and dramatically lower interest rates. Failure to implement or an unexpected or quick reversal of such policies could increase volatility in the equity and debt markets.

Natural Disasters and Adverse Weather Conditions. Certain areas of the world historically have been prone to major natural disasters, such as hurricanes, earthquakes, typhoons, flooding, tidal waves, tsunamis, erupting volcanoes, wildfires or droughts, and have been economically sensitive to environmental events. Such disasters, and the resulting damage, could have a severe and negative impact on a Fund’s investment portfolio and, in the longer term, could impair the ability of issuers in which a Fund invests to conduct their businesses in the manner normally conducted. Adverse weather conditions may also have a particularly significant negative effect on issuers in the agricultural sector and on insurance companies that insure against the impact of natural disasters.

Sanctions Risk. From time-to-time, the U.S. Government or other governments may place “sanctions” on a country. Such sanctions may include limitations on transactions in a country, such as the purchase or sale of products or services in that country. Sanctions also may include limitations on the movement of cash and securities to and from a sanctioned country, or may limit investments in a sanctioned country. When sanctions are placed on a country, a Fund may experience limitations on its investments, including the

inability to dispose of securities in that country, the inability to settle securities transactions in that country, and the inability to repatriate currency from that country. Investments in sanctioned countries may be volatile, and the Fund and its pricing agent may have difficulty valuing such sanctioned country securities. Investments in sanctioned countries are subject to a number of risks, including, but not limited to, liquidity risk, foreign securities risk, and currency risk. The Fund could lose money investing in a country that is later sanctioned by the U.S. Government or other governments.

Technology Disruptions. Markets and market-participants are increasingly reliant upon both publicly available and proprietary information data systems. Data imprecision, software or other technology malfunctions, programming inaccuracies, unauthorized use or access, and similar circumstances may impair the performance of these systems and may have an adverse impact upon the performance of the Funds. Such circumstances may adversely impact the Funds' operations or the performance of the Fund's investments in a single issuer, a group of issuers, or the market at-large. For example, cyber attacks on the Funds' adviser, sub-advisers, and/or other service providers could cause business failures or delays in daily operations, and the Funds may not be able to process shareholder transactions or calculate a net asset value ("NAV") per share. Cyber attacks also could disrupt daily operations related to trading and portfolio management. In addition, technology disruptions and cyber attacks also may impact the operations or securities prices of an issuer or a group of issuers, and thus may have an adverse impact on the value of the Funds' investments and performance. In certain cases, an exchange or market may close or issue trading halts on specific securities or the entire market, which may result in a Fund being, among other things, unable to buy or sell certain securities or financial instruments or unable to accurately price its investments.

Legislation and Regulatory Activities. At any time after the date of the Prospectus, legislation may be enacted that could negatively affect the shares of the Funds or the issuers of such common stock. Further, changing approaches to regulation may have a negative impact on certain companies represented in the Funds. There can be no assurance that future legislation, regulation or deregulation will not have a material adverse effect on the Funds or will not impair the ability of the issuers of the common stock held in the Funds to achieve their business goals.

Description of Indices. The portfolios of certain of the Funds consist of the common stocks of companies included in various indices. Except as previously described, the publishers of the indices have not granted the JNL Series Trust or the investment adviser a license to use their respective indices. Except as previously described for the JNL/Mellon Sector Funds, JNL/Mellon DowSM Index Fund, and JNL/Mellon Nasdaq[®] 100 Index Fund, none of the Funds are designed or intended to result in investment returns that parallel or correlate with the movements in any particular index or a combination of indices and it is expected that their investment returns will not parallel or correlate with such movements. The publishers of the indices have not participated in any way in the creation of any of the Funds or in the selection of stocks that are purchased or sold for the Funds. A description of certain of the indices is provided below. For additional information, please refer to Appendix A.

The Dow Jones Industrial AverageTM. The stocks included in the DJIA[®] are chosen by the editors of The Wall Street Journal as representative of the broad market and of American industry. The companies are major factors in their industries and their stocks are widely held by individuals and institutional investors.

The S&P 500[®] Index. Widely regarded as the standard for measuring large-capitalization U.S. stock market performance, the S&P 500 Index includes a representative sample of leading U.S. companies in leading industries. The S&P 500 Index consists of 500 stocks chosen for market size, liquidity and industry group representation. It is a market-value weighted index with each stock's weight in the Index proportionate to its market value.

The Nasdaq-100[®] IndexTM. The Nasdaq-100 Index includes 100 of the largest domestic and international non-financial companies listed on The Nasdaq Stock Market based on market capitalization. The Index reflects companies across major industry groups including computer hardware and software, telecommunications, retail/wholesale trade and biotechnology. It does not contain financial companies including investment companies.

S&P MidCap 400[®] Index. The S&P MidCap 400 Index is a market-capitalization-weighted index that captures and measures the performance of 400 mid-sized companies in the U.S. with a market capitalization of \$1.17 billion to \$22.17 billion, reflecting this market segment's distinctive risk and return characteristics. Mid-capitalization exposure generally captures a phase in the typical corporate life cycle in which firms have successfully navigated the challenges specific to small companies. At the same time, mid capitalizations tend to be quite dynamic and not so large that continued growth is unattainable. As a result, the mid-capitalization segment may offer aspects of the markets not covered by the large- and small-capitalization worlds.

S&P SmallCap 600[®] Index. The S&P SmallCap 600 Index is a market capitalization-weighted index that captures and measures the performance of 600 small size companies in U.S. with a market capitalization of \$146.42 million to \$6.33 billion, reflecting this market segment's distinctive risk and return characteristics. The index is designed to track companies that meet specific inclusion criteria to ensure that they are liquid and financially viable as this segment of the market is typically known for less liquidity and potentially less financial stability than large capitalizations.

Morningstar[®] Developed Markets Target Market Exposure IndexSM. The Morningstar Developed Markets Target Market Exposure Index is a rules based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market

capitalization of the Developed Markets equity markets. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® Developed Markets ex-North America Target Market Exposure IndexSM. The Morningstar Developed Markets ex-North America Target Market Exposure Index is a rules based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the Developed Markets ex-North America equity markets. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® Emerging Markets Target Market Exposure IndexSM. The Morningstar Emerging Markets Target Market Exposure Index is a rules based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the Emerging Markets equity markets. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® PitchBook Developed Markets Listed Private Equity IndexSM. The Morningstar PitchBook Developed Markets Listed Private Equity Index tracks the performance of public companies with significant private equity exposure, listed in developed markets countries.

Morningstar® US Communication Services IndexSM. The Morningstar US Communication Services Index measures the performance of U.S. companies that provide communication services using fixed-line networks or those that provide wireless access and services. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Consumer Cyclical Sector IndexSM. The Morningstar US Consumer Cyclical Sector Index measures the performance of retail stores, auto & auto parts manufacturers, companies engaged in residential construction, lodging facilities, restaurants and entertainment companies. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Consumer Defensive Sector IndexSM. The Morningstar US Consumer Defensive Sector Index measures the performance of companies engaged in the manufacturing of food, beverages, household and personal products, packaging, or tobacco. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Energy IndexSM. The Morningstar US Energy Index measures the performance of U.S. companies that produce or refine oil and gas, oil field services and equipment companies, and pipeline operators. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar US Financial Services Sector IndexSM. The Morningstar US Financial Services Sector Index measures the performance of companies that provide financial services which includes banks, savings and loans, asset management companies, credit services, investment brokerage firms, and insurance companies. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Healthcare Sector IndexSM. The Morningstar US Healthcare Sector Index measures the performance of companies of biotechnology, pharmaceuticals, research services, home healthcare, hospitals, long-term care facilities, and medical equipment and supplies. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Industrials Sector IndexSM. The Morningstar US Industrials Sector Index measures the performance of companies that manufacture machinery, hand-held tools and industrial products. This sector also includes aerospace and defense firms as well as companies engaged in transportation and logistic services. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Technology Sector IndexSM. The Morningstar US Technology Sector Index measures the performance of companies engaged in the design, development, and support of computer operating systems and applications. This sector also includes companies that provide computer technology consulting services. Also includes companies engaged in the manufacturing of computer equipment, data storage products, networking products, semiconductors, and components. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria

Morningstar® US Basic Materials Sector IndexSM. The Morningstar US Basics Materials Sector Index measures the performance of companies that manufacturer chemicals, building materials and paper products. This sector also includes companies engaged in commodities exploration and processing. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Real Estate Sector IndexSM. The Morningstar US Real Estate Sector Index measures the performance of mortgage companies, property management companies, and REITs in the United States. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Utilities Sector IndexSM. The Morningstar US Utilities Sector Index measures the performance of electric, gas, and water utilities. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® Developed Markets ex-North America Value Target Market Exposure IndexSM. The Morningstar Developed Markets ex-North America Value Target Market Exposure Index measures the performance of large and mid-cap stocks representing developed markets excluding North American stocks with lower valuations. This index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® Developed Markets ex-US Target Market Exposure IndexSM. The Morningstar Developed Markets ex-US Target Market Exposure Index targets large- and mid-cap stocks listed in developed markets, excluding the United States, representing the largest 85% of the market by float-adjusted market capitalization. This index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® Dividend Composite IndexSM. The Morningstar Dividend Composite Index measures the performance of a portfolio of all stocks in the U.S. Market Index that have a consistent record of dividend payment and have the ability to sustain their dividend payment. Stocks in the index are weighted in proportion to the total pool of dividends available to investors. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® Emerging Markets IndexSM. The Morningstar Emerging Markets Index measures the performance of emerging markets targeting the top 97% of stocks by market capitalization. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® Global ex-US Small Cap Target Market Exposure IndexSM. The Morningstar Global ex-US Small Cap Target Market Exposure Index measures the performance of small-cap stocks listed in developed and emerging countries outside the US. These stocks fall between the 85% and 99% market cap thresholds of the investable universe and are weighted by float-adjusted market capitalization. This index does not incorporate Environmental, Social, or Governance (ESG) Criteria.

Morningstar® Global ex-US Target Market Exposure IndexSM. The Morningstar Global ex-US Target Market Exposure Index targets large-and mid-cap stocks listed in developed and emerging markets outside the U.S. representing the largest 85% of the market by float-adjusted market capitalization. This index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® Global Small Cap Target Market Exposure IndexSM. The Morningstar Global Small Cap Target Market Exposure Index measures the performance of small-cap stocks listed in developed and emerging markets around the world. These stocks fall between the 85% and 99% market cap thresholds of the investable universe and are weighted by float-adjusted market capitalization. This index does not incorporate Environmental, Social, or Governance (ESG) Criteria.

Morningstar® Global Target Market Exposure IndexSM. The Morningstar Global Target Market Exposure Index is a rules based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the Global equity markets. This index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Large-Mid Cap Broad Growth IndexSM. The Morningstar US Large-Mid Cap Broad Growth Index provides a comprehensive depiction of the performance and fundamental characteristics of the Large-Mid Cap Growth segment of U.S. equity markets. It targets stocks representing the cheaper half of the U.S. large- and mid-cap market. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Large-Mid Cap Broad Value IndexSM. The Morningstar US Large-Mid Cap Broad Value Index provides a comprehensive depiction of the performance and fundamental characteristics of the Large-Mid Cap Value segment of U.S. equity markets. It targets stocks representing the faster growing half of the U.S. large- and mid-cap market. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Market Extended IndexSM. The Morningstar US Market Extended Index measures the performance of U.S. securities and targets 99.5% market capitalization coverage of the investable universe. It is a diversified broad market index. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Mid Cap Broad Growth IndexSM. The Morningstar US Mid Cap Broad Growth Index measures the performance of U.S. mid-cap growth stocks. It targets stocks representing the faster growing half of the mid-cap market. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Mid Cap Broad Value IndexSM. The Morningstar US Mid Cap Broad Value Index measures the performance of U.S. mid-cap value stocks. It targets stocks representing the cheaper half of the U.S. mid-cap market. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Mid Cap IndexSM. The Morningstar US Mid Cap Index measures the performance of U.S. mid-cap stocks. These stocks fall between the 70th and 90th percentile in market capitalization of the investable universe. In aggregate, the Mid-Cap Index represents 20 percent of the investable universe. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US REIT IndexSM. The Morningstar US REIT Index is a free-float weighted index that tracks the performance of publicly listed Real Estate Investment Trusts (REITs). The qualifying REITs are identified by Morningstar's proprietary industry classification system, Global Equity Classification System (GECS). This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Small Cap Broad Growth Extended IndexSM. The Morningstar US Small Cap Broad Growth Extended Index provides a comprehensive depiction of the performance and fundamental characteristics of the Small Growth segment of U.S. equity markets. It targets stocks representing the faster growing half of the U.S. small-cap market. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Small Cap Broad Value Extended IndexSM. The Morningstar US Small Cap Broad Value Extended Index provides a comprehensive depiction of the performance and fundamental characteristics of the Small Value segment of U.S. equity markets. It targets stocks representing the cheaper half of the U.S. small-cap market. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Small Cap Extended IndexSM. The Morningstar US Small Cap Extended Index measures the performance of U.S. small-cap stocks. These stocks fall between the 90th and 99.5th percentile in market capitalization of the investable universe. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Target Market Exposure IndexSM. The Morningstar US Target Market Exposure Index targets large- and mid-cap U.S. stocks representing the top 85% of the market by float-adjusted market capitalization. The exchange rate used for the currency translations is as of 4:00 pm NY time. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® China IndexSM. The Morningstar China Index measures the performance of China's equity markets targeting the top 97% of stocks by market capitalization. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Large-Mid Cap IndexSM. The Morningstar US Large-Mid Cap Index provides a comprehensive depiction of the performance and fundamental characteristics of the Large-Mid Cap segment of U.S. equity markets. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® US Sustainability IndexSM. The Morningstar US Sustainability Index is designed to reduce environmental, social, and governance risk (ESG) by targeting stocks with low ESG Risk Ratings, representing 50% of the Morningstar US Large-Mid Index by float market capitalization. The Index is rebalanced quarterly and reconstituted semi-annually.

Morningstar® Wide Moat Focus Index□. The Morningstar Wide Moat Focus Index provides exposure to companies with Morningstar® Economic Moat™ Ratings of wide that are trading at the lowest current market price/fair value ratios. Moat ratings and fair value estimates are determined through independent research conducted by the Morningstar Equity Research team.

Morningstar® Aggressive Target Risk Index□. The Morningstar Target Risk Index family is designed to meet the needs of investors who would like to maintain a target level of equity exposure through a portfolio diversified across equities, bonds and inflation-hedged instruments. The Morningstar Aggressive Target Risk Index seeks approximately 95% exposure to global equity markets. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® Conservative Target Risk Index□. The Morningstar Target Risk Index family is designed to meet the needs of investors who would like to maintain a target level of equity exposure through a portfolio diversified across equities, bonds and inflation-hedged instruments. The Morningstar Conservative Target Risk Index seeks approximately 20% exposure to global equity markets. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® Moderately Aggressive Target Risk Index□. The Morningstar Target Risk Index family is designed to meet the needs of investors who would like to maintain a target level of equity exposure through a portfolio diversified across equities, bonds and inflation-hedged instruments. The Morningstar Moderately Aggressive Target Risk Index seeks approximately 80% exposure to global equity markets. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® Moderately Conservative Target Risk Index□. The Morningstar Target Risk Index family is designed to meet the needs of investors who would like to maintain a target level of equity exposure through a portfolio diversified across equities, bonds and inflation-hedged instruments. The Morningstar Moderately Conservative Target Risk Index seeks approximately 40% exposure to global equity markets. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Morningstar® Moderate Target Risk Index□. The Morningstar Target Risk Index family is designed to meet the needs of investors who would like to maintain a target level of equity exposure through a portfolio diversified across equities, bonds and inflation-hedged instruments. The Morningstar Moderate Target Risk Index seeks approximately 60% exposure to global equity markets. This Index does not incorporate Environmental, Social, or Governance (ESG) criteria.

Benchmarks. Listed below are the primary benchmarks, and secondary benchmarks, if applicable, for each Fund that has completed less than one full calendar year of operations and thus does not show performance information above.

NAME	PRIMARY BENCHMARK	SECONDARY BENCHMARK(S) (IF APPLICABLE)
JNL/American Funds Bond Fund of America Fund	Bloomberg U.S. Aggregate Bond Index	Not Applicable

JNL Small Cap Index Fund	S&P SmallCap 600® Index	Not Applicable

GLOSSARY OF RISKS

The following risks may apply to the Funds and/or Master Funds. Please consult the Fund's Summary Prospectus and Statutory Prospectus to identify the risks associated with a particular Fund.

Accounting risk – The Fund makes investment decisions, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.

Allocation risk – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations and investment manager's ability to select an appropriate mix of asset classes. The Fund is subject to the risk of changes in market, investment, and economic conditions, as well as the selection and percentages of allocations.

Asia ex-Japan concentration risk – If a Fund concentrates its investments within Asia ex-Japan countries, the Fund's performance is expected to be closely tied to social, political and economic conditions within Asian countries, excluding Japan, and to be more volatile than the performance of more geographically diversified funds. Many Asian economies are generally characterized by over-extension of credit, frequent currency fluctuations, devaluations and restrictions, rising unemployment, rapid fluctuations in inflation, reliance on exports, geopolitical and territorial issues, currency fluctuations, less developed legal systems and less efficient markets. Adverse developments in one country can affect the entire region. Numerous elements of the auditing and reporting standards may not provide the same shareholder protection or information as those in developed countries.

Some developing Asian countries prohibit or impose substantial restrictions on investments in their capital markets, particularly their equity markets, by foreign entities, such as the Fund. There can be no assurance that the Fund will be able to obtain required governmental approvals, to the extent necessary, in a timely manner. In addition, changes to restrictions on foreign ownership of securities subsequent to the Fund's purchase of such securities may have an adverse effect on the value of such shares. Certain countries may restrict investment opportunities in issuers or industries deemed important to national interests.

Asian investment risk – Investing in Asia involves many of the same risks as investing in foreign securities. In addition, since Asia includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Asia and to be more volatile than the performance of more geographically diversified funds.

Asset-based securities risk – Asset-based securities are typically fixed-income securities whose value is related to the market price of certain commodities, interests, and other items, such as precious metals, as well as other assets, such as credit card receivables. Although the market price of these securities is expected to follow the market price of the related assets, there may not be perfect correlation. There are special risks associated with certain types of assets that will also affect the value of asset-based securities related to those assets. For an example of such special risks, please refer to "Sector risk - Precious metals-related securities risk."

Banking industry investment risk – Investment in securities issued by banks may be affected by factors influencing the health and performance of the banking industry. These factors may include, among others, economic trends, industry competition and governmental actions, as well as factors affecting the financial stability of borrowers. Bank securities typically are not insured by the U.S. Government, foreign governments, or their agencies. Bank securities that do not represent deposits have lower priority in the bank's capital structure than those securities comprised of deposits. This lower priority means that, in the event of insolvency of the bank that issued the security, the security could become worth less than the Fund paid for it.

Bitcoin capacity risk – If the Fund's ability to obtain exposure to bitcoin futures contracts consistent with its investment objective is disrupted for any reason including, for example, limited liquidity in the bitcoin futures market, a disruption to the bitcoin futures market, or as a result of margin requirements or position limits imposed by the Fund's futures commission merchants ("FCMs"), the Chicago Mercantile Exchange, or the U.S. Commodity Futures Trading Commission, the Fund may not be able to achieve its investment objective and may experience significant losses. In addition, future regulatory changes involving buying and selling bitcoin futures may limit the ability of the Fund to achieve its investment objective.

Bitcoin futures risk – The bitcoin futures contracts the Fund may invest in are traded on a futures exchange registered with the Commodity Futures Trading Commission. Bitcoin futures expose the Fund to all of the risks related to cryptocurrency discussed under "Cryptocurrency risk" below and also expose the Fund to risks specific to bitcoin futures.

The market for bitcoin futures may be less developed, and potentially less liquid and more volatile, than more established futures markets given that the bitcoin futures market is relatively new. In addition, the Chicago Mercantile Exchange ("CME"), the exchange on which bitcoin futures are traded, and its related clearinghouses and the Fund's futures commission merchants ("FCMs") generally require the Fund to maintain relatively high levels of initial margin at the clearinghouse and FCM in connection with bitcoin futures. Bitcoin futures are subject to collateral requirements and daily limits that may limit the Fund's ability to achieve the desired exposure.

In addition, bitcoin futures have generally exhibited significant price volatility relative to traditional asset classes. Bitcoin futures may also experience significant price volatility as a result of being the target of market fraud and manipulation. Futures contracts based on bitcoin are also subject to the risks otherwise applicable to derivatives and, in particular, futures contracts, discussed below.

Borrowing risk – Borrowing may exaggerate changes in the net asset value of Fund shares and in the return on the Fund’s portfolio. Borrowing will cost the Fund interest expense and other fees. The costs of borrowing may reduce the Fund’s return. Borrowing will typically cause a Fund to segregate (cover) assets sufficient to cover 300% of any amounts borrowed. Borrowing may cause the Fund to increase its cash position and/or liquidate positions when it may not be advantageous to do so to satisfy its obligations.

Call risk – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund’s income if the proceeds are reinvested at lower interest rates.

China risk – The value of a Fund’s investments in Chinese securities will be impacted by the economic, political, diplomatic, and social conditions within China. China is generally considered an emerging market country and investments in Chinese securities carry the risks associated with emerging markets, as well as risks particular to the region. China may be subject to considerable degrees of economic, political and social instability. The economies, industries, and securities and currency markets of China may be adversely affected by slow economic activity worldwide, protectionist trade policies, dependence on exports and international trade, currency devaluations and other currency exchange rate fluctuations, restrictions on monetary repatriation, increasing competition from Asia’s low-cost emerging economies, environmental events and natural disasters that may occur in China, and military conflicts either in response to social unrest or with other countries. In addition, the tax laws and regulations in mainland China are subject to change, possibly with retroactive effect. Over the last few decades, the Chinese government has undertaken reform of economic and market practices and has expanded the sphere of private ownership of property in China. However, Chinese markets generally continue to experience inefficiency, volatility and pricing anomalies resulting from governmental influence, a lack of publicly available information and/or political and social instability. The Chinese securities markets are subject to more frequent trading halts and low trading volume, resulting in substantially less liquidity and greater price volatility. Investments in Chinese issuers may be subject to the risk of expropriation and nationalization. The Chinese government may also impose capital controls, which could adversely affect a Fund, its ability to repatriate its investments and the value of the Fund’s investments. In addition, the Chinese government may intervene in currency markets, which could cause its currency, and therefore the value of the Fund’s investments in China, to depreciate. The Chinese economy is heavily reliant upon trade and export growth. Reduction in spending on Chinese products and services; further increases in trade restrictions, such as those resulting from the US-China trade dispute, or even the threat thereof; or a downturn in any of the economies of China’s key trading partners may negatively affect the Chinese economy and its issuers.

On November 12, 2020, the President of the United States issued an Executive Order (the "Order") to prohibit, beginning January 11, 2021, U.S. persons (which include the Funds) from transacting in certain securities and derivatives of publicly traded securities of 31 companies designated as a "Communist Chinese military company" (collectively with securities of certain subsidiaries of such companies and related depositary receipts that may be covered by the Order, "CCMC Securities") by the U.S. Department of Defense or the U.S. Department of the Treasury's Office of Foreign Assets Control, unless such transactions are for purposes of divestment. The list of such companies may change from time to time.

A Fund's holdings in CCMC Securities may adversely impact the Fund's performance. The extent of any impact will depend on future developments, including the Fund's ability to sell CCMC Securities, valuation of CCMC Securities, modifications to the Order, the issuance of additional or different interpretive guidance regarding compliance with the Order, and the duration of the Order, all of which are highly uncertain.

China and India country specific risks – Investments in equity and equity-related securities in the Greater China region and India will expose the Fund to that country’s market, currency, and other risks, including volatility and structural risks. Government reforms and the move to capitalism may not positively impact the economies of either country. Stable economic growth may be hampered by a number of factors, including burdensome regulatory requirements, inflation, poor allocation of resources and the reinvestment of capital, government price controls and capital restrictions, currency fluctuations, and social instability. As a result, investments in the Greater China region and India may be volatile.

Clearance and settlement risk – Foreign securities markets have different clearance and settlement procedures, and in certain markets there have been times when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct such transactions. Delays in clearance and settlement could result in temporary periods when assets of a Fund are uninvested and no return is earned. A Fund’s inability to make intended security purchases due to clearance and settlement problems could cause it to miss attractive investment opportunities. Inability to dispose of portfolio securities due to clearance and settlement problems could result either in losses to a Fund due to subsequent declines in the value of the portfolio security or, if the Fund has entered into a contract to sell the security, liability to the purchaser. This risk may be magnified in emerging markets because settlement systems may be less organized, creating a risk that settlements may be delayed or lost because of failures or defects in such systems.

Collateralized debt obligations risk – Collateralized debt obligations ("CDOs") are subject to credit, interest rate, valuation, prepayment and extension risks. In addition, CDOs carry additional risks including but not limited to: (i) the possibility that

distributions from the collateral will not be adequate to make interest or other payments; (ii) the risk that the collateral may default or decline in value or be downgraded, if rated by a nationally recognized statistical rating organization; (iii) the Fund may invest in tranches of CDOs that are subordinate to other tranches; (iv) the structure and complexity of the transaction and the legal documents could lead to disputes among investors regarding the characterization of proceeds; (v) the investment returns achieved by the Fund could be significantly different than those predicted by financial models; (vi) the lack of a readily available secondary market for CDOs; (vii) risk of forced “fire sale” liquidation due to technical defaults such as coverage test failures; and (viii) the CDO’s manager may perform poorly.

Collateralized loan obligations risk – CLOs are securities backed by an underlying portfolio of loan obligations. CLOs issue classes or “tranches” of debt that vary in risk and yield and may experience substantial losses due to actual defaults, decrease of market value due to collateral defaults and exhaustion of subordinate tranches, market anticipation of defaults and investor aversion to CLO securities as a class. The risks of investing in CLOs depend largely on the tranche invested in and the type of the underlying loans in the tranche of the CLO in which the Fund invests. Subordinate tranche investments involve greater risk of loss than more senior tranches. CLOs also carry risks including, but not limited to, interest rate risk and credit risk.

Commercial mortgage-backed securities risk – Commercial mortgage-backed securities include securities that reflect an interest in, and are secured by, mortgage loans on commercial real property. Many of the risks of investing in commercial mortgage-backed securities reflect the risks of investing in the real estate securing the underlying mortgage loans. These risks reflect the effects of local and other economic conditions on real estate markets, the ability of tenants to make loan payments, and the ability of a property to attract and retain tenants. Commercial mortgage-backed securities may be less liquid and exhibit greater price volatility than other types of mortgage- or asset-backed securities.

Commodities regulatory risk – Commodity-related operating companies typically are subject to significant foreign, federal, state and local government regulation in virtually every aspect of their operations, including how facilities are constructed, maintained and operated, environmental and safety controls, and the prices they may charge for the products and services they provide.

Commodity markets are subject to comprehensive statutes and regulations promulgated by the Commodity Futures Trading Commission (“CFTC”) and self-regulatory organizations, such as the NFA. Among other things, the CFTC and the exchanges on which futures contracts are traded are authorized to take extraordinary actions in the event of a market emergency, including, for example, the retroactive implementation of speculative position limits or higher margin requirements, the establishment of daily limits and the suspension of trading. Any of these actions, if taken, could adversely affect the returns of the Fund by limiting or precluding investment decisions the Fund might otherwise make. The regulation of commodity transactions in the U.S. is a rapidly changing area of law and is subject to ongoing modification by government, self-regulatory and judicial action. In addition, U.S. and various foreign national governments have expressed concern regarding the disruptive effects of speculative trading in the currency markets and the need to regulate the derivatives markets in general. The effect of any future regulatory change on the Fund is impossible to predict, but could be substantial and adverse to the Fund and/or may impact the Fund’s ability to invest in commodity-linked derivatives.

In order for a Fund (or, if a Fund is a partnership for federal income tax purposes, certain mutual funds that invest in such Fund) to qualify as a RIC under Subchapter M, it must derive at least 90% of its gross income each taxable year from qualifying income, which is described in more detail in the SAI. Income and gains from certain commodity-linked instruments do not constitute qualifying income to a RIC for purposes of the 90% gross income test. The tax treatment of some other commodity-linked instruments in which a Fund might invest is not certain, in particular with respect to whether income or gains from such instruments constitute qualifying income to a RIC. If the IRS publishes an adverse determination relating to the treatment of such income and gain, certain Funds that invest directly or indirectly in commodity-linked derivatives would likely need to significantly change their investment strategies in order to qualify as a RIC under the Code.

For Funds that have a wholly owned subsidiary, organized under the laws of the Cayman Islands, that invests in commodity-related instruments, under recently finalized regulations income and gain such Funds derive from the subsidiary constitute “qualifying income” to the extent such net income is either (i) currently and timely distributed to the Fund or (ii) derived with respect to the Fund's business of investing in stock, securities or other currencies.

If a Fund were to fail to qualify as a regulated investment company accorded special tax treatment in any taxable year, it would be subject to tax on its taxable income at corporate rates, and all distributions from earnings and profits, including any distributions of net tax-exempt income and net long-term capital gains, would be taxable to shareholders as ordinary income, and the Fund could be required to pay substantial taxes, penalties and interest and to make substantial distributions, in order to re-qualify for such special treatment. If a Fund is a partnership for federal income tax purposes, income of the Fund will be treated as qualifying income in the hands of RICs that invest in the Fund only to the extent such income is attributable to items of income of the Fund which would be qualifying income if realized directly by the RIC.

Commodity risk – Commodity prices can be extremely volatile and may be directly or indirectly affected by many factors, including changes in overall market movements, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, and factors affecting a particular industry or commodity, such as drought, floods, or other weather conditions, livestock disease, trade embargoes, competition from substitute products,

transportation bottlenecks or shortages, fluctuations in supply and demand, tariffs, and international regulatory, political, and economic developments (e.g., regime changes and changes in economic activity levels). In addition, some commodities are subject to limited pricing flexibility because of supply and demand factors, and others are subject to broad price fluctuations as a result of the volatility of prices for certain raw materials and the instability of supplies of other materials.

Actions of and changes in governments, and political and economic instability, in commodity-producing and commodity-exporting countries may affect the production and marketing of commodities. In addition, commodity-related industries throughout the world are subject to greater political, environmental, and other governmental regulation than many other industries. Changes in government policies and the need for regulatory approvals may adversely affect the products and services of companies in the commodities industries. The effect of future regulations affecting commodity-related industries cannot be predicted. Because of a Fund's exposure to the commodities market, the value of the Fund may decline and fluctuate in a rapid and unpredictable manner.

Commodity ETF risk – In addition to the risks described under “exchange-traded funds investing risk,” the value of the Fund’s investment in ETFs that invest in commodity-related securities may be affected by changes in overall market movements or factors affecting a particular industry or commodity and may fluctuate significantly over short periods for a variety of factors, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments. Investments linked to the prices of commodities are considered speculative and may be more volatile than investments in other types of securities or instruments. The commodity markets are subject to temporary distortions or other disruptions due to a variety of factors, including the lack of liquidity in the markets, the participation of speculators and government regulation and intervention.

Commodity-linked derivatives risk – The value of a commodity-linked derivative investment is typically based upon the price movements of a commodity, a commodity futures contract, or a commodity index, or some other readily measurable economic variable. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, volatility of the underlying benchmark, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, volatility in the spot market, and political and regulatory developments. The value of commodity-linked derivatives will rise or fall in response to changes in the underlying commodity or related index. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. A liquid secondary market may not exist for certain commodity-linked derivatives, and there can be no assurance that such market will develop.

Commodity-linked derivatives also may be subject to credit and interest rate risks that generally affect the values of fixed-income securities. Therefore, at maturity, the Fund may receive more or less principal than it originally invested. The Fund may also receive interest payments that are more or less than the stated coupon interest payments.

In connection with the Fund’s investments in commodity-linked derivatives, the Fund will attempt to manage its counterparty exposure so as to limit its exposure to any one counterparty. However, due to the limited number of entities that may serve as counterparties (and which the Fund believes are creditworthy) at any one time, the Fund may enter into swap agreements with a limited number of counterparties and may invest in commodity-linked notes issued by a limited number of issuers that will act as counterparties, which may increase the Fund’s exposure to counterparty risk. There can be no assurance that the Fund will be able to limit exposure to any one counterparty at all times.

Commodity-linked notes risk – Commodity-linked notes involve substantial risks, including the risk of loss of a significant portion of their principal value. In addition to commodity risk and derivatives risk, they may be subject to additional risks, such as risk of loss of interest and principal, lack of secondary market and risk of greater volatility, that do not affect traditional equity and debt securities. There may be a change in the tax treatment of commodity-linked notes, which could impact the Fund’s use of commodity-linked notes in the implementation of its investment strategy. The Fund could lose money investing in commodity-linked notes.

Company risk – Investments in U.S. and foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company’s financial condition. For example, poor earnings performance of a company may result in a decline of its stock price.

Concentration risk – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in such areas of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.

Industry

Companies within an industry are often faced with the same economic conditions, government regulations, availability of basic resources or supplies, or other events that affect that industry, and their stock may react similarly and move in unison with these and other market conditions. As a result, stocks within a certain industry in which the Fund invests may be more volatile, and carry greater risk of adverse developments affecting many of the Fund’s holdings, than a mixture of stocks of companies from a wide variety of industries.

Geographic

To the extent that the Fund has a significant level of investment in issuers in particular countries or regions, the Fund's performance is expected to be closely tied to social, political and economic conditions within those countries or regions and to be more volatile than the performance of more geographically diversified funds. The economies and financial markets of certain regions can be highly interdependent and may decline all at the same time. In addition, certain regions are prone to natural disasters such as earthquakes, volcanoes, droughts or tsunamis and are economically sensitive to environmental events. Such events may have a negative impact on the value of the Fund's investments in those regions.

Security

The Fund's portfolio may invest in a limited number of securities. As compared to other Funds, this could subject the Fund to additional risk if one of the portfolio securities declines in price, or if certain sectors of the market experience a downturn. It may take additional time to sell all or part of a Fund's investment in a particular security, and consequently, concentrating portfolio investments may also limit the ability of the Fund to take advantage of other investment opportunities.

Consumer discretionary risk – An investment in issuers in the consumer discretionary sector of the market may be more affected by events influencing the consumer discretionary sector than a fund that is more diversified across numerous sectors. An investment in issuers in the consumer discretionary sector can be significantly affected by the performance of the overall economy, interest rates, competition and consumer confidence. Success of these companies can depend heavily on disposable household income and consumer spending. Changes in demographics and consumer tastes can also affect the demand for, and success of, products of consumer discretionary companies.

Convertible securities risk – Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and the conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. A convertible security is also subject to the same types of market and issuer-specific risks that apply to the underlying common stock, since it derives a portion of its value from the common stock into which it may be converted. In addition, because companies that issue convertible securities are often small- or mid-capitalization companies, to the extent the Fund invests in convertible securities, it will be subject to the risks of investing in these companies.

The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Convertible securities normally are "junior" securities, which means that an issuer usually must pay interest on its non-convertible debt before it can make payments on its convertible securities. If an issuer stops making interest or principal payments, these securities may become worthless and the Fund could lose its entire investment. In the event of a liquidation of the issuing company, holders of convertible securities may be paid before the company's common stockholders but after holders of any senior debt obligations of the company. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.

Corporate loan, sovereign entity loan, and bank loan risk – Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the Secured Overnight Financing Rate ("SOFR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling such securities. It may take longer than seven days for transactions in loans to settle. As a result, sale proceeds related to the sale of loans may not be available to make additional investments until a substantial period after the sale of the loans. Certain loans may be classified as "illiquid" securities.

Due to restrictions on transfers in loan agreements and the nature of private syndication of loans, some loans are not as easily purchased or sold as publicly traded securities. Some loans are illiquid, which may make it difficult for the Fund to value them or dispose of them at the price at which the Fund has valued the loan. In addition, compared to public securities, purchases and sales of loans generally take longer to settle. To the extent the extended loan settlement process gives rise to short-term liquidity needs, such as the need to satisfy redemption requests, the Fund may hold cash, sell investments or temporarily borrow to meet its short-term liquidity needs. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.

Bank loans may not be considered securities under the federal securities laws and accordingly, may offer less legal protection in the event of fraud or misrepresentation in connection with the purchase or sale of such instruments. Instead, lenders generally rely on the contractual provisions in the loan agreement itself, and common-law fraud protections under applicable state law.

Bank loans usually have mandatory and optional prepayment provisions. If a borrower prepays a loan, the Fund will have to reinvest the proceeds in other loans or financial assets that may pay lower rates of return.

A Sub-Adviser may take steps to ensure that it does not receive material nonpublic information about the issuers of loans who also issue (directly or through a related entity) publicly traded securities. In that circumstance, a Sub-Adviser may have less information than other investors about certain of the loans in which it invests or seeks to invest. This may place the Fund at a disadvantage relative to other investors in loans.

A lead bank or other financial institution will often act as agent for all holders of a particular corporate loan. The agent administers the terms of the loan, as specified in the loan agreement. Unless a holder of the corporate loan, such as the Fund, has direct recourse against the borrower, the holder may have to rely on the agent to apply appropriate credit remedies against a borrower under the terms of the loan or other indebtedness. The agent may also be responsible for distributing income from the corporate loan and, as a result, holders of the loan might incur certain costs and delays in realizing payment on the loan and could suffer a loss of principal or interest. In addition, investments in corporate loans may expose the holders of the corporate loan, including the Fund, to the credit risk of both the financial institution and the underlying borrower. In the event of the insolvency of an agent bank, a corporate loan could be subject to settlement risk, as well as the risk of interruptions in the administrative duties performed in the day-to-day administration of the loan (such as processing LIBOR calculations and processing draws).

Certain corporate loans may be issued in connection with highly leveraged transactions, including leveraged buyout loans, leveraged recapitalization loans, and other types of acquisition financing. Leveraged buyout loans are subject to greater credit risks than other investments including a greater possibility that the borrower may default or enter bankruptcy.

Some loans may be “covenant lite” loans which do not include terms which allow the lender to monitor the performance of the borrower and declare a default if certain criteria are breached.

If a Fund invests in a loan via participation, the Fund will be exposed to the ongoing counterparty risk of the entity providing exposure to the loan (and in certain circumstances, such entity’s credit risk) in addition to the exposure the Fund has to the creditworthiness of the borrower.

Counterparty risk – Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter (“OTC”) derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.

Participants in OTC derivatives markets typically are not subject to the same level of credit evaluation and regulatory oversight as are members of exchange-based markets, and, therefore, OTC derivatives generally expose a Fund to greater counterparty risk than exchange-traded derivatives. A Fund is subject to the risk that a counterparty will not settle a derivative in accordance with its terms because of a dispute over the terms of the contract (whether or not bona fide) or because of a credit or liquidity problem. If a counterparty’s obligation to a Fund is not collateralized, then the Fund is essentially an unsecured creditor of the counterparty. If a counterparty defaults, the Fund will have contractual remedies, but the Fund may be delayed and/or unable to enforce them, which may cause the Fund to suffer a loss. Counterparty risk is greater for derivatives with longer maturities because there is more time for events to occur that may prevent settlement. Counterparty risk also is greater when a Fund has concentrated its derivatives with a single or small group of counterparties. Counterparty risk still exists even if a counterparty’s obligations are secured by collateral because, for example, the Fund’s interest in the collateral may not be perfected or additional collateral may not be promptly posted as required.

A Fund also is subject to counterparty risk because it executes its securities transactions through brokers and dealers. If a broker or dealer fails to meet its contractual obligations, goes bankrupt, or otherwise experiences a business interruption, the Fund could miss investment opportunities or be unable to dispose of investments it would prefer to sell, resulting in losses for the Fund.

Counterparty risk with respect to derivatives will be affected by rules and regulations affecting the derivatives market. Some derivatives transactions are required to be centrally cleared, and a party to a cleared derivatives transaction is subject to the credit risk of the clearing house and the clearing member through which it holds its cleared position, rather than the credit risk of its original counterparty to the derivatives transaction. Credit risk of market participants with respect to derivatives that are centrally cleared is concentrated in a few clearing houses, and it is not clear how an insolvency proceeding of a clearing house would be conducted and what impact an insolvency of a clearing house would have on the financial system. A clearing member is obligated by contract and by applicable regulation to segregate all funds received from customers with respect to cleared derivatives transactions from the clearing member’s proprietary assets. However, all funds and other property received by a clearing member from its customers with respect to cleared derivatives are generally held by the clearing member on a commingled basis in an omnibus account, and the clearing member may invest those funds in certain instruments permitted under the applicable regulations. Therefore, a Fund might not be fully protected in the event of the bankruptcy of a Fund’s clearing member because the Fund would be limited to recovering only a pro rata

share of all available funds segregated on behalf of the clearing member's customers for a relevant account class. Also, the clearing member is required to transfer to the clearing house the amount of margin required by the clearing house for cleared derivatives, which amounts are generally held in an omnibus account at the clearing house for all customers of the clearing member. Regulations promulgated by the CFTC require that the clearing member notify the clearing house of the initial margin provided by the clearing member to the clearing house that is attributable to each customer. However, if the clearing member does not accurately report a Fund's initial margin, the Fund is subject to the risk that a clearing house will use the Fund's assets held in an omnibus account at the clearing house to satisfy payment obligations of a defaulting customer of the clearing member to the clearing house. In addition, clearing members generally provide the clearing house the net amount of variation margin required for cleared swaps for all of its customers in the aggregate, rather than individually for each customer. A Fund is therefore subject to the risk that a clearing house will not make variation margin payments owed to the Fund if another customer of the clearing member has suffered a loss and is in default, and the risk that the Fund will be required to provide additional variation margin to the clearing house before the clearing house will move the Fund's cleared derivatives transactions to another clearing member. In addition, if a clearing member does not comply with the applicable regulations or its agreement with a Fund, or in the event of fraud or misappropriation of customer assets by a clearing member, the Fund could have only an unsecured creditor claim in an insolvency of the clearing member with respect to the margin held by the clearing member.

Also, under new special resolution regimes adopted in the United States, the European Union and various other jurisdictions, the possibility exists that the Funds' ability to exercise remedies, such as the termination of transactions, netting of obligations and realization on collateral, could be stayed or eliminated in the event of a counterparty's (or its affiliate's) insolvency. Such regimes provide government authorities with broad authority to intervene when a financial institution is experiencing financial difficulty. In particular, in the European Union and the United Kingdom, governmental authorities could reduce, eliminate, or convert to equity the liabilities to the Funds of a counterparty experiencing financial difficulties (sometimes referred to as a "bail in").

Credit risk – The price of a debt security can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations. Changes in an issuer's financial strength, the market's perception of the issuer's financial strength or in a security's credit rating, which reflects a third party's assessment of the credit risk presented by a particular issuer, may affect debt securities' value. When a fixed-income security is not rated, the Fund's investment manager may have to assess the risk of the security itself. The Fund may incur substantial losses on debt securities that are inaccurately perceived to present a different amount of credit risk by the market, the investment manager or the rating agencies than such securities actually do. In addition, to the extent the Fund invests in municipal bonds, they are subject to the risk that litigation, legislation or other political events, local business or economic conditions, or the bankruptcy of the issuer could have a significant effect on an issuer's ability to make payments of principal and/or interest.

Cryptocurrency risk – Cryptocurrencies (also referred to as "virtual currencies" and "digital currencies") are digital assets designed to act as a medium of exchange. Although cryptocurrency is an emerging asset class, there are thousands of cryptocurrencies, the most well-known of which is bitcoin (the only cryptocurrency that the Fund seeks exposure to). Cryptocurrency is a newer technological innovation with limited history; it is highly speculative and future regulatory actions or policies may significantly affect the price of cryptocurrencies, and thus the value of the Fund's bitcoin futures contracts. The growth of cryptocurrency markets and the acceptance of bitcoin as a digital currency is subject to significant uncertainty, and to the extent the pace of this growth slows or reverses, the price of bitcoin and the Fund's bitcoin futures contracts may decline.

The value of cryptocurrencies is normally determined by the supply and demand for cryptocurrency in the global market for the trading of cryptocurrency, which consists primarily of transactions on electronic exchanges. The market price of bitcoin has been subject to extreme fluctuations, and may be highly volatile. If cryptocurrency markets continue to be subject to sharp fluctuations, the Fund's exposure to bitcoin futures contracts could result in substantial losses to the Fund. Cryptocurrency generally operates without central authority (such as a bank), and the value is generally not backed by any government, corporation, or other identified body. Cryptocurrency is not legal tender; Federal, state and/or foreign governments may restrict the use and exchange of cryptocurrency, which could severely affect the value of any holdings. Regulation of cryptocurrencies in the United States is still developing and is subject to significant uncertainty. Similar to fiat currencies (i.e., a currency that is backed by a central bank or a national, supranational or quasi-national organization), cryptocurrencies are susceptible to theft, loss and destruction.

Cryptocurrency exchanges and other trading venues on which cryptocurrencies trade are relatively new and, in most cases, largely unregulated and may therefore be more exposed to fraud and failure than established, regulated exchanges for securities, derivatives and other currencies. The Fund's investment exposure to bitcoin through bitcoin futures contracts remains subject to volatility experienced by the cryptocurrency exchanges and other cryptocurrency trading venues. Cryptocurrency exchanges may stop operating or permanently shut down due to fraud, technical glitches, hackers or malware, which may also affect the price of bitcoin and thus the Fund's investment exposure to bitcoin.

Currency management strategies risk – Currency management strategies may substantially change the Fund's exposure to currency exchange rates and could result in losses to the Fund if currencies do not perform as the investment manager expects. In addition, currency management strategies, to the extent that they reduce the Fund's exposure to currency risks, may also reduce the Fund's

ability to benefit from favorable changes in currency exchange rates. Using currency management strategies for purposes other than hedging further increases the Fund's exposure to foreign investment losses. Currency markets generally are not as regulated as securities markets. In addition, currency rates may fluctuate significantly over short periods of time, and can reduce returns.

