- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Real estate investment risk* – Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, public health or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to April 24, 2017, reflects the Fund's results when managed by the former sub-adviser, Goldman Sachs Assets Management, L.P. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

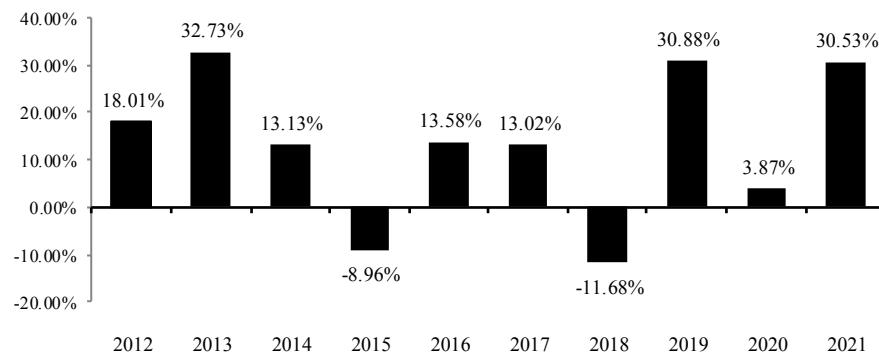

Effective August 13, 2018, the Fund was combined with JNL/Invesco Mid Cap Value Fund with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNL/Invesco Mid Cap Value Fund.

Effective April 27, 2020, the Fund was combined with JNL/PPM America Mid Cap Value Fund, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNL/PPM America Mid Cap Value Fund.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the MSCI USA Mid Cap Value Index (Gross) with the Morningstar® US Mid Cap Broad Value IndexSM as the Fund's primary benchmark.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

Massachusetts Financial Services Company (d/b/a MFS Investment Management) ("MFS")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Kevin Schmitz	April 2017	Investment Officer, MFS
Brooks Taylor	April 2017	Investment Officer, MFS
Richard Offen	June 2021	Investment Officer, MFS

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL/Morningstar PitchBook Listed Private Equity Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to provide long-term capital growth by seeking to track the performance of the Morningstar® PitchBook Developed Markets Listed Private Equity IndexSM (“Index”).

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class A
Management Fee	0.20%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.22%
Acquired Fund Fees and Expenses ²	0.06%
Total Annual Fund Operating Expenses	0.78%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class I
Management Fee	0.20%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.22%
Acquired Fund Fees and Expenses ²	0.06%
Total Annual Fund Operating Expenses	0.48%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Morningstar PitchBook Listed Private Equity Index Fund Class A			
1 year	3 years	5 years	10 years
\$80	\$249	\$433	\$966

JNL/Morningstar PitchBook Listed Private Equity Index Fund Class I			
1 year	3 years	5 years	10 years
\$49	\$154	\$269	\$604

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
4/26/2021 - 12/31/2021	56%

Principal Investment Strategies. The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the Index. The Index tracks the performance of public companies with significant private equity exposure that are listed in developed markets countries. More specifically, the Index is comprised of companies whose primary industry is classified by PitchBook Data, Inc. as private equity and are involved in venture capital, private equity buyouts or growth and mezzanine financing as well as companies with substantial private equity investments. The Index constituents may include direct private equity investors, alternative asset managers, fund-of-funds, holding companies, and closed-end funds with significant private equity exposures. While the Index may include fund of funds, the Fund will not invest in those constituents. The weight of each security in the Index is based on float market capitalization, adjusted for a purity score, and subjected to investment stage and maximum security weight constraints. The Index is reconstituted annually and implemented after the close of business on the third Friday of December and is effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and is effective the following Monday. As of December 31, 2021, the Index had 61 constituents and the full market capitalization range was \$121.32 million to \$88.87 billion. The number of stocks in the Index is subject to the selection and eligibility criteria at the time of reconstitution. As this is a rule-based index, private securities are not a part of the Index by rule. As of December 31, 2021, the total percentage weight of the Index in foreign securities (non-U.S.) was 61.11%.

The Fund may concentrate its investments in the capital markets industry to the extent that the Index is designed to track is also so concentrated. As such, the Fund’s investments may be concentrated in the private equity/venture capital industry.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index.

When attempting to replicate an index such as the Index, portfolio turnover is reduced to what the index adds and deletes, contract owner contributions and withdrawals, and reinvestment income. The replicated portfolio does not require rebalancing as a result of market movement. The Fund stays aligned with the benchmark automatically with the change in share price, due to the close similarity between the holdings of the Index and those of the Fund. The Fund is managed and rebalanced to reflect the composition of the Index.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund’s use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is a “non-diversified” fund, as defined in the Investment Company Act of 1940, as amended (the “1940 Act”), and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.