Currency risk – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value, or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. The Fund accrues additional expenses when engaging in currency exchange transactions, and valuation of a Fund's foreign securities may be subject to greater risk because both the price of the currency (relative to the U.S. dollar) and the price of the security may fluctuate with market and economic conditions. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.

Currency transaction risk – Non-U.S. currency forward contracts, options, swaps, or other derivatives contracts on non-U.S. currencies involve a risk of loss if currency exchange rates move against the Fund. Forward contracts may not be guaranteed by an exchange or clearinghouse and a default by the counterparty may result in a loss to the Fund. Governmental authorities may impose credit controls to limit the level of forward trading to the detriment of the Fund. Neither the CFTC nor the U.S. banking authorities regulate forward currency transactions through banks. In respect of such trading, the Fund is subject to the risk of bank failure or the inability of or refusal by a bank to perform with respect to such contracts.

Custody risk – The Fund may invest in securities markets that are less developed than those in the U.S., which may expose the Fund to risks in the process of clearing and settling trades and the holding of securities by local banks, agents and depositories. Some foreign banks and securities depositories may be recently organized or new to the foreign custody business. In addition, there may be limited or no regulatory oversight of their operations. Also, the laws of certain countries may limit a Fund's ability to recover its assets if a foreign bank, depository or issuer of a security, or any of their agents, goes bankrupt. Custody risk is heightened in countries with less developed securities markets.

Cybersecurity risk – Cyber attacks could cause business failures or delays in daily processing and the Fund may need to delay transactions, consistent with regulatory requirements, as a result could impact the performance of the Fund. See the "Technology Disruptions" section in this Prospectus.

Cyclical opportunities risk – The Fund may invest in stocks of a company in an effort to take tactical advantage of an anticipated event in that company's business cycle which evidences growth potential, short-term market movements or changes affecting particular issuers or industries. If the anticipated event does not occur, the value of the stock could fall, which in turn could depress the Fund's share prices. Cyclical stocks may tend to increase in value quickly during economic upturns, but they also tend to lose value quickly in economic downturns. These companies may have relatively weak balance sheets and, during economic downturns, they may have insufficient cash flow to pay their debt obligations and difficulty finding additional financing needed for their operations, which can result in losses for the Fund.

Debt securities ratings risk – The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate. Governmental efforts to reform rating agencies and the use of credit ratings in the marketplace may impact a Fund's investments or investment process.

Depository receipts risk – Investments in securities of foreign companies in the form of American depositary receipts ("ADRs"), Global depositary receipts ("GDRs"), and European depositary receipts ("EDRs") are subject to certain risks. ADRs typically are issued by a U.S. bank or trust company and evidence ownership of underlying securities issued by a foreign corporation. EDRs and GDRs typically are issued by foreign banks or trust companies, although they may be issued by U.S. banks or trust companies, and evidence ownership of underlying securities issued by either a foreign or U.S. corporation. Where the custodian or similar financial institution that holds the issuer's shares in a trust account is located in a country that does not have developed financial markets, a Fund could be exposed to the credit risk of the custodian or financial institution and greater market risk. In addition, the depository institution may not have physical custody of the underlying securities at all times and may charge fees for various services, including forwarding dividends and interest and corporate actions. A Fund would be expected to pay a share of the additional fees, which it would not pay if investing directly in the foreign securities. A Fund may experience delays in receiving its dividend and interest payments or exercising rights as a shareholder.

Depository receipts may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an un-sponsored program, the issuer may not be directly involved in the creation of the program. Although the U.S. regulatory requirements applicable to ADRs generally are similar for both sponsored and un-sponsored programs, in some cases it may be easier to obtain financial and other information from an issuer that has participated in the creation of a sponsored program. To the extent the Fund invests in depositary receipts of an un-sponsored

program, there may be an increased possibility the Fund would not become aware of and be able to respond to corporate actions such as stock splits or rights offerings involving the foreign issuer on a timely basis, as the issuers of unsponsored depositary receipts are not obligated to disclose information that is considered material in the U.S.

Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.

Derivatives risk – Certain Funds may invest in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices. Derivatives can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to a number of risks described elsewhere in this section, such as leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.

The Fund's investment manager must choose the correct derivatives exposure versus the underlying assets to be hedged or the income to be generated, in order to realize the desired results from the investment. The Fund's investment manager must also correctly predict price, credit or their applicable movements, during the life of a derivative, with respect to the underlying asset in order to realize the desired results from the investment.

The Fund could experience losses if its derivatives were poorly correlated with its other investments, or if the Fund were unable to liquidate its position because of an illiquid secondary market. The market for many derivatives is, or suddenly can become, illiquid. Changes in liquidity may result in significant, rapid and unpredictable changes in the prices for derivatives. The value of derivatives may fluctuate more rapidly than other investments, which may increase the volatility of the Fund, depending on the nature and extent of the derivatives in the Fund's portfolio.

If the Fund's investment manager uses derivatives in attempting to manage or "hedge" the overall risk of the portfolio, the strategy might not be successful and the Fund may lose money. To the extent that the Fund is unable to close out a position because of market illiquidity or counterparty default, the Fund may not be able to prevent further losses of value in its derivatives holdings and the Fund's liquidity may be impaired to the extent that it has a substantial portion of its otherwise liquid assets marked as segregated on its books to cover its obligations under such derivative instruments.

The Fund may also be required to take or make delivery of an underlying instrument that the manager would otherwise have attempted to avoid. Investors should bear in mind that, while a Fund may intend to use derivative strategies on a regular basis, it is not obligated to actively engage in these transactions, generally or in any particular kind of derivative, if the investment manager elects not to do so due to availability, cost or other factors.

The Fund's use of derivative instruments may involve risks different from, or possibly greater than, the risks associated with investing directly in securities and other more traditional investments. Certain derivative transactions may have a leveraging effect on the Fund. For example, a small investment in a derivative instrument may have a significant impact on the Fund's exposure to interest rates, currency exchange rates or other investments. As a result, a relatively small price movement in a derivative instrument may cause an immediate and substantial loss or gain. The Fund may engage in such transactions regardless of whether the Fund owns the asset, instrument or components of the index underlying the derivative instrument. The Fund may invest a portion of its assets in these types of instruments, which could cause the Fund's investment exposure to exceed the value of its portfolio securities and its investment performance could be affected by securities it does not own.

The U.S. Government has enacted legislation that provides for new regulation of the derivatives market, including clearing, margin, reporting, and registration requirements. The European Union (and some other countries) are implementing similar requirements, which will affect a Fund when it enters into a derivatives transaction with a counterparty organized in that country or otherwise subject to that country's derivatives regulations. Because these requirements are relatively new and evolving (and some of the rules are not yet final), their ultimate impact remains unclear. It is possible that government regulation of various types of derivative instruments could potentially limit or completely restrict the ability of a Fund to use these instruments as a part of its investment strategy, increase the costs of using these instruments or make them less effective. Limits or restrictions applicable to the counterparties with which a Fund engages in derivative transactions could also prevent a Fund from using these instruments or affect the pricing or other factors relating to these instruments, or may change availability of certain investments.

The CFTC and certain futures exchanges have established limits, referred to as "position limits," on the maximum net long or net short positions which any person or entity may hold or control in particular options and futures contracts (and certain related swap positions). All positions owned or controlled by the same person or entity, even if in different accounts, must be aggregated for purposes of determining whether the applicable position limits have been exceeded and, as a result, the investment manager's trading

decisions may have to be modified or positions held by a Fund may have to be liquidated in order to avoid exceeding such limits. Even if the Fund does not intend to exceed applicable position limits, it is possible that different clients managed by the investment manager or its affiliates may be aggregated for this purpose. The modification of investment decisions or the elimination of open positions, if it occurs, may adversely affect the profitability of the Fund. A violation of position limits could also lead to regulatory action materially adverse to a Fund's investment strategy.

Under the Dodd-Frank Act, a Fund also may be subject to additional recordkeeping and reporting requirements. In addition, the tax treatment of certain derivatives, such as certain swaps, is unclear under current law and may be subject to future legislation, regulation or administrative pronouncements issued by the IRS. Other future regulatory developments may also impact a Fund's ability to invest or remain invested in certain derivatives. Legislation or regulation may also change the way in which a Fund itself is regulated. The investment manager cannot predict the effects of any new governmental regulation that may be implemented or the ability of a Fund to use swaps or any other financial derivative product, and there can be no assurance that any new governmental regulation will not adversely affect a Fund's ability to achieve its investment objective.

Distressed debt risk – Certain Funds may invest in securities of issuers that are, or are about to be, involved in reorganizations, financial restructurings, or bankruptcy (also known as "distressed debt"). Such distressed debt securities involve substantial risk in addition to the risks of investing in lower-grade debt securities. To the extent that a Fund invests in distressed debt, the Fund is subject to the risk that it may lose a portion or all of its investment in the distressed debt and may incur higher expenses trying to protect its interests in distressed debt. Distressed securities and any securities received in an exchange for such securities may be subject to restrictions on resale and may be subject to liquidity risk.

Distressed securities risk – Distressed securities risk refers to the uncertainty of repayment of defaulted securities and obligations of distressed issuers. Because the issuer of such securities is likely to be in a distressed financial condition, repayment of distressed or defaulted securities (including insolvent issuers or issuers in payment or covenant default, in workout or restructuring or in bankruptcy or insolvency proceedings) is subject to significant uncertainties. Insolvency laws and practices in foreign jurisdictions are different than those in the U.S. and the effect of these laws and practices may be less favorable and predictable than in the U.S. Investments in defaulted securities and obligations of distressed issuers are considered highly speculative. Distressed securities may be subject to limitations on resale and may be subject to liquidity risk.

Dividend-paying stock risk – Dividend-paying stocks may underperform non-dividend paying stocks (and the stock market as a whole) over any period of time. The prices of dividend-paying stocks may decline as interest rates increase. In addition, issuers of dividend-paying stocks typically have discretion to defer or stop paying dividends. If the dividend-paying stocks held by an account reduce or stop paying dividends, the account's ability to generate income may be adversely affected.

Emerging markets and less developed countries risk – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. There may be government policies that restrict investment by foreigners, greater government influence over the private sector, and a higher risk of a government taking private property in emerging and less developed countries. Moreover, economies of emerging market countries may be dependent upon international trade and may be adversely affected by trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

Underdeveloped securities exchanges and low or nonexistent trading volume in securities of issuers may result in a lack of liquidity and in price volatility. A fund may not be able to sell such securities in a timely manner, and may receive less than the currently available market price when selling such emerging market securities. Emerging market countries often have less uniformity in accounting and reporting requirements and less reliable clearance and settlement, registration and custodial procedures, which could result in ownership registration being completely lost. Issuers in emerging markets typically are subject to greater risk of adverse changes in earnings and business prospects than are companies in developed markets. Loss may also result from the imposition of exchange controls, confiscations and other government restrictions, including confiscatory taxes on investment proceeds and other restrictions on the ability of foreign investors to withdraw their money at will, or from problems in security registration or settlement and custody. Investments in, or exposure to, emerging market securities may be more susceptible to investor sentiment than investments in developed countries. As a result, emerging market securities may be adversely affected by negative perceptions about an emerging market country's stability and prospects for continued growth. The Fund will also be subject to the risk of negative foreign currency rate fluctuations. Investments in, or exposure to, emerging market securities tend to be more volatile than investments in developed countries.

Frontier market countries are emerging market countries that are considered to have the smallest, least mature and least liquid securities markets. Frontier market countries generally have smaller economies and less developed capital markets than traditional emerging markets, and, as a result, the risks of investing in emerging market countries are magnified in frontier market countries. The economies of frontier market countries are less correlated to global economic cycles than those of their more developed counterparts and their markets have low trading volumes, low security market capitalizations, and the potential for extreme price volatility and illiquidity. This volatility may be further heightened by the actions of a few major investors. For example, a substantial increase or decrease in cash flows of mutual funds investing in these markets could significantly affect local stock prices and, therefore, the price of Fund shares. These factors make investing in frontier market countries significantly riskier than in other countries and any one of them could cause the price of the Fund's shares to decline.

Equity-linked notes (ELNs) risk – Investing in investment funds may be more costly to the Fund than if the Fund had invested in the underlying securities directly. ELNs may not perform as expected and could cause the Fund to realize significant losses including its entire principal investment. Other risks include counterparty risk, liquidity risk and imperfect correlation between ELNs and the underlying securities.

Equity securities risk – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

ESG (Environmental, Social & Governance) investment strategy risk – The Fund's ESG investment strategy limits the types and number of investment opportunities available to the Fund and, as a result, the Fund may underperform other funds that do not have an ESG focus. The Fund's ESG investment strategy may result in the Fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the Index Provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.

European investment risk – Investing in Europe involves many of the same risks as investing in foreign securities generally. In addition, investing in Europe poses some unique risks. Europe includes both developed and emerging markets and investments by a Fund will be subject to the risks associated with investments in such markets. Most developed countries in Western Europe are members of the European Union ("EU") and many are also members of the European Economic and Monetary Union ("EMU"). The EU is an economic and political union of most western European countries and a growing number of eastern European countries. One of the key mandates of the EU is the establishment and administration of a common single market, consisting of, among other things, a single currency and a common trade policy. In order to pursue this goal, member states established the EMU, which sets out different stages and commitments that member states need to follow to achieve greater economic and monetary policy coordination, including the adoption of a single currency, the euro. Many member states have adopted the euro as their currency and, as a result, are subject to the monetary policies of the European Central Bank ("ECB"). Performance is expected to be closely tied to social, political, security, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Recent security concerns related to immigration, war and geopolitical risk, and terrorism could have a negative impact on the EU and investments within EU countries.

The global economic crisis of the past several years has caused severe financial difficulties for many EU countries, pushing some to the brink of insolvency and causing others to experience recession, large public debt, restructuring of government debt, credit rating downgrades and an overall weakening of banking and financial sectors. The European financial markets have recently experienced volatility and adverse trends due to concerns about economic downturns in, or rising government debt levels of, several European countries as well as acts of war in the region. These events may spread to other countries in Europe and may affect the value and liquidity of certain of the Fund's investments. Some of those countries have depended on, and may continue to be dependent on, the assistance from others such as the ECB, the International Monetary Fund, or other governments and institutions to address those issues. Failure by one or more EU countries to implement reforms or attain a certain performance level imposed as a condition of assistance, or an insufficient level of assistance, could deepen or prolong the economic downturn which could have a significant adverse effect on the value of investments in those and other European countries. By adopting the euro as its currency, members of the EMU are subject to fiscal and monetary controls that could limit to some degree the ability to implement their own economic policies. Additionally, EMU member countries could voluntarily abandon the euro or involuntarily be forced out of the euro, including by way of a partial or complete dissolution of the monetary union. The effects of such outcomes on the rest of the Eurozone and global markets as a whole are unpredictable, but are likely to be negative, including adversely impacted market values of Eurozone and various other securities and currencies, redenomination of certain securities into less valuable local currencies, and more volatile and illiquid markets. Under such circumstances, investments denominated in euros or replacement currencies may be difficult to value, the ability to operate an investment strategy in connection with euro-denominated securities may be significantly impaired and the value

of euro-denominated investments may decline significantly and unpredictably. Further defaults or restructurings by governments and others of their debt could have additional adverse effects on economies, financial markets and asset valuations around the world.

Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. There may also be similar Brexit movements in other EU countries, which could impact the economic, security, and political fabric of the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there was an eleven-month transition period, ending December 31, 2020, during which the United Kingdom negotiated its future relationship with the EU. On January 1, 2021, the EU UK Trade and Cooperation Agreement, a bilateral trade and cooperation deal governing the future relationship between the UK and the EU went into effect. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.

With the UK's withdrawal from the EU, there is the possibility that one or more other countries may withdraw from the EU and/or abandon the Euro, the common currency of the EU, as well. The impact of these actions, especially if they occur in a disorderly fashion, is not clear but could be significant and far reaching. In addition, Russia launched a large-scale invasion of Ukraine on February 24, 2022. The extent and duration of the military action, resulting sanctions and resulting future market disruptions in the region are impossible to predict, but could be significant and have a severe adverse effect on the region, including significant negative impacts on the economy and the markets for certain securities and commodities, such as oil and natural gas, as well as other sectors.

Event driven and special situations risk – At times, the Fund may seek to benefit from what are considered "special situations," such as mergers, acquisitions, consolidations, liquidations, spin-offs, tender or exchange offers, reorganizations, restructurings or other unusual events that are expected to affect a particular issuer. Such special situations may involve so-called "distressed companies," the debt obligations of which typically are unrated, lower-rated, in default or close to default. Also, securities of distressed companies are generally more likely to become worthless. There is a risk that the expected change or event might not occur, which could cause the price of the security to fall, perhaps sharply. In that case, the investment might not produce the expected gains or might cause a loss. This is an aggressive investment technique that may be considered speculative.

Exchange-traded funds investing risk – Most exchange-traded funds ("ETFs") are investment companies whose shares are purchased and sold on a securities exchange. Generally, an ETF represents a portfolio of securities designed to track a particular market segment or index. An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional mutual fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.

In addition, many ETFs invest in securities included in, or representative of, underlying indexes regardless of investment merit or market trends and, therefore, these ETFs do not change their investment strategies to respond to changes in the economy, which means that an ETF may be particularly susceptible to a general decline in the market segment relating to the relevant index. As with traditional mutual funds, ETFs charge asset-based fees. The Funds will indirectly pay a proportional share of the asset-based fees of the ETFs in which the Funds invest. During periods of market volatility, there may be delays in the pricing of ETFs, and ETF exchange-traded prices may also be subject to volatility, which could cause the Fund to lose money.

Exchange-traded note risk – The value of an exchange-traded note ("ETN") may be influenced by maturity, level of supply and demand for the ETN, volatility and lack of liquidity in the underlying securities' markets, changes in the applicable interest rates, changes in the issuer's credit rating and economic, legal, political or geographic events that affect the referenced index. In addition, the notes issued by ETNs and held by the Fund are unsecured debt of the issuer.

Expense risk – Fund expenses are subject to a variety of factors, including fluctuations in the Fund's net assets. Accordingly, actual expenses may be greater or less than those indicated in the Fund's Prospectus. For example, to the extent that the Fund's net assets decrease due to market declines or redemptions, the Fund's expenses will increase as a percentage of Fund net assets. During periods of high market volatility, these increases in the Fund's expense ratio could be significant.

Extension risk – When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.

Financial services risk – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework; (ii) interest rate changes that may negatively affect financial service businesses; (iii) exposure

of a financial institution to a non-diversified or concentrated loan portfolio; (iv) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (v) the risk that a market shock or other unexpected market, economic, political, regulatory, public health or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.

Fixed-income risk – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. In addition, falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Longer maturity fixed-income securities may be subject to greater price fluctuations than shorter maturity fixed-income securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed income security will fail to make timely payments of principal or interest and the security will go into default. The Fund may be subject to a greater risk of rising interest rates in periods of historically low rates.

Foreign exchange and currency derivatives trading risk – The Fund intends to actively trade in spot and forward currency positions and related currency derivatives in order to increase the value of the Fund. The trading of foreign currencies directly generates risks separate from those associated with inactive or indirect exposures to non-U.S. dollar denominated instruments and currency derivative instruments. Specifically, the Fund may directly take a loss from the buying and selling of currencies without any related exposure to non-U.S. dollar-denominated assets.

Foreign securities risk – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities and foreign issuers may not be subject to the same accounting, auditing and financial recordkeeping standards and requirements as domestic issuers. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position. Such factors may adversely affect the value of securities issued by companies in foreign countries or regions.

Investments in, or exposure to, foreign securities could be affected by restrictions on receiving the investment proceeds from a foreign country, confiscatory foreign tax laws, and potential difficulties in enforcing contractual obligations. Transactions may be subject to less efficient settlement practices, including extended clearance and settlement periods. Foreign accounting may be less revealing than U.S. accounting practices and regulation may be inadequate or irregular. Investments in, or exposure to, emerging market countries and/or their securities markets may present market, credit, currency, liquidity, legal, political, technical and other risks different from, or greater than, the risks of investing in developed countries. In addition, the risks associated with investing in a narrowly defined geographic area are generally more pronounced with respect to investments in, or exposure to, emerging market countries.

Forward and futures contract risk – The successful use of forward and futures contracts draws upon the investment manager's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (i) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (ii) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (iii) losses caused by unanticipated market movements, which are potentially unlimited; (iv) the investment manager's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (v) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (vi) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Forward foreign currency exchange contracts risk – Forward foreign currency exchange contracts do not eliminate fluctuations in the value of non-U.S. securities but rather allow the Fund to establish a fixed rate of exchange for a future point in time. Depending upon currency movements, this strategy can have the effect of reducing returns and minimizing opportunities for gain.

Frontier market countries risk – Frontier market countries generally have smaller economies and less developed capital markets than traditional developing markets, and, as a result, the risks of investing in developing market countries are magnified in frontier market countries. The economies of frontier market countries are less correlated to global economic cycles than those of their more developed counterparts and their markets have low trading volumes, low security market capitalizations, and the potential for extreme price volatility and illiquidity. This volatility may be further heightened by the actions of a few major investors. For example, a substantial increase or decrease in cash flows of mutual funds investing in these markets could significantly affect local stock prices and, therefore, the price of Fund shares. These factors make investing in frontier market countries significantly riskier than in other countries and any one of them could cause the price of the Fund's shares to decline.

Governments of many frontier market countries in which the Fund may invest may exercise substantial influence over many aspects of the private sector. In some cases, the governments of such frontier market countries may own or control certain companies.

Accordingly, government actions could have a significant effect on economic conditions in a frontier market country and on market conditions, prices and yields of securities in the Fund's portfolio. Moreover, the economies of frontier market countries may be heavily dependent upon international trade and, accordingly, have been and may continue to be, adversely affected by trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. These economies also have been and may continue to be adversely affected by economic conditions in the countries with which they trade.

Investment in equity securities of issuers operating in certain frontier market countries may be restricted or controlled to varying degrees. These restrictions or controls may at times limit or preclude foreign investment in equity securities of issuers operating in certain frontier market countries and increase the costs and expenses of the Fund. Certain frontier market countries require governmental approval prior to investments by foreign persons, limit the amount of investment by foreign persons in a particular issuer, limit the investment by foreign persons only to a specific class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of the countries and/or impose additional taxes on foreign investors. Certain frontier market countries may also restrict investment opportunities in issuers in industries deemed important to national interests, ("sensitive industries").

Frontier market countries may require governmental approval for the repatriation of investment income, capital or the proceeds of sales of securities by foreign investors, such as the Fund. In addition, if deterioration occurs in a frontier market country's balance of payments, the country could impose temporary restrictions on foreign capital remittances. The Fund could be adversely affected by delays in, or a refusal to grant, any required governmental approval for repatriation of capital, as well as by the application to the Fund of any restrictions on investments. Investing in local markets in frontier market countries may require the Fund to adopt special procedures, seek local government approvals or take other actions, each of which may involve additional costs to the Fund.

There may be no centralized securities exchange on which securities are traded in frontier market countries. Also, securities laws in many frontier market countries are relatively new and unsettled. Therefore, laws regarding foreign investment in frontier market securities, securities regulation, title to securities, and shareholder rights may change quickly and unpredictably.

The frontier market countries in which the Fund invests may become subject to sanctions or embargoes imposed by the U.S. government and the United Nations. The value of the securities issued by companies that operate in, or have dealings with these countries may be negatively impacted by any such sanction or embargo and may reduce the Fund's returns.

Banks in frontier market countries used to hold the Fund's securities and other assets in that country may lack the same operating experience as banks in developed markets. In addition, in certain countries there may be legal restrictions or limitations on the ability of the Fund to recover assets held by a foreign bank in the event of the bankruptcy of the bank. Settlement systems in frontier markets may be less well organized than in the developed markets. As a result, there is greater risk than in developed countries that settlements will take longer and that cash or securities of the Fund may be in jeopardy because of failures of or defects in the settlement systems.

Government regulatory risk – Certain industries or sectors, including, but not limited to, real estate, financial services, utilities, oil and natural gas exploration and production, anything environment-related, and health care are subject to increased regulatory requirements. There can be no guarantee that companies in which the Fund invests will meet all applicable regulatory requirements. Certain companies could incur substantial fines and penalties for failing to meet government regulatory requirements. These requirements may also result in additional compliance expenses and costs. Such increased regulatory compliance costs could hurt a company's performance.

Hedging instruments risk – The Fund may attempt, from time to time, to hedge (protect) against currency risks, largely using forward foreign currency exchange contracts, where available and when, in the manager's opinion, it would be advantageous to the Fund. A forward foreign currency exchange contract is an agreement to buy or sell a specific currency at a future date and at a price set at the time of the contract. Forward foreign currency exchange contracts may reduce the risk of loss from a change in value of a currency, but they also limit any potential gains and do not protect against fluctuations in the value of the underlying position. For example, during periods when the U.S. dollar weakens in relation to a foreign currency the Fund's use of a currency hedging program will result in lower returns than if no currency hedging programs were in effect. The Fund may also attempt, from time to time, to hedge against market risk by using other derivative investments, which may include purchasing or selling call and put options. The purchase of a call option gives the purchaser of the option, upon payment of a premium, the right to buy, and the seller of the option the obligation to sell, the underlying instrument at the exercise price. Conversely, the purchase of a put option gives the purchaser of the option, upon payment of a premium, the right to sell, and the seller of the option the obligation to buy, the underlying instrument at the exercise price. Forward foreign currency exchange contracts and put options are considered derivative investments, because their value and performance depend, at least in part, on the value and performance of an underlying asset. The Fund may also use futures, swaps, and other derivative instruments to hedge risk. The Fund's investment in derivatives may involve a small investment relative to the amount of risk assumed. To the extent the Fund enters into these transactions, its success will depend on the manager's ability to predict market movements, and their use may have the opposite effect of that intended. Risks include potential loss due to the imposition of controls by a government on the exchange of foreign currencies, the loss of any premium paid to enter into the

transaction, delivery failure, default by any other party, or inability to close out a position because the trading market becomes illiquid. In addition, for certain reasons, the Fund may not seek to establish a perfect correlation between such hedging instruments and the portfolio instruments being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. It is not possible to hedge fully or perfectly against any risk.

Hedging transactions risk – The Sub-Adviser from time to time employs various hedging techniques. The success of the Fund’s hedging strategy will be subject to the Sub-Adviser’s ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Fund’s hedging strategy will also be subject to the Sub-Adviser’s ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the Sub-Adviser may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs (such as trading commissions and fees).

High-yield bonds, lower-rated bonds, and unrated securities risk – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds typically have a higher yield to compensate for a greater risk that the issuer might not make its interest and principal payments. As a result, an investment in junk bonds is considered speculative. An unanticipated default would result in a reduction in income and a decline in the market value of the related securities. During an economic downturn or substantial period of rising interest rates, highly leveraged issuers may experience financial stress which could adversely affect their ability to service principal and interest payment obligations, to meet projected business goals and to obtain additional financing. The market prices of junk bonds are generally less sensitive to interest rate changes than higher-rated investments, but more sensitive to adverse economic or political changes, or individual developments specific to the issuer. Periods of economic or political uncertainty and change can be expected to result in price volatility. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued. The credit rating of a below investment grade security does not necessarily address its market value risk and may not reflect its actual credit risk. Ratings and market value may change from time to time, positively or negatively, to reflect new developments regarding the issuer.

Hong Kong investment risk – If China were to exert its authority so as to alter the economic, political or legal structures or the existing social policy of Hong Kong, investor and business confidence in Hong Kong could be negatively affected, which in turn could negatively affect markets and business performance and have an adverse effect on the Fund’s investments.

Income risk – Income generated from the Fund’s investments may decline in the event of falling interest rates. Income risk may be high if the Fund’s income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund’s distributions to shareholders may decline when interest rates fall.

Index investing risk – A Fund’s indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Market fluctuations can cause the performance of an index to be significantly influenced by a small number of companies. Because different types of stocks tend to shift in and out of favor depending on market and economic conditions, performance of an index may be lower than the performance of funds that actively invest in stocks that comprise the index. Should a Fund engage in index sampling, the performance of the securities selected may not match the performance of the relevant index for a number of reasons, including, but not limited to: the Fund’s expenses, which the index does not bear; changes in securities markets; changes in the composition of the index; the size of the portfolio; the timing of purchases and redemptions of the Fund’s shares; and the costs and investment effects of reallocating a portion of the portfolio to comply with the diversification requirements under the Code. Certain regulatory limitations, such as Fund diversification requirements or foreign regulatory ownership requirements, may limit the ability of a Fund to completely replicate an index.

Indexed and inverse securities risk – Certain indexed and inverse securities have greater sensitivity to changes in interest rates or index levels than other securities, and the Fund’s investment in such instruments may decline significantly in value if interest rates or index levels move in a way the Fund’s investment manager does not anticipate.

Inflation-indexed securities risk – Inflation-indexed securities have a tendency to react to changes in real interest rates. Real interest rates represent nominal (stated) interest rates lowered by the anticipated effect of inflation. In general, the price of an inflation-indexed security can decrease when real interest rates increase, and can increase when real interest rates decrease. Interest payments on inflation-indexed securities will fluctuate as the principal and/or interest is adjusted for inflation and can be unpredictable. In periods of deflation, the Fund may not receive any income from such investments. In certain interest rate environments, such as when real interest rates are rising faster than normal interest rates, inflation-indexed securities may experience greater losses than other fixed-income securities with similar durations.

Information technology sector risk – Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on their profit margins. Like other technology companies, information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology

companies may face obsolescence due to rapid technological developments, frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent and intellectual property rights. The loss or impairment of these rights may adversely affect the profitability of these companies.

Interest rate risk – When interest rates increase, fixed-income securities generally will decline in value. Conversely, as interest rates decrease, the prices of fixed income securities tend to increase. In a low interest rate environment, an increase in interest rates could have a negative impact on the price of fixed income securities, and could negatively impact a Fund’s portfolio of fixed income securities. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes. A nominal interest rate can be described as the sum of a real interest rate and an expected inflation rate. Inflation-indexed securities, including TIPS, decline in value when real interest rates rise. In certain interest rate environments, such as when real interest rates are rising faster than normal interest rates, inflation-indexed securities may experience greater losses than other fixed income securities with similar durations.

Floating rate investments have adjustable interest rates and as a result, generally fluctuate less in response to interest rate changes than will fixed-rate investments. However, because floating rates generally only reset periodically, changes in prevailing interest rates may cause a fluctuation in a Fund’s value. In addition, extreme increases in prevailing interest rates may cause an increase in defaults on floating rate investments, which may cause a further decline in a Fund’s value. Finally, a decrease in interest rates could adversely affect the income earned by the Fund from its floating rate debt securities.

At times, when interest rates in the United States are at or near historic lows, a Fund may face increased exposure to risks associated with rising interest rates.

Investing in China A Shares risk – Investments in Class A Shares of Chinese companies involve certain risks and special considerations not typically associated with investments in U.S. companies, such as greater government control over the economy, political and legal uncertainty, currency fluctuations or blockage, the risk that the Chinese government may decide not to continue to support economic reform programs and the risk of nationalization or expropriation of assets. Additionally, the Chinese securities markets are emerging markets subject to the special risks applicable to developing and emerging market countries described elsewhere in this prospectus.

Investing through Stock Connect risk – The Fund may invest directly in China A shares through Stock Connect, and will be subject to the following risks: sudden changes in quota limitations, application of trading suspensions, differences in trading days between the PRC and Stock Connect, operational risk, clearing and settlement risk and regulatory and taxation risk.

Investment in money market funds risk – Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. An investment in a money market fund is not insured or guaranteed by a Federal Deposit Insurance Corporation or any other government agency. Although such money market funds seek to maintain a net asset value of \$1.00 per share, it is possible to lose money by investing in a money market fund. Despite the short maturities and high credit quality of a money market fund’s investments, increases in interest rates and deteriorations in the credit quality of the instruments the Fund has purchased may reduce the Fund’s yield and can cause the price of a money market security to decrease. In addition, a money market fund is subject to the risk that the value of an investment may be eroded over time by inflation.

Investment in other investment companies risk – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.

Investment strategy risk – The Sub-Adviser, or if no Sub-Adviser, the investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund’s investment objective. Investment decisions made in accordance with these investment strategies may not produce the returns expected, and may cause the Fund’s shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.

Investment style risk – The returns from a certain investment style may be lower than the returns from the overall stock market. For example, value funds typically emphasize stocks whose prices are below-average in comparison to earnings and book value, although they may yield above-average dividends. A value stock may not increase in price if other investors fail to recognize the company’s value or the factors that are expected to increase the price of the security do not occur. As another example, growth funds generally focus on stocks of companies believed to have above-average potential for growth in revenue and earnings. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund’s investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for, example, growth investing may outperform value investing).

Investments in IPOs risk – The Fund may purchase shares issued as part of, or a short period after, companies' initial public offerings ("IPOs"), and may at times dispose of those shares shortly after their acquisition. The Fund's purchase of shares issued in IPOs exposes it to the risks associated with companies that have little operating history as public companies, as well as to the risks inherent in those sectors of the market where these new issuers operate. The market for IPO issuers has been volatile, and share prices of newly public companies have fluctuated in significant amounts over short periods of time. The purchase of shares issued in IPOs may have a greater impact upon the Fund's total returns during any period that the Fund has a small asset base. As the Fund's assets grow, any impact of IPO investments on the Fund's total return may decline.

Issuer risk – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services. A change in the financial condition of a single issuer may affect securities markets as a whole. Certain unanticipated events, such as natural disasters, can have a dramatic adverse effect on the value of an issuer's securities.

Large-capitalization investing risk – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks. In addition, larger, more established companies may be unable to respond quickly to new competitive challenges such as changes in technology and consumer preferences. Many larger companies also may not be able to attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion.

Latin America concentration risk – If a Fund concentrates investments in Latin American countries, the Fund's performance is expected to be closely tied to social, political and economic conditions within Latin American countries. Funds that concentrate in specific countries and regions, such as Latin America, tend to have more performance volatility than the performance of more geographically diversified funds. Investment primarily in equity and equity-related securities in Latin America will expose the Fund specifically to their market, currency and other risks, including volatility and structural risks. Stable economic growth may be hampered by a number of factors, including, burdensome regulatory requirements, inflation, poor allocation of resources and the reinvestment of capital, government price controls and capital restrictions, and social instability with a corresponding effect on securities holdings and volatility.

Leverage risk – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. Leverage, including borrowing, may cause the Fund to be more volatile because leverage tends to exaggerate the effect of any increase or decrease in the value of the Fund's portfolio securities. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund. To attempt to minimize these risks, the Fund may segregate on its books (cover) liquid assets sufficient to cover the value of such transactions; however, such coverage techniques may not always be successful and the Funds could lose money.

LIBOR replacement risk – The Funds' payment obligations, financing terms and investments in certain instruments (including debt securities and derivatives) may be tied to floating rates, such as the London Interbank Offered Rate ("LIBOR"). In 2017, the UK Financial Conduct Authority ("FCA") announced its intention to cease compelling banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration, the administrator of LIBOR, ceased publication of most LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of a majority of U.S. dollar LIBOR settings on a representative basis after June 30, 2023. In addition, global regulators have announced that, with limited exceptions, no new LIBOR-based contracts should be entered into after 2021. Actions by regulators have resulted in the establishment of alternative reference rates to LIBOR in most major currencies (e.g., the Secured Overnight Financing Rate for U.S. dollar LIBOR and the Sterling Overnight Interbank Average Rate for GBP LIBOR). Various financial industry groups have been planning for the transition away from LIBOR and markets are developing in response to these new rates, but questions around the liquidity of the new rates and how to appropriately adjust these rates to eliminate any economic value transfer at the time of transition remain a significant concern. It is difficult to predict the full impact of the transition away from LIBOR on the Funds. The transition process may involve, among other things, increased volatility or illiquidity in markets for instruments that continue to rely on LIBOR. The transition may also result in a reduction in the value of certain LIBOR-based investments held by the Funds or reduce the effectiveness of related transactions such as hedges. Any such effects of the transition away from LIBOR, as well as other unforeseen effects, could result in losses for the Funds. Since the usefulness of LIBOR as a benchmark could also deteriorate during the transition period, effects could occur at any time.

License termination risk – The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.

Limited management, trading cost and rebalance risk – Investing primarily according to specific, mechanical criteria and applied on a specific date each year may prevent a Fund from responding to market fluctuations, or changes in the financial condition or business prospects of the selected companies during the year. As a result of this investment strategy, the Fund may be subject to increased risk if one of the selected stocks declines in price or if certain sectors of the market, or economy, experience downturns. This investment strategy may also prevent taking advantage of trading opportunities that may be available to other funds.

Liquidity risk – Investments in securities that are difficult to purchase or sell (illiquid or thinly traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. An “illiquid investment” is defined as an investment that a Fund reasonably expects cannot be sold or disposed of in current market conditions in seven (7) calendar days or less without the sale or disposition significantly changing the market value of the investment. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. In times of market volatility, certain securities or classes of securities may become illiquid. Government or regulatory actions may decrease market liquidity, and the liquidity for certain securities. Small-capitalization companies and companies domiciled in emerging markets pose greater liquidity and price volatility risks. Certain securities that were liquid when purchased may later become illiquid or less liquid, particularly in times of overall economic distress. Illiquid securities may also be difficult to value, may be required to be fair valued according to the valuation procedures approved by the Board, and may reflect a discount, which may be significant, from the market price of comparable securities for which a liquid market exists. Liquidity risk may also refer to the risk that the Fund will not be able to meet requests to redeem shares issued by a Fund without significant dilution of remaining investors’ interests in the Fund because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions. In addition, although the fixed-income securities markets have grown significantly in the last few decades, regulations and business practices have led some financial intermediaries to curtail their capacity to engage in trading (i.e., “market making”) activities for certain debt securities. As a result, dealer inventories of fixed-income securities, which provide an indication of the ability of financial intermediaries to make markets in fixed-income securities, are at or near historic lows relative to market size. Because market makers help stabilize the market through their financial intermediary services, further reductions in dealer inventories could have the potential to decrease liquidity and increase volatility in the fixed-income securities markets.

Managed portfolio risk – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund’s manager’s investment techniques could fail to achieve the Fund’s investment objective, or may negatively affect the Fund’s investment performance, or legislative, regulatory, or tax developments may affect the investment techniques available to the manager of the Fund. There is no guarantee that the investment objective of the Fund will be achieved.

Market direction risk – Since the Fund will typically hold both long and short positions, an investment in the Fund will involve market risks associated with different types of investment decisions than those made for a typical “long only” fund. The Fund’s results could suffer when there is a general market advance and the Fund holds significant “short” positions, or when there is a general market decline and the Fund holds significant “long” positions. The markets may have considerable volatility from day to day and even in intra-day trading.

Market risk – Stock market risk refers to the fact that stock (equity securities) prices typically fluctuate more than the values of other types of securities, typically in response to changes in the particular company’s financial condition and factors affecting the market in general. Over time, the stock market tends to move in cycles, with periods when stock prices rise, and periods when stock prices decline. A slower-growth or recessionary economic environment could have an adverse effect on the price of the various stocks held by the Fund. Consequently, a broad-based market drop may also cause a stock’s price to fall.

Bond market risk generally refers to credit risk and interest rate risk. Credit risk is the actual or perceived risk that the issuer of the bond will not pay the interest and principal payments when due. Bond value typically declines if the issuer’s credit quality deteriorates. Interest rate risk is the risk that interest rates will rise and the value of bonds will fall. A broad-based market drop may also cause a bond’s price to fall.

Portfolio securities may also decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, or due to factors affecting particular industries represented in the securities markets, such as competitive conditions. Changes in the financial condition of a single issuer can impact a market as a whole, and adverse market conditions may be prolonged and may not have the same impact on all types of securities. In addition, the markets may not favor a particular kind of security, including equity securities or bonds. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.

The COVID-19 pandemic and efforts to contain its spread have negatively affected, and are likely to continue to negatively affect, the global economy, the economies of the United States and other individual countries, and the financial performance of individual issuers, sectors, industries, asset classes, and markets in significant and unforeseen ways. The COVID-19 pandemic has resulted in

significant market volatility, exchange trading suspensions and closures, declines in global financial markets, higher default rates, and economic downturns and recessions, and these effects may continue for an extended period of time and may increase in severity over time. In addition, actions taken by government and quasi-governmental authorities and regulators throughout the world in response to the COVID-19 pandemic, including significant fiscal and monetary policy changes, may affect the value, volatility, and liquidity of some securities and other assets. Given the significant uncertainty surrounding the magnitude, duration, reach, costs and effects of the COVID-19 pandemic, as well as actions that have been or could be taken by governmental authorities or other third parties, it is difficult to predict its potential impacts on a Fund's investments. The effects of the COVID-19 pandemic also are likely to exacerbate other risks that apply to a Fund, including the risks disclosed in this prospectus, which could negatively impact the Fund's performance and lead to losses on your investment in the Fund.

Master limited partnership risk – An investment in master limited partnership (“MLP”) units involves some risks that differ from an investment in the common stock of a corporation. Holders of MLP units have limited control on matters affecting the partnership. Investing in MLPs involves certain risks related to investing in the underlying assets of the MLPs and risks associated with pooled investment vehicles. MLPs holding credit-related investments are subject to interest rate risk and the risk of default on payment obligations by debt issuers. MLPs that concentrate in a particular industry or a particular geographic region are subject to risks associated with such industry or region. The benefit derived from the Fund’s investment in MLPs is largely dependent on the MLPs being treated as partnerships for federal income tax purposes. Certain MLPs may be illiquid securities.

Mezzanine securities risk – Mezzanine securities are generally rated below investment-grade and frequently are unrated and present many of the same risks as senior loans, second lien loans and non-investment grade bonds. However, unlike senior loans and second lien loans, mezzanine securities are not a senior or secondary secured obligation of the related borrower. They typically are the most subordinated debt obligation in an issuer’s capital structure. Mezzanine securities also may often be unsecured. Mezzanine securities therefore are subject to the additional risk that the cash flow of the related borrower and the property securing the loan may be insufficient to repay the scheduled obligation after giving effect to any senior obligations of the related borrower. Mezzanine securities are also expected to be illiquid investments. Mezzanine securities will be subject to certain additional risks to the extent that such loans may not be protected by financial covenants or limitations upon additional indebtedness. Investment in mezzanine securities is a highly specialized investment practice that depends more heavily on independent credit analysis than investments in other types of debt obligations.

Micro-capitalization investing risk – Micro-capitalization stocks involve substantially greater risks of loss and price fluctuations because their earnings and revenues tend to be less predictable (and some companies may be experiencing significant losses), and their share prices tend to be more volatile and their markets less liquid than companies with larger market capitalizations. Micro-capitalization companies may be newly formed or in the early stages of development, with limited product lines, markets or financial resources and may lack management depth. In addition, there may be less publicly available information about these companies. The shares of micro-capitalization companies tend to trade less frequently than those of larger, more established companies, which can adversely affect the pricing of these securities and the future ability to sell these securities. Also, it may take a long time before the Fund realizes a gain, if any, on an investment in a micro-capitalization company.

Mid-capitalization and small-capitalization investing risk – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund’s portfolio. Securities of such issuers may lack sufficient market liquidity to conduct transactions at an advantageous time, or without a substantial drop in price. Generally, the smaller the company size, the greater these risks become.

Mid-capitalization investing risk – The prices of securities of mid-capitalization companies tend to fluctuate more widely than those of larger, more established companies. Mid-capitalization companies may have limited product lines, markets or financial resources or may depend on the expertise of a few people and may be subject to more abrupt or erratic market movements than securities of larger, more established companies or the market averages in general. Securities of such issuers may lack sufficient market liquidity to effect sales at an advantageous time or without a substantial drop in price.

Model risk – Funds that use models bear the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Funds achieve their investment objectives, which may cause a Fund to underperform its benchmark or other funds with a similar investment objective.

Mortgage-related and other asset-backed securities risk – The risk of investing in mortgage-related and other asset-backed securities include interest rate risk, extension risk, and prepayment (contraction) risk. With respect to extension risk, rising interest rates tend to extend the duration of mortgage-related securities, making them more sensitive to changes in interest rates. As a result, in a period of rising interest rates, mortgage-related securities may exhibit increased volatility. With respect to default risk, rising interest rates and falling property prices may increase the likelihood that individuals and entities will fall behind or fail to make payments on their mortgages or other loans. When there are a number of mortgage defaults, the interest paid by mortgage-backed and mortgage-

related securities may decline, or may not be paid. A number of mortgage defaults could lead to a decline in the value of mortgage-backed and mortgage-related securities. In addition, legal and documentation risk (incomplete mortgage information) related to mortgage defaults may exist. With respect to prepayment risk, borrowers may pay off their mortgages or other loans sooner than expected, which may result in contraction risk, whereby the Fund will have to reinvest that money at the lower prevailing interest rates and, thus, may suffer an unexpected loss of interest income.

Investments in mortgage-backed securities entail the uncertainty of the timing of cash flows resulting from the rate of prepayments or defaults on the underlying mortgages serving as collateral. An increase or decrease in payment rates (resulting primarily from a decrease or increase in mortgage interest rates) will affect the yield, average life, and price. The prices of mortgage-backed securities, depending on their structure and the rate of payments, can be volatile. Some mortgage-backed securities may also not be as liquid as other securities. The value of these securities also may change because of changes in the market's perception or the actual creditworthiness of the issuer. In addition, the mortgage-backed or other asset-backed securities market in general may be adversely affected by changes in governmental regulation, interest rates, tax policies, the real estate market, and/or the overall economy.

Municipal securities risk – Municipal securities are subject to certain additional risks. A Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in the debt securities of projects in the same or similar sectors (e.g., education, health care, housing, transportation, and utilities), industrial development bonds, or in particular types of municipal securities (e.g., general obligation bonds, private activity bonds and moral obligation bonds). Other occurrences, such as catastrophic natural disasters or acts of terrorism, can also adversely affect a state's fiscal stability and affect the value of a Fund's investment in municipal securities. The recent national economic crisis, among other factors, has caused deterioration in the economies of many states, resulting in an adverse impact on states' spending, revenues and state budgets that has caused many states to operate under significant financial stress. Certain states or municipalities may file for, and enter bankruptcy proceedings. Legal and regulatory requirements related to state and municipal bankruptcy are evolving, which could affect the value of a Fund's investment in municipal securities.

Specific risks are associated with different types of municipal securities. With respect to general obligation bonds, the full faith, credit and taxing power of the municipality that issues a general obligation bond secures payment of interest and repayment of principal. Timely payments depend on the issuer's credit quality, ability to raise tax revenues and ability to maintain an adequate tax base. With respect to revenue bonds, payments of interest and principal are made only from the revenues generated by a particular facility, class of facilities or the proceeds of a special tax, or other revenue source, and depends on the money earned by that source. Private activity bonds are issued by municipalities and other public authorities to finance development of industrial facilities for use by a private enterprise. The private enterprise pays the principal and interest on the bond, and the issuer does not pledge its full faith, credit and taxing power for repayment. If the private enterprise defaults on its payments, a Fund may not receive any income or get its money back from the investment. Moral obligation bonds are generally issued by special purpose public authorities of a state or municipality. If the issuer is unable to meet its obligations, repayment of these bonds becomes a moral commitment, but not a legal obligation, of the state or municipality.

Natural resource related securities risk – A Fund that concentrates its investments in natural resource related securities is subject to the risks associated with natural resource investments in addition to the general risk of the stock market. This means the Fund is more vulnerable to the price movements of natural resources and factors that particularly affect the oil, gas, mining, energy, chemicals, paper, steel or agriculture sectors than a more broadly diversified fund. Because the Fund invests primarily in companies with natural resource assets, there is the risk that the Fund will perform poorly during a downturn in natural resource and commodity prices.

Non-diversification risk – The Fund is non-diversified. As such, the Fund may invest in a limited number of issuers. Under a definition provided by the Investment Company Act of 1940, as amended (the "1940 Act"), non-diversified funds may invest in fewer securities, or in larger proportions of the securities of single companies or industries. If these securities were to decline in value, there could be a substantial loss of the investment. In addition, because of the investment strategies, the Fund may hold a smaller number of issuers than if it were "diversified." There is increased risk in investing in a smaller number of different issuers than there is in investing in a larger number of issuers since changes in the financial condition or market status of a single issuer may cause greater fluctuation in a non-diversified portfolio with respect to total return and share price.

Non-hedging foreign currency trading risk – The Fund may engage in forward foreign currency transactions for speculative purposes. The Funds' investment manager may purchase or sell foreign currencies through the use of forward contracts based on the investment manager's judgment regarding the direction of the market for a particular foreign currency or currencies. In pursuing this strategy, the investment manager seeks to profit from anticipated movements in currency rates by establishing "long" and/or "short" positions in forward contracts on various foreign currencies. Foreign exchange rates can be extremely volatile and a variance in the degree of volatility of the market or in the direction of the market from the investment manager's expectations may produce significant losses to the Fund. Some of these transactions may also be subject to interest rate risk.

Options risk – If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed-upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying

instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund.

When options are purchased OTC, the Fund bears the risk that the counterparty that wrote the option will be unable or unwilling to perform its obligations under the option contract. OTC options may also be illiquid and the Fund may have difficulty closing out its position. A decision as to whether, when and how to use options involves the exercise of skill and judgment and even a well-conceived option transaction may be unsuccessful because of market behavior or unexpected events. The prices of options can be highly volatile and the use of options can lower total returns.

Pacific Rim investing risk – The Pacific Rim economies are in various stages of economic development. Many of the economies in the region can be characterized as developing, newly industrialized, or developed. Many of the Pacific Rim economies may be intertwined, so they may experience recessions at the same time. Furthermore, many of the Pacific Rim economies are characterized by high inflation, undeveloped financial services sectors, heavy reliance on international trade, frequent currency fluctuations, devaluations, or restrictions, political and social instability, and less efficient markets. The Australia and New Zealand economies are largely dependent on the economies of Asian countries and on the price and demand for agricultural products and natural resources. If a Fund concentrates investments in Pacific Rim markets, the Fund's performance is expected to be closely tied to social, political, and economic conditions within the Pacific Rim region and to be more volatile than the performance of more geographically diversified funds.

Participation note risk – An investment in a participation note involves additional risks beyond the risks normally associated with a direct investment in the underlying security and a participation note's performance may differ from the underlying security's performance. Holders of participation notes do not have the same rights as an owner of the underlying stock and are subject to the credit risk of the issuer. Participation notes are typically privately issued and may be illiquid.

Passive investment risk – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends. Additionally, an index relies on various third-party sources of information to assess the criteria of issuers included in an index, including information that may be based on assumptions and estimates. Errors in index data, index computations, or the construction of an index in accordance with its methodology may occur from time to time and may not be identified and corrected by an index provider for a period of time or at all, which may have an adverse impact on the Fund and its performance. The Fund, an index provider, and the Adviser do not offer assurances that an index's calculation methodology or sources of information will provide an accurate assessment of included issuers or a correct valuation of securities, nor can they guarantee the availability or timeliness of the production of an index.

Portfolio turnover risk – Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Preferred stock risk – Preferred stock represents an equity interest in a company that generally entitles the holder to receive, in preference to the holders of other stocks such as common stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the company. Some preferred stocks also entitle their holders to receive additional liquidation proceeds on the same basis as holders of a company's common stock, and thus also represent an ownership interest in that company. Preferred stocks may pay fixed or adjustable rates of return. Preferred stock is subject to issuer-specific and market risks applicable generally to equity securities and is sensitive to changes in the issuer's creditworthiness and to changes in interest rates, and may decline in value if interest rates rise. In addition, a company's preferred stock generally pays dividends only after the company makes required payments to holders of its bonds and other debt. For this reason, the value of preferred stock will usually react more strongly than bonds and other debt to actual or perceived changes in the company's financial condition or prospects. Preferred stock of smaller companies may be more vulnerable to adverse developments than preferred stock of larger companies.

Prepayment risk – During periods of falling interest rates, there is the risk that a debt security with a high stated interest rate will be prepaid before its expected maturity date and that the Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.

Privately placed securities risk – While it is the Funds' policy to restrict investments in privately placed securities, the Fund's investments may also include privately-placed securities. Generally, privately placed securities are illiquid and are subject to resale restrictions. Typically, the securities are sold as an offering exempt from registration with the SEC. Investments in these securities usually will decrease a Fund's liquidity level to the extent the Fund may be unable to sell or transfer these securities due to restrictions on transfers or on the ability to find buyers interested in purchasing the securities. The illiquid nature of the market for privately placed securities, as well as the lack of publicly available information regarding these securities, may also adversely affect the Fund's ability to fair value such securities at certain times and could make it difficult for the Fund to sell them. The Fund could lose money on such investments.

Profitability investment risk – High relative profitability stocks may perform differently from the market as a whole and following a profitability-oriented strategy may cause the Fund to at times underperform equity funds that use other investment strategies.

Quantitative strategy risk – Securities identified using quantitative analysis can perform differently from the market as a whole as a result of the factors used in the analysis, the weight placed on those factors, changes in a factor's historical trends, or for reasons included in the analysis. The factors used in quantitative analysis and the weights placed on those factors may not predict a security's value, and the effectiveness of the factors can change over time. These changes may not be reflected in the current quantitative model.

In addition, data for emerging markets companies may be less available and/or less current than data for developed markets companies, and the Sub-Adviser's processes and exposure selection can be adversely affected if it relies on erroneous or outdated data. Any errors in the quantitative methods may adversely affect performance.

Real estate investment risk – Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management. Many real estate companies, including real estate investment trusts ("REITs") and real estate operating companies, utilize leverage (and some may be highly leveraged), which increases investment risk and could adversely affect a real estate company's operations and market value in periods of rising interest rates. Financial covenants related to real estate company leveraging may affect the company's ability to operate effectively. A real estate company may become liable for removal or other costs related to environmental contamination. Real estate companies tend to be small to medium-sized companies and share prices can be more volatile than, and perform differently from, larger company shares. The Fund could hold real estate directly if a company defaults on its debt securities. Direct ownership in real estate presents additional risks, including liquidity risks, declines in value of the properties, risks from general and local economic conditions, changes in the climate for real estate, increases in taxes, expenses and costs, changes in laws, casualty and condemnation losses, rent control limitations, increases in interest rates, and the risk of generating too much income that would not be "qualifying income" under Subchapter M of the Code.

In addition to the risks which are linked to the real estate sector in general, REITs are subject to additional risks. Investment in REITs may be affected by the management skill of the persons managing the REIT and are often not diversified, which will subject the Fund to more risk than would be associated with an investment in a diversified fund. Equity REITs, which invest a majority of their assets directly in real property and derive income primarily from the collection of rents and lease payments, may be affected by changes in the value of the underlying property owned by the trust. Mortgage REITs, which invest the majority of their assets in real estate mortgages and derive income primarily from the collection of interest payments, may be affected by the quality of any credit extended. REITs are also subject to heavy cash flow dependency and to defaults by borrowers or lessees. In addition, REITs possibly could fail to qualify for favorable tax treatment under applicable U.S. or foreign law and/or to maintain exempt status under the 1940 Act. Certain REITs provide for a specified term of existence in their trust documents. Such REITs run the risk of liquidating at an economically disadvantageous time. The Fund will bear a proportional share of the REITs' expenses.

Redemption risk – Large redemption activity could result in the Fund being forced to sell portfolio securities at a loss or before the Adviser or Sub-Adviser would otherwise decide to do so. Large redemption activity in the Fund may also result in increased expense ratios, higher levels of realized capital gains or losses with respect to the Fund's portfolio securities, higher brokerage commissions, and other transaction costs. It could be difficult for a Fund to meet large redemption requests where there is minimal liquidity in the Fund's portfolio securities.

Regulatory investment limits risk – The U.S. "Federal Securities Laws" may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory limitations under the Federal Securities Laws and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Fund may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Funds' expenses and may limit the Funds' performance.

Repurchase agreements, purchase and sale contracts risk – If the other party to a repurchase agreement or purchase and sale contract defaults on its obligation under the agreement, the Fund may suffer delays and incur costs or lose money in exercising its rights under the agreement. If the seller fails to repurchase the security under a repurchase agreement or purchase and sale contract, and the market value of the security declines, the Fund may lose money.

Restricted securities risk – Restricted securities are subject to legal restrictions on their sale and may not be sold to the public without an effective registration statement. Before they are registered, such securities may be sold only in a privately negotiated transaction or pursuant to an exemption from registration. Restricted securities may be illiquid. The Fund may be unable to sell them on short notice or may be able to sell them only at a price below current value. Also, the Fund may get only limited information about the issuer of a restricted security, so it may be less able to predict a loss. In addition, if Fund management receives certain material

nonpublic information about the issuer, the Fund may be unable to sell the securities in accordance with laws and regulations prohibiting insider trading.

Reverse repurchase agreements risk – Reverse repurchase agreements involve the sale of securities held by the Fund with an agreement to repurchase the securities at an agreed-upon price, date, and interest payment. Reverse repurchase agreements involve the risk that the other party may fail to return the securities in a timely manner or at all. The Fund could lose money if the value of collateral held by the Fund, including the value of the investments made with the cash received from the sale of securities, is less than the value of the securities sold by the Fund. Furthermore, reverse repurchase agreements involve the risks that: (i) the interest income earned in the investment of the proceeds will be less than the interest expense; (ii) the market value of the securities retained in lieu of sale by the Fund may decline below the price of the securities the Fund has sold but is not obligated to repurchase; and (iii) the market value of the securities sold will decline below the price at which the Fund is required to repurchase them. In addition, the use of reverse repurchase agreements will result in leverage.

Rule 144A securities risk – Rule 144A securities are securities offered as exempt from registration with the SEC, but may be treated as liquid securities because there is a market for such securities. Rule 144A securities may have an active trading market, but carry the risk that the active trading market may not continue. To the extent that institutional buyers become, for a time, uninterested in purchasing Rule 144A securities, investing in such securities could increase the Fund’s level of illiquidity.

Russia investment risk – A Fund may invest a portion of its assets in securities issued by companies located in Russia. Because of the recent formation of the Russian securities markets as well as the underdeveloped state of Russia’s banking system, settlement, clearing and registration of securities transactions are subject to significant risks. Prior to 2013, there was no central registration system for equity share registration in Russia and registration was carried out by either the issuers themselves or by registrars located throughout Russia. Such registrars were not necessarily subject to effective state supervision nor were they licensed with any governmental entity, thereby increasing the risk that the Fund could lose ownership of its securities through fraud, negligence, or even mere oversight. With the implementation of the National Settlement Depository (“NSD”) in Russia as a recognized central securities depository, title to Russian equity securities is now based on the records of the NSD and not the registrars. Although the implementation of the NSD is generally expected to decrease the risk of loss in connection with recording and transferring title to securities, issues resulting in loss still might occur. In addition, issuers and registrars are still prominent in the validation and approval of documentation requirements for corporate action processing in Russia. Because the documentation requirements and approval criteria vary between registrars and/or issuers, there remain unclear and inconsistent market standards in the Russian market with respect to the completion and submission of corporate action elections. To the extent that the Fund suffers a loss relating to title or corporate actions relating to its portfolio securities, it may be difficult for the Fund to enforce its rights or otherwise remedy the loss.

Many investments in Russia are tied to commodities, particularly, oil. The price of commodities and volatility in the commodities market could have a negative impact on the Russian economy, Russian companies, and Russian investments. The geopolitical environment with the Ukraine and Middle East enhance the possibility of conflict with Russia.

In addition, Russia also may attempt to assert its influence in the region through economic or even military measures, as it did with Georgia in the summer of 2008 and the Ukraine in 2014 and 2022. Russia launched a large-scale invasion of Ukraine on February 24, 2022. The extent and duration of the military action, resulting sanctions and resulting future market disruptions, including declines in its stock markets and the value of the ruble against the U.S. dollar, are impossible to predict, but could be significant. Any such disruptions caused by Russian military action or other actions (including cyberattacks and espionage) or resulting actual and threatened responses to such activity, including purchasing and financing restrictions, boycotts or changes in consumer or purchaser preferences, sanctions, tariffs or cyberattacks on the Russian government, Russian companies or Russian individuals, including politicians, may negatively impact Russia’s economy and Russian issuers of securities in which the Fund invests. Actual and threatened responses to such military action may also impact the markets for certain Russian commodities, such as oil and natural gas, as well as other sectors of the Russian economy, and may likely have collateral impacts on such sectors globally. These and any related events could have significant impact on Fund performance and the value of an investment in the Fund.

In response to recent political and military actions undertaken by Russia, the United States and certain other countries, as well as the European Union, have instituted economic sanctions against certain Russian individuals, including politicians, and Russian corporate and banking entities. These countries could also institute broader sanctions on Russia, including banning Russia from global payment systems that facilitate cross-border payments. The political and economic situation in Russia, and the current and any future sanctions or other government actions against Russia, may result in the decline in the value and liquidity of Russian securities, devaluation of Russian currency, a downgrade in Russia’s credit rating, the inability to freely trade sanctioned companies (either due to the sanctions imposed or related operational issues) and/or other adverse consequences to the Russian economy, any of which could negatively impact the Fund’s investments in Russian securities. Sanctions could result in the immediate freeze of Russian securities, impairing the ability of the Fund to buy, sell, receive or deliver those securities. Both the current and potential future sanctions or other government actions against Russia also could result in Russia taking counter measures or retaliatory actions, which may impair further the value or liquidity of Russian securities and negatively impact the Fund. Any or all of these potential results could lead Russia’s economy into a recession.

Second lien loans risk – Second lien loans generally are subject to similar risks as those associated with investments in senior loans. Because second lien loans are subordinated and thus lower in priority of payment to senior loans, they are subject to the additional risk that the cash flow of the borrower and property securing the loan or debt, if any, may be insufficient to meet scheduled payments after giving effect to the senior secured obligations of the borrower.

Sector risk – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment, or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund’s performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the portfolio managers’ choice of securities within such sector.

Air transportation sector risk – The air transportation sector can be significantly affected by competition within the industry, domestic and foreign economies, government regulation, labor relations, terrorism, and the price of fuel. Airline deregulation has substantially diminished the government’s role in the air transport sector while promoting an increased level of competition. However, regulations and policies of various domestic and foreign governments can still affect the profitability of individual carriers as well as the entire industry.

Financial services sector risk – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses, for example sub-prime loans; and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.

Gold-mining companies sector risk – An investment in issuers in the gold-mining sector may be susceptible to financial, economic, political or market events, as well as government regulation, impacting the gold industry. Fluctuations in the price of gold often dramatically affect the profitability of companies in the gold-mining sector.

Health care sector risk – An investment in issuers in the health care sector may be adversely affected by government regulations and government health care programs and increases or decreases in the cost of medical products and services. Health care companies are heavily dependent on patent protection and the expiration of a patent may adversely affect their profitability. Health care companies are also subject to extensive litigation based on product liability and similar claims. Regulatory approvals are generally required before new drugs and medical devices or procedures may be introduced and before the acquisition of additional facilities by health care providers, all of which may be time consuming and costly with no guarantee that any product will come to market. Health care companies are also subject to competitive forces that may make it difficult to raise prices and, in fact, may result in price discounting. Health care companies may also be thinly capitalized and susceptible to product obsolescence.

Infrastructure companies sector risk – Securities and instruments of infrastructure companies are more susceptible to adverse economic or regulatory occurrences affecting their industries. Infrastructure companies may be subject to a variety of factors that may adversely affect their business or operations, including high interest costs in connection with capital construction programs, high leverage, costs associated with environmental and other regulations, the effects of economic slowdown, surplus capacity, increased competition from other providers of services, uncertainties concerning the availability of fuel at reasonable prices, the effects of energy conservation policies and other factors. Infrastructure companies may also be affected by or subject to: regulation by various government authorities; government regulation of rates charged to customers; service interruption due to environmental, operational or other mishaps; the imposition of special tariffs and changes in tax laws, regulatory policies and accounting standards; and general changes in market sentiment toward infrastructure and utilities assets. Other factors that may affect the operations of infrastructure-related companies include innovations in technology, significant changes to the number of ultimate end-users of a company’s products, increased susceptibility to terrorist acts or political actions, risks of environmental damage due, and general changes in market sentiment toward infrastructure and utilities assets.

Natural resource-related securities risk – An investment in natural resource-related securities may be subject to the risks associated with natural resource investments in addition to the general risk of the stock market. Such investments are more vulnerable to the price movements of natural resources and factors that particularly affect the oil, gas, mining, energy, chemicals, paper, steel or agriculture sectors. Such factors may include price fluctuations caused by real and perceived inflationary trends and political developments, the cost assumed by natural resource companies in complying with environmental and safety regulations, changes in supply of, or demand for, various natural resources, changes in energy prices, the success of exploration projects, changes in commodity prices, and special risks associated with natural or man-made disasters. A Fund that invests primarily in companies with natural resource assets is subject to the risk that it may perform poorly during a downturn in natural resource prices.

Precious metals-related securities risk – Prices of precious metals and of precious metals-related securities historically have been very volatile. The high volatility of precious metal prices may adversely affect the financial condition of companies involved with precious metals. The production and sale of precious metals by governments or central banks or other larger holders can be affected by various economic, financial, social and political factors, which may be unpredictable and may have a significant impact on the prices of precious metals. Other factors that may affect the prices of precious metals and securities related to them include changes in inflation, the outlook for inflation and changes in industrial and commercial demand for precious metals.

Utilities sector risk – Utility company securities are particularly sensitive to interest rate movements; when interest rates rise, the stock prices of these companies tend to fall. The continually changing regulatory environment, at both the state and federal level, has led to greater competition in the industry and the emergence of non-regulated providers as a significant part of the industry, which may make some companies less profitable. Companies in the utilities industry may: (i) be subject to risks associated with the difficulty of obtaining adequate returns on invested capital in spite of frequent rate increases and of financing large construction programs during periods of inflation; (ii) face restrictions on operations and increased costs due to environmental and safety regulations, including increased fuel costs; (iii) find that existing plants and equipment or products have been rendered obsolete by technical innovations; (iv) confront challenging environmental conditions, including natural or man-made disasters; (v) tackle difficulties of the capital markets in absorbing utility debt and equity securities; (vi) incur risks associated with the operation of nuclear power plants; and (vii) face the effects of energy conservation and other factors affecting the level of demand for services. Government regulators monitor and control utility revenues and costs, and therefore may limit utility profits. The deregulation of certain utility companies may eliminate restrictions on profits, but may also subject these companies to greater risks of loss. Adverse regulatory changes could prevent or delay utilities from passing along cost increases to customers, which could hinder a utility's ability to meet its obligations to its suppliers. Furthermore, regulatory authorities, which may be subject to political and other pressures, may not grant future rate increases, or may impose accounting or operational policies, any of which could affect a company's profitability and the value of its securities. In addition, federal, state and municipal governmental authorities may review existing construction projects, and impose additional, regulations governing the licensing, construction and operation of power plants. Any of these factors could result in a material adverse impact on the Fund's holdings and the performance of the Fund and, to the extent a Fund is concentrated in the utilities sector, any potential material adverse impact may be magnified.

Securities lending risk – The Fund may lend its portfolio securities to brokers, dealers, and other financial institutions provided a number of conditions are satisfied, including that the loan is fully collateralized. When the Fund lends portfolio securities, its investment performance will continue to reflect changes in the value of the securities loaned, and the fund will also receive a fee or interest on the collateral. Securities lending involves the risk of loss or delays in recovery of the loaned security or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent. The Fund will also bear the risk of any decline in value of securities acquired with cash collateral. The Fund may pay lending fees to a party arranging the loan. See the "Lending of Portfolio Securities" section in this Prospectus.

Senior loans risk – The senior loans in which the Fund invests are usually rated below investment grade. The amount of public information with respect to loans may be less extensive than that available for registered or exchange listed securities. An economic downturn generally leads to a higher non-payment rate, and a senior loan may lose significant value before a default occurs. A secured senior loan may not be adequately collateralized. Moreover, any specific collateral used to secure a senior loan may decline in value or become illiquid, which would adversely affect the senior loan's value. Although senior loans in which the Fund will invest generally will be secured by specific collateral, there can be no assurance that liquidation of such collateral would satisfy the borrower's obligation in the event of non-payment of scheduled interest or principal or that such collateral could be readily liquidated. To the extent that a senior loan is collateralized by stock in the borrower or its subsidiaries, such stock may lose all of its value in the event of the bankruptcy of the borrower. The Fund's access to collateral may be limited by bankruptcy or other insolvency laws. In addition, the lenders' security interest or their enforcement of their security interest under the loan agreement may be found by a court to be invalid. Uncollateralized senior loans involve a greater risk of loss. No active trading market may exist for certain senior loans, which may impair the ability of the Fund to realize full value in the event of the need to sell a senior loan and which may make it difficult to value senior loans.

Settlement risk – Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Delayed settlement may affect a Fund's liquidity due to the timing and receipt of the proceeds from the sale of that security. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.

Short sales risk – A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs

(that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.

Small-capitalization investing risk – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations. In addition, such securities may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable the Fund to effect sales at an advantageous time or without a substantial drop in price. Small-capitalization companies often have limited product lines, narrower markets and more limited managerial and financial resources, or may depend on the expertise of a few people, than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of the Fund's portfolio. Generally, the smaller the company size, the greater these risks become.

Sovereign debt risk – Investments issued by a governmental entity are subject to the risk that the governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt due to, among other things, cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay its debt, request additional loans or otherwise restructure its debt. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt may be collected.

Special purpose acquisition companies risk – The Fund may invest in stock of, warrants to purchase stock of, and other interests in special purpose acquisition companies or similar special purpose entities that pool funds to seek potential acquisition opportunities (collectively, "SPACs"). Because SPACs and similar entities have no operating history or ongoing business other than seeking acquisitions, the value of their securities is particularly dependent on the ability of the entity's management to identify and complete a profitable acquisition. Some SPACs may pursue acquisitions only within certain industries or regions, which may increase the volatility of their prices. In addition, these securities, which are typically traded in the over-the-counter market, may be considered illiquid and/or may be subject to restrictions on resale. An investment in a SPAC is subject a variety of risks, including that (i) a significant portion of the monies raised by the SPAC for the purpose of identifying and effecting an acquisition or merger may be expended during the search for a target transaction; (ii) an attractive acquisition or merger target may not be identified at all and the SPAC will be required to return any remaining monies to shareholders; (iii) any proposed merger or acquisition may be unable to obtain the requisite approval, if any, of SPAC shareholders; (iv) an acquisition or merger once effected may prove unsuccessful and an investment in the SPAC may lose value; (v) the warrants or other rights with respect to the SPAC held by the Fund may expire worthless or may be repurchased or retired by the SPAC at an unfavorable price; (vi) the Fund will be delayed in receiving any redemption or liquidation proceeds from a SPAC to which it is entitled; (vii) an investment in a SPAC may be diluted by additional later offerings of interests in the SPAC or by other investors exercising existing rights to purchase shares of the SPAC; (viii) no or only a thinly traded market for shares of or interests in a SPAC may develop, leaving the Fund unable to sell its interest in a SPAC or to sell its interest only at a price below what the Fund believes is the SPAC interest's intrinsic value; and (ix) the values of investments in SPACs may be highly volatile and may depreciate significantly over time.

Speculative exposure risk – If a Fund invests in a derivative instrument (or engages in a similarly speculative practice) not for the purpose of hedging but to generate return, the Fund is directly exposed to the risks associated with an investment in that derivative. Gains or losses from speculative positions in a derivative may be much greater than the derivative's original cost and, in certain instances, potential losses may be unlimited. For example, potential losses from writing uncovered call options and from speculative short sales are unlimited.

Standby commitment agreements risk – Standby commitment agreements involve the risk that the security the Fund buys will lose value prior to its delivery to the Fund and will no longer be worth what the Fund has agreed to pay for it. These agreements also involve the risk that if the security increases in value, the counterparty will decide not to issue the security. In this case, the Fund loses both the investment opportunity for the assets it set aside to pay for the security and any gain in the security's price.

Stapled securities risk – A stapled security is comprised of two different securities—a unit of a trust and a share of a company—that are "stapled" together and treated as a unit at all times, including for transfer or trading. The characteristics and value of a stapled security are influenced by both underlying securities. Stapled securities are not obligations of, deposits in, or guaranteed by, the Fund. The listing of stapled securities on a domestic or foreign exchange does not guarantee a liquid market for stapled securities.

Stock risk – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock

markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Structured investments risk – A structured investment is a derivative security designed to offer a return linked to a particular underlying security, currency, commodity or market. Structured investments may come in various forms including notes (such as exchange-traded notes), warrants and options to purchase securities. A Fund will typically use structured investments to gain exposure to a particular underlying security, currency, commodity or market when direct access to the security, currency, commodity or market is limited or inefficient from a tax or cost standpoint. There can be no assurance that structured investments will trade at the same price or have the same value as the underlying security, currency, commodity or market. Investments in structured investments involve risks including, but not limited to, issuer risk, counterparty risk and market risk. Holders of structured investments bear risks of the underlying investment and are subject to issuer or counterparty risk because a Fund is relying on the creditworthiness of such issuer or counterparty and has no rights with respect to the underlying investment. Certain structured investments may be thinly traded or have a limited trading market and may have the effect of increasing a Fund's illiquidity to the extent that a Fund, at a particular point in time, may be unable to find qualified buyers for these securities.

Structured note risk – A Fund may invest in notes, sometimes called "structured notes," linked to the performance of securities or commodities. Commodity-linked structured notes provide exposure, which may include long and/or short exposure, to the investment returns of "real assets" (i.e., assets that have tangible properties such as oil, gold and silver) that trade in the commodities markets without investing directly in physical commodities. The performance of these notes is determined by the price movement of the commodities underlying the note. These notes are subject to the credit risk of the issuing party and may be less liquid than other types of securities. This means that a Fund may lose money if the issuer of the note defaults and that a Fund may not be able to readily close out its investment in such notes without incurring losses.

Subsidiary risk (for JNL Multi-Manager Alternative Fund only) – Each applicable Fund is the sole owner of a Cayman Islands entity (each, a "Subsidiary"), which invests directly in its Subsidiary. By investing in its Subsidiary, a Fund is indirectly exposed to the risks associated with the Subsidiary's investments. The commodity-related instruments held by a Subsidiary are generally similar to those that are permitted to be held by its parent Fund without regard to certain U.S. federal income tax rules, and are generally subject to the same risks that apply to similar investments held directly by the Fund (see "Commodity-linked derivatives risk," "Commodities regulatory risk," and "Commodity Risk" above). There can be no assurance that the investment objective of any Subsidiary will be achieved. Each Subsidiary is not registered under the 1940 Act and, unless otherwise noted in this Prospectus, is not subject to all the investor protections of the 1940 Act. However, each Fund wholly owns and controls its Subsidiary, and each Fund and its Subsidiary is managed by the Fund's Adviser and applicable Sub-Adviser, making it unlikely that a Subsidiary will take action contrary to the interests of its parent Fund and its shareholders. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of a Fund and/or its Subsidiary to operate as described in this Prospectus and the Fund's SAI and could affect the Fund.

Swaps risk – Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein.

The Dodd-Frank Act mandated a new regulatory framework for trading swaps in the United States. For example, certain standardized swaps are now, and others will be, required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The process of implementing the regulations under the Dodd-Frank Act as well as other foreign regulations is ongoing and there may be further changes to the system including collateral requirements.

Taiwan investment risk – Although the relationship between China and Taiwan has been improving, there is the potential for future political or economic disturbances that may have an adverse impact on the values of investments in either China or Taiwan, or make investments in China and/or Taiwan impractical or impossible.

Tax risk – In order for a regulated investment company ("RIC") to qualify as such under Subchapter M, including certain of the series of registered investment companies that invest in the Fund, the RIC must derive at least 90% of its gross income each taxable year from "qualifying income," which is described in more detail in the SAI. Income and gains from certain commodity-linked instruments do not constitute "qualifying income" to a RIC for purposes of the 90% gross income test. The tax treatment of some other commodity-linked instruments in which a Fund might invest is not certain, in particular with respect to whether income or gains

from such instruments constitute “qualifying income” to a RIC. The IRS has issued a ruling to the effect that income from commodity-linked swaps does not constitute “qualifying income” for purposes of a Fund’s qualification as a RIC under Subchapter M. In general, for purposes of the 90% gross income requirement, income derived from a partnership will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership which would be qualifying income if realized directly by the RIC. The Fund will therefore annually restrict its income from commodities and commodity-linked derivative instruments, such as commodity-linked swaps, and other assets that give rise to non-qualifying income to a maximum of 10% of the Fund’s gross income. Failure to qualify as a RIC would subject a RIC that invests in the Fund to U.S. federal income tax on its taxable income at regular corporate rates (without deduction for distributions to shareholders). The tax treatment of swap agreements and other derivative instruments, such as commodity-linked derivative instruments, may be adversely affected by future regulatory or legislative changes that could affect whether income from such investments is “qualifying income” under Subchapter M, or otherwise affect the character, timing or amount of a Fund’s taxable income or gains and thus income allocations made by the Fund.

Tax risk (for JNL Multi-Manager Alternative Fund only) – In order for a regulated investment company (“RIC”) to qualify as such under Subchapter M of the Internal Revenue Code of 1986, as amended (the “Internal Revenue Code” or the “Code”), including certain of the series of registered investment companies that invest in the Fund, the RIC must derive at least 90% of its gross income each taxable year from “qualifying income,” which is described in more detail in the SAI. Income and gains from certain commodity-linked instruments do not constitute “qualifying income” to a RIC for purposes of the 90% gross income test. The tax treatment of some other commodity-linked instruments in which a Fund might invest is not certain, in particular with respect to whether income or gains from such instruments constitute qualifying income to a RIC. In general, for purposes of the 90% gross income requirement, income derived from a partnership will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership which would be qualifying income if realized directly by the RIC. The Fund will therefore annually restrict its income from commodities and commodity-linked derivative instruments, such as commodity-linked swaps, and other assets that give rise to non-qualifying income to a maximum of 10% of the Fund’s gross income. The Fund’s investment in the Subsidiary is expected to provide the Fund with exposure to the commodities markets within the limitations of the federal tax requirements of Subchapter M of the Code (“Subchapter M”). Under Treasury Regulations, the annual net income, if any, realized by the Subsidiary and imputed for U.S. federal income tax purposes to the Fund constitutes “qualifying income” for purposes of certain funds of funds qualification as a RIC to the extent such net income is either (i) currently and timely distributed to the Fund or (ii) derived with respect to the Fund’s business of investing in stock, securities or currencies. The tax treatment of commodity-linked notes, other commodity-linked derivatives and the Fund’s investments in the Subsidiary may be adversely affected by future legislation, Treasury regulations and/or guidance issued by the Internal Revenue Service (“IRS”) that could affect whether income from such investments is “qualifying income” under Subchapter M, or otherwise affect the character, timing or amount of the Fund’s taxable income or gains and thus income allocations made by the Fund.

Temporary defensive positions and large cash positions risk – In anticipation of, or in response to, adverse market or other conditions, or atypical circumstances such as unusually large cash inflows or redemptions, and Sub-Adviser transitions, and/or Fund mergers or rebalances, the Fund may temporarily hold all or a significant portion, without limitation, of its assets in cash, cash equivalents, affiliated and unaffiliated money market funds, or high-quality debt instruments. During periods in which the Fund employs such a temporary defensive strategy or holds large cash positions, it will not be pursuing, and will not achieve, its investment objective. Taking a defensive or large cash position may reduce the potential for appreciation of the portfolio and may affect performance.

TIPS and inflation-linked bonds risk – The value of inflation-protected securities generally fluctuates in response to changes in real interest rates, which are tied to the relationship between nominal interest rates and the rate of inflation. As a result, if inflation rates were to rise at a faster rate than nominal rates, real interest rates might decline, leading to an increase in the value of inflation-protected securities. In contrast, if nominal interest rates increased at a faster rate than inflation, real interest rates might rise, leading to a decrease in the value of inflation-protected securities. If the Fund purchases inflation-protected securities in the secondary market whose principal values have been adjusted upward due to inflation since issuance, the Fund may experience a loss if there is a subsequent period of deflation. The inflation-protected securities markets are generally much smaller and less liquid than the nominal bonds from the same issuers and, as such, can suffer from losses during time of economic stress or illiquidity.

Tracking error risk – Tracking error is the divergence of the Fund’s performance from that of the Index. The Fund’s return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund’s portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund’s holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the Investment Company Act of 1940, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

U.S. Government securities risk – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury, such as those of the Government National Mortgage Association; (ii) supported by the right of the issuer to borrow from the U.S. Treasury, such as those of the Federal National Mortgage Association (“Fannie Mae”); (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer’s obligations, such as those of the former Student Loan Marketing Association; or (iv) supported only by the credit of the issuer, such as those of the Federal Farm Credit Bureau. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, including their legal right to receive support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future.

Although many types of U.S. Government securities may be purchased by the Funds, such as those issued by Fannie Mae, the Federal Home Loan Mortgage Corporation (“Freddie Mac”), the Federal Home Loan Banks, and other entities chartered or sponsored by Acts of Congress, their securities are neither issued nor guaranteed by the U.S. Treasury and, therefore, are not backed by the full faith and credit of the United States. The U.S. Government may choose not to provide financial support to U.S. Government sponsored agencies or instrumentalities if it is not legally obligated to do so, in which case, if the issuer defaulted, the holder of the securities of such issuer might not be able to recover its investment from the U.S. Government. In September 2008, the U.S. Treasury and the Federal Housing Finance Administration (“FHFA”) announced that Fannie Mae and Freddie Mac would be placed into conservatorship under FHFA. The ongoing effect that this conservatorship will continue to have on the entities’ debt and equities and on securities guaranteed by the entities is unclear. No assurance can be given that the U.S. Treasury initiatives discussed above with respect to the debt and mortgage-backed securities issued by Fannie Mae and Freddie Mac will be successful. In addition, new accounting standards and future Congressional action may affect the value of Fannie Mae and Freddie Mac debt.

FHFA and the White House have made public statements regarding plans to consider ending the conservatorships of Fannie Mae and Freddie Mac. In the event that Fannie Mae and Freddie Mac are taken out of conservatorship, it is unclear how the capital structure of Fannie Mae and Freddie Mac would be constructed and what effects, if any, there may be on Fannie Mae’s and Freddie Mac’s creditworthiness and guarantees of certain mortgage-backed securities. Should Fannie Mae’s and Freddie Mac’s conservatorship end, there could be an adverse impact on the value of their securities, which could cause losses to the Funds.

Underlying funds risk – The risks associated with investing in the Fund are closely related to the risks associated with the securities and other investments held by the Underlying Funds. The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives. There can be no assurance that the investment objective of any Underlying Fund will be achieved. The extent to which the investment performance and risks associated with the Fund correlates to those of a particular Underlying Fund will depend upon the extent to which the Fund’s assets are allocated from time to time for investment in the Underlying Fund, which will vary. The Fund also will bear its pro-rata portion of the operating expenses of the Underlying Funds, including Management and Administrative Fees and 12b-1 fees.

Volatility risk – The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund’s net asset value per share to experience significant appreciations or depreciations in value over short periods of time.

Warrants risk – If the price of the underlying stock does not rise above the exercise price before the warrant expires, the warrant generally expires without any value and the Fund loses any amount it paid for the warrant. As a result, investments in warrants may involve substantially more risk than investments in common stock. Warrants may trade in the same markets as their underlying stock; however, the price of the warrant does not necessarily move with the price of the underlying stock.

When-issued and delayed delivery securities and forward commitments risk – When-issued and delayed delivery securities and forward commitments transactions arise when securities are purchased by the Fund with payment and delivery taking place in the future in order to secure what is considered to be an advantageous price or yield to the Fund at the time of entering into the transaction. When-issued and delayed delivery securities and forward commitments involve the risk that the security the Fund buys will lose value prior to its delivery. There also is the risk that the security will not be issued or that the other party to the transaction will not meet its obligation. If this occurs, the Fund loses both the investment opportunity for the assets it set aside to pay for the security and any gain in the security’s price. In addition, these investments may create a form of investment leverage, which may increase the Fund’s volatility and may require the Fund to liquidate portfolio securities when it may not be advantageous.

MANAGEMENT OF THE TRUST

Under Massachusetts law and the Trust's Declaration of Trust and By-Laws, the Trust's Board of Trustees (the "Board") is responsible for managing the business and affairs of the Trust.

Investment Adviser

Jackson National Asset Management, LLCSM ("JNAM®" or the "Adviser"), located at 1 Corporate Way, Lansing, Michigan 48951, serves as the investment adviser to the Funds and provides the Funds with professional investment supervision and management under an Investment Advisory and Management Agreement between the Trust and the Adviser. The Adviser is registered with the SEC under the Investment Advisers Act of 1940, as amended (the "Advisers Act").

The Adviser is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

Under the Investment Advisory and Management Agreement, which applies to all Funds except the JNL Mellon Master Funds, and under the Unitary Fee Agreement, which applies to the JNL Mellon Master Funds, the Adviser is responsible for managing the affairs and overseeing the investments of the Funds and determining how voting and other rights with respect to securities owned by each Fund will be exercised. The Adviser also provides recordkeeping, administrative and exempt transfer agent services to the Funds and oversees the performance of services provided to each Fund by other service providers, including the custodian and shareholder servicing agent. The Adviser is authorized to delegate certain of its duties with respect to a Fund to a sub-adviser, subject to the approval of the Board, and is responsible for overseeing that Sub-Adviser's performance. The Adviser is solely responsible for payment of any fees to the Sub-Advisers.

The Adviser plays an active role in advising and monitoring each Fund and Sub-Adviser, if any. For those Funds the Adviser directly manages, the Adviser, among other things, implements the investment objective and program by selecting securities and determining asset allocation ranges. When appropriate, the Adviser recommends to the Board potential sub-advisers for a Fund. For those Funds managed by a Sub-Adviser, the Adviser monitors each Sub-Adviser's Fund management team to determine whether its investment activities remain consistent with the Funds' investment strategies and objectives. The Adviser also monitors changes that may impact the Sub-Adviser's overall business, including the Sub-Adviser's operations and changes in investment personnel and senior management, and regularly performs due diligence reviews of each Sub-Adviser. In addition, the Adviser obtains detailed, comprehensive information concerning each Fund's and Sub-Adviser's performance and Fund operations. The Adviser is responsible for providing regular reports on these matters to the Board.

A discussion regarding the Board's basis for approving the Investment Advisory and Management Agreement for all Funds, except JNL/American Funds Bond Fund of America Fund, JNL/Baillie Gifford U.S. Equity Growth Fund, JNL/Morningstar PitchBook Listed Private Equity Index Fund, JNL Bond Index Fund, JNL Emerging Markets Index Fund, JNL International Index Fund, JNL Mid Cap Index Fund, and JNL Small Cap Index Fund, is available in the applicable Fund's Annual Report for the period ended December 31, 2021.

A discussion regarding the Board's basis for approving the Investment Advisory and Management Agreement for JNL/American Funds Bond Fund of America Fund, JNL/Baillie Gifford U.S. Equity Growth Fund, JNL/Morningstar PitchBook Listed Private Equity Index Fund, JNL Bond Index Fund, JNL Emerging Markets Index Fund, JNL International Index Fund, JNL Mid Cap Index Fund, and JNL Small Cap Index Fund, is available in the Fund's Annual Report for the period ended December 31, 2020.

A discussion regarding the Board's basis for approving the Unitary Fee Agreement for the JNL Mellon Master Funds is available in the Trust's Annual Report for the period ended December 31, 2020.

As of December 31, 2021, the Adviser managed approximately \$285.37 billion in assets.

Management Fee

As compensation for its advisory services, the Adviser receives a fee from the Trust computed separately for each Fund, accrued daily and payable monthly. The fee the Adviser receives from each Fund is set forth below as an annual percentage of the net assets of the Fund.

The table below shows the advisory fee rate schedule for each Fund (except the JNL Mellon Master Funds) as set forth in the Investment Advisory and Management Agreement and, if applicable, the aggregate annual fee each Fund paid to the Adviser for the fiscal year ended December 31, 2021. Under this agreement, each Fund's advisory fee rate schedule is subject to contractual breakpoints that reduce the advisory fee rate should the Fund's average daily net assets exceed specified amounts. Each Feeder Fund charges the advisory fee disclosed in the table below. Each Master Fund charges a separate advisory fee.

The advisory fee the Adviser charges to the JNL Mellon Master Funds is a unitary fee and is shown in the table below. Under the Unitary Fee Agreement for the JNL Mellon Master Funds, the Adviser pays all of these funds' expenses, except the fees payable under the Unitary Fee Agreement, anti-money laundering service fees, borrowing expenses, brokerage commissions, licensing costs, registration fees, Rule 12b-1 fees, short sales costs, taxes, expenses related to these Funds' Chief Compliance Officer, Trustee insurance premiums and other Trustee insurance expenses, fees and expenses of the Independent Trustees and of independent legal counsel to the Independent Trustees, and nonrecurring and extraordinary expenses.

In addition to the fees disclosed below, each of the following Funds will indirectly bear its pro rata share of the fees of certain Underlying Funds: JNL/Goldman Sachs Managed Funds, JNL Conservative Allocation Fund, JNL Moderate Allocation Fund, JNL Moderate Growth Allocation Fund, JNL Growth Allocation Fund, JNL Aggressive Growth Allocation Fund, JNL/American Funds Moderate Growth Allocation Fund, and JNL/American Funds Growth Allocation Fund.

The following terms apply in connection with JNAM's contractual obligation to waive fees and reimburse expenses for the AF Feeder Funds, JNL Mellon Master Funds, JNL Mellon Feeder Funds, and JNL S&P 500 Index Fund. The fee waiver will continue for at least one year from the date of this Prospectus, unless the Board approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board, and there is no assurance that the Adviser will continue to waive fees and reimburse expenses. The Funds have agreed to reimburse the Adviser in an amount equal to the full amount of fees that would have been payable by the Fund to the Adviser, or were reimbursed by the Adviser in excess of its Adviser fee. Such reimbursement by the Fund shall be made monthly, but only if the operating expenses of the Fund (exclusive of brokerage costs, interest, taxes and dividend and extraordinary expenses), without regard to such repayment, are at an annual rate (as a percentage of the average daily net assets of the Fund) equal to or less than the Fund's investment income for the period.

The following terms apply in connection with JNAM's contractual obligation to waive fees and/or reimburse expenses for the JNL/WMC Government Money Market Fund. The fee waiver will continue through April 30, 2023. The fee waiver will automatically renew for additional subsequent one-year terms unless the Board of Trustees approves the elimination of the fee waiver. This fee waiver is subject to yearly review and approval by the Board, and there is no assurance that the Adviser will continue to waive fees and/or reimburse expenses. The Fund has agreed to reimburse the Adviser in an amount equal to the full amount of fees that would have been payable by the Fund to the Adviser, or were reimbursed by the Adviser in excess of its Adviser fee. Such reimbursement by the Fund shall be made monthly, but only if the operating expenses of the Fund (exclusive of transaction costs, if any, interest, taxes and dividend and extraordinary expenses), without regard to such repayment, are at an annual rate (as a percentage of the average daily net assets of the Fund) equal to or less than the Fund's investment income for the period.