- *License termination risk* – The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Index investing risk* – The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should the Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as fund diversification requirements, may limit the ability of the Fund to completely replicate an index.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Mezzanine securities risk* – Mezzanine securities carry the risk that the issuer will not be able to meet its obligations and that the equity securities purchased with the mezzanine investments may lose value.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For

example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.

- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *Tracking error risk* – Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.
- *Non-diversification risk* – The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. Performance for the Fund has not been included because the Fund has less than one full calendar year of operations.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

Mellon Investments Corporation ("Mellon")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Marlene Walker Smith	April 2021	Director, Head of Equity Index – Portfolio Management, Mellon
David France, CFA	April 2021	Vice President and Senior Portfolio Manager, Mellon
Todd Frysinger, CFA	April 2021	Vice President and Senior Portfolio Manager, Mellon
Vlasta Sheremeta, CFA	April 2021	Vice President and Senior Portfolio Manager, Mellon
Michael Stoll	April 2021	Vice President and Senior Portfolio Manager, Mellon

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/Morningstar U.S. Sustainability Index Fund
(formerly, JNL/Mellon MSCI KLD 400 Social Index Fund)

Class A
Class I

Investment Objective. The investment objective of the Fund is to seek to track the performance of the Morningstar® US Sustainability Index□, which is designed to provide broad US equity market exposure with lower environmental, social and governance (“ESG”) risk.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.25%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.16%
Total Annual Fund Operating Expenses ²		0.71%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Expense information has been restated to reflect current fees.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.25%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.16%
Total Annual Fund Operating Expenses ²		0.41%
Less Waiver/Reimbursement ³		0.05%
Total Annual Fund Operating Expenses After Waiver/Reimbursement ²		0.36%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Expense information has been restated to reflect current fees.

³ JNAM has contractually agreed to waive 0.05% of the administrative fees of the Class. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the Class I administrative fee waiver is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Morningstar U.S. Sustainability Index Fund Class A			
1 year	3 years	5 years	10 years
\$73	\$227	\$395	\$883

JNL/Morningstar U.S. Sustainability Index Fund Class I			
1 year	3 years	5 years	10 years
\$37	\$127	\$225	\$513

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	24%

Principal Investment Strategies. The Fund, under normal circumstances, seeks to invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities included in the Morningstar US Sustainability Index (the “Index”), including depositary receipts representing securities of the Index. The Fund seeks to track the investment results of the Index, which is designed to provide broad U.S. equity market exposure with lower ESG risk. The Index includes large- and mid-capitalization companies and employs a best-in-class stock selection process to reduce exposure to companies with high ESG risk relative to their sector peers, targeting coverage of 50% of the Morningstar US Large-Mid Cap Index (the “parent index”) by float-adjusted market capitalization. Sector constraints are applied to preserve market-like exposure. The Fund’s investments may be concentrated in certain industries to the extent such industries are represented in the Index.

As of December 31, 2021, the Index consisted of 374 constituents identified by Morningstar Indexes (the “Index Provider”) and the full market capitalization range was \$298 million to \$2.14 billion. The number of constituents in the Index is subject to the selection and eligibility criteria at the time of reconstitution. The Index is reconstituted semi-annually and implemented after the close of business on the third Friday of June and December and is effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and is effective the following Monday. If Monday is a holiday, reconstitution or rebalancing is effective on the following business day.

The Index Provider defines sustainable investing as an approach that takes into account ESG factors and their impact throughout the investment process.

All constituents within the Index must meet the following criteria in sequence: (i) the security must have a current Sustainalytics ESG Risk Rating and Sustainalytics Controversy Score, (ii) the security’s Controversy Score must be 3 out of 5, or lower, (iii) the security must not have a ‘Severe’ Sustainalytics ESG Risk Rating, and (iv) the company must not derive more than 50% of its revenue from tobacco products, not have any involvement in the production of controversial weapons (land mines, for example) as defined by third-party Sustainalytics Global Compact Compliance Service exclusionary lists, not have any involvement in the manufacturing and sale of firearms to civilian customers, and not have any involvement in the manufacturing and sale of key components of small arms. The Index Provider selects the best-in-class companies in priority order of their Sustainalytics ESG Risk Ratings until they reach 50% coverage by float-adjusted market capitalization of the parent index. The companies with the lowest possible ESG Risk Ratings are selected for the Index, subject to sector weight constraints relative to the parent index.