Fund	Assets	Advisory Fee (Annual Rate Based on Average Daily Net Assets of each Fund)	Aggregate Fee Paid to Adviser based on Average Daily Net Asset as of December 31, 2021
JNL/American Funds Balanced Fund ¹	\$0 to \$500 million \$500 million to \$3 billion \$3 billion to \$5 billion Over \$5 billion	.550% .500% .490% .480%	0.51%
JNL/American Funds Bond Fund of America Fund ^{1,2}	\$0 to \$1 billion \$1 billion to \$3 billion \$3 billion to \$5 billion Over \$5 billion	.400% .375% .350% .340%	0.40%
JNL/American Funds Capital Income Builder Fund ¹	\$0 to \$1 billion \$1 billion to \$3 billion \$3 billion to \$5 billion Over \$5 billion	.525% .500% .490% .480%	0.53%

¹ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a feeder fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or

Fund	Assets	Advisory Fee (Annual Rate Based on Average Daily Net Assets of each Fund)	Aggregate Fee Paid to Adviser based on Average Daily Net Asset as of December 31, 2021
------	--------	--	--

elimination of the waiver.

² The Fund commenced operations on April 26, 2021.

³ The Fund will commence operations on April 25, 2022.

⁴ Prior to April 26, 2021, the Fund did not pay an advisory fee.

⁵ Effective October 14, 2019, JNAM has contractually agreed to waive its management fee in an amount equivalent to the Acquired Fund Fees and Expenses (“AFFE”) attributable to the Fund’s investment in funds managed by the Sub-Adviser (each an “JPMorgan Underlying Fund”). The AFFE for each JPMorgan Underlying Fund is the “Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements” disclosed in the current prospectus for each JPMorgan Underlying Fund.

⁶ Effective April 26, 2021, the Fund became a feeder fund. JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a feeder fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

⁷ JNAM has contractually agreed to waive 0.17% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

⁸ JNAM has contractually agreed to waive a portion of the Fund’s management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of T. Rowe Price attributable to the Fund’s investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

⁹ Effective March 16, 2020, JNAM has contractually agreed to waive fees and/or reimburse expenses of the Fund to the extent necessary to limit the total operating expenses of each class of shares of the Fund, transactional costs, if any, interest, taxes and dividend and extraordinary expenses, to an annual rate (as a percentage of the average daily net assets of the Fund) equal to or less than the Fund’s investment income for the period. The fee waiver will continue through April 30, 2023. The Adviser may extend the fee waiver for a subsequent one-year term, and thereafter, the fee waiver will automatically renew for additional subsequent one-year terms unless the Board of Trustees approves the elimination of the fee waiver. In addition, when the Fund receives income sufficient to pay a dividend, the Adviser may recapture previously waived fees and expenses for a period of three years.

¹⁰ JNAM has contractually agreed to waive 0.13% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

¹¹ JNAM has contractually agreed to waive 0.055% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

¹² JNAM has contractually agreed to waive 0.105% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

¹³ JNAM has contractually agreed to waive 0.12% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Investment Sub-Advisers

The Adviser has engaged certain other investment advisers to serve as Sub-Advisers to certain assigned Funds under separate Sub-Advisory Agreements between each Sub-Adviser and the Adviser. The Adviser selects, contracts with and compensates Sub-Advisers to manage the investment and reinvestment of the assets of the Funds of the Trust. The Adviser monitors the compliance of such Sub-Advisers with the investment objectives and related policies of each Fund and reviews the performance of such Sub-Advisers and reports periodically on such performance to the Trustees of the Trust.

Under the terms of each of the Sub-Advisory Agreements, the Sub-Advisers are responsible for supervising and managing the investment and reinvestment of the assets of an assigned Fund and for directing the purchase and sale of the Fund’s investment securities, subject to the oversight and supervision of the Adviser and the Board. The Sub-Advisers formulate a continuous investment program for an assigned Fund consistent with the Fund’s investment strategies, objectives and policies outlined in this Prospectus. Each Sub-Adviser implements such program by purchases and sales of securities and regularly reports to the Adviser and the Board with respect to the implementation of such programs.

As compensation for its sub-advisory services, each Sub-Adviser receives a fee from the Adviser, computed separately for the applicable Fund, stated as an annual percentage of the Fund’s net assets. The SAI shows the aggregate fees paid to the Sub-Advisers

for the fiscal year ended December 31, 2021. The Adviser currently is obligated to pay the Sub-Advisers out of the advisory fee it receives from the Fund.

A discussion regarding the Board's basis for approving the Sub-Advisory Agreements for all Funds, except JNL Multi-Manager International Small Cap Fund (for the portion of assets managed by Baillie Gifford Overseas Limited), JNL Multi-Manager Small Cap Value Fund (for the portion of assets managed by River Road Asset Management, LLC), JNL/Baillie Gifford International Growth Fund, JNL/Baillie Gifford U.S. Equity Growth Fund, JNL/Goldman Sachs 4 Fund, JNL Multi-Manager Alternative Fund (for the portion of assets managed by Kayne Anderson Rudnick Investment Management, LLC), JNL/Mellon U.S. Stock Market Index Fund, JNL/Morningstar PitchBook Listed Private Equity Index Fund, JNL/WMC Equity Income Fund, JNL/WMC Global Real Estate Fund, JNL Bond Index Fund, JNL Emerging Markets Index Fund, JNL International Index Fund, JNL Mid Cap Index Fund, and JNL Small Cap Index Fund, is available in the applicable Fund's Annual Report for the period ended December 31, 2021.

A discussion regarding the Board's basis for approving the Sub-Advisory Agreements for JNL Multi-Manager International Small Cap Fund (for the portion of assets managed by Baillie Gifford Overseas Limited), JNL Multi-Manager Small Cap Value Fund (for the portion of assets managed by River Road Asset Management, LLC), JNL/Baillie Gifford International Growth Fund, JNL/Baillie Gifford U.S. Equity Growth Fund, JNL/Goldman Sachs 4 Fund, JNL Multi-Manager Alternative Fund (for the portion of assets managed by Kayne Anderson Rudnick Investment Management, LLC), JNL/Mellon U.S. Stock Market Index Fund, JNL/Morningstar PitchBook Listed Private Equity Index Fund, JNL/WMC Equity Income Fund, JNL/WMC Global Real Estate Fund, JNL Bond Index Fund, JNL Emerging Markets Index Fund, JNL International Index Fund, JNL Mid Cap Index Fund, and JNL Small Cap Index Fund, is available in the applicable Fund's Annual Report for the period ended December 31, 2020.

The Adviser and the Trust, together with other investment companies of which the Adviser is investment adviser, have received an exemptive order (the "Order") that allows the Adviser to hire, replace or terminate unaffiliated Sub-Advisers or materially amend a Sub-Advisory Agreement with an unaffiliated Sub-Adviser with the approval of the Board, but without the approval of shareholders. Under the terms of the Order, if a new Sub-Adviser is hired by the Adviser, the affected Fund will provide shareholders with information about the new Sub-Adviser and new Sub-Advisory Agreement within ninety (90) days of the change. The Order allows the Funds to operate more efficiently and with greater flexibility. At a shareholder meeting of the Trust held on October 26, 2000, the shareholders of all Funds approved this multi-manager structure.

The Adviser does not expect to recommend frequent changes of Sub-Advisers. Although the Adviser will monitor the performance of the Sub-Advisers, there is no certainty that any Sub-Adviser or Fund will obtain favorable results at any given time.

Portfolio Manager(s)

For information about the portfolio management team responsible for the day-to-day management of a particular Fund, please refer to each Fund's Summary Prospectus or the disclosure pertaining to the Fund in the "Additional Information About the Funds" section of this Prospectus.

ADMINISTRATOR

JNAM serves as the administrator to the Funds. JNAM, in its capacity as administrator, provides or procures, at its own expense, certain legal, audit, fund accounting, custody (except overdraft and interest expense), printing and mailing, and other administrative services necessary for the operation of the Funds.

In addition, JNAM, in its capacity as administrator for all Funds except the JNL Mellon Master Funds, also pays a portion of the costs of the Funds' Chief Compliance Officer. In return for these services, the Funds except the JNL Mellon Master Funds and the JNL Mellon Feeder Funds, pay JNAM an administrative fee, as outlined below, equal to a certain percentage of the average daily net assets of the Fund's Class A and Class I shares, accrued daily and paid monthly. The JNL Mellon Feeder Funds pay JNAM an administrative fee, as outlined below, equal to a certain percentage of the average daily net assets of each such Fund's respective JNL Mellon Master Fund, accrued daily and paid monthly.

The JNL Mellon Master Funds have a unitary fee structure, as described above, and therefore do not pay JNAM an administrative fee.

¹The Fund commenced operations April 25, 2022.

²Jackson National Asset Management, LLC has contractually agreed to waive 0.05% of the administrative fees of the Class I shares of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

³Jackson National Asset Management, LLC has contractually agreed to waive 0.06% of the administrative fees of the Class I shares of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

⁴Jackson National Asset Management, LLC has contractually agreed to waive 0.13% of the administrative fees of the Class I shares of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

⁵Jackson National Asset Management, LLC has contractually agreed to waive 0.12% of the administrative fees of the Class I shares of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Each Fund is responsible for trading expenses including brokerage commissions, interest and taxes, and other non-operating expenses. Each Fund is also responsible for nonrecurring and extraordinary legal fees, interest expenses, registration fees, licensing costs, directors and officers insurance, expenses related to the Funds' Chief Compliance Officer, and the fees and expenses of the Independent Trustees and of independent legal counsel to the Independent Trustees (categorized as "Other Expenses" in the fee tables).

DISTRIBUTOR

Jackson National Life Distributors LLC ("JNLD"), a wholly owned subsidiary of Jackson, is the principal underwriter of the Funds and is responsible for promoting sales of the Funds' shares. JNLD also is the principal underwriter of the variable annuity insurance products issued by Jackson and its subsidiaries.

JNLD and/or an affiliate have the following relationships with certain Sub-Advisers and/or their affiliates:

- JNLD receives payments from certain of the Sub-Advisers to assist in defraying the costs of certain promotional and marketing meetings in which those Sub-Advisers participate. The amounts paid depend on the nature of the meetings, the number of meetings attended, the costs expected to be incurred, and the level of the Sub-Adviser's participation.
- JNLD acts as distributor of variable insurance contracts and variable life insurance policies ("Contracts") issued by Jackson and its subsidiary Jackson National Life Insurance Company of New York ("Jackson NY"). The compensation consists of commissions, trail commissions, and other compensation or promotional incentives as described in the Prospectus or statement of additional information for the Contracts.

CLASSES OF SHARES

The Trust adopted a multi-class plan pursuant to Rule 18f-3 under the 1940 Act. Under the multi-class plan, each Fund has two classes of shares (Class A and Class I).

The Class A shares of each Fund are subject to a Rule 12b-1 fee equal to 0.30% of the Fund's average daily net assets attributable to Class A shares. Class I shares are not subject to a Rule 12b-1 fee.

Under the multi-class structure, the Class A shares and Class I shares of each Fund represent interests in the same portfolio of securities and are substantially the same except for "class expenses." The expenses of each Fund are borne by each Class of shares based on the net assets of the Fund attributable to each class, except that class expenses are allocated to the appropriate class. "Class expenses" include any distribution, administrative or service expense allocable to that class, pursuant to the 12b-1 Plan described below, and any other expenses that JNAM determines, subject to ratification or approval by the Board, to be properly allocable to that class, including: (i) printing and postage expenses related to preparing and distributing to the shareholders of a particular class (or

contract owners of variable contracts funded by shares of such class) materials such as Prospectuses, shareholder reports and (ii) professional fees relating solely to one class.

RULE 12B-1 PLAN

All of the Funds have adopted a distribution plan in accordance with the provisions of Rule 12b-1 under the 1940 Act. Effective July 1, 2017, the Funds adopted an Amended and Restated Distribution Plan (“Amended Plan”).

The Board, including all of the Independent Trustees, must approve, at least annually, the continuation of the Amended Plan. Under the Amended Plan, each Fund pays a Rule 12b-1 fee to JNLD, as principal underwriter, at an annual rate of 0.30% of the Fund’s average daily net assets attributed to Class A shares, as compensation for distribution, administrative or other service activities incurred by JNLD and its affiliates with respect to Class A shares. Because these fees are paid out of the Fund’s assets on an on-going basis, over time these fees will increase the cost of your investment and may cost you more than paying other types of sales charges. To the extent consistent with applicable law and the Amended Plan, JNLD may use the Rule 12b-1 fee to compensate broker-dealers, administrators, financial intermediaries or others for providing or assisting in providing distribution and related additional services.

The Amended Plan was approved by shareholders holding Class A shares of the Funds at a special meeting of shareholders held on June 22, 2017.

The Board has approved the suspension or reduction of 12b-1 fee payments for the JNL/WMC Government Money Market Fund as needed in order to maintain a yield for Class A shares of at least 0%.

INVESTMENT IN FUND SHARES

Shares of the Funds are presently offered only to separately managed accounts of Jackson (1 Corporate Way, Lansing, Michigan 48951) and Jackson National Life Insurance Company of New York (“Jackson NY”) (2900 Westchester Avenue, Purchase, New York 10577) (collectively, “Separate Accounts”) to fund the benefits under certain variable insurance contracts and variable life insurance policies (collectively, “Contracts”), to non-qualified retirement plans, and to other regulated investment companies. The Separate Accounts, through their various sub-accounts that invest in designated Funds, purchase the shares of the Funds at their NAV using premiums received on Contracts issued by the insurance company. Shares of the Funds are not available to the general public for direct purchase.

Purchases are effected at NAV next determined after the purchase order is received by JNAM as the Funds’ transfer agent in proper form. There is no sales charge.

Certain of the Funds are managed by a sub-adviser who manages publicly available mutual funds that have similar names and investment objectives. While some of the Funds may be similar to or modeled after publicly available mutual funds, Contract purchasers should understand that the Funds are not otherwise directly related to any publicly available mutual fund. Consequently, the investment performance of publicly available mutual funds and any corresponding Fund may differ substantially.

The price of each Fund’s shares is based on its NAV. The NAV of a Fund’s shares is generally determined by the Adviser once each day on which the New York Stock Exchange (“NYSE”) is open (a “Business Day”) at the close of the regular trading session of the NYSE (normally 4:00 p.m. Eastern Time, Monday through Friday). However, consistent with legal requirements, calculation of the Fund’s NAV may be suspended on days determined by the Board during times of NYSE market closure, which may include times during which the SEC issues policies or protocols associated with such closure pursuant to Section 22(e) of the Investment Company Act of 1940, as amended. The NAV per share of each Fund is calculated by adding the value of all securities and other assets of a Fund, deducting its liabilities, and dividing by the number of shares outstanding. To the extent circumstances prevent the use of the primary calculation methodology previously described, the Adviser may use alternative methods to calculate the NAV. Generally, the value of exchange-listed or exchange-traded securities is based on their respective market prices, and fixed income securities are valued based on prices provided by an independent pricing service. Current NAV per share of the Fund’s classes may be obtained by calling 1-800-644-4565 (Jackson Customer Care).

In addition, the following Funds are comprised of Underlying Funds: JNL/Goldman Sachs Managed Funds, JNL/American Funds Moderate Growth Allocation Fund, JNL/American Funds Growth Allocation Fund, JNL Conservative Allocation Fund, JNL Moderate Allocation Fund, JNL Moderate Growth Allocation Fund, JNL Growth Allocation Fund, JNL Aggressive Growth Allocation Fund, JNL/Vanguard Moderate ETF Allocation Fund, JNL/Vanguard Moderate Growth ETF Allocation Fund, and JNL/Vanguard Growth ETF Allocation Fund. The value of each Underlying Fund is determined based on the number of shares owned multiplied by the NAV of the respective Underlying Funds.

Domestic fixed-income and foreign securities are normally priced using data reflecting the closing of the principal markets or market participants for those securities, which may be earlier than the NYSE close. Information that becomes known to the Funds or its agents after the NAV has been calculated on a particular day will not normally be used to retroactively adjust the price of a security or the NAV determined earlier that day.

The Board has adopted procedures pursuant to which the Adviser may determine, subject to Board oversight, the “fair value” of a security for which a current market price is not available or the current market price is considered unreliable or inaccurate. Under these procedures, the “fair value” of a security generally will be the amount, determined by the Adviser in good faith, that the owner of such security might reasonably expect to receive upon its current sale.

The Board has established a valuation committee to review fair value determinations pursuant to the Trust’s “Valuation Policies and Procedures.” The valuation committee will also review the value of restricted securities, securities and assets for which a current market price is not readily available, and securities and assets for which there is reason to believe that the most recent market price does not accurately reflect current value (e.g. disorderly market transactions). In the event that the NYSE is closed unexpectedly or opens for trading but closes earlier than scheduled, the valuation committee will evaluate if trading activity on other U.S. exchanges and markets for equity securities is otherwise reflective of normal market activity. To the extent an NYSE closure is determined to be accompanied by a disruption of normal market activity, the valuation committee may utilize the time the NYSE closed for purposes of measuring and calculating the Funds’ NAVs. To the extent an NYSE closure is determined to not have resulted in a disruption of normal market activity, the valuation committee may utilize the time the NYSE was scheduled to close for purposes of measuring and calculating the Funds’ NAVs.

A Fund may invest in securities primarily listed on foreign exchanges and that trade on days when the Fund does not price its shares. As a result, a Fund’s NAV may change on days when shareholders are not able to purchase or redeem the Fund’s shares.

Because the calculation of a Fund’s NAV does not take place contemporaneously with the determination of the closing prices of the majority of foreign portfolio securities used in the calculation, there exists a risk that the value of foreign portfolio securities will change after the close of the exchange on which they are traded, but before calculation of the Fund’s NAV (“time-zone arbitrage”). Accordingly, the Trust’s procedures for valuing of portfolio securities also authorize the Adviser, subject to Board oversight, to determine the “fair value” of such foreign securities for purposes of calculating a Fund’s NAV. The Adviser will “fair value” foreign securities held by the Fund if it determines that a “significant event” has occurred subsequent to the close of trading in such securities on the exchanges or markets on which the securities owned by a Fund principally are traded, but prior to the time of the Fund’s NAV calculation, which reasonably can be expected to affect the value of such security. Under the Trust’s valuation procedures, a “significant event” affecting a single issuer might include, but is not limited to, an announcement by the issuer, a competitor, a creditor, a major holder of the issuer’s securities, a major customer or supplier, or a governmental, regulatory or self-regulatory authority relating to the issuer, the issuer’s products or services, or the issuer’s securities, and a “significant event” affecting multiple issuers might include, but is not limited to, a substantial price movement in other securities markets, an announcement by a governmental, regulatory or self-regulatory authority relating to securities markets, political or economic matters, or monetary or credit policies, a natural disaster such as an earthquake, flood or storm, or the outbreak of civil strife or military hostilities. When fair valuing foreign equity securities, the Adviser adjusts the closing prices of foreign portfolio equity securities (except foreign equity securities traded in North America and South America) based upon pricing models provided by a third party vendor in order to reflect the “fair value” of such securities for purposes of determining a Fund’s NAV. Foreign equity securities traded in North America and South America may be fair valued utilizing international adjustment factors in response to local market holidays, exchange closures, or other events as deemed necessary in order to reflect the “fair value” of such securities for purposes of determining a Fund’s NAV.

These procedures seek to minimize the opportunities for “time zone arbitrage” in Funds that invest all or substantial portions of their assets in foreign securities, thereby seeking to make those Funds significantly less attractive to “market timers” and other investors who might seek to profit from time zone arbitrage and seeking to reduce the potential for harm to other Fund investors resulting from such practices. However, these procedures may not completely eliminate opportunities for time zone arbitrage because it is not possible to predict in all circumstances whether post-closing events will have a significant impact on securities prices.

All investments in the Trust are credited to the shareholder’s account in the form of full and fractional shares of the designated Fund (rounded to the nearest 1/1000 of a share). The Trust does not issue share certificates.

“MARKET TIMING” POLICY

Fund shares may only be purchased by Separate Accounts of Jackson and Jackson NY, those insurance companies themselves, non-qualified retirement plans and certain other regulated investment companies.

The interests of a Fund’s long-term shareholders may be adversely affected by certain short-term trading activity by other contract owners invested in separate accounts of Jackson and Jackson NY that invest in the Fund. Such short-term trading activity, when excessive, has the potential to, among other things, compromise efficient portfolio management, generate transaction and other costs, and dilute the value of Fund shares held by long-term shareholders. This type of excessive short-term trading activity is referred to herein as “market timing.” The Funds are not intended to serve as vehicles for market timing. The Board has adopted policies and procedures with respect to market timing.

The Funds, directly and through its service providers, and the insurance company and qualified retirement plan service providers (collectively, “service providers”) take various steps designed to deter and curtail market timing with the cooperation of the insurance companies who invest in the Funds. For example, in the event of a round trip transfer, complete or partial redemptions by a

shareholder from a sub-account investing in a Fund is permitted; however, once a complete or partial redemption has been made from a sub-account that invests in a Fund, through a sub-account transfer, shareholders will not be permitted to transfer any value back into that sub-account (and corresponding Fund) within fifteen (15) calendar days of the redemption. The Funds will treat as short-term trading activity any transfer that is requested into a sub-account that was previously redeemed within the previous fifteen (15) calendar days, whether the transfer was requested by the shareholders or a third party authorized by the shareholder. This policy does not apply to a money market Fund.

In addition to identifying any potentially disruptive trading activity, the Funds' Board has adopted a policy of "fair value" pricing to discourage investors from engaging in market timing or other excessive trading strategies for international Funds.

The Funds' "fair value" pricing policy will apply to the Underlying Funds in which certain of the Funds invest.

The Funds' "fair value" pricing policy applies to all Funds where a significant event (as described above) has occurred. The Funds' "fair value" pricing policy is described under "Investment in Fund Shares" above.

The policies and procedures described above are intended to deter and curtail market timing in the Fund. However, there can be no assurance that these policies, together with those of Jackson, Jackson NY and any other insurance company that may invest in the Funds in the future, will be totally effective in this regard. The Funds rely on Jackson and Jackson NY to take the appropriate steps, including daily monitoring of separate account trading activity, to further deter market timing. If they are ineffective, the adverse consequences described above could occur.

A description of Jackson's anti-market timing policies and procedures can be found in the appropriate variable insurance contract Prospectus (the "Separate Account Prospectus"). The rights of the Separate Accounts to purchase and redeem shares of a Fund are not affected by any Fund's anti-market timing policies if they are not in violation of the Separate Accounts' anti-market timing policies and procedures.

DISCLOSURE OF PORTFOLIO SECURITIES

A description of each Fund's policies and procedures relating to disclosure of portfolio securities is available in the Funds' SAI and at www.jackson.com.

REDEMPTION OF FUND SHARES

A Separate Account redeems shares of a Fund to make benefit or withdrawal payments under the terms of its Contracts. Redemptions typically are processed on any day on which the Trust and the NYSE are open for business and are effected at net asset value next determined after the redemption order is received by JNAM, the Funds' transfer agent, in proper form.

The Trust may suspend the right of redemption only under the following circumstances:

- When the NYSE is closed (other than weekends and holidays) or trading is restricted;
- When an emergency exists, making disposal of portfolio securities or the valuation of net assets not reasonably practicable; or
- During any period when the SEC has by order permitted a suspension of redemption for the protection of shareholders.

The Funds typically expect that a Fund will hold cash or cash equivalents to meet redemption requests. The Funds may also use the proceeds of orders to purchase Fund shares or the proceeds from the sale of portfolio securities to meet redemption requests, if consistent with the management of the Fund. These redemption methods will be used regularly and may also be used in stressed market conditions. The Funds have in place a line of credit intended to provide short-term financing, if necessary, subject to certain conditions, in connection with stressed market conditions or atypical redemption activity. The Funds, pursuant to an exemptive order issued by the SEC and a master Interfund Lending agreement, also have the ability to lend or borrow money for temporary purposes directly to or from one another.

In the case of a liquidity event, a Fund's share price and/or returns may be negatively impacted. If a liquidity event occurs, the Adviser will notify the Board of the liquidity event and take corrective action. Corrective action may include, among other things, use of the Fund's line of credit or Interfund Lending Program.

Redemptions will generally be in the form of cash, although a Fund reserves the right to redeem in kind from another Fund. If a Fund redeems shares in kind from another Fund, it may bear transaction costs and will bear market risks until such time as such securities are converted to cash.

TAX STATUS

General

The Trust consists of Funds that are either treated for U.S. federal income tax purposes as corporations that intend to qualify and be eligible for treatment as regulated investment companies (“Regulated Investment Company Funds”) or partnerships (“Partnership Funds”).

Dividends from net investment income are declared and distributed at least annually to all Regulated Investment Company Funds’ shareholders except the JNL/WMC Government Money Market Fund shareholders. Dividends from net investment income, if any, are declared daily and payable monthly to the JNL/WMC Government Money Market Fund shareholders. Distributions from net realized capital gains, if any, are declared and distributed at least annually to shareholders of any Regulated Investment Company Fund to the extent they exceed available capital loss carryforwards.

Dividends and other distributions by a Fund, if any, are automatically reinvested at net asset value in shares of the distributing Fund, unless otherwise requested by a shareholder. There are no fees or sales charges on reinvestments.

Regulated Investment Company Funds

Effective January 1, 2021, the Board of Trustees approved the JNL/Baillie Gifford International Growth Fund (formerly, JNL/Vanguard International Fund) to change its U.S. federal income tax status from partnership to a regulated investment company.

Each Regulated Investment Company Fund (for purposes of this section, a “Fund”) intends to qualify and be eligible for treatment as a “regulated investment company” under Subchapter M of the Code. A regulated investment company generally is not subject to tax at the fund level on income and gains from investments that are distributed to shareholders. Each Fund intends to distribute all its net investment income and net realized capital gains, if any, to shareholders no less frequently than annually and, therefore, does not expect to be required to pay any federal income or excise taxes. However, a Fund’s failure to qualify and be eligible for treatment as a regulated investment company would result in fund-level taxation, and consequently, a reduction in income available for distribution to shareholders.

Each Fund is treated as a separate corporation for purposes of the Code. Therefore, the assets, income, and distributions of each Fund are considered separately for purposes of determining whether or not the Fund qualifies as a regulated investment company.

Partnership Funds

Effective April 24, 2017, the Board of Trustees approved the JNL/Mellon DowSM Index Fund to change its U.S. federal income tax status from a disregarded entity to a partnership.

Effective January 1, 2019, the Board of Trustees approved the following Funds to change their U.S. federal income tax status from a regulated investment company to a partnership:

JNL/American Funds Balanced Fund	JNL/Mellon S&P 400 MidCap Index Fund
JNL/American Funds Capital World Bond Fund	JNL/Mellon Small Cap Index Fund
JNL/American Funds Global Growth Fund	JNL/Mellon Nasdaq [®] 100 Index Fund
JNL/American Funds Global Small Capitalization Fund	JNL/Mellon Communication Services Sector Fund
JNL/American Funds International Fund	JNL/Mellon Consumer Discretionary Sector Fund
JNL/American Funds New World Fund	JNL/Mellon Energy Sector Fund
JNL Multi-Manager Alternative Fund	JNL/Mellon Financial Sector Fund
JNL Multi-Manager Mid Cap Fund	JNL/Mellon Healthcare Sector Fund
JNL Multi-Manager Small Cap Growth Fund	JNL/Mellon Information Technology Sector Fund
JNL Multi-Manager Small Cap Value Fund	JNL/MFS Mid Cap Value Fund
JNL/BlackRock Global Allocation Fund	JNL/Morningstar U.S. Sustainability Index Fund
JNL/BlackRock Global Natural Resources Fund	JNL/PIMCO Real Return Fund
JNL/BlackRock Large Cap Select Growth Fund	JNL/PPM America Floating Rate Income Fund
JNL/DFA U.S. Core Equity Fund	JNL/PPM America High Yield Bond Fund
JNL/DoubleLine [®] Emerging Markets Fixed Income Fund	JNL/PPM America Total Return Fund
JNL/DoubleLine [®] Shiller Enhanced CAPE Fund	JNL/T. Rowe Price Capital Appreciation Fund
JNL/DoubleLine [®] Total Return Fund	JNL/T. Rowe Price Established Growth Fund
JNL/Franklin Templeton Income Fund	JNL/T. Rowe Price Mid-Cap Growth Fund
JNL/Invesco Global Real Estate Fund	JNL/T. Rowe Price Short-Term Bond Fund
JNL/Invesco Small Cap Growth Fund	JNL/T. Rowe Price U.S. High Yield Fund
JNL/JPMorgan Global Allocation Fund	JNL/T. Rowe Price Value Fund
JNL/JPMorgan Midcap Growth Fund	JNL/Westchester Capital Event Driven Fund
JNL/JPMorgan U.S. Government & Quality Bond Fund	JNL/WMC Balanced Fund
JNL/JPMorgan U.S. Value Fund	JNL/WMC Value Fund
JNL/Mellon Equity Income Fund	

Effective January 1, 2020, the Board of Trustees approved the following Funds to change their U.S. federal income tax status from a regulated investment company to a partnership:

JNL/DFA U.S. Small Cap Fund	JNL/Mellon Utilities Sector Fund
JNL/DoubleLine® Core Fixed Income Fund	JNL/Mellon S&P 500 Index Fund
JNL/Fidelity Institutional Asset Management® Total Bond Fund	JNL/Neuberger Berman Commodity Strategy Fund
JNL/First Sentier Global Infrastructure Fund	JNL/Neuberger Berman Strategic Income Fund
JNL/GQG Emerging Markets Equity Fund	JNL/PIMCO Income Fund
JNL/Invesco Diversified Dividend Fund	JNL/PIMCO Investment Grade Credit Bond Fund
JNL/Invesco Global Growth Fund	JNL/RAFI® Fundamental U.S. Small Cap Fund
JNL/Mellon Bond Index Fund	JNL/RAFI® Multi-Factor U.S. Equity Fund

Effective January 1, 2022, the Board of Trustees approved the following Funds to change their U.S. federal income tax status from a regulated investment company to a partnership:

JNL/Mellon Emerging Markets Index Fund
JNL/Mellon World Index Fund
JNL Emerging Markets Index Fund

Each Partnership Fund (for purposes of this section, a “Fund”) expects to be treated as a partnership that is not a “publicly traded partnership” for U.S. federal income tax purposes. If a Fund were not to qualify for such treatment, the Fund could be subject to U.S. federal income tax at the Fund level, which would reduce the value of an investment in such Fund.

As a partnership that is not a “publicly traded partnership,” each Fund is generally not itself subject to U.S. federal income tax. Instead, each shareholder will be required to take into account for U.S. federal income tax purposes its allocable share of a Fund’s income, gains, losses, deductions, credits, and other tax items, without regard to whether such shareholder has received or will receive corresponding distributions from the Fund.

Special Considerations for Separate Accounts of Insurance Companies (all Funds)

The interests in each Fund are owned by separate accounts of participating insurance companies, qualified pension and retirement plans, and certain other eligible persons or plans permitted to hold shares of the Fund pursuant to the applicable Treasury regulations without impairing the ability of participating insurance companies to satisfy the diversification requirements of Section 817(h) of the Internal Revenue Code. Provided certain requirements are met, distributions from the Funds, if any, are not taxable to owners of Contracts. Owners of Contracts should consult the applicable Separate Account Prospectus for considerations on tax issues related to the Contracts.

The Funds intend to comply with the diversification requirements currently imposed by the Code and U.S. Treasury regulations thereunder, on separate accounts of insurance companies as a condition of maintaining the favorable tax status of the Contracts issued by Separate Accounts of Jackson and Jackson NY. The Sub-Advisory Agreements require the Funds to be operated in compliance with these diversification requirements. The Sub-Advisers may depart from the investment strategy of a Fund only to the extent necessary to meet these diversification requirements. If a Fund does not meet such diversification requirements, the Contracts could lose their favorable tax treatment and income and gain allocable to the Contracts could be taxable currently to shareholders of the Fund. This could also occur if Contract holders are found to have an impermissible level of control over the investments underlying their Contracts. For more specific information, please refer to the Funds’ SAI.

The information provided above is only a summary of the U.S. federal income tax considerations relating to an investment in a Fund. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal, state, local and foreign tax consequences to you of your contract, policy or plan.

FINANCIAL HIGHLIGHTS

The financial highlights table is intended to help you understand each Fund’s financial performance for the past five years or, if shorter, the period of the Fund’s operations. Financial information for the JNL/AB Sustainable Global Thematic Fund, JNL/Neuberger Berman Gold Plus Strategy Fund, and JNL/WCM China Quality Growth Fund is not provided because the Funds are newly created and have not yet commenced operations. The following table provides selected per share data for one share of each Fund. The total returns in the financial highlights table represent the rate by which an investor would have earned (or lost) on an investment in a Fund (assuming reinvestment of all dividends and distributions) held for the entire period. The information does not reflect any charges imposed under a variable insurance contract. If charges imposed under a variable contract were reflected, the returns would be lower. You should refer to the appropriate variable insurance contract prospectus regarding such charges.

The annual information below has been derived from financial statements audited by KPMG LLP, an independent registered public accounting firm, and should be read in conjunction with the financial statements and notes thereto, together with the report of KPMG LLP thereon, in the Trust's Annual Report, which is available upon request.

JNL Series Trust
Financial Highlights
For a Share Outstanding

Net Investment Income (Loss). The net investment income (loss) per share is calculated using the average shares method. Net investment income(loss) per share and ratios of net investment income(loss) to average net assets for Class I shares can be less than Class A shares for certain Funds or can be significantly more than Class A shares for certain Funds because the net assets for Class I shares increased significantly after the Funds of Funds investment in the underlying fund was sold in Class A and purchased in Class I effective September 25, 2017 and also as a result of the timing of income received in the Fund before and after September 25, 2017.

Total Return. Total return assumes reinvestment of all distributions for the period. Total return is not annualized for periods less than one year and does not reflect payment of the expenses that apply to the variable accounts or any annuity charges and if it did performance would be lower.

Portfolio Turnover. Portfolio turnover is not annualized for periods of less than one year. Securities sold short are considered long term investments for purposes of calculating portfolio turnover. Dollar roll and in-kind transactions are excluded for purposes of calculating portfolio turnover. Fixed income securities with maturities greater than one year that are purchased for short term investment are excluded from the portfolio turnover calculation. Portfolio turnover for the Funds of Funds is based on the Funds of Funds' purchases and sales of the Underlying Funds. Portfolio turnover for the Feeder Funds reflects each Master Fund's portfolio purchases and sales. Portfolio turnover is calculated on the basis of the Fund as a whole, without distinguishing between the classes of shares issued.

Expense Ratios. The expenses or expense waivers for certain Funds' Class I shares were \$0.00 for one or more days during certain periods and this was a result of the net assets for the respective Class being below a level to generate an expense allocation greater than \$0.005 for that day. Additionally, the expenses or expense waivers for certain Funds' Class I shares were \$0.01 for one or more days during certain periods and this was a result of the net assets for the respective Class being at a level to generate an expense allocation between \$0.005 and \$0.01 for that day and rounded to \$0.01. As a result, the ratios of net and total expenses to average net assets during the period for Class I shares can be less than or more than the anticipated ratios of net and total expenses to average net assets depending on the net assets that Class I shares acquired during the period.

Ratios. Ratios are annualized for periods less than one year.

- (a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.
- (b) The Master Funds for the JNL/American Funds Feeder Funds are the Class 1 shares of the corresponding American Fund Insurance Series Fund. These financial statements should be read in conjunction with each Master Fund's shareholder report.
- (c) Ratios of net investment income and expenses to average net assets do not include the impact of each Master Fund's and underlying funds' expenses. The net expense to average net assets ratio, the total expense to average net assets ratio, and the net investment income (loss) to average net assets ratio, respectively, for both the Master and Feeder Fund are as follows (annualized for periods less than one year): JNL/American Funds Balanced Fund - Class A: December 31, 2021: 0.91%, 1.21%, 0.96%; December 31, 2020: 0.92%, 1.22%, 1.13%; December 31, 2019: 0.90%, 1.23%, 1.45%; December 31, 2018: 0.86%, 1.26%, 1.26%; December 31, 2017: 0.89%, 1.20%, 1.87%. JNL/American Funds Balanced Fund - Class I: December 31, 2021: 0.61%, 0.91%, 1.29%; December 31, 2020: 0.62%, 0.92%, 1.53%; December 31, 2019: 0.60%, 0.93%, 1.97%; December 31, 2018: 0.56%, 0.96%, 2.60%; December 31, 2017: 0.67%, 0.97%, 2.10%.
- (d) Portfolio turnover including dollar roll transactions for JNL/American Funds Balanced Fund, formerly known as JNL/Capital Guardian Global Balanced Fund was 79% and 18% for the period January 1, 2017 to April 23, 2017, respectively. Portfolio turnover excluding dollar rolls was 14% for the period January 1, 2017 to April 23, 2017. Portfolio turnover including dollar roll transactions for JNL/American Funds Balanced Fund's Master Fund was 85%, 86%, 79%, 145% and 124% in 2017, 2018, 2019, 2020 and 2021 respectively.
- (e) Effective April 24, 2017, the JNL/American Funds Balanced Fund became a Feeder Fund. Prior to April 24, 2017, the Fund was a Sub-Advised Fund named JNL/Capital Guardian Global Balanced Fund.
- (f) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.
- (g) Ratios of net investment income and expenses to average net assets do not include the impact of each Master Fund's and underlying funds' expenses. The net expense to average net assets ratio, the total expense to average net assets ratio, and the net investment income (loss) to average net assets ratio, respectively, for both the Master and Feeder Fund are as follows (annualized for periods less than one year): JNL/American Funds Bond Fund of America Fund - Class A: December 31, 2021: 0.87%, 1.07%, 3.21%. JNL/American Funds Bond Fund of America Fund - Class I: December 31, 2021: 0.57%, 0.77%, 2.06%.
- (h) The Fund commenced operations on April 26, 2021.
- (i) Portfolio turnover including dollar roll transactions for JNL/American Funds Bond Fund of America Fund was 456% in 2021 respectively.
- (j) Ratios of net investment income and expenses to average net assets do not include the impact of each Master Fund's and underlying funds' expenses. The net expense to average net assets ratio, the total expense to average net assets ratio, and the net investment income (loss) to average net assets ratio, respectively, for both the Master and Feeder Fund are as follows (annualized for periods less than one year): JNL/American Funds Capital Income Builder Fund - Class A: December 31, 2021: 0.95%, 1.20%, 2.17%; December 31, 2020: 1.00%, 1.28%, 2.24%; December 31, 2019: 1.11%, 1.47%, 2.30%; December 31, 2018: 1.15%, 1.52%, 3.55%. JNL/American Funds Capital Income Builder Fund - Class I: December 31, 2021: 0.65%, 0.90%, 2.50%; December 31, 2020: 0.70%, 0.98%, 2.48%; December 31, 2019: 0.81%, 1.17%, 2.55%; December 31, 2018: 0.79%, 1.22%, 5.16%.
- (k) Portfolio turnover including dollar roll transactions for JNL/American Funds Capital Income Builder Fund's Master Fund was 98%, 72%, 184% and 93% in 2018, 2019, 2020 and 2021 respectively.
- (l) The Fund commenced operations on August 13, 2018.

- (a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.
- (b) Ratios of net investment income and expenses to average net assets do not include the impact of each Master Fund's and underlying funds' expenses. The net expense to average net assets ratio, the total expense to average net assets ratio, and the net investment income (loss) to average net assets ratio, respectively, for both the Master and Feeder Fund are as follows (annualized for periods less than one year): JNL/Mellon Bond Index Fund - Class A: December 31, 2021: 0.56%, 0.61%, (0.08%). JNL/Mellon Bond Index Fund - Class I: December 31, 2021: 0.30%, 0.31%, 1.30%.
- (c) Effective April 26, 2021, the Fund became a feeder fund. Prior to April 26, 2021, the Fund was a Sub-Advised Fund.
- (d) The Master Funds for the JNL/Mellon Feeder Funds are the Class I shares of the corresponding JNL Series Trust Fund. These financial statements should be read in conjunction with each Master Fund's shareholder report.
- (e) Amount represents less than \$0.005.
- (f) Portfolio turnover including dollar roll transactions for JNL/Mellon Bond Index Fund was 118%, 121%, 107%, 140% and 105% in 2017, 2018, 2019, 2020 and 2021 respectively.
- (g) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.
- (h) Ratios of net investment income and expenses to average net assets do not include the impact of each Master Fund's and underlying funds' expenses. The net expense to average net assets ratio, the total expense to average net assets ratio, and the net investment income (loss) to average net assets ratio, respectively, for both the Master and Feeder Fund are as follows (annualized for periods less than one year): JNL/Mellon Emerging Markets Index Fund - Class A: December 31, 2021: 0.74%, 0.84%, (0.21%). JNL/Mellon Emerging Markets Index Fund - Class I: December 31, 2021: 0.38%, 0.54%, 0.11%.
- (i) Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees.
- (j) Ratios of net investment income and expenses to average net assets do not include the impact of each Master Fund's and underlying funds' expenses. The net expense to average net assets ratio, the total expense to average net assets ratio, and the net investment income (loss) to average net assets ratio, respectively, for both the Master and Feeder Fund are as follows (annualized for periods less than one year): JNL/Mellon International Index Fund - Class A: December 31, 2021: 0.61%, 0.69%, 0.02%. JNL/Mellon International Index Fund - Class I: December 31, 2021: 0.38%, 0.40%, 1.87%.

- (a) Prior to September 25, 2017, the Fund did not charge a 12b-1 fee. The shareholders investing in a Fund of Funds indirectly bore any 12b-1 fees incurred by the Class A shares or regular shares, as applicable of each Underlying Fund. Effective September 25, 2017, the Fund began to charge a Rule 12b-1 fee at a maximum annual rate of 0.30% of the average daily net assets of the Class A Shares. At this time, the investment in each Underlying Fund was sold from Class A shares and purchased into Class I shares which do not charge a 12b-1 fee.
- (b) Portfolio turnover includes the purchase and sale in each Underlying Fund which was sold from Class A shares and purchased into Class I shares effective September 25, 2017. Portfolio turnover not including the purchase and sale of each Underlying Fund was as follows: JNL Aggressive Growth Allocation Fund: 51%.
- (c) Effective September 25, 2017, Class I shares were offered by the Fund.
- (d) Portfolio turnover includes the purchase and sale in each Underlying Fund which was sold from Class A shares and purchased into Class I shares effective September 25, 2017. Portfolio turnover not including the purchase and sale of each Underlying Fund was as follows: JNL Conservative Allocation Fund: 47%.
- (e) Portfolio turnover includes the purchase and sale in each Underlying Fund which was sold from Class A shares and purchased into Class I shares effective September 25, 2017. Portfolio turnover not including the purchase and sale of each Underlying Fund was as follows: JNL Growth Allocation Fund: 49%.

- (a) Prior to September 25, 2017, the Fund did not charge a 12b-1 fee. The shareholders investing in a Fund of Funds indirectly bore any 12b-1 fees incurred by the Class A shares or regular shares, as applicable of each Underlying Fund. Effective September 25, 2017, the Fund began to charge a Rule 12b-1 fee at a maximum annual rate of 0.30% of the average daily net assets of the Class A shares. At this time, the investment in each Underlying Fund was sold from Class A shares and purchased into Class I shares which do not charge a 12b-1 fee.
- (b) Portfolio turnover includes the purchase and sale in each Underlying Fund which was sold from Class A shares and purchased into Class I shares effective September 25, 2017. Portfolio turnover not including the purchase and sale of each Underlying Fund was as follows: JNL Moderate Allocation Fund: 48%.
- (c) Effective September 25, 2017, Class I shares were offered by the Fund.
- (d) Portfolio turnover includes the purchase and sale in each Underlying Fund which was sold from Class A shares and purchased into Class I shares effective September 25, 2017. Portfolio turnover not including the purchase and sale of each Underlying Fund was as follows: JNL Moderate Growth Allocation Fund: 44%.

- (a) Prior to September 25, 2017, the Fund did not charge a 12b-1 fee. The shareholders investing in a Fund of Funds indirectly bore any 12b-1 fees incurred by the Class A shares or regular shares, as applicable of each Underlying Fund. Effective September 25, 2017, the Fund began to charge a Rule 12b-1 fee at a maximum annual rate of 0.30% of the average daily net assets of the Class A shares. At this time, the investment in each Underlying Fund was sold from Class A shares and purchased into Class I shares which do not charge a 12b-1 fee.
- (b) Portfolio turnover includes the purchase and sale in each Underlying Fund which was sold from Class A shares and purchased into Class I shares effective September 25, 2017. Portfolio turnover not including the purchase and sale of each Underlying Fund was as follows: JNL/Goldman Sachs Managed Moderate Growth Fund: 11%.
- (c) Amount represents less than \$0.005.
- (d) Effective September 25, 2017, Class I shares were offered by the Fund.
- (e) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.
- (f) Ratios of net investment income and expenses to average net assets do not include the impact of underlying funds' expenses.
- (g) Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees.

(a) Effective April 26, 2021, the Fund received investments from its Feeder Fund in exchange for shares of the Fund. For information on the performance of these investments prior to April 26, 2021, please see the Financial Highlights of the Feeder Fund. See Note 1 in the Notes to Financial Statements for additional information.

(b) The Fund commenced operations on April 26, 2021.

(c) Portfolio turnover including dollar roll transactions for JNL Bond Index Fund was 129% in 2021.

(d) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.

(e) The total (and net, where applicable) expense ratios to average net assets without dividend expenses, net borrowing fees on securities sold short or interest expense for JNL Multi-Manager Alternative Fund were as follows: Class A: December 31, 2021: 1.68%; December 31, 2020: 1.71% (Net: 1.70%); December 31, 2019: 1.69%; December 31, 2018: 1.70%; December 31, 2017: 1.86% (Net: 1.70%). Class I: December 31, 2021: 1.38%; December 31, 2020: 1.41% (Net: 1.40%); December 31, 2019: 1.39%; December 31, 2018: 1.40%; December 31, 2017: 1.45%. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees. The difference between the ratios of net and total expenses to average net assets for each share class may differ if the Fund had a significant increase in Class I shares during the year.