Sustainalytics’ ESG Risk Ratings are designed to help investors identify and understand financially material ESG risks in their portfolio companies. Sustainalytics’ ESG Risk Ratings measure the degree to which a company’s economic value is driven by the magnitude of a company’s unmanaged ESG risks. Sustainalytics’ ESG Risk Ratings are composed of three building blocks that contribute to a company’s overall rating. These building blocks include Corporate Governance, material ESG issues (“MEIs”), and idiosyncratic ESG issues. To be considered relevant in the ESG Risk Ratings, an issue must have a potentially substantial impact on the economic value of a company and, hence, its financial risk- and return profile from an investment perspective. The ESG Risk Rating is forward looking in the sense that it identifies these issues based on the typical business model and business environment a company is operating in. The final ESG Risk Rating score is calculated as the sum of all unmanaged risk. To determine unmanaged risk, Sustainalytics reviews three building blocks: Corporate Governance, MEIs’, and idiosyncratic ESG issues. Based on their quantitative scores, companies are grouped into one of five risk categories (negligible, low, medium, high, severe) per the chart below. A low score indicates a low level of ESG risk.

ESG Risk Rating	Quantitative Score
Negligible	0 - 9.99
Low	10 - 19.99
Medium	20 - 29.99
High	30 - 39.99
Severe	40+

Mellon Investments Corporation, the Fund’s sub-adviser (“Sub-Adviser”), does not apply its own ESG screening criteria. The Sub-Adviser relies on the Index Provider to apply its screening criteria to portfolio companies included in the Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through full replication or representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon fundamental security analysis. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index.

When attempting to replicate an index such as the Index, portfolio turnover is generally reduced to security additions or deletions to the index, contract owner contributions and withdrawals, and reinvestment income. The Fund stays aligned with the benchmark automatically with the change in share price, due to the close similarity between the holdings of the Index and those of the Fund such that the replicated portfolio does not require rebalancing as a result of market movement. The Fund is managed and rebalanced to reflect the composition of the Index.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to the Index to assist with the Index rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of exchange-traded derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *ESG (Environmental, Social & Governance) investment strategy risk* – The Fund's ESG investment strategy limits the types and number of investment opportunities available to the Fund and, as a result, the Fund may underperform other funds that do not have an ESG focus. The Fund's ESG investment strategy may result in the Fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the Index Provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.

- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund’s performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *Index investing risk* – The Fund’s indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should the Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund’s shares, changes in the composition of the index, and the Fund’s expenses. Certain regulatory limitations, such as fund diversification requirements, may limit the ability of the Fund to completely replicate an index.
- *Tracking error risk* – Tracking error is the divergence of the Fund’s performance from that of the Index. The Fund’s return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund’s portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund’s holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *License termination risk* – The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party’s intellectual property in connection with the Fund’s name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF’s shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF’s fees and expenses as well as their share of the Fund’s fees and expenses.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.
- *Depository receipts risk* – Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an un-sponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject the Fund to liquidity risk.
- *Non-diversification risk* – The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund’s performance more than if the Fund were a diversified investment company.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown, and if such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

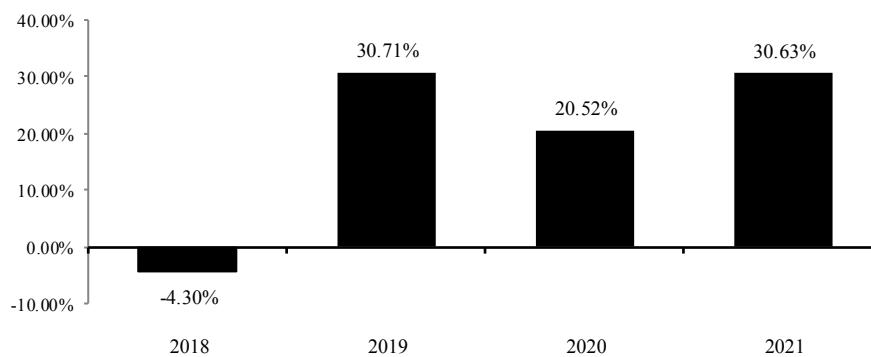

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 25, 2022, for consistency with the Fund's principal investment strategies, the Fund replaced the MSCI KLD 400 Social Index with the Morningstar® US Sustainability IndexSM as the Fund's primary benchmark.