(f) Portfolio turnover including dollar roll transactions for JNL Multi-Manager Alternative Fund was 240% and 181% in 2017 and 2018 respectively.

(g) Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees.

(h) Effective September 25, 2017, Class I shares were offered by the Fund.

- (a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.
- (b) Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees.
- (c) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.
- (d) The Fund commenced operations on August 13, 2018.
- (e) Effective September 25, 2017, Class I shares were offered by the Fund.

(a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.

(b) Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees.

(c) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.

(d) Effective September 25, 2017, Class I shares were offered by the Fund.

(e) The total (and net, where applicable) expense ratios to average net assets without dividend expenses, net borrowing fees on securities sold short or interest expense for JNL/DoubleLine Core Fixed Income Fund were as follows: Class A: December 31, 2017: 0.79% (Net: 0.77%). Class I: December 31, 2017: 0.52% (Net: 0.52%). Effective January 1, 2017, the Fund voluntarily began waiving a portion of advisory fees. Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees. The difference between the ratios of net and total expenses to average net assets for each share class may differ if the Fund had a significant increase in Class I shares during the year.

- (a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.
- (b) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.
- (c) Prior to September 25, 2017, the Fund did not charge a 12b-1 fee. The shareholders investing in a Fund of Funds indirectly bore any 12b-1 fees incurred by the Class A shares or regular shares, as applicable of each Underlying Fund. Effective September 25, 2017, the Fund began to charge a Rule 12b-1 fee at a maximum annual rate of 0.30% of the average daily net assets of the Class A shares. At this time, the investment in each Underlying Fund was sold from Class A shares and purchased into Class I shares which do not charge a 12b-1 fee.
- (d) On April 26, 2021, JNL/Goldman Sachs 4 Fund became a Sub-Advised Fund. Prior to April 26, 2021, the fund held affiliated funds selected by the Adviser and was considered a "Fund of Funds."
- (e) Portfolio turnover includes the purchase and sale in each Underlying Fund which was sold from Class A shares and purchased into Class I shares effective September 25, 2017. Portfolio turnover not including the purchase and sale of each Underlying Fund was as follows: JNL/Goldman Sachs 4 Fund: 5%.
- (f) Effective September 25, 2017, Class I shares were offered by the Fund.
- (g) Amount represents less than \$0.005.

(a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.

(b) Effective April 26, 2021, JNL/JPMorgan Growth & Income Fund name was changed to JNL/JPMorgan U.S. Value Fund.

(c) Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees.

(d) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.

(e) Effective September 25, 2017, Class I shares were offered by the Fund.

(f) The Fund commenced operations on August 13, 2018.

- (a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.
- (b) On April 27, 2020, JNL/Mellon Financial Sector Fund of JNL Variable Fund LLC was redomiciled into the JNL Series Trust. A fund was created within the JNL Series Trust to facilitate the acquisition of the fund with the same name from JNL Variable Fund LLC. Although the fund of JNL Variable Fund LLC was legally dissolved, it is considered the accounting survivor for financial reporting purposes, and as a result, the Financial Highlights reflect the performance history of the acquired fund formerly in JNL Variable Fund LLC for periods prior to April 27, 2020.
- (c) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.
- (d) On April 27, 2020, JNL/Mellon Healthcare Sector Fund of JNL Variable Fund LLC was redomiciled into the JNL Series Trust. A fund was created within the JNL Series Trust to facilitate the acquisition of the fund with the same name from JNL Variable Fund LLC. Although the fund of JNL Variable Fund LLC was legally dissolved, it is considered the accounting survivor for financial reporting purposes, and as a result, the Financial Highlights reflect the performance history of the acquired fund formerly in JNL Variable Fund LLC for periods prior to April 27, 2020.

(a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.

(b) Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees.

(c) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.

(d) Effective April 26, 2021, JNL/Vanguard U.S. Stock Market Index Fund name was changed to JNL/Mellon U.S. Stock Market Index Fund.

(e) The Fund commenced operations on September 25, 2017.

(f) Effective September 25, 2017, Class I shares were offered by the Fund.

- (a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.
- (b) On April 27, 2020, JNL/Mellon MSCI World Index Fund of JNL Variable Fund LLC was redomiciled into the JNL Series Trust. A fund was created within the JNL Series Trust to facilitate the acquisition of the fund with the same name from JNL Variable Fund LLC. Although the fund of JNL Variable Fund LLC was legally dissolved, it is considered the accounting survivor for financial reporting purposes, and as a result, the Financial Highlights reflect the performance history of the acquired fund formerly in JNL Variable Fund LLC for periods prior to April 27, 2020.
- (c) Effective April 26, 2021, JNL/Mellon MSCI World Index Fund name was changed to JNL/Mellon World Index Fund.
- (d) Effective September 25, 2017, Class I shares were offered by the Fund.
- (e) Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees.
- (f) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.
- (g) The Fund commenced operations on April 26, 2021.
- (h) The Fund commenced operations on April 24, 2017.

- (a) The total expense ratios to average net assets without dividend expenses, net borrowing fees on securities sold short or interest expense for JNL/PIMCO Income Fund were as follows: Class A: December 31, 2020: 0.94%; December 31, 2019: 0.94%; December 31, 2018: 0.95%; December 31, 2017: 0.96%. Class I: December 31, 2020: 0.64%; December 31, 2019: 0.64%; December 31, 2018: 0.65%; December 31, 2017: 0.66%.
- (b) The Fund commenced operations on September 25, 2017.
- (c) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.
- (d) The total expense ratios to average net assets without dividend expenses, net borrowing fees on securities sold short or interest expense for JNL/PIMCO Investment Grade Credit Bond Fund were as follows: Class A: December 31, 2021: 0.73%; December 31, 2020: 0.74%; December 31, 2019: 0.74%; December 31, 2018: 0.75%; December 31, 2017: 0.76%. Class I: December 31, 2021: 0.43%; December 31, 2020: 0.44%; December 31, 2019: 0.46%; December 31, 2018: 0.45%; December 31, 2017: 0.54%.
- (e) Effective September 25, 2017, Class I shares were offered by the Fund.
- (f) The total (and net, where applicable) expense ratios to average net assets without dividend expenses, net borrowing fees on securities sold short or interest expense for JNL/PIMCO Real Return Fund were as follows: Class A: December 31, 2021: 0.79%; December 31, 2020: 0.79%; December 31, 2019: 0.81%; December 31, 2018: 0.79%; December 31, 2017: 0.79% (Net: 0.78%). Class I: December 31, 2021: 0.49%; December 31, 2020: 0.49%; December 31, 2019: 0.51%; December 31, 2018: 0.49%; December 31, 2017: 0.52% (Net: 0.52%). Effective January 1, 2017, the Fund voluntarily began waiving a portion of advisory fees. Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees. The difference between the ratios of net and total expenses to average net assets for each share class may differ if the Fund had a significant increase in Class I shares during the year.
- (g) Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees.
- (h) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.

(a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.

(b) Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees.

(c) Effective September 25, 2017, Class I shares were offered by the Fund.

(d) Total return for the Fund includes class action settlement proceeds. The return for Class A and Class I, respectively, without the class action settlement proceeds was as follows: JNL/PPM America High Yield Bond Fund: 5.04% and 5.39%

(e) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.

(f) Portfolio turnover including dollar roll transactions for JNL/PPM America Total Return Fund was 72%, 70%, 97%, 118% and 146% in 2017, 2018, 2019, 2020 and 2021 respectively.

- (a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.
- (b) On June 24, 2019, JNL/RAFI Fundamental U.S. Small Cap Fund completed the acquisition of JNL/Mellon Capital S&P SMid 60 Fund, which is a series in JNL Variable Fund LLC. JNL/Mellon Capital S&P SMid 60 Fund is considered the accounting survivor for financial reporting purposes, and as a result, the Financial Highlights reflects activity of the fund formerly in JNL Variable Fund LLC for periods prior to June 24, 2019.
- (c) The Fund commenced operations on June 24, 2019.
- (d) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.
- (e) On June 24, 2019, JNL/RAFI Multi-Factor U.S. Equity Fund completed the acquisition of JNL/Mellon Capital JNL 5 Fund, which is a series in JNL Variable Fund LLC. JNL/Mellon Capital JNL 5 Fund is considered the accounting survivor for financial reporting purposes, and as a result, the Financial Highlights reflects activity of the fund formerly in JNL Variable Fund LLC for periods prior to June 24, 2019.
- (f) Prior to September 25, 2017, the Fund did not charge a 12b-1 fee. The shareholders investing in a Fund of Funds indirectly bore any 12b-1 fees incurred by the Class A shares or regular shares, as applicable of each Underlying Fund. Effective September 25, 2017, the Fund began to charge a Rule 12b-1 fee at a maximum annual rate of 0.30% of the average daily net assets of the Class A shares. At this time, the investment in each Underlying Fund was sold from Class A shares and purchased into Class I shares which do not charge a 12b-1 fee.
- (g) Prior to June 24, 2019, the fund held affiliated funds selected by the Adviser and was considered a "Fund of Funds".
- (h) Portfolio turnover for JNL/T. Rowe Price Balanced Fund includes the purchase and sale in each of the Fund's underlying funds which was sold from Class A shares and purchased into Class I shares effective September 25, 2017. Portfolio turnover not including the purchase and sale in each of the Fund's underlying funds was 11% in 2017.
- (i) Effective September 25, 2017, Class I shares were offered by the Fund.

- (a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.
- (b) Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees.
- (c) Effective September 25, 2017, Class I shares were offered by the Fund.
- (d) The total expense ratios to average net assets without dividend expenses, net borrowing fees on securities sold short or interest expense for JNL/Westchester Capital Event Driven Fund were as follows: Class A: December 31, 2021: 1.46%; December 31, 2020: 1.46%; December 31, 2019: 1.46%; December 31, 2018: 1.46%; December 31, 2017: 1.44%. Class I: December 31, 2021: 1.16%; December 31, 2020: 1.16%; December 31, 2019: 1.16%; December 31, 2018: 1.16%; December 31, 2017: 1.19%.
- (e) Amount represents less than \$0.005.
- (f) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.

- (a) Prior to September 25, 2017, the Fund accrued the Rule 12b-1 fee at the maximum annual rate up to 0.20% of the average daily net assets of Class A shares of the Fund. Effective September 25, 2017, the maximum annual rate for Rule 12b-1 fees paid by the Fund changed from 0.20% to 0.30% of the average daily net assets of the Class A shares of the Fund.
- (b) Portfolio turnover including dollar roll transactions for JNL/WMC Balanced Fund was 76%, 80%, 55%, 108%, and 137% in 2017, 2018, 2019, 2020 and 2021 respectively.
- (c) Prior to September 25, 2017, the Fund offered Class B shares. Effective September 25, 2017, Class B shares were renamed to Class I shares.
- (d) Ratios of net investment income and expenses to average net assets do not include the impact of each Master Fund's and underlying funds' expenses. The net expense to average net assets ratio, the total expense to average net assets ratio, and the net investment income (loss) to average net assets ratio, respectively, for both the Master and Feeder Fund are as follows (annualized for periods less than one year): JNL/WMC Equity Income Fund - Class A: December 31, 2021: 0.89%, 0.99%, 2.92%; December 31, 2020: 0.89%, 1.23%, 1.58%; December 31, 2019: 0.88%, 1.24%, 1.40%; December 31, 2018: 0.87%, 1.27%, 0.61%; December 31, 2017: 0.89%, 1.29%, (0.89%). JNL/WMC Equity Income Fund - Class I: December 31, 2021: 0.59%, 0.69%, 3.16%; December 31, 2020: 0.59%, 0.93%, 1.98%; December 31, 2019: 0.58%, 0.94%, 1.37%; December 31, 2018: 0.57%, 0.97%, 0.45%; December 31, 2017: 0.59%, 0.99%, (0.59%).
- (e) Effective April 26, 2021, JNL/Vanguard Equity Income Fund name was changed to JNL/WMC Equity Income Fund.
- (f) Effective April 26, 2021, the Fund became a Sub-Advised fund. Prior to April 26, 2021, the Fund was a Feeder Fund.
- (g) The Fund commenced operations on September 25, 2017.
- (h) Effective April 26, 2021, JNL/Invesco Global Real Estate Fund name was changed to JNL/WMC Global Real Estate Fund.
- (i) Prior to September 25, 2017, pursuant to contractual and voluntary fee waiver agreements, JNAM waived a portion of its advisory fees for the Fund. Effective September 25, 2017, the contractual and voluntary advisory fee waivers were discontinued and the waived portion of advisory fees for the Fund was converted to a permanent reduction in advisory fees.

Effective April 25, 2022, the JNL/BlackRock Advantage International Fund merged into the JNL/DFA International Core Equity Fund.

Effective April 25, 2022, the JNL/Franklin Templeton Growth Allocation Fund merged into the JNL Growth Allocation Fund.

APPENDIX B

“JNL®,” “Jackson National®,” “Jackson®,” “Jackson of NY®” and “Jackson National Life Insurance Company of New York®” are trademarks of Jackson National Life Insurance Company®.

Goldman Sachs is a registered service mark of Goldman, Sachs & Co.

Fidelity Institutional Asset Management is a registered service mark of FMR LLC. Used with permission.

The “Dow Jones Industrial Average” is a product of S&P Dow Jones Indices LLC (“SPDJI”), and has been licensed for use by Jackson National Life Insurance Company and its Affiliates (collectively, “Jackson”). Standard & Poor’s® and S&P® are registered trademarks of Standard & Poor’s Financial Services LLC (“S&P”); DJIA®, The Dow®, Dow Jones® and Dow Jones Industrial Average™ are trademarks of Dow Jones Trademark Holdings, LLC (“Dow Jones”); and have been licensed to SPDJI and have been sub-licensed for use for certain purposes by Jackson. The JNL/Mellon DowSM Index Fund is not sponsored, endorsed, sold or promoted by SPDJI, Dow Jones, S&P, or any of their respective affiliates (collectively, “S&P Dow Jones Indices”). S&P Dow Jones Indices make no representation or warranty, expressed or implied, to the owners of the JNL/Mellon DowSM Index Fund or any member of the public regarding the advisability of investing in securities generally or in the JNL/Mellon DowSM Index Fund particularly or the ability of the Dow Jones Industrial Average to track general market performance. S&P Dow Jones Indices’ only relationship to Jackson is the licensing of the Dow Jones Industrial Average and certain trademarks, service marks and/or trade names of S&P Dow Jones Indices or its licensors. The Dow Jones Industrial Average is determined, composed and calculated by S&P Dow Jones Indices without regard to Jackson or the JNL/Mellon DowSM Index Fund. S&P Dow Jones Indices have no obligation to take the needs of Jackson, or the owners of the JNL/Mellon DowSM Index Fund into consideration in determining, composing or calculating the Dow Jones Industrial Average. S&P Dow Jones Indices are not responsible for and have not participated in the determination of the prices, and amount of the JNL/Mellon DowSM Index Fund or the timing of the issuance or sale of the JNL/Mellon DowSM Index Fund in the determination or calculation of the equation by which the JNL/Mellon DowSM Index Fund is to be converted into cash, surrendered or redeemed, as the case may be. S&P Dow Jones Indices have no obligation or liability in connection with the administration, marketing or trading of the JNL/Mellon DowSM Index Fund. There is no assurance that investment products based on the Dow Jones Industrial Average will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC is not an investment advisor. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice. Notwithstanding the foregoing, CME Group Inc. and its affiliates may independently issue and/or sponsor financial products unrelated to the JNL/Mellon DowSM Index Fund currently being issued by Jackson, but which may be similar to and competitive with the JNL/Mellon DowSM Index Fund. In addition, CME Group Inc. and its affiliates may trade financial products which are linked to the performance of the Dow Jones Industrial Average.

S&P DOW JONES INDICES DO NOT GUARANTEE THE ADEQUACY, ACCURACY, TIMELINESS AND/OR THE COMPLETENESS OF THE DOW JONES INDUSTRIAL AVERAGE OR ANY DATA RELATED THERETO OR ANY COMMUNICATION, INCLUDING BUT NOT LIMITED TO, ORAL OR WRITTEN COMMUNICATION (INCLUDING ELECTRONIC COMMUNICATIONS) WITH RESPECT THERETO. S&P DOW JONES INDICES SHALL NOT BE SUBJECT TO ANY DAMAGES OR LIABILITY FOR ANY ERRORS, OMISSIONS, OR DELAYS THEREIN. S&P DOW JONES INDICES MAKE NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES, OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE OR AS TO RESULTS TO BE OBTAINED BY JACKSON, OWNERS OF THE JNL/MELLON DOWSM INDEX FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE DOW JONES INDUSTRIAL AVERAGE OR WITH RESPECT TO ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL S&P DOW JONES INDICES BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES INCLUDING BUT NOT LIMITED TO, LOSS OF PROFITS, TRADING LOSSES, LOST TIME OR GOODWILL, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE. THERE ARE NO THIRD PARTY BENEFICIARIES OF ANY AGREEMENTS OR ARRANGEMENTS BETWEEN S&P DOW JONES INDICES AND JACKSON, OTHER THAN THE LICENSORS OF S&P DOW JONES INDICES.

The S&P 500 Index, S&P MidCap 400 Index, and S&P SmallCap 600 Index, (collectively, the “Indices”) are products of S&P Dow Jones Indices LLC (“SPDJI”), and have been licensed for use by Jackson National Life Insurance Company (“Jackson”) and its affiliates (collectively, “Jackson”). Standard & Poor’s®, S&P® and S&P 500®, S&P MidCap 400® and S&P SmallCap 600® are registered trademarks of Standard & Poor’s Financial Services LLC (“S&P”); Dow Jones® is a registered trademark of Dow Jones Trademark Holdings LLC (“Dow Jones”) and these trademarks have been licensed for use by SPDJI and have been sub-licensed for certain purposes by Jackson. The JNL/Mellon S&P 500 Index Fund, JNL/Mellon S&P 400 MidCap Index Fund, JNL/Mellon Small Cap Index Fund, JNL S&P 500 Index Fund, JNL Mid Cap Index Fund, JNL Small Cap Index Fund (collectively, the “JNL Funds”) are not sponsored, endorsed, sold or promoted by SPDJI, Dow Jones, S&P, or any of their respective affiliates (collectively, “S&P Dow Jones Indices”). S&P Dow Jones Indices make no representation or warranty, express or implied, to the owners of the JNL Funds or any member of the public regarding the advisability of investing in securities generally or in the JNL Funds particularly or the ability of the Indices to track general market performance. S&P Dow Jones Indices’ only relationship to Jackson

with respect to the Indices is the licensing of the Indices and certain trademarks, service marks and/or trade names of S&P Dow Jones Indices or its licensors. The Indices are determined, composed and calculated by S&P Dow Jones Indices without regard to Jackson or the JNL Funds. S&P Dow Jones Indices have no obligation to take the needs of Jackson or the owners of the JNL Funds into consideration in determining, composing or calculating the Indices. S&P Dow Jones Indices are not responsible for and have not participated in the determination of the prices, and amount of the JNL Funds or the timing of the issuance or sale of the JNL Funds in the determination or calculation of the equation by which the JNL Funds are to be converted into cash, surrendered or redeemed, as the case may be. S&P Dow Jones Indices have no obligation or liability in connection with the administration, marketing or trading of the JNL Funds. There is no assurance that investment products based on the Indices will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC is not an investment advisor. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice. Notwithstanding the foregoing, CME Group Inc. and its affiliates may independently issue and/or sponsor financial products unrelated to the JNL Funds currently being issued by Jackson, but which may be similar to and competitive with JNL Funds. In addition, CME Group Inc. and its affiliates may trade financial products which are linked to the performance of the Index.

S&P DOW JONES INDICES DO NOT GUARANTEE THE ADEQUACY, ACCURACY, TIMELINESS AND/OR THE COMPLETENESS OF THE INDICES OR ANY DATA RELATED THERETO OR ANY COMMUNICATION, INCLUDING BUT NOT LIMITED TO, ORAL OR WRITTEN COMMUNICATION (INCLUDING ELECTRONIC COMMUNICATIONS) WITH RESPECT THERETO. S&P DOW JONES INDICES SHALL NOT BE SUBJECT TO ANY DAMAGES OR LIABILITY FOR ANY ERRORS, OMISSIONS, OR DELAYS THEREIN. S&P DOW JONES INDICES MAKE NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES, OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE OR AS TO RESULTS TO BE OBTAINED BY JACKSON OR OWNERS OF THE JNL FUNDS, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDICES OR WITH RESPECT TO ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT WHATSOEVER SHALL S&P DOW JONES INDICES BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES INCLUDING BUT NOT LIMITED TO, LOSS OF PROFITS, TRADING LOSSES, LOST TIME OR GOODWILL, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE. THERE ARE NO THIRD PARTY BENEFICIARIES OF ANY AGREEMENTS OR ARRANGEMENTS BETWEEN S&P DOW JONES INDICES AND JACKSON, OTHER THAN THE LICENSORS OF S&P DOW JONES INDICES.

The JNL/Mellon Nasdaq® 100 Index Fund is not sponsored, endorsed, sold or promoted by Nasdaq, Inc. or its affiliates (Nasdaq, with its affiliates, are referred to as the "Corporations"). The Corporations have not passed on the legality or suitability of, or the accuracy or adequacy of descriptions and disclosures relating to, the JNL/Mellon Nasdaq® 100 Index Fund. The Corporations make no representation or warranty, express or implied to the owners of the JNL/Mellon Nasdaq® 100 Index Fund or any member of the public regarding the advisability of investing in securities generally or in the JNL/Mellon Nasdaq® 100 Index Fund particularly, or the ability of the Nasdaq-100® Index to track general stock market performance. The Corporations' only relationship to Jackson National Life Insurance Company ("Licensee") is in the licensing of the NASDAQ®, and Nasdaq-100® Index™ registered trademarks, and certain trade names of the Corporations and the use of the Nasdaq-100® Index which is determined, composed and calculated by NASDAQ without regard to Licensee or the JNL/Mellon Nasdaq® 100 Index Fund. Nasdaq has no obligation to take the needs of the Licensee or the owners of the JNL/Mellon Nasdaq® 100 Index Fund into consideration in determining, composing or calculating the Nasdaq-100® Index. The Corporations are not responsible for and have not participated in the determination of the timing of, prices at, or quantities of the JNL/Mellon Nasdaq® 100 Index Fund to be issued or in the determination or calculation of the equation by which the JNL/Mellon Nasdaq® 100 Index Fund is to be converted into cash. The Corporations have no liability in connection with the administration, marketing or trading of the JNL/Mellon Nasdaq® 100 Index Fund.

THE CORPORATIONS DO NOT GUARANTEE THE ACCURACY AND/OR UNINTERRUPTED CALCULATION OF THE NASDAQ-100® INDEX OR ANY DATA INCLUDED THEREIN. THE CORPORATIONS MAKE NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY LICENSEE, OWNERS OF THE JNL/MELLON NASDAQ® 100 INDEX FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE NASDAQ-100® INDEX OR ANY DATA INCLUDED THEREIN. THE CORPORATIONS MAKE NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIM ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE NASDAQ-100® INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL THE CORPORATIONS HAVE ANY LIABILITY FOR ANY LOST PROFITS OR SPECIAL, INCIDENTAL, PUNITIVE, INDIRECT, OR CONSEQUENTIAL DAMAGES, EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

Morningstar® and the Morningstar Indices (as defined below) are trademarks or service marks of Morningstar, Inc. ("Morningstar") and have been licensed for use for certain purposes by Jackson National Asset Management, LLC ("JNAM"). The JNL Funds (as defined below) are not sponsored, endorsed, sold or promoted by Morningstar, or any of its affiliated companies (all such entities, collectively, "Morningstar Entities"). The Morningstar Entities make no representation or warranty, express or implied, to the

owners of the JNL Funds or any member of the public regarding the advisability of investing in securities generally or in the JNL Funds in particular or the ability of the Morningstar Indices to track general stock market performance. The Morningstar Entities' only relationship to JNAM is the licensing of: (i) certain service marks and service names of Morningstar; and (ii) of the Morningstar Indices which is determined, composed and calculated by the Morningstar Entities without regard to JNAM or the JNL Funds. The Morningstar Entities have no obligation to take the needs of JNAM or the owners of the JNL Funds into consideration in determining, composing or calculating the Morningstar Indices. The Morningstar Entities are not responsible for and have not participated in the determination of the prices and amount of the JNL Funds or the timing of the issuance or sale of the JNL Funds or in the determination or calculation of the equation by which the JNL Funds are converted into cash. The Morningstar Entities have no obligation or liability in connection with the administration, marketing or trading of the JNL Funds.

The JNL/RAFI® Fundamental U.S. Small Cap Fund and JNL/RAFI® Multi-Factor U.S. Equity Fund (the “JNL/RAFI Funds”) are not sponsored, offered, or sold in any manner by RAFI Indices, LLC or any of its affiliates, licensors or contractors (the “RAFI Parties”) nor do any of the RAFI Parties offer to any person purchasing a product that uses or incorporates a product based on an Index any express or implicit guarantee, warranty or assurance either with regard to the results of using the RAFI Multi-Factor® US Index and RAFI Fundamental US Small Index (each an “Index”) or the Index Price at any time or in any other respect. Each Index is calculated and published by the RAFI Parties. The RAFI Parties use commercially reasonable efforts to ensure that the Index is calculated correctly. None of the RAFI Parties shall be liable to any person purchasing a product that uses or incorporates a product based on the Index for any error, omission, inaccuracy, incompleteness, delay, or interruption in the Index or any data related thereto or have any obligation to point out errors in the Index to any person. Neither publication of each Index by the RAFI Parties nor the licensing of the Index or Index trademark for the purpose of use in connection with the JNL/RAFI Funds constitutes a recommendation by any of the RAFI Parties to invest in nor does it in any way represent an assurance, endorsement or opinion of any of the RAFI Parties with regard to any investment in the JNL/RAFI Funds. The trade names Fundamental Index® and RAFI® are registered trademarks of Research Affiliates, LLC in the US and other countries.

“Bloomberg®” and the Bloomberg Indices (as defined below) are service marks of Bloomberg Finance L.P. and its affiliates, including Bloomberg Index Services Limited (“BISL”), the administrator of the index (collectively, “Bloomberg”), and have been licensed for use for certain purposes by Jackson National Asset Management, LLC (“JNAM”).

The JNL Funds (as defined below) are not sponsored, endorsed, sold or promoted by Bloomberg. Bloomberg does not make any representation or warranty, express or implied, to the owners of or counterparties to the JNL Funds or any member of the public regarding the advisability of investing in securities generally or in the JNL Funds particularly. The only relationship of Bloomberg to JNAM is the licensing of certain trademarks, trade names and service marks and of the Bloomberg Indices, which is determined, composed and calculated by BISL without regard to JNAM or the JNL Funds. Bloomberg has no obligation to take the needs of JNAM or the owners of the JNL Funds into consideration in determining, composing or calculating the Bloomberg Indices. Bloomberg is not responsible for and has not participated in the determination of the timing of, prices at, or quantities of the JNL Funds to be issued. Bloomberg shall not have any obligation or liability, including, without limitation, to JNL Funds customers, in connection with the administration, marketing or trading of the JNL Funds.

PROSPECTUS

APRIL 25, 2022

JNL SERIES TRUST

You can find more information about the Trust in:

- The Trust's **Statement of Additional Information** ("SAI") dated April 25, 2022 is on file with the Securities and Exchange Commission ("SEC") and is incorporated into the Prospectus by reference (which means the SAI is legally part of the Prospectus).
- The Trust's **Annual and Semi-Annual Reports** to shareholders, dated December 31, 2021 and June 30, 2021, respectively, show the Funds' actual investments and include financial statements as of the close of the particular annual or semi-annual period. The Annual Report also discusses the market conditions and investment strategies that significantly affected each Fund's performance during the year covered by the report. The current Annual and Semi-Annual Reports are on file with the SEC and are incorporated into the Prospectus by reference.

You can obtain a copy of the current SAI or the most recent Annual or Semi-Annual Reports without charge, or make other inquiries, by calling 1-800-644-4565 (Jackson Service Center), 1-800-599-5651 (Jackson NY Service Center), or by writing the JNL Series Trust, P.O. Box 30314, Lansing, Michigan 48909-7814 or by visiting www.jackson.com.

Reports and other information about the Trust also are available on the EDGAR database on the SEC's Internet site (<http://www.sec.gov>), and copies may be obtained, after payment of a duplicating fee, by electronic request (publicinfo@sec.gov).

The Trust's SEC file number is: 811-8894

Global Growth Fund

Investment objective The fund's investment objective is to provide long-term growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee ¹	0.48%
Other expenses	0.05
Total annual fund operating expenses	0.53
Fee waiver ²	0.11
Total annual fund operating expenses after fee waiver	0.42

¹ Restated to reflect current fees.

² The investment adviser is currently waiving a portion of its management fee equal to .11% of the fund's net assets. This waiver will be in effect through at least May 1, 2023. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$43	\$159	\$285	\$654

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 18% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks of companies around the world that the investment adviser believes have the potential for growth. As a fund that seeks to invest globally, the fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the fund will invest significantly in issuers domiciled outside the United States (i.e., at least 40% of its net assets, unless market conditions are not deemed favorable by the fund's investment adviser, in which case the fund would invest at least 30% of its net assets in issuers outside the United States).

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

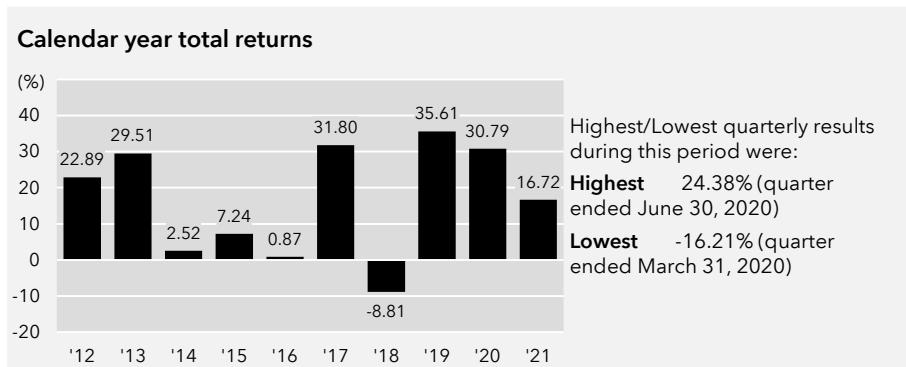

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries. Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2021:	1 year	5 years	10 years	Lifetime
Fund (inception date – 4/30/97)	16.72%	20.00%	15.95%	11.24%
MSCI All Country World Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	18.54	14.40	11.85	7.32

Management

Investment adviser Capital Research and Management CompanySM

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Patrice Collette	7 years	Partner – Capital World Investors
Paul Flynn	5 years	Partner – Capital World Investors
Roz Hongsaranagon	4 years	Partner – Capital World Investors
Jonathan Knowles	9 years	Partner – Capital World Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

Global Small Capitalization Fund

Investment objective The fund's investment objective is to provide long-term growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee ¹	0.65%
Other expenses	0.05
Total annual fund operating expenses	0.70
Fee waiver ²	0.05
Total annual fund operating expenses after fee waiver	0.65

¹ Restated to reflect current fees.

² The investment adviser is currently waiving a portion of its management fee equal to .05% of the fund's net assets. This waiver will be in effect through at least May 1, 2023. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$66	\$219	\$385	\$866

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 29% of the average value of its portfolio.

Principal investment strategies Normally, the fund invests at least 80% of its net assets in growth-oriented common stocks and other equity type securities of companies with small market capitalizations, measured at the time of purchase. However, the fund's holdings of small capitalization stocks may fall below the 80% threshold due to subsequent market action. The investment adviser currently defines "small market capitalization" companies as companies with market capitalizations of \$6.0 billion or less. The investment adviser has periodically re-evaluated and adjusted this definition and may continue to do so in the future. As a fund that seeks to invest globally, the fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the fund will invest significantly in issuers domiciled outside the United States (i.e., at least 40% of its net assets, unless market conditions are not deemed favorable by the fund's investment adviser, in which case the fund would invest at least 30% of its net assets in issuers outside the United States).

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

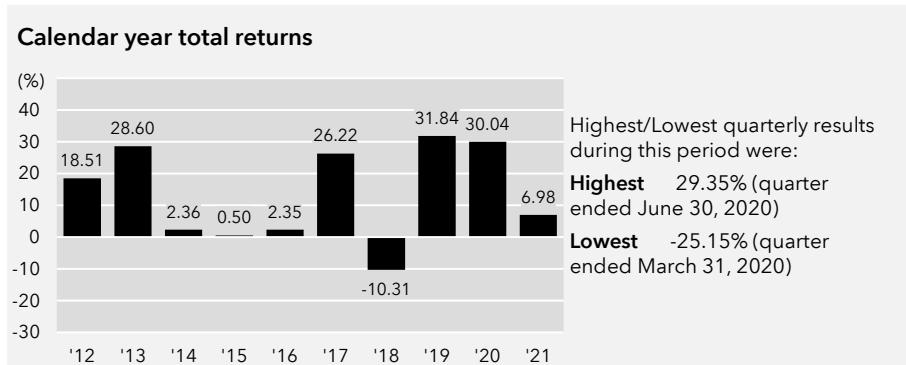

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries. Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2021:

	1 year	5 years	10 years	Lifetime
Fund (inception date – 4/30/98)	6.98%	15.74%	12.79%	10.37%

Other expenses	0.04
Total annual fund operating expenses	0.35

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$36	\$113	\$197	\$443

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 25% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks and seeks to invest in companies that appear to offer superior opportunities for growth of capital. The fund may invest up to 25% of its assets in common stocks and other securities of issuers domiciled outside the United States.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

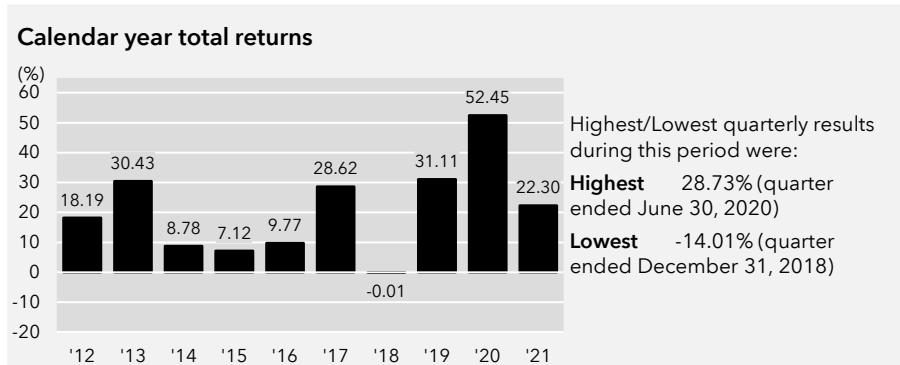

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2021:	1 year	5 years	10 years	Lifetime
Fund (inception date – 2/8/84)	22.30%	25.75%	20.01%	14.06%
S&P 500 Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	28.71	18.47	16.55	12.05

Management

Investment adviser Capital Research and Management CompanySM

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Paul Benjamin	4 years	Partner – Capital World Investors
Mark L. Casey	5 years	Partner – Capital International Investors
Irfan M. Furniturewala	1 year	Partner – Capital International Investors
Anne-Marie Peterson	4 years	Partner – Capital World Investors
Andraz Razen	9 years	Partner – Capital World Investors
Alan J. Wilson	8 years	Partner – Capital World Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

International Fund

Investment objective The fund's investment objective is to provide long-term growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee*	0.48%
Other expenses	0.06
Total annual fund operating expenses	0.54

* Restated to reflect current fees.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$55	\$173	\$302	\$677

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 44% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks of companies domiciled outside the United States, including companies domiciled in emerging markets, that the investment adviser believes have the potential for growth.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

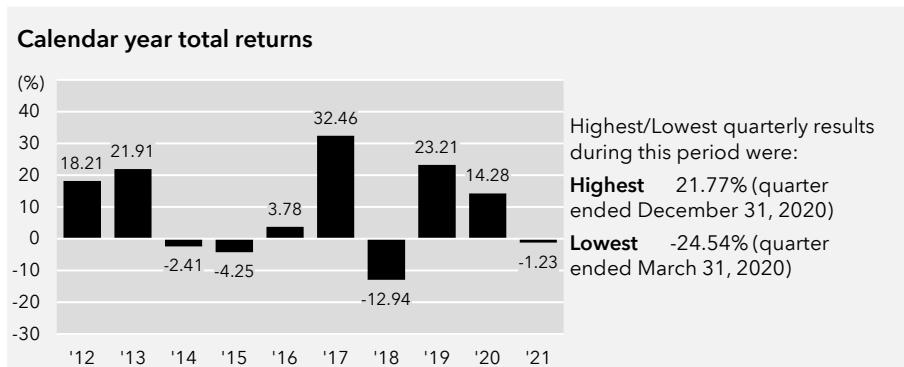

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries. Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

New World Fund

Investment objective The fund's investment objective is long-term capital appreciation.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee ¹	0.58%
Other expenses	0.06
Total annual fund operating expenses	0.64
Fee waiver ²	0.07
Total annual fund operating expenses after fee waiver	0.57

¹ Restated to reflect current fees.

² The investment adviser is currently waiving a portion of its management fee equal to .07% of the fund's net assets. This waiver will be in effect through at least May 1, 2023. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$58	\$198	\$350	\$792

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 43% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks of companies with significant exposure to countries with developing economies and/or markets. The securities markets of these countries may be referred to as emerging markets. The fund may invest in equity securities of any company, regardless of where it is based (including developed countries), if the fund's investment adviser determines that a significant portion of the company's assets or revenues (generally 20% or more) is attributable to developing countries.

Under normal market conditions, the fund invests at least 35% of its assets in equity and debt securities of issuers primarily based in qualified countries that have developing economies and/or markets. The fund may also, to a limited extent, invest in securities of issuers based in nonqualified developing countries.

In determining whether a country is qualified, the fund's investment adviser considers such factors as the country's per capita gross domestic product, the percentage of the country's economy that is industrialized, market capital as a percentage of gross domestic product, the overall regulatory environment, the presence of government regulation limiting or banning foreign ownership, and restrictions on repatriation of initial capital, dividends, interest and/or capital gains. The fund's investment adviser maintains a list of qualified countries and securities in which the fund may invest.

The fund may also invest in debt securities of issuers, including issuers of lower rated bonds (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser), with exposure to these countries. Bonds rated Ba1 or BB+ or below are sometimes referred to as "junk bonds."

In addition, the fund may invest in nonconvertible debt securities of issuers, including issuers of lower rated bonds and government bonds, that are primarily based in qualified countries or that have a significant portion of their assets or revenues attributable to developing countries.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in developing countries.

Investing in developing countries – Investing in countries with developing economies and/or markets may involve risks in addition to and greater than those generally associated with investing in developed countries. For instance, developing countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries. Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in developing countries may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, developing countries are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in lower rated debt instruments – Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

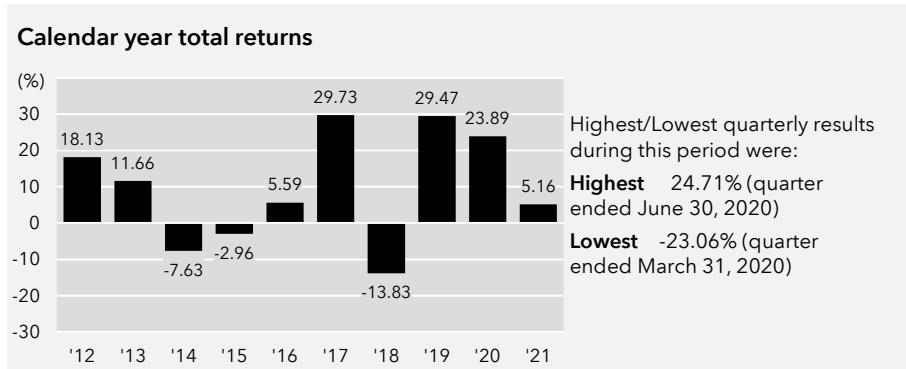

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies.

Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

Capital World Growth and Income Fund

Investment objective The fund's investment objective is to provide you with long-term growth of capital while providing current income.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee ¹	0.48%
Other expenses	0.05
Total annual fund operating expenses	0.53
Fee waiver ²	0.11
Total annual fund operating expenses after fee waiver	0.42

¹ Restated to reflect current fees.

² The investment adviser is currently waiving a portion of its management fee equal to .11% of the fund's net assets. This waiver will be in effect through at least May 1, 2023. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$43	\$159	\$285	\$654

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 85% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks of well-established companies located around the world, many of which have the potential to pay dividends. The fund invests, on a global basis, in common stocks that are denominated in U.S. dollars or other currencies. Under normal market circumstances the fund will invest a significant portion of its assets in securities of issuers domiciled in a number of countries outside the United States, and such investments may include securities domiciled in developing countries.

The fund is designed for investors seeking both capital appreciation and income. In pursuing its objective, the fund tends to invest in stocks that the investment adviser believes to be relatively resilient to market declines.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries.

Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

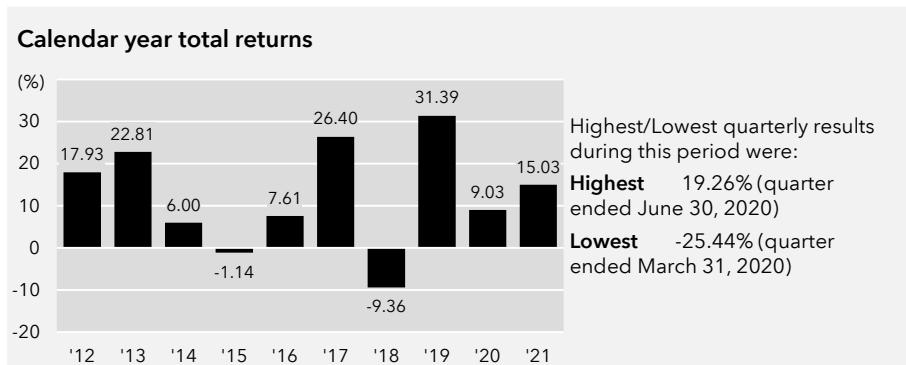

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2021:

	1 year	5 years	10 years	Lifetime
Fund (inception date – 5/1/06)	15.03%	13.55%	11.92%	8.11%
MSCI All Country World Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	18.54	14.40	11.85	7.35

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

Growth-Income Fund

Investment objectives The fund's investment objectives are to achieve long-term growth of capital and income.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.25%
Other expenses	0.04
Total annual fund operating expenses	0.29

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$30	\$93	\$163	\$368

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 24% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks or other securities that the investment adviser believes demonstrate the potential for appreciation and/or dividends. The fund may invest up to 15% of its assets, at the time of purchase, in securities of issuers domiciled outside the United States. The fund is designed for investors seeking both capital appreciation and income.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

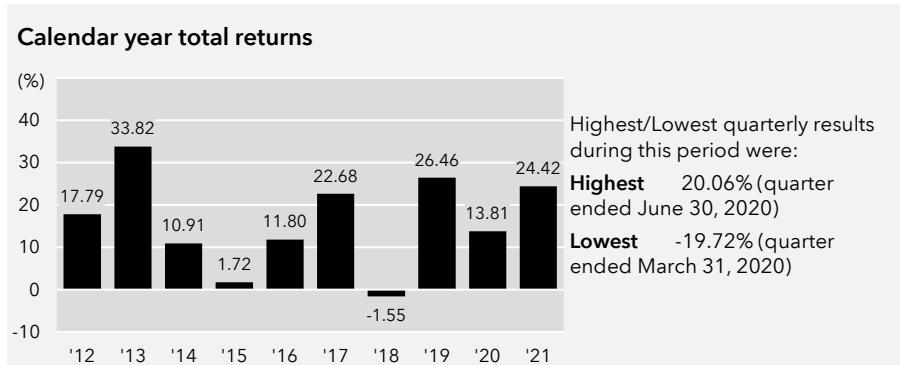

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. International Growth and Income Fund

Investment objective The fund's investment objective is to provide you with long-term growth of capital while providing current income.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee ¹	0.48%
Other expenses	0.06
Total annual fund operating expenses	0.54
Fee waiver ²	0.01
Total annual fund operating expenses after fee waiver	0.53

¹ Restated to reflect current fees.

² The investment adviser is currently waiving a portion of its management fee equal to .01% of the fund's net assets. This waiver will be in effect through at least May 1, 2023. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$54	\$172	\$301	\$676

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 41% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in stocks of larger, well-established companies domiciled outside the United States, including in emerging markets and developing countries, that the investment adviser believes have the potential for growth and/or to pay dividends. The fund currently intends to invest at least 90% of its assets in securities of issuers domiciled outside the United States whose securities are listed primarily on exchanges outside the United States, cash, cash equivalents (including shares of money market or similar funds managed by the investment adviser or its affiliates) and securities held as collateral issued by U.S. issuers. The fund therefore expects to be invested in numerous countries outside the United States.

The fund is designed for investors seeking both capital appreciation and income. In pursuing its objective, the fund focuses on stocks of companies with strong earnings that pay dividends. The investment adviser believes that these stocks may be more resistant to market declines than stocks of companies that do not pay dividends.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries.

Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

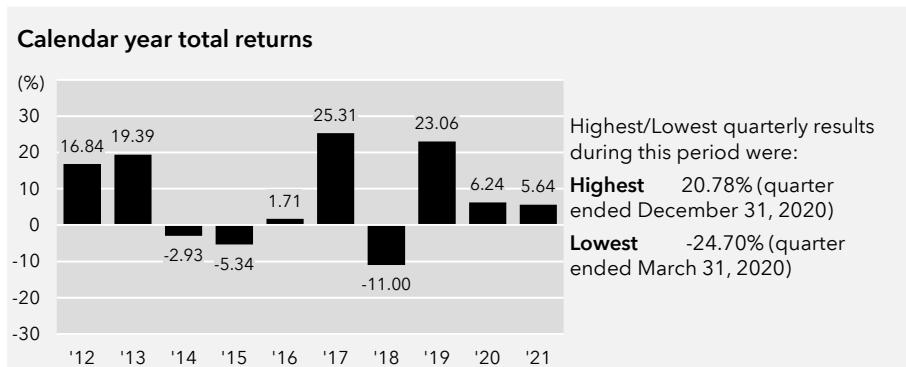

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

Washington Mutual Investors Fund

Investment objective The fund's investment objective is to produce income and to provide an opportunity for growth of principal consistent with sound common stock investing.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee ¹	0.37%
Other expenses	0.04
Total annual fund operating expenses	0.41
Fee waiver ²	0.14
Total annual fund operating expenses after fee waiver	0.27

¹ Restated to reflect current fees.

² The investment adviser is currently waiving a portion of its management fee equal to .14% of the fund's net assets. This waiver will be in effect through at least May 1, 2023. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$28	\$118	\$216	\$504

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 90% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks of established companies that are listed on, or meet the financial listing requirements of, the New York Stock Exchange and have a strong record of earnings and dividends. The fund strives to accomplish its objective through fundamental research, careful selection and broad diversification. In the selection of common stocks and other securities for investment, current and potential income as well as the potential for long-term capital appreciation are considered. The fund seeks to provide an above-average yield in its quarterly income distribution in relation to the S&P 500 Index (a broad, unmanaged index). The fund strives to maintain a fully invested, diversified portfolio, consisting primarily of high-quality common stocks.

The fund has an "Eligible List" of investments considered appropriate for a prudent investor seeking opportunities for income and growth of principal consistent with common stock investing. The investment adviser generates and maintains the Eligible List and selects the fund's investments exclusively from the issuers on the Eligible List.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

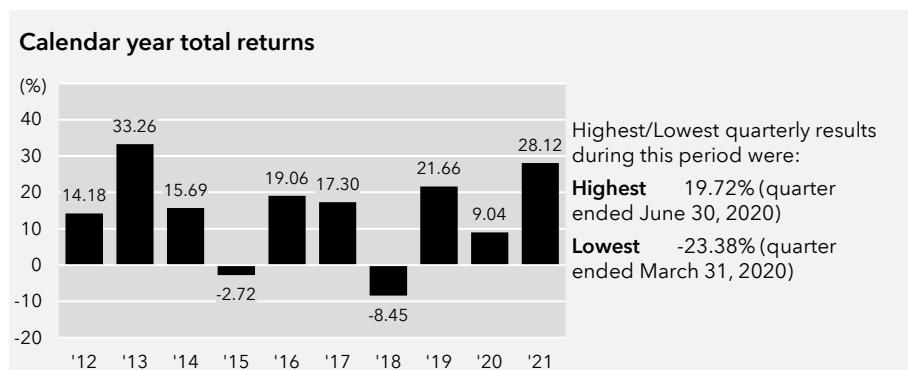

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. The results for all of the years shown reflect the operation of the fund as the Blue Chip Income and Growth Fund prior to May 1, 2021. Accordingly, results for such periods may not be representative of the fund's results had the fund been operated under its current strategy during the entire period. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2021:	1 year	5 years	10 years	Lifetime
Fund (inception date – 7/5/01)	28.12%	12.79%	14.04%	7.78%
S&P 500 Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	28.71	18.47	16.55	9.00

Management

Investment adviser Capital Research and Management CompanySM

Alan J. Wilson	1 year	Partner – Capital World Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

Capital Income Builder

Investment objectives The fund has two primary investment objectives. It seeks (1) to provide a level of current income that exceeds the average yield on U.S. stocks generally and (2) to provide a growing stream of income over the years. The fund's secondary objective is to provide growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee ¹	0.36%
Other expenses	0.05
Total annual fund operating expenses	0.41
Fee waiver ²	0.14
Total annual fund operating expenses after fee waiver	0.27

¹ Restated to reflect current fees.

² The investment adviser is currently waiving a portion of its management fee equal to .14% of the fund's net assets. This waiver will be in effect through at least May 1, 2023. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$28	\$118	\$216	\$504

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 93% of the average value of its portfolio.

Principal investment strategies The fund normally invests at least 90% of its assets in income-producing securities (with at least 50% of its assets in common stocks and other equity securities). The fund invests primarily in a broad range of income-producing securities, including common stocks and bonds. In seeking to provide a level of current income that exceeds the average yield on U.S. stocks, the fund generally looks to the average yield on stocks of companies listed on the S&P 500 Index. The fund may also invest significantly in common stocks, bonds and other securities of issuers domiciled outside the United States.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks, bonds and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations. These risks may be heightened in the case of smaller capitalization stocks.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

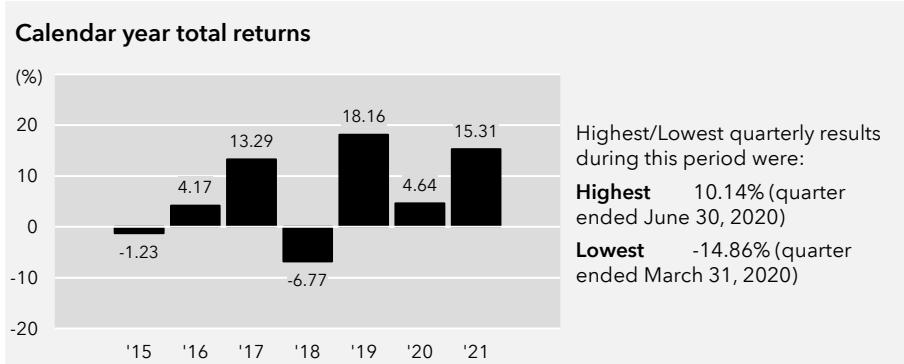

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of

investing in the fund. The fund has selected the 70%/30% MSCI All Country World Index/Bloomberg U.S. Aggregate Index to replace the MSCI All Country World Index as its broad-based securities market index. The fund's investment adviser believes that the 70%/30% MSCI All Country World Index/Bloomberg U.S. Aggregate Index better reflects the market sectors and securities in which the fund primarily invests and the investment strategies employed by the adviser in seeking to achieve the fund's investment objective. The MSCI All Country World Index reflects the equity market sectors in which the fund invests. Results reflect dividends gross of withholding taxes through December 31, 2000, and dividends net of withholding taxes thereafter. The Bloomberg U.S. Aggregate Index represents the U.S. investment-grade fixed-rate bond market. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2021:

	1 year	5 years	Lifetime
Fund (inception date – 5/1/14)	15.31%	8.53%	5.89%
70%/30% MSCI All Country World Index/Bloomberg U.S. Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	12.25	11.31	8.24
MSCI All Country World Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	18.54	14.40	10.18
Bloomberg U.S. Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	-1.54	3.57	3.13

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

American Funds Global Balanced Fund

Investment objectives This fund seeks the balanced accomplishment of three objectives: long-term growth of capital, conservation of principal and current income.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee ¹	0.45%
Other expenses	0.07
Total annual fund operating expenses	0.52
Fee waiver ²	0.01
Total annual fund operating expenses after fee waiver	0.51

¹ Restated to reflect current fees.

² The investment adviser is currently waiving a portion of its management fee equal to .01% of the fund's net assets. This waiver will be in effect through at least May 1, 2023. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$52	\$166	\$290	\$652

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 39% of the average value of its portfolio.

Principal investment strategies As a balanced fund with global scope, the fund seeks to invest in equity and debt securities around the world that offer the opportunity for growth and/or provide dividend income, while also constructing the portfolio to protect principal and limit volatility.

Normally the fund will maintain at least 45% of the value of its assets in common stocks and other equity investments. Although the fund's equity investments focus on medium to larger capitalization companies, the fund's investments are not limited to a particular capitalization size.

Normally the fund will invest at least 25% of the value of its assets in bonds and other debt securities (including money market instruments). These will consist of investment-grade securities (rated Baa3 or better or BBB- or better by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser).

The fund will allocate its assets among various countries, including the United States (but in no fewer than three countries). Under normal market conditions, the fund will invest at least 40% of its net assets in issuers domiciled outside the United States, unless market conditions are not deemed favorable by the fund's investment adviser, in which case the fund would invest at least 30% of its net assets in issuers domiciled outside the United States.

The fund's ability to invest in issuers domiciled outside the United States includes investing in emerging markets.

The fund may invest in bonds and other debt securities, including securities issued and guaranteed by the U.S. government, securities issued by federal agencies and instrumentalities and securities backed by mortgages or other assets. The fund may also invest in securities of governments, agencies, corporations and other entities domiciled outside the United States. These investments will typically be denominated in currencies other than U.S. dollars.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks, bonds and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities may involve larger price swings and greater potential for loss than other types of investments.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries.

Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

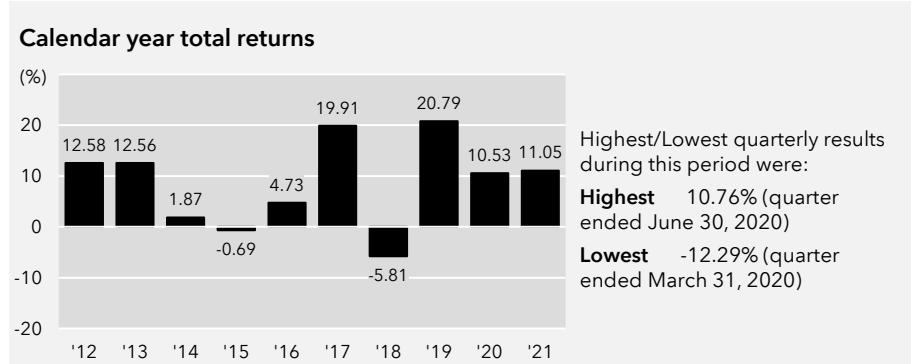

Investing in mortgage-related and other asset-backed securities – Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as residential mortgage loans, home equity loans, mortgages on commercial buildings, consumer loans and equipment leases. While such securities are subject to the risks associated with investments in debt instruments generally (for example, credit, extension and interest rate risks), they are also subject to other and different risks. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt, potentially increasing the volatility of the securities and the fund's net asset value. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in the fund having to reinvest the proceeds in lower yielding securities, effectively reducing the fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing the fund's cash available for reinvestment in higher yielding securities. Mortgage-backed securities are also subject to the risk that underlying borrowers will be unable to meet their obligations and the value of property that secures the mortgages may decline in value and be insufficient, upon foreclosure, to repay the associated loans. Investments in asset-backed securities are subject to similar risks.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results, such as the 60%/40% MSCI All Country World Index/Bloomberg Aggregate Index. This information provides some indication of the risks of investing in the fund. The 60%/40% MSCI All Country World Index/Bloomberg Global Aggregate Index blends the MSCI All Country World Index, which measures global equity markets, with the Bloomberg Global Aggregate Index, which measures investment-grade bonds (rated BBB-/Baa3 and above), by weighting their total returns at 60% and 40% respectively. This assumes the blend is rebalanced monthly. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2021:

	1 year	5 years	10 years	Lifetime
Fund (inception date – 5/2/11)	11.05%	10.86%	8.44%	7.28%
60%/40% MSCI All Country World Index/Bloomberg Global Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	8.78	10.11	7.91	6.50
MSCI All Country World Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	18.54	14.40	11.85	9.40
Bloomberg Global Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	-4.71	3.36	1.77	1.76

Management

Investment adviser Capital Research and Management CompanySM

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Alfonso Barroso	Less than 1 year	Partner – Capital Research Global Investors
Andrew A. Cormack	1 year	Partner – Capital Fixed Income Investors
Bradford F. Freer	Less than 1 year	Partner – Capital Research Global Investors
Thomas H. Høgh	3 years	Partner – Capital Fixed Income Investors
Winnie Kwan	Less than 1 year	Partner – Capital Research Global Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

American Funds Mortgage Fund

Investment objective The fund's investment objective is to provide current income and preservation of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee ¹	0.30%
Other expenses	0.07
Total annual fund operating expenses	0.37
Fee waiver ²	0.12
Total annual fund operating expenses after fee waiver	0.25

¹ Restated to reflect current fees.

² The investment adviser is currently waiving a portion of its management fee equal to .12% of the fund's net assets. This waiver will be in effect through at least May 1, 2023. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$26	\$107	\$196	\$456

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 975% of the average value of its portfolio.

Principal investment strategies Normally at least 80% of the fund's assets are invested in mortgage-related securities, including securities collateralized by mortgage loans and contracts for future delivery of such securities (such as to be announced contracts and mortgage dollar rolls). The fund invests primarily in mortgage-related securities that are sponsored or guaranteed by the U.S. government, such as securities issued by government-sponsored entities that are not backed by the full faith and credit of the U.S. government, and nongovernment mortgage-related securities that are rated in the Aaa or AAA rating category (by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser) or unrated but determined to be of equivalent quality by the fund's investment adviser. The fund may also invest in debt issued by federal agencies. In the case of to be announced contracts, each contract for future delivery is normally of short duration.

The fund may also invest in futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time.

Investing in mortgage-related and other asset-backed securities – Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as consumer loans or receivables. While such securities are subject to the risks associated with investments in debt instruments generally (for example, credit, extension and interest rate risks), they are also subject to other and different risks. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt, potentially increasing the volatility of the securities and the fund's net asset value. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in the fund having to reinvest the proceeds in lower yielding securities, effectively reducing the fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing the fund's cash available for reinvestment in higher yielding securities. Mortgage-backed securities are also subject to the risk that underlying borrowers will be unable to meet their obligations and the value of property that secures the mortgages may decline in value and be insufficient, upon foreclosure, to repay the associated loans. Investments in asset-backed securities are subject to similar risks.

Market conditions – The prices of, and the income generated by, the securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing in securities backed by the U.S. government – Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government. Securities issued by U.S. government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Investing in future delivery contracts – The fund may enter into contracts, such as to-be-announced contracts and mortgage dollar rolls, that involve the fund selling mortgage-related securities and simultaneously contracting to repurchase similar securities for delivery at a future date at a predetermined price. This can increase the fund's market exposure, and the market price of the securities that the fund contracts to repurchase could drop below their purchase price. While the fund can preserve and generate capital through the use of such contracts by, for example, realizing the difference between the sale price and the future purchase price, the income generated by the fund may be reduced by engaging in such transactions. In addition, these transactions increase the turnover rate of the fund.

Investing in inflation-linked bonds – The values of inflation-linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation-linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation-linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation-linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

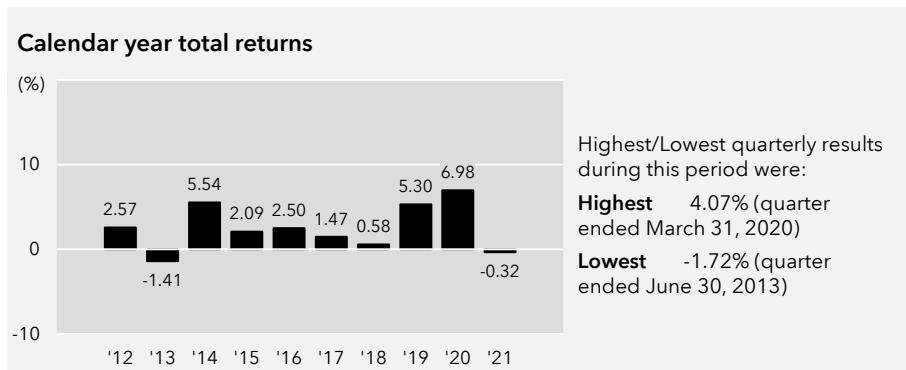

Investing in inflation-linked bonds may also reduce the fund's distributable income during periods of deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation-linked securities may decline and result in losses to the fund.

Investing in derivatives – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

It is important to note that neither your investment in the fund nor the fund's yield is guaranteed by the U.S. government. Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The Lipper Intermediate U.S. Government Funds Average includes mutual funds that disclose investment objectives and/or strategies reasonably comparable to those of the fund. The Lipper GNMA Funds Average includes funds that disclose investment objectives and/or strategies reasonably comparable to those of the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2021:

	1 year	5 years	10 years	Lifetime
Fund (inception date – 5/2/11)	-0.32%	2.76%	2.50%	2.79%
Bloomberg U.S. Mortgage Backed Securities Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	-1.04	2.50	2.28	2.56
Lipper Intermediate U.S. Government Funds Average (reflects no deduction for sales charges, account fees or U.S. federal income taxes)	-1.66	2.35	1.72	2.14
Lipper GNMA Funds Average (reflects no deduction for sales charges, account fees or U.S. federal income taxes)	-1.55	1.77	1.54	1.91

Management

Investment adviser Capital Research and Management CompanySM

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
David J. Betanzos	8 years	Partner – Capital Fixed Income Investors
Oliver V. Edmonds	2 years	Vice President – Capital Fixed Income Investors
Fergus N. MacDonald	11 years	Partner – Capital Fixed Income Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

American High-Income Trust

Investment objectives The fund's primary investment objective is to provide you with a high level of current income. Its secondary investment objective is capital appreciation.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee ¹	0.40%
Other expenses	0.04
Total annual fund operating expenses	0.44
Fee waiver ²	0.14
Total annual fund operating expenses after fee waiver	0.30

¹ Restated to reflect current fees.

² The investment adviser is currently waiving a portion of its management fee equal to .14% of the fund's net assets. This waiver will be in effect through at least May 1, 2023. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$31	\$127	\$232	\$541

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 56% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in higher yielding and generally lower quality debt securities (rated Ba1 / BB+ or below by Nationally Recognized Statistical Rating Organizations or unrated but determined by the fund's investment adviser to be of equivalent quality), including corporate loan obligations. Such securities are sometimes referred to as "junk bonds." The fund may also invest a portion of its assets in securities of issuers domiciled outside the United States.

The fund may also invest in futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objectives and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The fund is designed for investors seeking a high level of current income and who are able to tolerate greater credit risk and price fluctuations than those that exist in funds investing in higher quality debt securities.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time.

Market conditions – The prices of, and the income generated by, the securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in lower rated debt instruments – Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

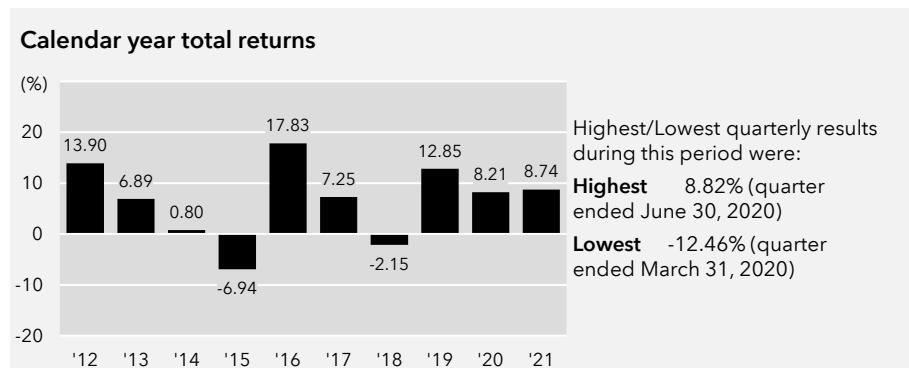

Investing in derivatives – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The Lipper High Yield Funds Average includes mutual funds that disclose investment objectives and/or strategies reasonably comparable to those of the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2021:	1 year	5 years	10 years	Lifetime
Fund (inception date – 2/8/84)	8.74%	6.86%	6.49%	8.66%
Bloomberg U.S. Corporate High Yield 2% Issuer Capped Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	5.26	6.28	6.82	N/A
Lipper High Yield Funds Average (reflects no deduction for sales charges, account fees or U.S. federal income taxes)	5.07	5.41	5.84	7.69

Management

Investment adviser Capital Research and Management CompanySM

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Tom Chow	7 years	Partner – Capital Fixed Income Investors
David A. Daigle	13 years	Partner – Capital Fixed Income Investors
Tara L. Torrens	4 years	Partner – Capital Fixed Income Investors
Shannon Ward	5 years	Partner – Capital Fixed Income Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

Capital World Bond Fund

Investment objective The fund's investment objective is to provide you, over the long term, with a high level of total return consistent with prudent investment management. Total return comprises the income generated by the fund and the changes in the market value of the fund's investments.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee*	0.43%
Other expenses	0.07
Total annual fund operating expenses	0.50

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$51	\$160	\$280	\$628

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 91% of the average value of its portfolio.

Principal investment strategies Under normal market circumstances, the fund invests at least 80% of its assets in bonds and other debt securities, which may be represented by derivatives. The fund invests primarily in debt securities, including asset-backed and mortgage-backed securities and securities of governmental, supranational and corporate issuers denominated in various currencies, including U.S. dollars. The fund will invest substantially in securities of issuers domiciled in a number of countries outside the United States, and such investments may include securities of issuers domiciled in developing countries. Normally, the fund invests substantially in investment-grade bonds (rated Baa3 or better or BBB- or better by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). The fund may also invest up to 25% of its assets in lower quality, higher yielding debt securities (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). Such securities are sometimes referred to as "junk bonds." The total return of the fund will be the result of interest income, changes in the market value of the fund's investments and changes in the values of other currencies relative to the U.S. dollar.

The fund may invest in forward currency contracts, futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time.

Market conditions – The prices of, and the income generated by, the securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing in lower rated debt instruments – Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Currency – The prices of, and the income generated by, many debt securities held by the fund may also be affected by changes in relative currency values. If the U.S. dollar appreciates against foreign currencies, the value in U.S. dollars of the fund's securities denominated in such currencies would generally fall and vice versa.

Investing in derivatives – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

Investing in inflation-linked bonds – The values of inflation-linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation-linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation-linked bonds may experience greater losses than other debt

securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation-linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation-linked bonds may also reduce the fund's distributable income during periods of deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation-linked securities may decline and result in losses to the fund.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

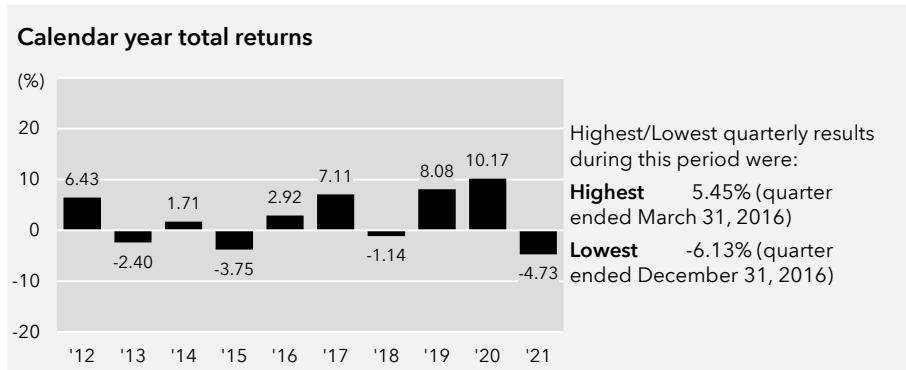

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries.

Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The Lipper Global Income Funds Average includes funds that disclose investment objectives and/or strategies reasonably comparable to those of the fund. The Consumer Price Index provides a comparison of the fund's results to inflation. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2021:	1 year	5 years	10 years	Lifetime

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Philip Chitty	1 year	Partner – Capital Fixed Income Investors
Andrew A. Cormack	3 years	Partner – Capital Fixed Income Investors
Thomas H. Høgh	16 years	Partner – Capital Fixed Income Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

The Bond Fund of America

Investment objective The fund's investment objective is to provide as high a level of current income as is consistent with the preservation of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee ¹	0.35%
Other expenses	0.04
Total annual fund operating expenses	0.39
Fee waiver ²	0.19
Total annual fund operating expenses after fee waiver	0.20

¹ Restated to reflect current fees.

² The investment adviser is currently waiving a portion of its management fee equal to .19% of the fund's net assets. This waiver will be in effect through at least May 1, 2023. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$20	\$106	\$200	\$474

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 456% of the average value of its portfolio.

Principal investment strategies The fund seeks to maximize your level of current income and preserve your capital by investing primarily in bonds. Normally the fund invests at least 80% of its assets in bonds and other debt securities, which may be represented by derivatives. The fund invests at least 60% of its assets in debt securities (excluding derivatives) rated A3 or better or A- or better by Nationally Recognized Statistical Ratings Organizations designated by the fund's investment adviser, or in debt securities that are unrated but determined to be of equivalent quality by the fund's investment adviser, and in U.S. government securities, money market instruments, cash or cash equivalents.

The fund may invest in debt securities and mortgage-backed securities issued by government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government.

The fund may invest in inflation-linked bonds issued by U.S. and non-U.S. governments, their agencies or instrumentalities, and corporations. Inflation-linked bonds are structured to protect against inflation by linking the bond's principal and interest payments to an inflation index, such as the Consumer Price Index for Urban Consumers, so that principal and interest adjust to reflect changes in the index.

The fund may invest in futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The fund may invest up to 10% of its assets in debt securities rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Ratings Organizations designated by the fund's investment adviser, or in debt securities that are unrated but determined to be of equivalent quality by the fund's investment adviser. Securities rated Ba1 or below and BB+ or below are sometimes referred to as "junk bonds."

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time.

Market conditions – The prices of, and the income generated by, the securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in mortgage-related and other asset-backed securities – Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as consumer loans or receivables. While such securities are subject to the risks associated with investments in debt instruments generally (for example, credit, extension and interest rate risks), they are also subject to other and different risks. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt, potentially increasing the volatility of the securities and the fund's net asset value. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in the fund having to reinvest the proceeds in lower yielding securities, effectively reducing the fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing the fund's cash available for reinvestment in higher yielding securities. Mortgage-backed securities are also subject to the risk that underlying borrowers will be unable to meet their obligations and the value of property that secures the mortgages may decline in value and be insufficient, upon foreclosure, to repay the associated loans. Investments in asset-backed securities are subject to similar risks.

Investing in securities backed by the U.S. government – Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government. Securities issued by U.S. government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in future delivery contracts – The fund may enter into contracts, such as to-be-announced contracts and mortgage dollar rolls, that involve the fund selling mortgage-related securities and simultaneously contracting to repurchase similar securities for delivery at a future date at a predetermined price. This can increase the fund's market exposure, and the market price of the securities that the fund contracts to repurchase could drop below their purchase price. While the fund can preserve and generate capital through the use of such contracts by, for example, realizing the difference between the sale price and the future purchase price, the income generated by the fund may be reduced by engaging in such transactions. In addition, these transactions increase the turnover rate of the fund.

Investing in inflation-linked bonds – The values of inflation-linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation-linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation-linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation-linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

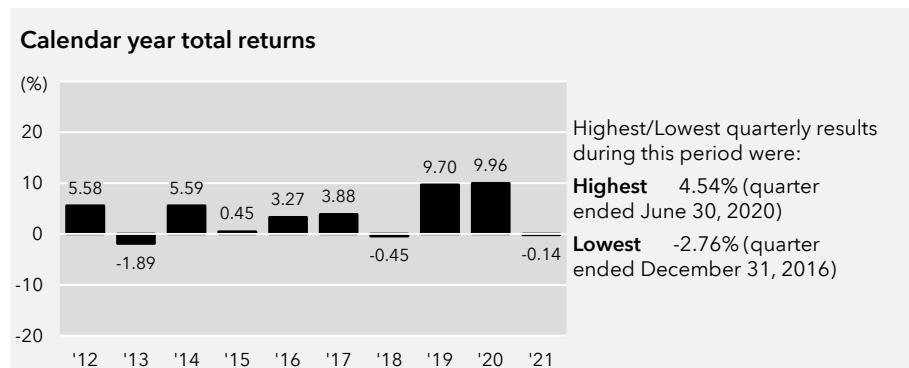

Investing in inflation-linked bonds may also reduce the fund's distributable income during periods of deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation-linked securities may decline and result in losses to the fund.

Investing in derivatives – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The Lipper Core Bond Funds Average includes mutual funds that disclose investment objectives and/or strategies reasonably comparable to those of the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2021:

	1 year	5 years	10 years	Lifetime
Fund (inception date – 1/2/96)	-0.14%	4.49%	3.52%	4.73%
Bloomberg U.S. Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	-1.54	3.57	2.90	4.90
Lipper Core Bond Funds Average (reflects no deduction for sales charges, account fees or U.S. federal income taxes)	-1.26	3.65	3.10	4.70

Management

Investment adviser Capital Research and Management CompanySM

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Pramod Atluri	6 years	Partner – Capital Fixed Income Investors
David J. Betanzos	1 year	Partner – Capital Fixed Income Investors
David A. Hoag	15 years	Partner – Capital Fixed Income Investors
Fergus N. MacDonald	1 year	Partner – Capital Fixed Income Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

U.S. Government Securities Fund

Investment objective The fund's investment objective is to provide a high level of current income consistent with prudent investment risk and preservation of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy, hold and sell an interest in Class 1 shares of the fund. You may pay other fees, such as insurance contract fees and expenses, which are not reflected in the tables and examples below. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee ¹	0.30%
Other expenses	0.04
Total annual fund operating expenses	0.34
Fee waiver ²	0.12
Total annual fund operating expenses after fee waiver	0.22

¹ Restated to reflect current fees.

² The investment adviser is currently waiving a portion of its management fee equal to .12% of the fund's net assets. This waiver will be in effect through at least May 1, 2023. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$23	\$97	\$179	\$419

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 433% of the average value of its portfolio.

Principal investment strategies Normally at least 80% of the fund's assets will be invested in securities that are guaranteed or sponsored by the U.S. government, its agencies and instrumentalities, including bonds and other debt securities denominated in U.S. dollars, which may be represented by derivatives. The fund may also invest in mortgage-backed securities issued by federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government.

The fund may invest in inflation-linked bonds issued by U.S. and non-U.S. governments, their agencies or instrumentalities, and corporations. Inflation-linked bonds are structured to protect against inflation by linking the bond's principal and interest payments to an inflation index, such as the Consumer Price Index for Urban Consumers, so that principal and interest adjust to reflect changes in the index.

The fund may invest in futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time.

Market conditions – The prices of, and the income generated by, the securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in securities backed by the U.S. government – Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government. Securities issued by U.S. government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Investing in mortgage-related and other asset-backed securities – Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as consumer loans or receivables. While such securities are subject to the risks associated with investments in debt instruments generally (for example, credit, extension and interest rate risks), they are also subject to other and different risks. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt, potentially increasing the volatility of the securities and the fund's net asset value. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in the fund having to reinvest the proceeds in lower yielding securities, effectively reducing the fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing the fund's cash available for reinvestment in higher yielding securities. Mortgage-backed securities are also subject to the risk that underlying borrowers will be unable to meet their obligations and the value of property that secures the mortgages may decline in value and be insufficient, upon foreclosure, to repay the associated loans. Investments in asset-backed securities are subject to similar risks.

Investing in future delivery contracts – The fund may enter into contracts, such as to-be-announced contracts and mortgage dollar rolls, that involve the fund selling mortgage-related securities and simultaneously contracting to repurchase similar securities for delivery at a future date at a predetermined price. This can increase the fund's market exposure, and the market price of the securities that the fund contracts to repurchase could drop below their purchase price. While the fund can preserve and generate capital through the use of such contracts by, for example, realizing the difference between the sale price and the future purchase price, the income generated by the fund may be reduced by engaging in such transactions. In addition, these transactions increase the turnover rate of the fund.

Investing in inflation-linked bonds – The values of inflation-linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation-linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation-linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation-linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

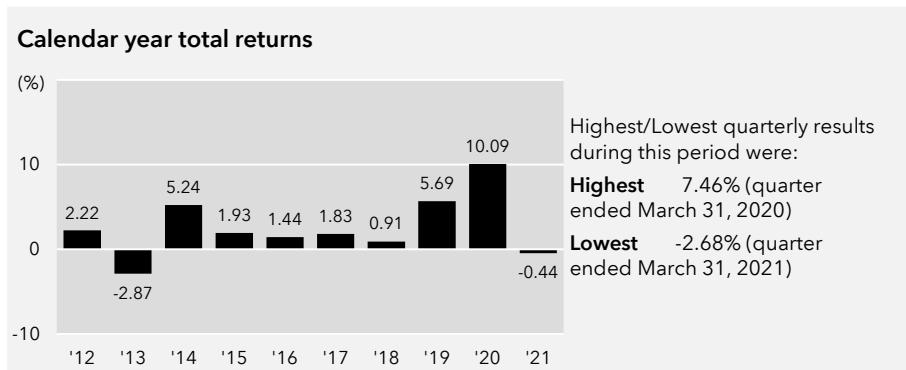

Investing in inflation-linked bonds may also reduce the fund's distributable income during periods of deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation-linked securities may decline and result in losses to the fund.

Investing in derivatives – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

It is important to note that neither your investment in the fund nor the fund's yield is guaranteed by the U.S. government. Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The Lipper General U.S. Government Funds Average includes mutual funds that disclose investment objectives and/or strategies reasonably comparable to those of the fund. The Consumer Price Index provides a comparison of the fund's results to inflation. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2021:

	1 year	5 years	10 years	Lifetime
Fund (inception date – 12/2/85)	-0.44%	3.55%	2.55%	5.65%
Bloomberg U.S. Government/Mortgage Backed Securities Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	-1.77	2.85	2.21	5.98
Lipper General U.S. Government Funds Average (reflects no deduction for sales charges, account fees or U.S. federal income taxes)	-2.18	2.68	1.90	5.32
Consumer Price Index	7.04	2.92	2.14	2.64

Management

Investment adviser Capital Research and Management CompanySM

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
David J. Betanzos	7 years	Partner – Capital Fixed Income Investors
Fergus N. MacDonald	12 years	Partner – Capital Fixed Income Investors
Ritchie Tuazon	7 years	Partner – Capital Fixed Income Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds – and not the holders of variable insurance contracts – are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

Investment objectives, strategies and risks

Global Growth Fund The fund's investment objective is to provide long-term growth of capital. While it has no present intention to do so, the fund's board may change the fund's investment objective without shareholder approval upon 60 days' written notice to shareholders.

The fund invests primarily in common stocks of companies around the world that the investment adviser believes have the potential for growth. The fund may also invest in securities of foreign issuers in the form of depositary receipts or other instruments by which the fund may obtain exposure to equity investments in local markets. As a fund that seeks to invest globally, the fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the fund will invest significantly in issuers domiciled outside the United States (i.e., at least 40% of its net assets, unless market conditions are not deemed favorable by the fund's investment adviser, in which case the fund would invest at least 30% of its net assets in issuers outside the United States). Although the fund focuses on investments in medium to larger capitalization companies, the fund's investments are not limited to a particular capitalization size.

The fund is designed for investors seeking capital appreciation through investments in stocks. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries. Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Lending of portfolio securities – Securities lending involves risks, including the risk that the loaned securities may not be returned in a timely manner or at all and/or the risk of a loss of rights in the collateral if a borrower or the lending agent defaults. These risks could be greater for non-U.S. securities. Additionally, the fund may lose money from the reinvestment of collateral received on loaned securities in investments that decline in value, default or do not perform as expected.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including "ransomware" attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser's or an affiliate's website that could render the fund's network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund's assets or sensitive information, the disruption of the fund's operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund's physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund's investment adviser, transfer agent, custodian, administrators and other financial

intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund's investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund's principal investment strategies and other investment practices. The fund's investment results will depend on the ability of the fund's investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The MSCI All Country World Index is a free float-adjusted market capitalization-weighted index that is designed to measure equity market results in the global developed and emerging markets, consisting of more than 40 developed and emerging market country indexes. Results reflect dividends gross of withholding taxes through December 31, 2000, and dividends net of withholding taxes thereafter. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes.

Portfolio holdings A description of the fund's policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

Global Small Capitalization Fund The fund's investment objective is to provide long-term growth of capital. While it has no present intention to do so, the fund's board may change the fund's investment objective without shareholder approval upon 60 days' written notice to shareholders.

Normally, the fund invests at least 80% of its net assets in growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) of companies with small market capitalizations, measured at the time of purchase. However, the fund's holdings of small capitalization stocks may fall below the 80% threshold due to subsequent market action. This policy is subject to change only upon 60 days' written notice to shareholders. The investment adviser currently defines "small market capitalization" companies as companies with market capitalizations of \$6.0 billion or less. The investment adviser has periodically re-evaluated and adjusted this definition and may continue to do so in the future. As a fund that seeks to invest globally, the fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the fund will invest significantly in issuers domiciled outside the United States (i.e., at least 40% of its net assets, unless market conditions are not deemed favorable by the fund's investment adviser, in which case the fund would invest at least 30% of its net assets in issuers outside the United States).

The fund is designed for investors seeking capital appreciation through investments in stocks. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular

industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies.

Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries.

Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Lending of portfolio securities – Securities lending involves risks, including the risk that the loaned securities may not be returned in a timely manner or at all and/or the risk of a loss of rights in the collateral if a borrower or the lending agent defaults. These risks could be greater for non-U.S. securities. Additionally, the fund may lose money from the reinvestment of collateral received on loaned securities in investments that decline in value, default or do not perform as expected.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including "ransomware" attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser's or an affiliate's website that could render the fund's network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund's assets or sensitive information, the disruption of the fund's operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund's physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund's investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund's investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund's principal investment strategies and other investment practices. The fund's investment results will depend on the ability of the fund's investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The MSCI All Country World Small Cap Index is a free float-adjusted market capitalization-weighted index that is designed to measure equity market results of smaller capitalization companies in both developed and emerging markets. Results reflect dividends net of withholding taxes. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes.

Portfolio holdings A description of the fund's policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

Growth Fund The fund's investment objective is to provide growth of capital. While it has no present intention to do so, the fund's board may change the fund's investment objective without shareholder approval upon 60 days' written notice to shareholders.

The fund invests primarily in common stocks and seeks to invest in companies that appear to offer superior opportunities for growth of capital. The fund may invest up to 25% of its assets in common stocks and other securities of issuers domiciled outside the United States, including, to a more limited extent, in emerging markets. Although the fund focuses on investments in medium to larger capitalization companies, the fund's investments are not limited to a particular capitalization size. The fund may also invest in other equity type securities, such as preferred stocks, convertible preferred stocks and convertible bonds.

The fund is designed for investors seeking capital appreciation through investments in stocks. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number

and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Lending of portfolio securities – Securities lending involves risks, including the risk that the loaned securities may not be returned in a timely manner or at all and/or the risk of a loss of rights in the collateral if a borrower or the lending agent defaults. These risks could be greater for non-U.S. securities. Additionally, the fund may lose money from the reinvestment of collateral received on loaned securities in investments that decline in value, default or do not perform as expected.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including “ransomware” attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser’s or an affiliate’s website that could render the fund’s network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund’s assets or sensitive information, the disruption of the fund’s operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund’s physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund’s investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund’s investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund’s principal investment strategies and other investment practices. The fund’s investment results will depend on the ability of the fund’s investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The S&P 500 Index is a market capitalization-weighted index based on the results of approximately 500 widely held common stocks. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes.

Portfolio holdings A description of the fund’s policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

International Fund The fund’s investment objective is to provide long-term growth of capital. While it has no present intention to do so, the fund’s board may change the fund’s investment objective without shareholder approval upon 60 days’ written notice to shareholders.

The fund invests primarily in common stocks of companies domiciled outside the United States, including companies domiciled in emerging markets, that the investment adviser believes have the potential for growth. The fund may also invest in securities of foreign issuers in the form of depositary receipts or other instruments by which the fund may obtain exposure to equity investments in local markets. Although the fund focuses on investments in medium to larger capitalization companies, the fund’s investments are not limited to a particular capitalization size.

The fund is designed for investors seeking capital appreciation through investments in stocks. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund’s assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a fund’s investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a fund’s loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates (“Central Funds”) to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund’s investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund’s investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund’s assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund’s portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental

analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries. Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

Investing in depositary receipts – Depositary receipts are securities that evidence ownership interests in, and represent the right to receive, a security or a pool of securities that have been deposited with a bank or trust depository. Such securities may be less liquid or may trade at a lower price than the underlying securities of the issuer. Additionally, receipt of corporate information about the underlying issuer and proxy disclosure may not be timely and there may not be a correlation between such information and the market value of the depositary receipts.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Lending of portfolio securities – Securities lending involves risks, including the risk that the loaned securities may not be returned in a timely manner or at all and/or the risk of a loss of rights in the collateral if a borrower or the lending agent defaults. These risks could be greater for non-U.S. securities. Additionally, the fund may lose money from the reinvestment of collateral received on loaned securities in investments that decline in value, default or do not perform as expected.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including "ransomware" attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser's or an affiliate's website that could render the fund's network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund's assets or sensitive information, the disruption of the fund's operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund's physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund's investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund's investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund's principal investment strategies and other investment practices. The fund's investment results will depend on the ability of the fund's investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The MSCI All Country World ex USA Index is a free float-adjusted market capitalization-weighted index that is designed to measure equity market results in the global developed and emerging markets, excluding the United States. The index consists of more than 40 developed and emerging market country indexes. Results reflect dividends gross of withholding taxes through December 31, 2000, and dividends net of withholding taxes thereafter. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes.

Portfolio holdings A description of the fund's policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

New World Fund The fund's investment objective is long-term capital appreciation. While it has no present intention to do so, the fund's board may change the fund's investment objective without shareholder approval upon 60 days' written notice to shareholders. The fund invests primarily in common stocks of companies with significant exposure to countries with developing economies and/or markets. The securities markets of these countries may be referred to as emerging markets. The fund may invest in equity securities of any company, regardless of where it is based (including developed countries), if the fund's investment adviser determines that a significant portion of the company's assets or revenues (generally 20% or more) is attributable to developing countries.

Under normal market conditions, the fund invests at least 35% of its assets in equity and debt securities of issuers primarily based in qualified countries that have developing economies and/or markets. The fund may also, to a limited extent, invest in securities of issuers based in nonqualified developing countries.

In determining whether a country is qualified, the fund's investment adviser considers such factors as the country's per capita gross domestic product, the percentage of the country's economy that is industrialized, market capital as a percentage of gross domestic product, the overall regulatory environment, the presence of government regulation limiting or banning foreign ownership, and restrictions on repatriation of initial capital, dividends, interest and/or capital gains. The fund's investment adviser maintains a list of qualified countries and securities in which the fund may invest. Qualified developing countries in which the fund may invest currently include, but are not limited to, Argentina, Bahrain, Bangladesh, Belarus, Belize, Bolivia, Botswana, Brazil, Bulgaria, Chile, China, Colombia, Costa Rica, Côte d'Ivoire, Croatia, Cyprus, Czech Republic, Dominican Republic, Ecuador, Egypt, El Salvador, Estonia, Gabon, Ghana, Greece, Hungary, India, Indonesia, Iraq, Jamaica, Jordan, Kazakhstan, Kenya, Kuwait, Latvia, Lebanon, Lithuania, Macau, Malaysia, Malta, Mauritius, Mexico, Morocco, Nigeria, Oman, Pakistan, Panama, Paraguay, Peru, Philippines, Poland, Qatar, Romania, Russian Federation, Saudi Arabia, Serbia, Slovakia, Slovenia, South Africa, Sri Lanka, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, Uruguay, Venezuela, Vietnam and Zambia.

The fund may also invest in debt securities of issuers, including issuers of lower rated bonds (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser), with exposure to these countries. Bonds rated Ba1 or BB+ or below are sometimes referred to as "junk bonds."

In addition, the fund may invest in nonconvertible debt securities of issuers, including issuers of lower rated bonds and government bonds, that are primarily based in qualified countries or that have a significant portion of their assets or revenues attributable to developing countries.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate the fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of the fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may manage other funds and accounts with similar names, investment objectives and strategies (collectively, "portfolios"). The investment results of such portfolios may vary depending on a number of factors, including, but not limited to, fees and expenses, portfolio size, transaction costs, cash flows, currencies, securities pricing time, taxes, and portfolio holdings and any applicable investment limitations. Trading in the portfolios will be consistent with the investment adviser's aggregation and allocation policy, which is designed to allocate trades of the same security to clients in a fair and equitable manner over time.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of

issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in developing countries.

Investing in developing countries – Investing in countries with developing economies and/or markets may involve risks in addition to and greater than those generally associated with investing in developed countries. For instance, developing countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries. Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in developing countries may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, developing countries are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in lower rated debt instruments – Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings

may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Investing in depositary receipts – Depositary receipts are securities that evidence ownership interests in, and represent the right to receive, a security or a pool of securities that have been deposited with a bank or trust depository. Such securities may be less liquid or may trade at a lower price than the underlying securities of the issuer. Additionally, receipt of corporate information about the underlying issuer and proxy disclosure may not be timely and there may not be a correlation between such information and the market value of the depositary receipts.

Lending of portfolio securities – Securities lending involves risks, including the risk that the loaned securities may not be returned in a timely manner or at all and/or the risk of a loss of rights in the collateral if a borrower or the lending agent defaults. These risks could be greater for non-U.S. securities. Additionally, the fund may lose money from the reinvestment of collateral received on loaned securities in investments that decline in value, default or do not perform as expected.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including "ransomware" attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser's or an affiliate's website that could render the fund's network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund's assets or sensitive information, the disruption of the fund's operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund's physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund's investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund's investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund's principal investment strategies and other investment practices. The fund's investment results will depend on the ability of the fund's investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The MSCI All Country World Index is a free float-adjusted market capitalization-weighted index that is designed to measure equity market results in the global developed and emerging markets, consisting of more than 40 developed and emerging market country indexes.

Portfolio holdings A description of the fund's policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

Capital World Growth and Income Fund The fund's investment objective is to provide you with long-term growth of capital while providing current income. While it has no present intention to do so, the fund's board may change the fund's investment objectives without shareholder approval upon 60 days' written notice to shareholders.

The fund invests primarily in common stocks of well-established companies located around the world, many of which have the potential to pay dividends. The fund invests, on a global basis, in common stocks that are denominated in U.S. dollars or other currencies. Under normal market circumstances the fund will invest a significant portion of its assets in securities of issuers domiciled in a number of countries outside the United States, and such investments may include securities domiciled in developing countries.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For

temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate the fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of the fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may manage other funds and accounts with similar names, investment objectives and strategies (collectively, "portfolios"). The investment results of such portfolios may vary depending on a number of factors, including, but not limited to, fees and expenses, portfolio size, transaction costs, cash flows, currencies, securities pricing time, taxes, and portfolio holdings and any applicable investment limitations. Trading in the portfolios will be consistent with the investment adviser's aggregation and allocation policy, which is designed to allocate trades of the same security to clients in a fair and equitable manner over time.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline - sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries.

Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Lending of portfolio securities – Securities lending involves risks, including the risk that the loaned securities may not be returned in a timely manner or at all and/or the risk of a loss of rights in the collateral if a borrower or the lending agent defaults. These risks could be greater for non-U.S. securities. Additionally, the fund may lose money from the reinvestment of collateral received on loaned securities in investments that decline in value, default or do not perform as expected.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including "ransomware" attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser's or an affiliate's website that could render the fund's network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund's assets or sensitive information, the disruption of the fund's operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund's physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund's investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund's investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund's principal investment strategies and other investment practices. The fund's investment results will depend on the ability of the fund's investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The MSCI All Country World Index is a free float-adjusted market capitalization-weighted index that is designed to measure equity market results in the global developed and emerging markets, consisting of more than 40 developed and emerging market country indexes. Results reflect dividends gross of withholding taxes through December 31, 2000, and dividends net of withholding taxes thereafter. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes.

Portfolio holdings A description of the fund's policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

Growth-Income Fund The fund's investment objectives are to achieve long-term growth of capital and income. While it has no present intention to do so, the fund's board may change the fund's investment objectives without shareholder approval upon 60 days' written notice to shareholders.

The fund invests primarily in common stocks or other equity type securities, such as preferred stocks, convertible preferred stocks and convertible bonds, that the investment adviser believes demonstrate the potential for appreciation and/or dividends. Although the fund focuses on investments in medium to larger capitalization companies, the fund's investments are not limited to a particular capitalization size. The fund may invest up to 15% of its assets, at the time of purchase, in securities of issuers domiciled outside the United States, including, to a more limited extent, in emerging markets. The fund is designed for investors seeking both capital appreciation and income.

Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Lending of portfolio securities – Securities lending involves risks, including the risk that the loaned securities may not be returned in a timely manner or at all and/or the risk of a loss of rights in the collateral if a borrower or the lending agent defaults. These risks could be greater for non-U.S. securities. Additionally, the fund may lose money from the reinvestment of collateral received on loaned securities in investments that decline in value, default or do not perform as expected.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including "ransomware" attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser's or an affiliate's website that could render the fund's network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund's assets or sensitive information, the disruption of the fund's operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund's physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund's investment adviser, transfer agent, custodian, administrators and other financial

intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund's investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund's principal investment strategies and other investment practices. The fund's investment results will depend on the ability of the fund's investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The S&P 500 Index is a market capitalization-weighted index based on the results of approximately 500 widely held common stocks. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes.

Portfolio holdings A description of the fund's policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

International Growth and Income Fund The fund's investment objective is to provide you with long-term growth of capital while providing current income. While it has no present intention to do so, the fund's board may change the fund's investment objective without shareholder approval upon 60 days' written notice to shareholders. The fund pursues this objective by investing primarily in stocks of larger, well-established companies domiciled outside the United States, including in developing countries, that the investment adviser believes have the potential for growth and/or to pay dividends.

The following describes certain strategies that the investment adviser uses in pursuit of the fund's objective and the corresponding risks:

The fund is designed for investors seeking both capital appreciation and income. In pursuing its objective, the fund focuses on stocks of companies with strong earnings that pay dividends. The investment adviser believes that these stocks may be more resistant to market declines than stocks of companies that do not pay dividends.

The fund currently intends to invest at least 90% of its assets in securities of issuers domiciled outside the United States whose securities are listed primarily on exchanges outside the United States, cash, cash equivalents (including shares of money market or similar funds managed by the investment adviser or its affiliates) and securities held as collateral issued by U.S. issuers. The fund may also invest in securities of issuers domiciled outside the United States in the form of depository receipts or other instruments by which the fund may obtain exposure to equity investments in local markets. The fund therefore expects to be invested in numerous countries outside the United States.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate the fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of the fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular

industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries.

Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings

may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

Lending of portfolio securities – Securities lending involves risks, including the risk that the loaned securities may not be returned in a timely manner or at all and/or the risk of a loss of rights in the collateral if a borrower or the lending agent defaults. These risks could be greater for non-U.S. securities. Additionally, the fund may lose money from the reinvestment of collateral received on loaned securities in investments that decline in value, default or do not perform as expected.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including “ransomware” attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser’s or an affiliate’s website that could render the fund’s network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund’s assets or sensitive information, the disruption of the fund’s operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund’s physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund’s investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund’s investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund’s principal investment strategies and other investment practices. The fund’s investment results will depend on the ability of the fund’s investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The MSCI All Country World ex USA Index is a free float-adjusted market capitalization-weighted index that is designed to measure equity market results in the global developed and emerging markets, excluding the United States. The index consists of more than 40 developed and emerging market country indexes. Results reflect dividends net of withholding taxes. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes.

Portfolio holdings A description of the fund’s policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

Washington Mutual Investors Fund The fund’s investment objective is to produce income and to provide an opportunity for growth of principal consistent with sound common stock investing. While it has no present intention to do so, the fund’s board may change the fund’s investment objective without shareholder approval upon 60 days’ written notice to shareholders.

The fund strives to accomplish its objective through fundamental research, careful selection and broad diversification. In the selection of common stocks and other securities for investment, current and potential income as well as the potential for long-term capital appreciation are considered. The fund seeks to provide an above-average yield in its quarterly income distribution in relation to the S&P 500 Index (a broad, unmanaged index). The fund strives to maintain a fully invested, diversified portfolio, consisting primarily of high-quality common stocks.

The fund has an “Eligible List” of investments considered appropriate for a prudent investor seeking opportunities for income and growth of principal consistent with common stock investing. The investment adviser generates and maintains the Eligible List and selects the fund’s investments exclusively from the issuers on the Eligible List.

The fund is designed to provide fiduciaries, organizations, institutions and individuals with a convenient and prudent medium of investment in common stocks and securities convertible into common stocks, such as convertible bonds and debentures and convertible preferred stocks, that meet the fund’s criteria for investing. It is especially designed to serve those individuals who are charged with the responsibility of investing retirement plan trusts, other fiduciary-type reserves or family funds but who are reluctant to undertake the selection and supervision of individual stocks.

Although the fund’s policy is to maintain at all times a fully invested and widely diversified portfolio of securities, the fund may hold, to a limited extent, short-term U.S. government securities, cash and cash equivalents.

The fund may invest in other funds managed by the investment adviser or its affiliates (“Central Funds”) to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund’s investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund’s investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The

investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may manage other funds and accounts with similar names, investment objectives and strategies (collectively, "portfolios"). The investment results of such portfolios may vary depending on a number of factors, including, but not limited to, fees and expenses, portfolio size, transaction costs, cash flows, currencies, securities pricing time, taxes, and portfolio holdings and any applicable investment limitations. Trading in the portfolios will be consistent with the investment adviser's aggregation and allocation policy, which is designed to allocate trades of the same security to clients in a fair and equitable manner over time.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the common stocks and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Lending of portfolio securities – Securities lending involves risks, including the risk that the loaned securities may not be returned in a timely manner or at all and/or the risk of a loss of rights in the collateral if a borrower or the lending agent defaults. These risks could be greater for non-U.S. securities. Additionally, the fund may lose money from the reinvestment of collateral received on loaned securities in investments that decline in value, default or do not perform as expected.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including “ransomware” attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser’s or an affiliate’s website that could render the fund’s network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund’s assets or sensitive information, the disruption of the fund’s operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund’s physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund’s investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund’s investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund’s principal investment strategies and other investment practices. The fund’s investment results will depend on the ability of the fund’s investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The S&P 500 Index is a market capitalization-weighted index based on the results of approximately 500 widely held common stocks. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes.

Portfolio holdings A description of the fund’s policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

Capital Income Builder The fund has two primary investment objectives. It seeks (1) to provide a level of current income that exceeds the average yield on U.S. stocks generally and (2) to provide a growing stream of income over the years. The fund’s secondary objective is to provide growth of capital. While it has no present intention to do so, the fund’s board may change the fund’s investment objectives without shareholder approval upon 60 days’ written notice to shareholders. The fund invests primarily in a broad range of income-producing securities, including common stocks and bonds. In seeking to provide a level of current income that exceeds the average yield on U.S. stocks, the fund generally looks to the average yield on stocks of companies listed on the S&P 500 Index. The fund may also invest significantly in common stocks, bonds and other securities of issuers domiciled outside the United States, including developing countries.

The fund normally invests at least 90% of its assets in income-producing securities (with at least 50% of its assets in common stocks and other equity securities, including preferred stocks and convertible preferred stocks). Generally, the fund may invest in common stocks of companies with a broad range of capitalizations. In addition, the fund may invest in bonds and other debt securities of any maturity or duration, including securities issued and guaranteed by the U.S. government, securities issued by federal agencies and instrumentalities and securities backed by mortgages or other assets. Duration is a measure used to determine the sensitivity of a security’s price to changes in interest rates. The longer a security’s duration, the more sensitive it will be to changes in interest rates. The fund’s debt obligations will consist primarily of investment-grade bonds (rated Baa3 or better or BBB- or better by Nationally Recognized Statistical Rating Organizations, or NRSROs, designated by the fund’s investment adviser or unrated but determined to be of equivalent quality by the fund’s investment adviser). The fund may invest to a limited extent in lower quality, higher yielding debt securities (rated Ba1 or below and BB+ or below by NRSROs or unrated but determined to be of equivalent quality by the fund’s investment adviser). Such securities are sometimes referred to as “junk bonds.”

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund’s assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could

moderate the fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of the fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may manage other funds and accounts with similar names, investment objectives and strategies (collectively, "portfolios"). The investment results of such portfolios may vary depending on a number of factors, including, but not limited to, fees and expenses, portfolio size, transaction costs, cash flows, currencies, securities pricing time, taxes, and portfolio holdings and any applicable investment limitations. Trading in the portfolios will be consistent with the investment adviser's aggregation and allocation policy, which is designed to allocate trades of the same security to clients in a fair and equitable manner over time.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the common stocks, bonds and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations. These risks may be heightened in the case of smaller capitalization stocks.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher

quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Interest rate risk – The values and liquidity of the securities held by the fund may be affected by changing interest rates. For example, the values of debt securities may decline when interest rates rise and increase when interest rates fall. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities. The fund may invest in variable and floating rate securities. When the fund holds variable or floating rate securities, a decrease in market interest rates will adversely affect the income received from such securities and the net asset value of the fund's shares. Although the values of such securities are generally less sensitive to interest rate changes than those of other debt securities, the value of variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as market interest rates. Conversely, floating rate securities will not generally increase in value if interest rates decline. During periods of extremely low short-term interest rates, certain of the fund's debt securities may not be able to maintain a positive yield and, given the current low interest rate environment, risks associated with rising rates are currently heightened.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries.

Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Lending of portfolio securities – Securities lending involves risks, including the risk that the loaned securities may not be returned in a timely manner or at all and/or the risk of a loss of rights in the collateral if a borrower or the lending agent defaults. These risks could be greater for non-U.S. securities. Additionally, the fund may lose money from the reinvestment of collateral received on loaned securities in investments that decline in value, default or do not perform as expected.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including “ransomware” attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser’s or an affiliate’s website that could render the fund’s network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund’s assets or sensitive information, the disruption of the fund’s operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund’s physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund’s investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund’s investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund’s principal investment strategies and other investment practices. The fund’s investment results will depend on the ability of the fund’s investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The 70%/30% MSCI All Country World Index/Bloomberg U.S. Aggregate Index blends the MSCI All Country World Index with the Bloomberg U.S. Aggregate Index by weighting their cumulative total returns at 70% and 30%, respectively. This assumes the blend is rebalanced monthly. The MSCI All Country World Index is a free float-adjusted market capitalization-weighted index that is designed to measure equity market results in the global developed and emerging markets, consisting of more than 40 developed and emerging market country indexes. Results reflect dividends gross of withholding taxes through December 31, 2000, and dividends net of withholding taxes thereafter. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes. The Bloomberg U.S. Aggregate Index represents the U.S. investment-grade fixed-rate bond market. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes.

Portfolio holdings A description of the fund’s policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

American Funds Global Balanced Fund This fund seeks the balanced accomplishment of three objectives: long-term growth of capital, conservation of principal and current income. While it has no present intention to do so, the fund’s board may change the fund’s investment objectives without shareholder approval upon 60 days’ written notice to shareholders.

Normally, the fund will maintain at least 45% of the value of its assets in common stocks and other equity investments under normal market conditions. Although the fund’s equity investments focus on medium to larger capitalization companies, the fund’s investments are not limited to a particular capitalization size.

Normally the fund will invest at least 25% of the value of its assets in bonds and other debt securities (including money market instruments). These will consist of investment-grade securities (rated Baa3 or better or BBB- or better by Nationally Recognized Statistical Rating Organizations designated by the fund’s investment adviser or unrated but determined to be of equivalent quality by the fund’s investment adviser).

Under normal market conditions, the fund will invest at least 40% of its net assets in issuers outside the United States, unless market conditions are not deemed favorable by the fund’s investment adviser, in which case the fund would invest at least 30% of its net assets in issuers outside the United States.

The fund’s ability to invest in issuers outside the United States includes investing in emerging markets.

The fund may also invest to a limited extent in lower quality, higher yielding debt securities including those convertible into common stocks (rated Ba1 or below or BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund’s investment adviser or unrated but determined to be of equivalent quality by the fund’s investment adviser). Such securities are sometimes referred to as “junk bonds.”

The fund may invest in bonds and other debt securities, including securities issued and guaranteed by the U.S. government, securities issued by federal agencies and instrumentalities and securities backed by mortgages or other assets. The fund may also invest in securities of governments, agencies, corporations and other entities domiciled outside the United States. These investments will typically be denominated in currencies other than U.S. dollars.

There are no restrictions on the maturity or duration of the bonds and other debt securities in the fund’s portfolio.

The fund may enter into currency transactions to provide for the purchase or sale of a currency needed to purchase a security denominated in such currency. In addition, the fund may enter into agreements, known as forward currency contracts, to purchase or sell a specific currency at a future date at a fixed price. The fund may enter into forward currency contracts to protect against changes in currency exchange rates, to increase exposure to a particular foreign currency, to shift exposure to currency fluctuations from one currency to another or to seek to increase returns.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a

substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate the fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of the fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the common stocks, bonds and other securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities may involve larger price swings and greater potential for loss than other types of investments.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed

political, economic and legal systems and accounting and auditing practices and standards than those in developed countries. Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in mortgage-related and other asset-backed securities – Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as residential mortgage loans, home equity loans, mortgages on commercial buildings, consumer loans and equipment leases. While such securities are subject to the risks associated with investments in debt instruments generally (for example, credit, extension and interest rate risks), they are also subject to other and different risks. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt, potentially increasing the volatility of the securities and the fund's net asset value. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in the fund having to reinvest the proceeds in lower yielding securities, effectively reducing the fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing the fund's cash available for reinvestment in higher yielding securities. Mortgage-backed securities are also subject to the risk that underlying borrowers will be unable to meet their obligations and the value of property that secures the mortgages may decline in value and be insufficient, upon foreclosure, to repay the associated loans. Investments in asset-backed securities are subject to similar risks, as well as additional risks associated with the assets underlying those securities.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Interest rate risk – The values and liquidity of the securities held by the fund may be affected by changing interest rates. For example, the values of debt securities may decline when interest rates rise and increase when interest rates fall. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities. The fund may invest in variable and floating rate securities. When the fund holds variable or floating rate securities, a decrease in market interest rates will adversely affect the income received from such securities and the net asset value of the fund's shares. Although the values of such securities are generally less sensitive to interest rate changes than those of other debt securities, the value of variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as market interest rates. Conversely, floating rate securities will not generally increase in value if interest rates decline. During periods of extremely low short-term interest rates, certain

of the fund's debt securities may not be able to maintain a positive yield and, given the current low interest rate environment, risks associated with rising rates are currently heightened.

Investing in securities backed by the U.S. government – Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government. Securities issued by U.S. government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Investing in lower rated debt instruments – Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Currency transactions – In addition to the risks generally associated with investing in derivative instruments, the use of forward currency contracts involves the risk that currency movements will not be accurately predicted by the investment adviser, which could result in losses to the fund. While entering into forward currency contracts could minimize the risk of loss due to a decline in the value of the hedged currency, it could also limit any potential gain that may result from an increase in the value of the currency. Additionally, the adviser may use forward currency contracts to increase exposure to a certain currency or to shift exposure to currency fluctuations from one country to another. Forward currency contracts may expose the fund to potential gains and losses in excess of the initial amount invested.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Investing in derivatives – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction.

Lending of portfolio securities – Securities lending involves risks, including the risk that the loaned securities may not be returned in a timely manner or at all and/or the risk of a loss of rights in the collateral if a borrower or the lending agent defaults. These risks could be greater for non-U.S. securities. Additionally, the fund may lose money from the reinvestment of collateral received on loaned securities in investments that decline in value, default or do not perform as expected.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including "ransomware" attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser's or an affiliate's website that could render the fund's network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund's assets or sensitive information, the disruption of the fund's operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund's physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund's investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund's investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund's principal investment strategies and other investment practices. The fund's investment results will depend on the ability of the fund's investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The 60%/40% MSCI All Country World Index/Bloomberg Global Aggregate Index blends the MSCI All Country World Index with the Bloomberg Global Aggregate Index by weighting their cumulative total returns at 60% and 40%, respectively. This assumes the blend is rebalanced monthly. The MSCI All Country World Index is a free float-adjusted market capitalization-weighted index that is designed to measure equity market results in the global developed and emerging markets, consisting of more than 40 developed and emerging market country indexes. Results reflect dividends gross of withholding taxes through December 31, 2000, and dividends net of withholding taxes thereafter. This index is unmanaged, and its results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes. The Bloomberg Global Aggregate Index represents the global investment-grade fixed income markets. This index is unmanaged, and its results include reinvested distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes.

Portfolio holdings A description of the fund's policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

American Funds Mortgage Fund The fund's investment objective is to provide current income and preservation of capital. While it has no present intention to do so, the fund's board may change the fund's investment objective without shareholder approval upon 60 days' written notice to shareholders.

Normally at least 80% of the fund's assets are invested in mortgage-related securities. These include, but are not limited to, mortgage-backed securities, other securities collateralized by mortgage loans, as well as contracts for future delivery of such securities (such as to be announced contracts and mortgage dollar rolls). This policy is subject to change only upon 60 days' written notice to shareholders.

The fund invests primarily in mortgage-related securities that are sponsored or guaranteed by the U.S. government, such as securities issued by government-sponsored entities and nongovernment mortgage-related securities that are rated in the Aaa or AAA rating category (by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser) or unrated but determined to be of equivalent quality by the fund's investment adviser. The fund may invest a portion of its assets in securities rated in the Aa/AA and A rating categories (by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser) or securities that are unrated but determined to be of equivalent quality by the fund's investment adviser. The fund may invest up to 10% of its assets in securities of issuers domiciled outside the United States; however, all such securities will be U.S. dollar denominated. The fund may also invest in debt issued by federal agencies. In the case of to be announced contracts, each contract for future delivery is normally of short duration.

The fund may also invest in futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The fund may invest in futures contracts and interest rate swaps in order to seek to manage the fund's sensitivity to interest rates. A futures contract is a standardized exchange-traded agreement to buy or sell a specific quantity of an underlying asset, rate or index at an agreed-upon price at a stipulated future date. An interest rate swap is an agreement between two parties to exchange or swap payments based on changes in one or more interest rates, one of which is typically fixed and the other of which is typically a floating rate based on a designated short-term interest rate, such as the Secured Overnight Financing Rate, prime rate or other benchmark.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in cash, cash equivalents and/or U.S. Treasury securities. A larger percentage of such holdings could moderate the fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of the fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is by analyzing various factors, which may include the credit strength of the issuer, prices of similar securities issued by comparable issuers, anticipated changes in interest rates, general market conditions and other factors pertinent to the particular security being evaluated. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may manage other funds and accounts with similar names, investment objectives and strategies (collectively, "portfolios"). The investment results of such portfolios may vary depending on a number of factors, including, but not limited to, fees and expenses, portfolio size, transaction costs, cash flows, currencies, securities pricing time, taxes, and portfolio holdings and any applicable investment limitations. Trading in the portfolios will be consistent with the investment adviser's aggregation and allocation policy, which is designed to allocate trades of the same security to clients in a fair and equitable manner over time.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Investing in mortgage-related and other asset-backed securities – Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as residential mortgage loans, home equity loans, mortgages on commercial buildings, consumer loans and equipment leases. While such securities are subject to the risks associated with investments in debt instruments generally (for example, credit, extension and interest rate risks), they are also subject to other and different risks. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt, potentially increasing the volatility of the securities and the fund's net asset value. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in the fund having to reinvest the proceeds in lower yielding securities, effectively reducing the fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing the fund's cash available for reinvestment in higher yielding securities. Mortgage-backed securities are also subject to the risk that underlying borrowers will be unable to meet their obligations and the value of property that secures the mortgages may decline in value and be insufficient, upon foreclosure, to repay the associated loans. Investments in asset-backed securities are subject to similar risks, as well as additional risks associated with the assets underlying those securities.

Market conditions – The prices of, and the income generated by, the securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing in securities backed by the U.S. government – Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government. Securities issued by U.S. government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Investing in future delivery contracts – The fund may enter into contracts, such as to-be-announced contracts and mortgage dollar rolls, that involve the fund selling mortgage-related securities and simultaneously contracting to repurchase similar securities for delivery at a future date at a predetermined price. This can increase the fund's market exposure, and the market price of the securities that the fund contracts to repurchase could drop below their purchase price. While the fund can preserve and generate capital through the use of such contracts by, for example, realizing the difference between the sale price and the future purchase price, the income generated by the fund may be reduced by engaging in such transactions. In addition, these transactions increase the turnover rate of the fund.

Investing in inflation-linked bonds – The values of inflation-linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation-linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation-linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation-linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation-linked bonds may also reduce the fund's distributable income during periods of deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation-linked securities may decline and result in losses to the fund.

Investing in derivatives – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Interest rate risk – The values and liquidity of the securities held by the fund may be affected by changing interest rates. For example, the values of these securities may decline when interest rates rise and increase when interest rates fall. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities. The fund may invest in variable and floating rate securities. When the fund holds variable or floating rate securities, a decrease in market interest rates will adversely affect the income received from such securities and the net asset value of the fund's shares. Although the values of such securities are generally less sensitive to interest rate changes than those of other debt securities, the value of variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as market interest rates. Conversely, floating rate securities will not generally increase in value if interest rates decline. During periods of extremely low short-term interest rates, the fund may not be able to maintain a positive yield and, given the current low interest rate environment, risks associated with rising rates are currently heightened.

Investing in futures contracts – In addition to the risks generally associated with investing in derivative instruments, futures contracts are subject to the creditworthiness of the clearing organizations, exchanges and futures commission merchants with which the fund transacts. Additionally, although futures require only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a futures contract could greatly exceed the initial amount invested. While futures contracts are generally liquid instruments, under certain market conditions futures may be deemed to be illiquid. For example, the fund may be temporarily prohibited from closing out its position in a futures contract if intraday price change limits or limits on trading volume imposed by the applicable futures exchange are triggered. If the fund is unable to close out a position on a futures contract, the fund would remain subject to the risk of adverse price movements until the fund is able to close out the futures position. The ability of the fund to successfully utilize futures contracts may depend in part upon the ability of the fund's investment adviser to accurately forecast interest rates and other economic factors and to assess and predict the impact of such economic factors on the futures in which the fund invests. If the investment adviser incorrectly forecasts economic developments or incorrectly predicts the impact of such developments on the futures in which it invests, the fund could be exposed to the risk of loss.

Investing in swaps – Swaps, including interest rate swaps and credit default swap indices, or CDSI, are subject to many of the risks generally associated with investing in derivative instruments. Additionally, although swaps require no or only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a swap contract could greatly exceed the initial amount invested. The use of swaps involves the risk that the investment adviser will not accurately predict anticipated changes in interest rates or other economic factors, which may result in losses to the fund. If the fund enters into a bilaterally negotiated swap transaction, the counterparty may fail to perform in accordance with the terms of the swap agreement. If a counterparty defaults on its obligations under a swap agreement, the fund may lose any amount it expected to receive from the counterparty, potentially including amounts in excess of the fund's initial investment. Certain swap transactions are subject to mandatory central clearing or may be eligible for voluntary central clearing. Although clearing interposes a central clearinghouse as the ultimate counterparty to each participant's swap, central clearing will not eliminate (but may decrease) counterparty risk relative to uncleared bilateral swaps. Some swaps, such as CDSI, may be dependent on both the individual credit of the fund's counterparty and on the credit of one or more issuers of any underlying assets. If the fund does not correctly evaluate the creditworthiness of its counterparty and, where applicable, of issuers of any underlying reference assets, the fund's investment in a swap may result in losses to the fund.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social

instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including "ransomware" attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser's or an affiliate's website that could render the fund's network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund's assets or sensitive information, the disruption of the fund's operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund's physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund's investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund's investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund's principal investment strategies and other investment practices. The fund's investment results will depend on the ability of the fund's investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The Bloomberg U.S. Mortgage Backed Securities Index is a market-value-weighted index that covers the mortgage-backed pass-through securities of Ginnie Mae (GNMA), Fannie Mae (FNMA) and Freddie Mac (FHLMC). This index is unmanaged, and its results include reinvested distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes. The Lipper Intermediate U.S. Government Funds Average is composed of funds that invest primarily in securities issued or guaranteed by the U.S. government, its agencies, or its instrumentalities, with dollar-weighted average maturities of five to ten years. The results of the underlying funds in the average include reinvestment of dividends and capital gain distributions, as well as brokerage commissions paid by the funds for portfolio transactions and other fund expenses, but do not reflect the effect of sales charges, account fees or U.S. federal income taxes. The Lipper GNMA Funds Average is composed of funds that invest primarily in Government National Mortgage Association securities. The results of the underlying funds in the averages include reinvestment of dividends and capital gain distributions, as well as brokerage commissions paid by the funds for portfolio transactions and other fund expenses, but do not reflect the effect of sales charges, account fees or U.S. federal income taxes.

Portfolio holdings A description of the fund's policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

American High-Income Trust The fund's primary investment objective is to provide you with a high level of current income. Its secondary investment objective is capital appreciation. While it has no present intention to do so, the fund's board may change the fund's investment objectives without shareholder approval upon 60 days' written notice to shareholders.

The fund invests primarily in higher yielding and generally lower quality debt securities (rated Ba1 / BB+ or below by Nationally Recognized Statistical Rating Organizations or unrated but determined by the fund's investment adviser to be of equivalent quality), including corporate loan obligations. Such securities are sometimes referred to as "junk bonds." The fund may also invest a portion of its assets in securities of issuers domiciled outside the United States. The fund may invest in debt securities of any maturity or duration. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates. The fund may also invest in equity securities (including common stock, preferred stock, warrants, rights and equity linked notes) received out of a restructuring or corporate action, or in equity securities of issuers of high yield debt (debt rated Ba1 / BB+ or below) within the same or related corporate structure.

The fund may also invest in futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objectives and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The fund may invest in futures contracts and interest rate swaps in order to seek to manage the fund's sensitivity to interest rates, and in credit default swap indices, or CDSI, in order to assume exposure to a diversified portfolio of credits or to hedge against existing credit risks. A futures contract is a standardized exchange-traded agreement to buy or sell a specific quantity of an underlying asset, rate or index at an agreed-upon price at a stipulated future date. An interest rate swap is an agreement between two parties to exchange or swap payments based on changes in one or more interest rates, one of which is typically fixed and the other of which is typically a floating rate based on a designated short-term interest rate, such as the Secured Overnight Financing Rate, prime rate or other benchmark. A CDSI is based on a portfolio of credit default swaps with similar characteristics, such as credit default swaps on high-yield bonds. In a typical CDSI transaction, one party - the protection buyer - is obligated to pay the other party - the protection seller - a stream of periodic payments over the term of the contract, provided generally that no credit event on an underlying reference obligation has occurred. If such a credit event has occurred, the protection seller must pay the protection buyer the loss on those credits.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate the fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of the fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may manage other funds and accounts with similar names, investment objectives and strategies (collectively, "portfolios"). The investment results of such portfolios may vary depending on a number of factors, including, but not limited to, fees and expenses, portfolio size, transaction costs, cash flows, currencies, securities pricing time, taxes, and portfolio holdings and any applicable investment limitations. Trading in the portfolios will be consistent with the investment adviser's aggregation and allocation policy, which is designed to allocate trades of the same security to clients in a fair and equitable manner over time.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in lower rated debt instruments – Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing in derivatives – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Interest rate risk – The values and liquidity of the securities held by the fund may be affected by changing interest rates. For example, the values of these securities may decline when interest rates rise and increase when interest rates fall. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities. The fund may invest in variable and floating rate securities. When the fund holds variable or floating rate securities, a decrease in market interest rates will adversely affect the income received from such securities and the net asset value of the fund's shares. Although the values of such securities are generally less sensitive to interest rate changes than those of other debt securities, the value of variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as market interest rates. Conversely, floating rate securities will not generally increase in value if interest rates decline. During periods of extremely low short-term interest rates, the fund may not be able to maintain a positive yield and, given the current low interest rate environment, risks associated with rising rates are currently heightened.

Investing in futures contracts – In addition to the risks generally associated with investing in derivative instruments, futures contracts are subject to the creditworthiness of the clearing organizations, exchanges and futures commission merchants with which the fund transacts. Additionally, although futures require only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a futures contract could greatly exceed the initial amount invested. While futures contracts are generally liquid instruments, under certain market conditions futures may be deemed to be illiquid. For example, the fund may be temporarily prohibited from closing out its position in a futures contract if intraday price change limits or limits on trading volume imposed by the applicable futures exchange are triggered. If the fund is unable to close out a position on a futures contract, the fund would remain subject to the risk of adverse price movements until the fund is able to close out the futures position. The ability of the fund to successfully utilize futures contracts may depend in part upon the ability of the fund's investment adviser to accurately forecast interest rates and other economic factors and to assess and predict the impact of such economic factors on the futures in which the fund invests. If the investment adviser incorrectly forecasts economic developments or incorrectly predicts the impact of such developments on the futures in which it invests, the fund could be exposed to the risk of loss.

Investing in swaps – Swaps, including interest rate swaps and credit default swap indices, or CDSI, are subject to many of the risks generally associated with investing in derivative instruments. Additionally, although swaps require no or only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a swap contract could greatly exceed the initial amount invested. The use of swaps involves the risk that the investment adviser will not accurately predict anticipated changes in interest rates or other economic factors, which may result in losses to the fund. If the fund enters into a bilaterally negotiated swap transaction, the counterparty may fail to perform in accordance with the terms of the swap agreement. If a counterparty defaults on its obligations under a swap agreement, the fund may lose any amount it expected to receive from the counterparty, potentially including amounts in excess of the fund's initial investment. Certain swap transactions are subject to mandatory central clearing or may be eligible for voluntary central clearing. Although clearing interposes a central clearinghouse as the ultimate counterparty to each participant's swap, central clearing will not eliminate (but may decrease) counterparty risk relative to uncleared bilateral swaps. Some swaps, such as CDSI, may be dependent on both the individual credit of the fund's counterparty and on the credit of one or more issuers of any underlying assets. If the fund does not correctly evaluate the creditworthiness of its counterparty and, where applicable, of issuers of any underlying reference assets, the fund's investment in a swap may result in losses to the fund.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including "ransomware" attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser's or an affiliate's website that could render the fund's network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund's assets or sensitive information, the disruption of the fund's operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund's physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund's investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund's investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund's principal investment strategies and other investment practices. The fund's investment results will depend on the ability of the fund's investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The Bloomberg U.S. Corporate High Yield 2% Issuer Capped Index covers the universe of fixed-rate, non-investment-grade debt. The index limits the maximum exposure of any one issuer to 2%. This index is unmanaged, and its results include reinvested distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes. This index was not in existence on the date the fund began investment operations; therefore, lifetime results are not shown. The Lipper High Yield Funds Average is composed of funds that aim at high (relative) current yield from fixed income securities, have no quality or maturity restrictions and tend to invest in lower grade debt issues. The results of the underlying funds in the average include the reinvestment of dividends and capital gain distributions, as well as brokerage commissions paid by the funds for portfolio transactions and other fund expenses, but do not reflect the effect of sales charges, account fees or U.S. federal income taxes.

Portfolio holdings A description of the fund's policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

Capital World Bond Fund The fund's investment objective is to provide you, over the long term, with a high level of total return consistent with prudent investment management. Total return comprises the income generated by the fund and the changes in the market value of the fund's investments. While it has no present intention to do so, the fund's board may change the fund's investment objective without shareholder approval upon 60 days' written notice to shareholders.

Under normal market circumstances, the fund invests at least 80% of its assets in bonds and other debt securities, which may be represented by derivatives. This policy is subject to change only upon 60 days' written notice to shareholders. The fund invests primarily in debt securities, including asset-backed and mortgage-backed securities and securities of governmental, supranational and corporate issuers denominated in various currencies, including U.S. dollars. The fund will invest substantially in securities of issuers domiciled in a number of countries outside the United States, and such investments may include securities of issuers domiciled in developing countries. Normally, the fund invests substantially in investment-grade bonds (rated Baa3 or better or BBB- or better by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). The fund may also invest up to 25% of its assets in lower quality, higher yielding debt securities (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). Such securities are sometimes referred to as "junk bonds." The total return of the fund will be the result of interest income, changes in the market value of the fund's investments and changes in the values of other currencies relative to the U.S. dollar. The fund may invest in debt securities of any maturity or duration. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates.

The fund may invest in forward currency contracts, futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The fund may invest in futures contracts and interest rate swaps in order to seek to manage the fund's sensitivity to interest rates, and in credit default swap indices, or CDSI, in order to assume exposure to a diversified portfolio of credits or to hedge against existing credit risks. A futures contract is a standardized exchange-traded agreement to buy or sell a specific quantity of an underlying asset, rate or index at an agreed-upon price at a stipulated future date. An interest rate swap is an agreement between two parties to exchange or swap payments based on changes in one or more interest rates, one of which is typically fixed and the other of which is typically a floating rate based on a designated short-term interest rate, such as the Secured Overnight Financing Rate, prime rate or other benchmark. A CDSI is based on a portfolio of credit default swaps with similar characteristics, such as credit default swaps on high-yield bonds. In a typical CDSI transaction, one party - the protection buyer - is obligated to pay the other party - the protection seller - a stream of periodic payments over the term of the contract, provided generally that no credit event on an underlying reference obligation has occurred. If such a credit event has occurred, the protection seller must pay the protection buyer the loss on those credits.

The fund may also enter into currency transactions to provide for the purchase or sale of a currency needed to purchase a security denominated in such currency. In addition, the fund may enter into forward currency contracts to protect against changes in currency exchange rates, to increase exposure to a particular foreign currency, to shift exposure to currency fluctuations from one currency to another or to seek to increase returns. A forward currency contract is an agreement to purchase or sell a specific currency at a future date at a fixed price.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate the fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of the fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with government officials, central banks and company executives. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may manage other funds and accounts with similar names, investment objectives and strategies (collectively, "portfolios"). The investment results of such portfolios may vary depending on a number of factors, including, but not limited to, fees and expenses, portfolio size, transaction costs, cash flows, currencies, securities pricing time, taxes, and portfolio holdings and any applicable investment limitations. Trading in the portfolios will be consistent with the investment adviser's aggregation and allocation policy, which is designed to allocate trades of the same security to clients in a fair and equitable manner over time.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing in lower rated debt instruments – Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Currency – The prices of, and the income generated by, many debt securities held by the fund may also be affected by changes in relative currency values. If the U.S. dollar appreciates against foreign currencies, the value in U.S. dollars of the fund's securities denominated in such currencies would generally fall and vice versa.

Investing in derivatives – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets – Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries tend to have less developed political, economic and legal systems and accounting and auditing practices and standards than those in developed countries.

Accordingly, the governments of these countries may be less stable and more likely to intervene in the market economy, for example, by imposing capital controls, nationalizing a company or industry, placing restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or imposing punitive taxes that could adversely affect the prices of securities. Information regarding issuers in emerging markets may be limited, incomplete or inaccurate, and there may be fewer rights and remedies available to the fund and its shareholders. In addition, the economies of these countries may be dependent on relatively few industries, may have limited access to capital and may be more susceptible to changes in local and global trade conditions and downturns in the world economy. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Investing in inflation-linked bonds – The values of inflation-linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation-linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation-linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation-linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation-linked bonds may also reduce the fund's distributable income during periods of deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation-linked securities may decline and result in losses to the fund.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Interest rate risk – The values and liquidity of the securities held by the fund may be affected by changing interest rates. For example, the values of these securities may decline when interest rates rise and increase when interest rates fall. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities. The fund may invest in variable and floating rate securities. When the fund holds variable or floating rate securities, a decrease in market interest rates will adversely affect the income received from such securities and the net asset value of the fund's shares. Although the values of such securities are generally less sensitive to interest rate changes than those of other debt securities, the value of variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as market interest rates. Conversely, floating rate securities will not generally increase in value if interest rates decline. During periods of extremely low short-term interest rates, the fund may not be able to maintain a positive yield and, given the current low interest rate environment, risks associated with rising rates are currently heightened.

Investing in futures contracts – In addition to the risks generally associated with investing in derivative instruments, futures contracts are subject to the creditworthiness of the clearing organizations, exchanges and futures commission merchants with which the fund transacts. Additionally, although futures require only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a futures contract could greatly exceed the initial amount invested. While futures contracts are generally liquid instruments, under certain market conditions futures may be deemed to be illiquid. For example, the fund may be temporarily prohibited from closing out its position in a futures contract if intraday price change limits or limits on trading volume imposed by the applicable futures exchange are triggered. If the fund is unable to close out a position on a futures contract, the fund would remain subject to the risk of adverse price movements until the fund is able to close out the futures position. The ability of the fund to successfully utilize futures contracts may depend in part upon the ability of the fund's investment adviser to accurately forecast interest rates and other economic factors and to assess and predict the impact of such economic factors on the futures in which the fund invests. If the investment adviser incorrectly

forecasts economic developments or incorrectly predicts the impact of such developments on the futures in which it invests, the fund could be exposed to the risk of loss.

Currency transactions – In addition to the risks generally associated with investing in derivative instruments, the use of forward currency contracts involves the risk that currency movements will not be accurately predicted by the investment adviser, which could result in losses to the fund. While entering into forward currency contracts could minimize the risk of loss due to a decline in the value of the hedged currency, it could also limit any potential gain that may result from an increase in the value of the currency. Additionally, the adviser may use forward currency contracts to increase exposure to a certain currency or to shift exposure to currency fluctuations from one country to another. Forward currency contracts may expose the fund to potential gains and losses in excess of the initial amount invested.

Investing in swaps – Swaps, including interest rate swaps and credit default swap indices, or CDSI, are subject to many of the risks generally associated with investing in derivative instruments. Additionally, although swaps require no or only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a swap contract could greatly exceed the initial amount invested. The use of swaps involves the risk that the investment adviser will not accurately predict anticipated changes in interest rates or other economic factors, which may result in losses to the fund. If the fund enters into a bilaterally negotiated swap transaction, the counterparty may fail to perform in accordance with the terms of the swap agreement. If a counterparty defaults on its obligations under a swap agreement, the fund may lose any amount it expected to receive from the counterparty, potentially including amounts in excess of the fund's initial investment. Certain swap transactions are subject to mandatory central clearing or may be eligible for voluntary central clearing. Although clearing interposes a central clearinghouse as the ultimate counterparty to each participant's swap, central clearing will not eliminate (but may decrease) counterparty risk relative to uncleared bilateral swaps. Some swaps, such as CDSI, may be dependent on both the individual credit of the fund's counterparty and on the credit of one or more issuers of any underlying assets. If the fund does not correctly evaluate the creditworthiness of its counterparty and, where applicable, of issuers of any underlying reference assets, the fund's investment in a swap may result in losses to the fund.

Investing in mortgage-related and other asset-backed securities – Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as residential mortgage loans, home equity loans, mortgages on commercial buildings, consumer loans and equipment leases. While such securities are subject to the risks associated with investments in debt instruments generally (for example, credit, extension and interest rate risks), they are also subject to other and different risks. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt, potentially increasing the volatility of the securities and the fund's net asset value. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in the fund having to reinvest the proceeds in lower yielding securities, effectively reducing the fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing the fund's cash available for reinvestment in higher yielding securities. Mortgage-backed securities are also subject to the risk that underlying borrowers will be unable to meet their obligations and the value of property that secures the mortgages may decline in value and be insufficient, upon foreclosure, to repay the associated loans. Investments in asset-backed securities are subject to similar risks, as well as additional risks associated with the assets underlying those securities.

Investing in securities backed by the U.S. government – Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government. Securities issued by U.S. government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including "ransomware" attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser's or an affiliate's website that could render the fund's network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund's assets or sensitive information, the disruption of the fund's operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund's physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund's investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund's investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund's principal investment strategies and other investment practices. The fund's investment results will depend on the ability of the fund's investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The Bloomberg Global Aggregate Index represents the global investment-grade fixed income markets. This index is unmanaged, and its results include reinvested distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes. The Lipper Global Income Funds Average is comprised of funds that invest primarily in U.S. dollar and non-U.S. dollar debt securities of issuers located in at least three countries, one of which may be the United States. The results of the underlying funds in the average include the reinvestment of dividends and capital gain distributions, as well as brokerage commissions paid by the funds for portfolio transactions and other fund expenses, but do not reflect the effect of sales charges, account fees or U.S. federal income taxes. The Consumer Price Index (CPI) is a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services. Widely used as a measure of inflation, the CPI is computed by the U.S. Department of Labor, Bureau of Labor Statistics.

Portfolio holdings A description of the fund's policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

The Bond Fund of America The fund's investment objective is to provide as high a level of current income as is consistent with the preservation of capital. While it has no present intention to do so, the fund's board may change the fund's investment objective without shareholder approval upon 60 days' written notice to shareholders.

The fund seeks to maximize your level of current income and preserve your capital by investing primarily in bonds. Normally the fund invests at least 80% of its assets in bonds and other debt securities, which may be represented by derivatives. The fund invests at least 60% of its assets in debt securities (excluding derivatives) rated A3 or better or A- or better by Nationally Recognized Statistical Ratings Organizations designated by the fund's investment adviser, or in debt securities that are unrated but determined to be of equivalent quality by the fund's investment adviser, and in U.S. government securities, money market instruments, cash or cash equivalents.

The fund may invest in debt securities and mortgage-backed securities issued by government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government. The fund may invest in debt securities of any maturity or duration. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates.

The fund may invest in inflation-linked bonds issued by U.S. and non-U.S. governments, their agencies or instrumentalities, and corporations. Inflation-linked bonds are structured to protect against inflation by linking the bond's principal and interest payments to an inflation index, such as the Consumer Price Index for Urban Consumers, so that principal and interest adjust to reflect changes in the index.

The fund may invest in futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The fund may invest in futures contracts and interest rate swaps in order to seek to manage the fund's sensitivity to interest rates, and in credit default swap indices, or CDSI, in order to assume exposure to a diversified portfolio of credits or to hedge against existing credit risks. A futures contract is a standardized exchange-traded agreement to buy or sell a specific quantity of an underlying asset, rate or index at an agreed-upon price at a stipulated future date. An interest rate swap is an agreement between two parties to exchange or swap payments based on changes in one or more interest rates, one of which is typically fixed and the other of which is typically a floating rate based on a designated short-term interest rate, such as the Secured Overnight Financing Rate, prime rate or other benchmark. A CDSI is based on a portfolio of credit default swaps with similar characteristics, such as credit default swaps on high-yield bonds. In a typical CDSI transaction, one party – the protection buyer – is obligated to pay the other party – the protection seller – a stream of periodic payments over the term of the contract, provided generally that no credit event on an underlying reference obligation has occurred. If such a credit event has occurred, the protection seller must pay the protection buyer the loss on those credits.

The fund may also enter into currency transactions to provide for the purchase or sale of a currency needed to purchase a security denominated in such currency. In addition, the fund may enter into forward currency contracts to protect against changes in currency exchange rates, to increase exposure to a particular foreign currency, to shift exposure to currency fluctuations from one currency to another or to seek to increase returns. A forward currency contract is an agreement to purchase or sell a specific currency at a future date at a fixed price.

The fund may invest up to 10% of its assets in debt securities rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Ratings Organizations designated by the fund's investment adviser, or in debt securities that are unrated but determined to be of equivalent quality by the fund's investment adviser. Securities rated Ba1 or below and BB+ or below are sometimes referred to as "junk bonds."

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate the fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of the fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental research, which may include analysis of credit quality, general economic conditions and various quantitative measures and, in the case of corporate obligations, meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may manage other funds and accounts with similar names, investment objectives and strategies (collectively, "portfolios"). The investment results of such portfolios may vary depending on a number of factors, including, but not limited to, fees and expenses, portfolio size, transaction costs, cash flows, currencies, securities pricing time, taxes, and portfolio holdings and any applicable investment limitations. Trading in the portfolios will be consistent with the investment adviser's aggregation and allocation policy, which is designed to allocate trades of the same security to clients in a fair and equitable manner over time.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in mortgage-related and other asset-backed securities – Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as residential mortgage loans, home equity loans, mortgages on commercial buildings, consumer loans and equipment leases. While such securities are subject to the risks associated with investments in debt instruments generally (for example, credit, extension and interest rate risks), they are also subject to other and different risks. Mortgage-backed and other asset-backed securities are subject to changes in the

payment patterns of borrowers of the underlying debt, potentially increasing the volatility of the securities and the fund's net asset value. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in the fund having to reinvest the proceeds in lower yielding securities, effectively reducing the fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing the fund's cash available for reinvestment in higher yielding securities. Mortgage-backed securities are also subject to the risk that underlying borrowers will be unable to meet their obligations and the value of property that secures the mortgages may decline in value and be insufficient, upon foreclosure, to repay the associated loans. Investments in asset-backed securities are subject to similar risks, as well as additional risks associated with the assets underlying those securities.

Investing in securities backed by the U.S. government – Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government. Securities issued by U.S. government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting and auditing practices and standards and different regulatory, legal and reporting requirements, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in future delivery contracts – The fund may enter into contracts, such as to-be-announced contracts and mortgage dollar rolls, that involve the fund selling mortgage-related securities and simultaneously contracting to repurchase similar securities for delivery at a future date at a predetermined price. This can increase the fund's market exposure, and the market price of the securities that the fund contracts to repurchase could drop below their purchase price. While the fund can preserve and generate capital through the use of such contracts by, for example, realizing the difference between the sale price and the future purchase price, the income generated by the fund may be reduced by engaging in such transactions. In addition, these transactions increase the turnover rate of the fund.

Investing in inflation-linked bonds – The values of inflation-linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation-linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation-linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation-linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation-linked bonds may also reduce the fund's distributable income during periods of deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation-linked securities may decline and result in losses to the fund.

Investing in derivatives – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

The following are additional risks associated with investing in the fund.

Interest rate risk – The values and liquidity of the securities held by the fund may be affected by changing interest rates. For example, the values of these securities may decline when interest rates rise and increase when interest rates fall. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities. The fund may invest in variable and floating rate securities. When the fund holds variable or floating rate securities, a decrease in market interest rates will adversely affect the income received from such securities and the net asset value of the fund's shares. Although the values of such securities are generally less sensitive to interest rate changes than those of other debt securities, the value of variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as market interest rates. Conversely, floating rate securities will not generally increase in value if interest rates decline. During periods of extremely low short-term interest rates, the fund may not be able to maintain a positive yield and, given the current low interest rate environment, risks associated with rising rates are currently heightened.

Investing in futures contracts – In addition to the risks generally associated with investing in derivative instruments, futures contracts are subject to the creditworthiness of the clearing organizations, exchanges and futures commission merchants with which the fund transacts. Additionally, although futures require only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a futures contract could greatly exceed the initial amount invested. While futures contracts are generally liquid instruments, under certain market conditions futures may be deemed to be illiquid. For example, the fund may be temporarily prohibited from closing out its position in a futures contract if intraday price change limits or limits on trading volume imposed by the applicable futures exchange are triggered. If the fund is unable to close out a position on a futures contract, the fund would remain subject to the risk of adverse price movements until the fund is able to close out the futures position. The ability of the fund to successfully utilize futures contracts may depend in part upon the ability of the fund's investment adviser to accurately forecast interest rates and other economic factors and to assess and predict the impact of such economic factors on the futures in which the fund invests. If the investment adviser incorrectly forecasts economic developments or incorrectly predicts the impact of such developments on the futures in which it invests, the fund could be exposed to the risk of loss.

Investing in swaps – Swaps, including interest rate swaps and credit default swap indices, or CDSI, are subject to many of the risks generally associated with investing in derivative instruments. Additionally, although swaps require no or only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a swap contract could greatly exceed the initial amount invested. The use of swaps involves the risk that the investment adviser will not accurately predict anticipated changes in interest rates or other economic factors, which may result in losses to the fund. If the fund enters into a bilaterally negotiated swap transaction, the counterparty may fail to perform in accordance with the terms of the swap agreement. If a counterparty defaults on its obligations under a swap agreement, the fund may lose any amount it expected to receive from the counterparty, potentially including amounts in excess of the fund's initial investment. Certain swap transactions are subject to mandatory central clearing or may be eligible for voluntary central clearing. Although clearing interposes a central clearinghouse as the ultimate counterparty to each participant's swap, central clearing will not eliminate (but may decrease) counterparty risk relative to uncleared bilateral swaps. Some swaps, such as CDSI, may be dependent on both the individual credit of the fund's counterparty and on the credit of one or more issuers of any underlying assets. If the fund does not correctly evaluate the creditworthiness of its counterparty and, where applicable, of issuers of any underlying reference assets, the fund's investment in a swap may result in losses to the fund.

Currency transactions – In addition to the risks generally associated with investing in derivative instruments, the use of forward currency contracts involves the risk that currency movements will not be accurately predicted by the investment adviser, which could result in losses to the fund. While entering into forward currency contracts could minimize the risk of loss due to a decline in the value of the hedged currency, it could also limit any potential gain that may result from an increase in the value of the currency. Additionally, the adviser may use forward currency contracts to increase exposure to a certain currency or to shift exposure to currency fluctuations from one country to another. Forward currency contracts may expose the fund to potential gains and losses in excess of the initial amount invested.

Portfolio turnover – The fund may engage in frequent and active trading of its portfolio securities. Higher portfolio turnover may involve correspondingly greater transaction costs in the form of dealer spreads, brokerage commissions and other transaction costs on the sale of securities and on reinvestment in other securities. The sale of portfolio securities may also result in the realization of net capital gains, which are taxable when distributed to shareholders, unless the shareholder is exempt from taxation or his or her account is tax-favored. These costs and tax effects may adversely affect the fund's returns to shareholders. The fund's portfolio turnover rate may vary from year to year, as well as within a year.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including "ransomware" attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser's or an affiliate's website that could render the fund's network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund's assets or sensitive information, the disruption of the fund's operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund's physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its

third-party service providers, such as the fund's investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund's investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund's principal investment strategies and other investment practices. The fund's investment results will depend on the ability of the fund's investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The Bloomberg U.S. Aggregate Index represents the U.S. investment-grade fixed-rate bond market. This index is unmanaged, and its results include reinvested distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes. The Lipper Core Bond Funds Average is composed of funds that invest at least 85% of their net assets in domestic investment-grade debt issues (rated in the top four grades) with any remaining investment in non-benchmark sectors such as high-yield, global and emerging market debt. These funds maintain dollar-weighted average maturities of five to ten years. The results of the underlying funds in the average include the reinvestment of dividends and capital gain distributions, as well as brokerage commissions paid by the funds for portfolio transactions and other fund expenses, but do not reflect the effect of sales charges, account fees or U.S. federal income taxes.

Portfolio holdings A description of the fund's policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

U.S. Government Securities Fund The fund's investment objective is to provide a high level of current income consistent with prudent investment risk and preservation of capital. While it has no present intention to do so, the fund's board may change the fund's investment objective without shareholder approval upon 60 days' written notice to shareholders.

Normally at least 80% of the fund's assets will be invested in securities that are guaranteed or sponsored by the U.S. government, its agencies and instrumentalities, including bonds and other debt securities denominated in U.S. dollars, which may be represented by derivatives. The fund may also invest in mortgage-backed securities issued by federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government. Though investment decisions regarding the fund's portfolio may be informed by investment themes on a range of macroeconomic factors, the fund may invest in debt securities of any maturity or duration. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates.

The fund may invest in inflation-linked bonds issued by U.S. and non-U.S. governments, their agencies or instrumentalities, and corporations. Inflation-linked bonds are structured to protect against inflation by linking the bond's principal and interest payments to an inflation index, such as the Consumer Price Index for Urban Consumers, so that principal and interest adjust to reflect changes in the index.

The fund may invest in futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The fund may invest in futures contracts and interest rate swaps in order to seek to manage the fund's sensitivity to interest rates. A futures contract is a standardized exchange-traded agreement to buy or sell a specific quantity of an underlying asset, rate or index at an agreed-upon price at a stipulated future date. An interest rate swap is an agreement between two parties to exchange or swap payments based on changes in one or more interest rates, one of which is typically fixed and the other of which is typically a floating rate based on a designated short-term interest rate, such as the Secured Overnight Financing Rate, prime rate or other benchmark.

The fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. government, its agencies and instrumentalities. The percentage of the fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The investment adviser may determine that it is appropriate to invest a substantial portion of the fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a fund's investment results in a period of rising market prices. Consistent with the fund's preservation of capital objective, a larger percentage of such holdings could reduce the magnitude of a fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The fund may invest in other funds managed by the investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the fund's investment adviser and its affiliates. When investing in Central Funds, the fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is by analyzing various factors, which may include the credit strength of the issuer, prices of similar securities issued by comparable issuers, anticipated changes

in interest rates, general market conditions and other factors pertinent to the particular security being evaluated. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The investment adviser may manage other funds and accounts with similar names, investment objectives and strategies (collectively, "portfolios"). The investment results of such portfolios may vary depending on a number of factors, including, but not limited to, fees and expenses, portfolio size, transaction costs, cash flows, currencies, securities pricing time, taxes, and portfolio holdings and any applicable investment limitations. Trading in the portfolios will be consistent with the investment adviser's aggregation and allocation policy, which is designed to allocate trades of the same security to clients in a fair and equitable manner over time.

The investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

The following are principal risks associated with investing in the fund.

Market conditions – The prices of, and the income generated by, the securities held by the fund may decline – sometimes rapidly or unpredictably – due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Economies and financial markets throughout the world are highly interconnected. Economic, financial or political events, trading and tariff arrangements, wars, terrorism, cybersecurity events, natural disasters, public health emergencies (such as the spread of infectious disease) and other circumstances in one country or region, including actions taken by governmental or quasi-governmental authorities in response to any of the foregoing, could have impacts on global economies or markets. As a result, whether or not the fund invests in securities of issuers located in or with significant exposure to the countries affected, the value and liquidity of the fund's investments may be negatively affected by developments in other countries and regions.

Issuer risks – The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation, investigations or other controversies related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by factors such as the interest rates, maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in securities backed by the U.S. government – Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government. Securities issued by U.S. government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Investing in mortgage-related and other asset-backed securities – Mortgage-related securities, such as mortgage-backed securities, and other asset-backed securities, include debt obligations that represent interests in pools of mortgages or other income-bearing assets, such as residential mortgage loans, home equity loans, mortgages on commercial buildings, consumer loans and equipment leases. While such securities are subject to the risks associated with investments in debt instruments generally (for example, credit, extension and interest rate risks), they are also subject to other and different risks. Mortgage-backed and other asset-backed securities are subject to changes in the payment patterns of borrowers of the underlying debt, potentially increasing the volatility of the securities and the fund's net asset value. When interest rates fall, borrowers are more likely to refinance or prepay their debt before its stated maturity. This may result in the fund having to reinvest the proceeds in lower yielding securities, effectively reducing the fund's income. Conversely, if interest rates rise and borrowers repay their debt more slowly than expected, the time in which the mortgage-backed and other asset-backed securities are paid off could be extended, reducing the fund's cash available for reinvestment in higher yielding securities. Mortgage-backed securities are also subject to the risk that underlying borrowers will be unable to meet their obligations and the value of property that secures the

mortgages may decline in value and be insufficient, upon foreclosure, to repay the associated loans. Investments in asset-backed securities are subject to similar risks, as well as additional risks associated with the assets underlying those securities.

Investing in future delivery contracts – The fund may enter into contracts, such as to-be-announced contracts and mortgage dollar rolls, that involve the fund selling mortgage-related securities and simultaneously contracting to repurchase similar securities for delivery at a future date at a predetermined price. This can increase the fund's market exposure, and the market price of the securities that the fund contracts to repurchase could drop below their purchase price. While the fund can preserve and generate capital through the use of such contracts by, for example, realizing the difference between the sale price and the future purchase price, the income generated by the fund may be reduced by engaging in such transactions. In addition, these transactions increase the turnover rate of the fund.

Investing in inflation-linked bonds – The values of inflation-linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation-linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation-linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation-linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation-linked bonds may also reduce the fund's distributable income during periods of deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation-linked securities may decline and result in losses to the fund.

Investing in derivatives – The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

It is important to note that neither your investment in the fund nor the fund's yield is guaranteed by the U.S. government.

The following are additional risks associated with investing in the fund.

Interest rate risk – The values and liquidity of the securities held by the fund may be affected by changing interest rates. For example, the values of these securities may decline when interest rates rise and increase when interest rates fall. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities. The fund may invest in variable and floating rate securities. When the fund holds variable or floating rate securities, a decrease in market interest rates will adversely affect the income received from such securities and the net asset value of the fund's shares. Although the values of such securities are generally less sensitive to interest rate changes than those of other debt securities, the value of variable and floating rate securities may decline if their interest rates do not rise as quickly, or as much, as market interest rates. Conversely, floating rate securities will not generally increase in value if interest rates decline. During periods of extremely low short-term interest rates, the fund may not be able to maintain a positive yield and, given the current low interest rate environment, risks associated with rising rates are currently heightened.

Investing in futures contracts – In addition to the risks generally associated with investing in derivative instruments, futures contracts are subject to the creditworthiness of the clearing organizations, exchanges and futures commission merchants with which the fund transacts. Additionally, although futures require only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a futures contract could greatly exceed the initial amount invested. While futures contracts are generally liquid instruments, under certain market conditions futures may be deemed to be illiquid. For example, the fund may be temporarily prohibited from closing out its position in a futures contract if intraday price change limits or limits on trading volume imposed by the applicable futures exchange are triggered. If the fund is unable to close out a position on a futures contract, the fund would remain subject to the risk of adverse price movements until the fund is able to close out the futures position. The ability of the fund to successfully utilize futures contracts may depend in part upon the ability of the fund's investment adviser to accurately forecast interest rates and other economic factors and to assess and predict the impact of such economic factors on the futures in which the fund invests. If the investment adviser incorrectly forecasts economic developments or incorrectly predicts the impact of such developments on the futures in which it invests, the fund could be exposed to the risk of loss.

Investing in swaps – Swaps, including interest rate swaps and credit default swap indices, or CDSI, are subject to many of the risks generally associated with investing in derivative instruments. Additionally, although swaps require no or only a small initial investment in the form of a deposit of initial margin, the amount of a potential loss on a swap contract could greatly exceed the initial amount invested. The use of swaps involves the risk that the investment adviser will not accurately predict anticipated changes in interest rates or other economic factors, which may result in losses to the fund. If the fund enters into a bilaterally negotiated swap transaction, the counterparty

may fail to perform in accordance with the terms of the swap agreement. If a counterparty defaults on its obligations under a swap agreement, the fund may lose any amount it expected to receive from the counterparty, potentially including amounts in excess of the fund's initial investment. Certain swap transactions are subject to mandatory central clearing or may be eligible for voluntary central clearing. Although clearing interposes a central clearinghouse as the ultimate counterparty to each participant's swap, central clearing will not eliminate (but may decrease) counterparty risk relative to uncleared bilateral swaps. Some swaps, such as CDSI, may be dependent on both the individual credit of the fund's counterparty and on the credit of one or more issuers of any underlying assets. If the fund does not correctly evaluate the creditworthiness of its counterparty and, where applicable, of issuers of any underlying reference assets, the fund's investment in a swap may result in losses to the fund.

Exposure to country, region, industry or sector – Subject to the fund's investment limitations, the fund may have significant exposure to a particular country, region, industry or sector. Such exposure may cause the fund to be more impacted by risks relating to and developments affecting the country, region, industry or sector, and thus its net asset value may be more volatile, than a fund without such levels of exposure. For example, if the fund has significant exposure in a particular country, then social, economic, regulatory or other issues that negatively affect that country may have a greater impact on the fund than on a fund that is more geographically diversified.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Portfolio turnover – The fund may engage in frequent and active trading of its portfolio securities. Higher portfolio turnover may involve correspondingly greater transaction costs in the form of dealer spreads, brokerage commissions and other transaction costs on the sale of securities and on reinvestment in other securities. The sale of portfolio securities may also result in the realization of net capital gains, which are taxable when distributed to shareholders, unless the shareholder is exempt from taxation or his or her account is tax-favored. These costs and tax effects may adversely affect the fund's returns to shareholders. The fund's portfolio turnover rate may vary from year to year, as well as within a year.

Cybersecurity breaches – The fund may be subject to operational and information security risks through breaches in cybersecurity. Cybersecurity breaches can result from deliberate attacks or unintentional events, including "ransomware" attacks, the injection of computer viruses or malicious software code, the use of vulnerabilities in code to gain unauthorized access to digital information systems, networks or devices, or external attacks such as denial-of-service attacks on the investment adviser's or an affiliate's website that could render the fund's network services unavailable to intended end-users. These breaches may, among other things, lead to the unauthorized release of confidential information, misuse of the fund's assets or sensitive information, the disruption of the fund's operational capacity, the inability of fund shareholders to transact business, or the destruction of the fund's physical infrastructure, equipment or operating systems. These events could cause the fund to violate applicable privacy and other laws and could subject the fund to reputational damage, additional costs associated with corrective measures and/or financial loss. The fund may also be subject to additional risks if its third-party service providers, such as the fund's investment adviser, transfer agent, custodian, administrators and other financial intermediaries, experience similar cybersecurity breaches and potential outcomes. Cybersecurity risks may also impact issuers of securities in which the fund invests, which may cause the fund's investments in such issuers to lose value.

In addition to the principal investment strategies described above, the fund has other investment practices that are described in the statement of additional information, which includes a description of other risks related to the fund's principal investment strategies and other investment practices. The fund's investment results will depend on the ability of the fund's investment adviser to navigate the risks discussed above as well as those described in the statement of additional information.

Fund comparative indexes – The Bloomberg U.S. Government/Mortgage-Backed Securities Index is a market-value-weighted index that covers fixed-rate, publicly placed, dollar-denominated obligations issued by the U.S. Treasury, U.S. government agencies, quasi-federal corporations, corporate or foreign debt guaranteed by the U.S. government, and the mortgage-backed pass-through securities of the Federal National Mortgage Association, the Federal Home Loan Mortgage Corporation and the Government National Mortgage Association. This index is unmanaged and its results include reinvested distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes. The Lipper General U.S. Government Funds Average is composed of funds that invest primarily in U.S. government and agency issues. The results of the underlying funds in the average include the reinvestment of dividends and capital gain distributions, as well as brokerage commissions paid by the fund for portfolio transactions and other fund expenses, but do not reflect the effect of sales charges, account fees or U.S. federal income taxes. The Consumer Price Index (CPI) is a measure of the average change over time in the prices paid by urban consumers for a market basket of consumer goods and services. Widely used as a measure of inflation, the CPI is computed by the U.S. Department of Labor, Bureau of Labor Statistics.

Portfolio holdings A description of the fund's policies and procedures regarding disclosure of information about its portfolio holdings is available in the statement of additional information.

Management and organization

Investment adviser Capital Research and Management Company, an experienced investment management organization founded in 1931, serves as the investment adviser to the Series and other funds, including the American Funds. Capital Research and Management Company is a wholly owned subsidiary of The Capital Group Companies, Inc. and is located at 333 South Hope Street, Los Angeles, California 90071. Capital Research and Management Company manages the investment portfolios and business affairs of the Series. The total management fee paid by each fund to its investment adviser for the most recent fiscal year, including any amounts waived, in each case expressed as a percentage of average net assets of that fund, appears in the Annual Fund Operating Expenses table for each fund. Please see the statement of additional information for further details. A discussion regarding the basis for the approval of the Series' Investment Advisory and Service Agreement by the Series' board of trustees is contained in the Series' annual report to shareholders for the fiscal year ended December 31, 2021.

Capital Research and Management Company manages equity assets through three equity investment divisions and fixed income assets through its fixed income investment division, Capital Fixed Income Investors. The three equity investment divisions – Capital International Investors, Capital Research Global Investors and Capital World Investors – make investment decisions independently of one another.

The equity investment divisions may, in the future, be incorporated as wholly owned subsidiaries of Capital Research and Management Company. In that event, Capital Research and Management Company would continue to be the investment adviser, and day-to-day investment management of equity assets would continue to be carried out through one or more of these subsidiaries. Although not currently contemplated, Capital Research and Management Company could incorporate its fixed income investment division in the future and engage it to provide day-to-day investment management of fixed income assets. Capital Research and Management Company and each of the funds it advises have received an exemptive order from the U.S. Securities and Exchange Commission that allows Capital Research and Management Company to use, upon approval of the funds' boards, its management subsidiaries and affiliates to provide day-to-day investment management services to the funds, including making changes to the management subsidiaries and affiliates providing such services. The Series' shareholders approved this arrangement; however, there is no assurance that Capital Research and Management Company will incorporate its investment divisions or exercise any authority granted to it under the exemptive order.

In addition, shareholders of the Series have approved a proposal to reorganize the Series into a Delaware statutory trust. However, the Series reserved the right to delay implementing the reorganization and has elected to do so.

The Capital SystemSM Capital Research and Management Company uses a system of multiple portfolio managers in managing fund assets. Under this approach, the portfolio of a fund is divided into segments managed by individual managers. In addition, Capital Research and Management Company's investment analysts may make investment decisions with respect to a portion of each underlying fund's portfolio. Investment decisions are subject to a fund's objective(s), policies and restrictions and the oversight of the appropriate investment-related committees of Capital Research and Management Company and its investment divisions.

Certain senior members of Capital Fixed Income Investors, the investment adviser's fixed income investment division, serve on the Portfolio Strategy Group. The group utilizes a research-driven process with input from the investment adviser's analysts, portfolio managers and economists to define investment themes on a range of macroeconomic factors, including duration, yield curve and sector allocation. Where applicable, the investment decisions made by a fund's fixed income portfolio managers are informed by the investment themes discussed by the group.

The primary individual portfolio managers for each of the funds are:

Portfolio manager for the Series/Title (if applicable)	Primary title with investment adviser (or affiliate) and investment experience	Portfolio manager's role in management of, and experience in, the fund(s)
Donald D. O'Neal Co-President and Trustee	Partner – Capital International Investors Investment professional for 37 years, all with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Growth-Income Fund – 17 years
Alan N. Berro Co-President	Partner – Capital World Investors Investment professional for 36 years in total; 31 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Washington Mutual Investors Fund – 5 years Asset Allocation Fund – 22 years
Carl M. Kawaja Vice President	Partner – Capital World Investors Investment professional for 35 years in total; 31 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: New World Fund – 23 years
Sung Lee Vice President	Partner – Capital Research Global Investors Investment professional for 28 years, all with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: International Fund – 16 years Capital World Growth and Income Fund – 1 year
Keiko McKibben Vice President	Partner – Capital Research Global Investors Investment professional for 28 years in total; 24 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Growth-Income Fund – 8 years (plus 10 years of prior experience as an investment analyst for the fund)
Renaud H. Samyn Vice President	Partner – Capital Research Global Investors Investment professional for 21 years, all with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Global Small Capitalization Fund – 3 years (plus 15 years of prior experience as an investment analyst for the fund) Capital World Growth and Income Fund – 1 year International Fund – 8 years (plus 5 years of prior experience as an investment analyst for the fund)
Pramod Atluri	Partner – Capital Fixed Income Investors Investment professional for 24 years in total; 6 years with Capital Research and Management Company or affiliate	Serves as a fixed income portfolio manager for: The Bond Fund of America – 6 years
Aline Avzaradel	Partner – Capital International Investors Investment professional for 19 years in total; 18 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Capital Income Builder – 2 years
Alfonso Barroso	Partner – Capital Research Global Investors Investment professional for 28 years, all with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Capital World Growth and Income Fund – 1 year Capital Income Builder – 2 years American Funds Global Balanced Fund – Less than 1 year
Michael Beckwith	Vice President – Capital Research Global Investors Investment professional for 20 years in total; 3 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Global Small Capitalization Fund – 3 years
Paul Benjamin	Partner – Capital World Investors Investment professional for 17 years, all with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Growth Fund – 4 years (plus 12 years of prior experience as an investment analyst for the fund)
David J. Betanzos	Partner – Capital Fixed Income Investors Investment professional for 22 years in total; 20 years with Capital Research and Management Company or affiliate	Serves as a fixed income portfolio manager for: American Funds Mortgage Fund – 8 years The Bond Fund of America – 1 year U.S. Government Securities Fund – 7 years
Jeremy Burge	Partner – Capital World Investors Investment professional for 40 years in total; 20 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Capital World Growth and Income Fund – 1 year (plus 1 year of prior experience as an investment analyst for the fund)
Grant L. Cambridge	Partner – Capital International Investors Investment professional for 29 years in total; 25 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Capital Income Builder – 2 years
Mark L. Casey	Partner – Capital International Investors Investment professional for 22 years, all with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Growth Fund – 5 years (plus 11 years of prior experience as an investment analyst for the fund) Washington Mutual Investors Fund – 1 year
Philip Chitty	Partner – Capital Fixed Income Investors Investment professional for 28 years in total; 18 years with Capital Research and Management Company or affiliate	Serves as a fixed income portfolio manager for: Capital World Bond Fund – 1 year
Tom Chow	Partner – Capital Fixed Income Investors Investment professional for 33 years in total; 7 years with Capital Research and Management Company or affiliate	Serves as a fixed income portfolio manager for: American High-Income Trust – 7 years

Portfolio manager for the Series/Title (if applicable)	Primary title with investment adviser (or affiliate) and investment experience	Portfolio manager's role in management of, and experience in, the fund(s)
Michael Cohen	Partner – Capital World Investors Investment professional for 31 years in total; 22 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Capital World Growth and Income Fund – 4 years International Growth and Income Fund – Less than 1 year
Patrice Collette	Partner – Capital World Investors Investment professional for 28 years in total; 22 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Global Growth Fund – 7 years (plus 14 years of prior experience as an investment analyst for the fund) International Growth and Income Fund – Less than 1 year
Andrew A. Cormack	Partner – Capital Fixed Income Investors Investment professional for 18 years in total; 4 years with Capital Research and Management Company or affiliate	Serves as a fixed income portfolio manager for: American Funds Global Balanced Fund – 1 year Capital World Bond Fund – 3 years
David A. Daigle	Partner – Capital Fixed Income Investors Investment professional for 28 years, all with Capital Research and Management Company or affiliate	Serves as a fixed income portfolio manager for: Asset Allocation Fund – 13 years American High-Income Trust – 13 years (plus 9 years of prior experience as an investment analyst for the fund)
Oliver V. Edmonds	Vice President – Capital Fixed Income Investors Investment professional for 19 years, all with Capital Research and Management Company or affiliate	Serves as a fixed income portfolio manager for: American Funds Mortgage Fund - 2 years
Peter Eliot	Partner – Capital International Investors Investment professional for 27 years in total; 18 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Asset Allocation Fund – 6 years
Charles E. Ellwein	Partner – Capital Research Global Investors Investment professional for 26 years in total; 16 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Growth-Income Fund – 7 years (plus 8 years of prior experience as an investment analyst for the fund) Capital Income Builder – 1 year
Paul Flynn	Partner – Capital World Investors Investment professional for 26 years in total; 24 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Global Growth Fund – 5 years International Growth and Income Fund – Less than 1 year
J. Blair Frank	Partner – Capital Research Global Investors Investment professional for 29 years in total; 28 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Growth-Income Fund – 16 years
Bradford F. Freer	Partner – Capital Research Global Investors Investment professional for 30 years in total; 28 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Global Small Capitalization Fund – 4 years New World Fund – 5 years (plus 13 years of prior experience as an investment analyst for the fund) American Funds Global Balanced Fund – Less than 1 year
Irfan M. Furniturewala	Partner – Capital International Investors Investment professional for 22 years in total; 21 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Growth Fund – 1 year (plus 1 year of prior experience as an investment analyst for the fund) Washington Mutual Investors Fund – 1 year
Nicholas J. Grace	Partner – Capital Research Global Investors Investment professional for 32 years in total; 28 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: International Fund – 3 years (plus 9 years of prior experience as an investment analyst for the fund) New World Fund – 10 years (plus 8 years of prior experience as an investment analyst for the fund)
Leo Hee	Partner – Capital World Investors Investment professional for 28 years in total; 17 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Capital World Growth and Income Fund – 1 year (plus 10 years of prior experience as an investment analyst for the fund) International Growth and Income Fund – Less than 1 year
David A. Hoag	Partner – Capital Fixed Income Investors Investment professional for 34 years in total; 31 years with Capital Research and Management Company or affiliate	Serves as a fixed income portfolio manager for: Capital Income Builder – 2 years The Bond Fund of America – 15 years
Thomas H. Høgh	Partner – Capital Fixed Income Investors Investment professional for 35 years in total; 32 years with Capital Research and Management Company or affiliate	Serves as a fixed income portfolio manager for: American Funds Global Balanced Fund – 3 years Capital World Bond Fund – 16 years
Roz Hongsaranagon	Partner – Capital World Investors Investment professional for 20 years, all with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Global Growth Fund – 4 years
Dawid Justus	Partner – Capital World Investors Investment professional for 23 years in total; 17 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: New World Fund – 2 years (plus 14 years of prior experience as an investment analyst for the fund)

Portfolio manager for the Series/Title (if applicable)	Primary title with investment adviser (or affiliate) and investment experience	Portfolio manager's role in management of, and experience in, the fund(s)
Jonathan Knowles	Partner – Capital World Investors Investment professional for 30 years, all with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Global Growth Fund – 9 years (plus 10 years of prior experience as an investment analyst for the fund) New World Fund – 2 years (plus 8 years of prior experience as an investment analyst for the fund)
Emme Kozloff	Partner – Capital World Investors Investment professional for 30 years in total; 16 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Washington Mutual Investors Fund – 1 year
Winnie Kwan	Partner – Capital Research Global Investors Investment professional for 26 years in total; 22 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: New World Fund – 2 years (plus 2 years of prior experience as an investment analyst for the fund) Capital Income Builder – 2 years American Funds Global Balanced Fund – Less than 1 year
Harold H. La	Partner – Capital Research Global Investors Investment professional for 24 years in total; 23 years with Capital Research and Management Company or affiliate	Serves as an equity portfolio manager for: Global Small Capitalization Fund – 14 years (plus 4 years of prior experience as an investment analyst for the fund)

Information regarding the portfolio managers' compensation, their ownership of securities in the Series and other accounts they manage is in the statement of additional information.

Purchases and redemptions of shares Shares of the Series are currently offered only to insurance company separate accounts as well as so-called “feeder funds” under master-feeder arrangements sponsored by insurance companies as underlying investments for such insurance companies’ variable annuity contracts and variable life insurance policies. All such shares may be purchased or redeemed by the insurance company separate accounts (or feeder funds) at net asset value without any sales or redemption charges. These purchases and redemptions are made at the price next determined after such purchases and redemptions of units of the separate accounts (or feeder funds). The Series typically expects to remit redemption proceeds one business day following receipt and acceptance of a redemption order, regardless of the method the Series uses to make such payment (e.g., check, wire or automated clearing house transfer). However, payment may take longer than one business day and may take up to seven days as generally permitted by the Investment Company Act of 1940, as amended (the “1940 Act”). Under the 1940 Act, the Series may be permitted to pay redemption proceeds beyond seven days under certain limited circumstances.

Under normal conditions, the Series typically expects to meet shareholder redemptions by monitoring the Series’ portfolio and redemption activities and by regularly holding a reserve of highly liquid assets, such as cash or cash equivalents. The Series may use additional methods to meet shareholder redemptions, if they become necessary. These methods may include, but are not limited to, the sale of portfolio assets, the use of overdraft protection afforded by the Series’ custodian bank, borrowing from a line of credit and making payment with fund securities or other fund assets rather than in cash (as further discussed in the following paragraph).

Although payment of redemptions normally will be in cash, the Series may pay the redemption price wholly or partly with portfolio securities or other fund assets under conditions and circumstances determined by the Series’ board of trustees. On the same redemption date, some shareholders may be paid in whole or in part in securities (which may differ among those shareholders), while other shareholders may be paid entirely in cash. In general, in-kind redemptions to affiliated shareholders will as closely as practicable represent the affiliated shareholder’s pro rata share of the Series’ securities, subject to certain exceptions. Securities distributed in-kind to unaffiliated shareholders will be selected by the investment adviser in a manner the investment adviser deems to be fair and reasonable to the Series’ shareholders. The disposal of the securities received in-kind may be subject to brokerage costs and, until sold, such securities remain subject to market risk and liquidity risk, including the risk that such securities are or become difficult to sell. If the Series pays your redemption with illiquid or less liquid securities, you will bear the risk of not being able to sell such securities.

Frequent trading of fund shares The Series and American Funds Distributors, Inc., the Series' distributor, reserve the right to reject any purchase order for any reason. The funds are not designed to serve as vehicles for frequent trading. Frequent trading of fund shares may lead to increased costs to the funds and less efficient management of the funds' portfolios, potentially resulting in dilution of the value of the shares held by long-term shareholders. Accordingly, purchases, including those that are part of exchange activity, that the Series or American Funds Distributors has determined could involve actual or potential harm to a fund may be rejected.

The Series, through its transfer agent, American Funds Service Company, has agreements with the Series' insurance relationships to maintain its surveillance procedures that are designed to detect frequent trading in fund shares. The agreements generally require the insurance companies to (i) provide, upon request from a fund, the Series or their agent, certain identifying and account information regarding contract owners who invest in fund shares through an insurance company account and (ii) execute instructions from a fund, the Series or their agent to restrict further purchases or exchanges of fund shares by a contract owner who the Series has identified as having engaged in potentially harmful market timing or frequent trading. Under these procedures, various analytics are used to evaluate factors that may be indicative of frequent trading. For example, transactions in fund shares that exceed certain monetary thresholds may be scrutinized. American Funds Service Company may work with the insurance company separate accounts or feeder funds to apply their procedures that American Funds Service Company believes are reasonably designed to enforce the frequent trading policies of the Series. You should refer to disclosures provided by the insurance company with which you have a contract to determine the specific trading restrictions that apply to you.

Under the Series' frequent trading policy, certain trading activity will not be treated as frequent trading, such as:

- retirement plan contributions, loans and distributions (including hardship withdrawals) identified as such on the retirement plan recordkeeper's system;
- purchase transactions involving in-kind transfers of fund shares, if the entity maintaining the contract owner's account is able to identify the transaction as one of these types of transactions; and
- systematic redemptions and purchases if the entity maintaining the contract owner's account is able to identify the transaction as a systematic redemption or purchase.

Generally, purchases and redemptions will not be considered "systematic" unless the transaction is prescheduled for a specific date.

American Funds Service Company will monitor for other types of activity that could potentially be harmful to the Series – for example short-term trading activity in multiple funds. If American Funds Service Company identifies any activity that may constitute frequent trading, it reserves the right to contact the insurance company separate account or feeder fund and request that the separate account or feeder fund either provide information regarding an account owner's transactions or restrict the account owner's trading. If American Funds Service Company is not satisfied that insurance company separate account or feeder fund has taken appropriate action, American Funds Service Company may terminate the separate account's or feeder fund's ability to transact in fund shares.

There is no guarantee that all instances of frequent trading in fund shares will be prevented.

Notwithstanding the Series' surveillance procedures described above, all transactions in fund shares remain subject to the right of the Series, American Funds Distributors and American Funds Service Company to restrict potentially abusive trading generally, including the types of transactions described above that will not be prevented.

Valuing shares The net asset value of each share class of a fund is the value of a single share of that class. The net asset value per share is calculated once daily as of the close of regular trading on the New York Stock Exchange, normally 4 p.m. New York time, each day the New York Stock Exchange is open. If the New York Stock Exchange makes a scheduled (e.g. the day after Thanksgiving) or an unscheduled close prior to 4 p.m. New York time, the net asset value of each fund will be determined at approximately the time the New York Stock Exchange closes on that day. If on such a day market quotations and prices from third-party pricing services are not based as of the time of the early close of the New York Stock Exchange but are as of a later time (up to approximately 4 p.m. New York time), for example because the market remains open after the close of the New York Stock Exchange, those later market quotations and prices will be used in determining the funds' net asset value.

Equity securities are valued primarily on the basis of market quotations, and debt securities are valued primarily on the basis of prices from third-party pricing services. Futures contracts are valued primarily on the basis of settlement prices. The funds have adopted procedures for making fair value determinations if market quotations or prices from third-party pricing services, as applicable, are not readily available or are not considered reliable. For example, if events occur between the close of markets outside the United States and the close of regular trading on the New York Stock Exchange that, in the opinion of the investment adviser, materially affect the value of any of the funds' equity securities that trade principally in those international markets, those securities will be valued in accordance with fair value procedures. Similarly, fair value procedures may be employed if an issuer defaults on its debt securities and there is no market for its securities. Use of these procedures is intended to result in more appropriate net asset values and, where applicable, to reduce potential arbitrage opportunities otherwise available to short-term investors.

Because certain of the funds may hold securities that are listed primarily on foreign exchanges that trade on weekends or days when the funds do not price their shares, the values of securities held in the funds may change on days when you will not be able to purchase or redeem fund shares.

Shares of the funds will be purchased or sold at the net asset value next determined after receipt of requests from the appropriate insurance company. Requests received by the appropriate insurance company prior to 4 p.m. New York time and communicated by the insurance company to the Series or its agent will be purchased or sold at that day's net asset value. Orders in good order received after the New York Stock Exchange closes (scheduled or unscheduled) will be processed at the net asset value (plus any applicable sales charge) calculated on the following business day.

Plan of distribution The Series has not adopted (and does not presently intend to adopt) a plan of distribution or "12b-1 plan" for Class 1 shares.

Other compensation to dealers American Funds Distributors, at its expense, provides additional compensation to insurance companies. These payments may be made, at the discretion of American Funds Distributors, to insurance companies (or their affiliates) that have sold shares of the funds of the American Funds Insurance Series and American Funds as the exclusive underlying investments to their variable contracts. A number of factors will be considered in determining payments, including the sales, assets, and the quality of the company's relationship with American Funds Distributors. The payment will be determined using a formula applied consistently to insurance companies based on the relevant facts and circumstances. The level of payments made to a qualifying firm in any given year will vary and (excluding payments for meetings as described below) will represent the sum of (a) up to .14% of the current year's American Funds Insurance Series new deposits in the contracts, (b) up to .07% of the current and previous year's American Funds Insurance Series new deposits in the contracts, and (c) up to .0084% of American Funds Insurance Series assets attributable to the contracts, with an adjustment made for the quality of the company's relationship with American Funds Distributors. Aggregate payments made by American Funds Distributors to insurance companies may also change from year to year. Only assets and deposits in variable annuity contracts that offer exclusively shares of the American Funds Insurance Series and American Funds are included in the formula. Further, assets for which the insurance company, or an affiliated broker-dealer, acts as an ERISA investment fiduciary are generally excluded from the formula. American Funds Distributors makes these payments to help defray the costs incurred by qualifying insurance companies in connection with efforts to educate its sales force about the American Funds Insurance Series so that they help financial advisers make recommendations and provide services that are suitable and meet contractholders needs. These payments may also be made to help defray the costs associated with the insurance company's provision of account related services and activities and support the insurance company's distribution activities. American Funds Distributors will, on an annual basis, determine the advisability of continuing these payments.

Firms receiving additional compensation payments must sign a letter acknowledging the purpose of the payment and American Funds Distributors' goal that the payment will help facilitate education of the firm's sales force about the American Funds Insurance Series and American Funds to help financial professionals make suitable recommendations and better serve their clients who invest in the funds as underlying investments to variable contracts. The letters generally require the firms to (1) have significant assets invested in the American Funds, (2) provide American Funds Distributors broad access to their sales force and product platforms and develop a business plan to achieve such access, and (3) agree to maintain American Funds within their existing products.

American Funds Distributors may also pay expenses associated with meetings and other training and educational opportunities conducted by insurance companies, selling dealers, advisory platform providers and other intermediaries to facilitate educating financial professionals and shareholders about the American Funds. For example, some of these expenses may include, but not be limited to, meeting sponsor fees, meeting location fees, and fees to obtain lists of financial professionals to better tailor training and education opportunities.

If investment advisers, distributors or other affiliates of mutual funds pay additional compensation or other incentives to insurance companies in differing amounts, insurance companies and the financial professionals with which they interact may have financial incentives for recommending a particular mutual fund over other mutual funds or investments, creating a potential conflict of interest. You should consult with your financial professional and review carefully any disclosure by your financial professional's firm as to compensation received.

Fund expenses In periods of market volatility, assets of the funds may decline significantly, causing total annual fund operating expenses (as a percentage of the value of your investment) to become higher than the numbers shown in the Annual Fund Operating Expenses tables in this prospectus.

The "Other expenses" items in the Annual Fund Operating Expenses tables in this prospectus are based on expenses as of each fund's most recently completed fiscal year. These items include third-party expenses, such as custodial, legal, audit, accounting, regulatory reporting and pricing vendor services, and an administrative services fee payable to the Series' investment adviser for administrative services provided by the Series' investment adviser and its affiliates.

For all share classes, "Other expenses" items in the Annual Fund Operating Expenses table in this prospectus include fees for administrative services provided by the fund's investment adviser and its affiliates. Administrative services are provided by the investment adviser and its affiliates to help assist third parties providing non-distribution services to fund shareholders. These services include providing in-depth information on the fund and market developments that impact fund investments. Administrative services also include, but are not limited to, coordinating, monitoring and overseeing third parties that provide services to fund shareholders.

The Administrative Services Agreement between the fund and the investment adviser provides the fund the ability to charge an administrative services fee of .05% for all share classes. The fund's investment adviser receives an administrative services fee at the annual rate of .03% of the average daily net assets of the fund attributable to all share classes (which could be increased as noted above) for its provision of administrative services.

Investment results All fund results in the "Investment results" section of this prospectus reflect the reinvestment of dividends and capital gains distributions, if any. Unless otherwise noted, fund results reflect any fee waivers and/or expense reimbursements in effect during the period presented.

Distributions and taxes Each fund of the Series intends to qualify as a "regulated investment company" under the Internal Revenue Code. In any fiscal year in which a fund so qualifies and distributes to shareholders its investment company taxable income and net realized capital gain, the fund itself is relieved of federal income tax.

It is the Series' policy to distribute to the shareholders (the insurance company separate accounts) all of its investment company taxable income and capital gain for each fiscal year.

See the applicable contract prospectus for information regarding the federal income tax treatment of the contracts and distributions to the separate accounts.

Financial highlights The Financial Highlights table is intended to help you understand a fund's results for the past five fiscal years. Certain information reflects financial results for a single share of a particular class. The total returns in the table represent the rate that an investor would have earned or lost on an investment in a fund (assuming reinvestment of all dividends and capital gain distributions). Where indicated, figures in the table reflect the impact, if any, of certain waivers from Capital Research and Management Company. For more information about these waivers, see the fund's statement of additional information and annual report. The information in the Financial Highlights table has been audited by PricewaterhouseCoopers LLP, whose current report, along with the funds' financial statements, is included in the statement of additional information, which is available upon request. Figures shown do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, results would be lower.

Ultra-Short Bond Fund	— ¹²	— ¹²	— ¹²	— ¹²	— ¹²

¹ Based on average shares outstanding.

² This column reflects the impact of certain waivers/reimbursements from Capital Research and Management Company. During some of the periods shown, Capital Research and Management Company waived a portion of investment advisory services fees on some funds.

³ Ratios do not include expenses of any Central Funds. The fund indirectly bears its proportionate share of the expenses of any Central Funds, if applicable.

⁴ Based on operations for a period that is less than a full year.

⁵ Class 1A shares began investment operations on January 6, 2017.

⁶ Not annualized.

⁷ Annualized.

⁸ Amount less than \$1 million.

⁹ Amount less than \$.01.

¹⁰ Amount less than .01%.

¹¹Rates do not include the fund's portfolio activity with respect to any Central Funds, if applicable.

¹²Amount is either less than 1% or there is no turnover.

Other fund information Shares of the Series are currently offered to insurance company separate accounts funding both variable annuity contracts and variable life insurance policies. Interests of various contract owners participating in the Series may be in conflict. The board of trustees of the Series will monitor for the existence of any material conflicts and determine what action, if any, should be taken. Shares may be purchased or redeemed by the separate accounts without any sales or redemption charges at net asset value.

Annual/Semi-annual report to shareholders The shareholder reports contain additional information about the Series, including financial statements, investment results, portfolio holdings, a discussion of market conditions and the Series' investment strategies, and the independent registered public accounting firm's report (in the annual report).

Statement of additional information (SAI) and codes of ethics The current SAI, as amended from time to time, contains more detailed information about the Series, including the funds' financial statements, and is incorporated by reference into this prospectus. This means that the current SAI, for legal purposes, is part of this prospectus. The codes of ethics describe the personal investing policies adopted by the Series, the Series' investment adviser and its affiliated companies.

The codes of ethics and current SAI are on file with the U.S. Securities and Exchange Commission (SEC). These and other related materials about the Series are available for review on the EDGAR database on the SEC's website at sec.gov or, after payment of a duplicating fee, via email request to publicinfo@sec.gov.

The current SAI and annual/semi-annual reports to shareholders can be found online at capitalgroup.com/afis and may be available on the website of the company that issued your insurance contract. You also may request a free copy of these documents or the codes of ethics by calling Capital Group at (800) 421-9900, ext. 65413 or writing to the Secretary at 333 South Hope Street, Los Angeles, California 90071.