For consistency with the Fund's principal investment strategies, the Fund added the Morningstar® US Large-Mid Cap IndexSM as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the

broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/Morningstar Wide Moat Index Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to provide total return by tracking the performance, net of expenses, of the Morningstar® Wide Moat Focus IndexSM.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class A
Management Fee	0.20%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.26%
Total Annual Fund Operating Expenses	0.76%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class I
Management Fee	0.20%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.26%
Total Annual Fund Operating Expenses	0.46%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Morningstar Wide Moat Index Fund Class A			
1 year	3 years	5 years	10 years
\$78	\$243	\$422	\$942

JNL/Morningstar Wide Moat Index Fund Class I			
1 year	3 years	5 years	10 years
\$47	\$148	\$258	\$579

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	61%

Principal Investment Strategies. The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities in the Morningstar® Wide Moat Focus IndexSM (“Index”). The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index.

The Index is equal weighted and provides exposure to companies with Morningstar Economic Moat Ratings of “Wide” that are trading at the lowest current market price/fair value ratios. Moat ratings and fair value estimates are determined through independent research conducted by the Morningstar Equity Research team (“Morningstar Research”).

Wide-moat companies are those in which Morningstar Research has very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. Morningstar Research defines excess profits as returns on invested capital (ROICs), above their estimate of a firm’s cost of capital, or weighted average cost of capital (WACC). Without a moat, profits are more susceptible to competition. Morningstar Research has identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale. To assess the sustainability of excess profits, analysts perform ongoing assessments of what Morningstar Research calls the “moat trend.” A firm’s moat trend is positive in cases where Morningstar Research believes its sources of competitive advantage are growing stronger; stable where they do not anticipate changes to competitive advantages over the next several years; or negative when they see signs of deterioration.

Morningstar Research uses a standardized, proprietary valuation model to assign fair values to potential Index constituents’ common stock. Morningstar’s equity research team estimates the issuer’s future free cash flows and then calculates an enterprise value using weighted average costs of capital as the discount rate. Morningstar Research then assigns each issuer’s common stock a fair value by adjusting the enterprise value to account for net debt and other adjustments.

The Index employs a staggered rebalance methodology and is divided into two sub-portfolios. Each typically contains 40 stocks. However, if securities fall short of the selection and eligibility criteria or if securities are added or deleted as a result of corporate actions after reconstitution, the sub-portfolio can hold more or fewer than 40 companies. In addition, securities that are deleted from the Morningstar® US Market IndexSM after June and December reconstitutions are simultaneously deleted from the Index. One sub-portfolio reconstitutes in December and June, the other in March and September. At each reconstitution, the 40 securities representing the lowest current market price/fair value are selected from the list of eligible securities for the sub-portfolio. A buffer rule is applied to the current Index constituents. Current constituents ranked within the top 150% of the target count in the eligible universe based on current market price/fair value ratio are retained in the Index. The maximum weight of an individual sector in the Index is capped at 10% more than its corresponding weight in the Morningstar® US Market IndexSM at the time of reconstitution, or 40%, whichever is higher. Due to the staggered rebalance methodology, constituents and weightings may vary between sub-portfolios. As a rule, adjustments to one sub-portfolio are performed after the close of business on the third Friday of March and September and adjustments to the other sub-portfolio are performed after the close of business on the third Friday of June and December, and all adjustments are effective on the following Monday. If the Monday is a market holiday, reconstitution and rebalancing occurs on the Tuesday immediately following. In addition to the quarterly staggered reconstitution of sub-portfolio, the sub-portfolios weights are reset to 50% every June and December and distributed among the securities within them in proportion to their weight.

The aggregate portfolio can contain between 40 and 80 constituents.

The Fund intends to hold the same number of securities as the Index. As of December 31, 2021, the Index included 46 securities of companies with a market capitalization range of between approximately \$1,738.71 million to \$2,525.08 billion and a weighted average market capitalization of \$235.90 billion. These amounts are subject to change.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund’s use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may invest in exchange-traded funds (“ETFs”) to assist with Fund rebalances and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

Mellon Investments Corporation, the Fund’s sub-adviser (“Sub-Adviser”), uses a “passive” or “indexing” approach to try to achieve the Fund’s investment objective. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis.

The Fund may concentrate its investments in an industry or group of industries to the extent the Index that the Fund is designed to track is also concentrated.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *License termination risk* – The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Index investing risk* – The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should the Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as fund diversification requirements, may limit the ability of the Fund to completely replicate an index.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform

other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.

- *Tracking error risk* – Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

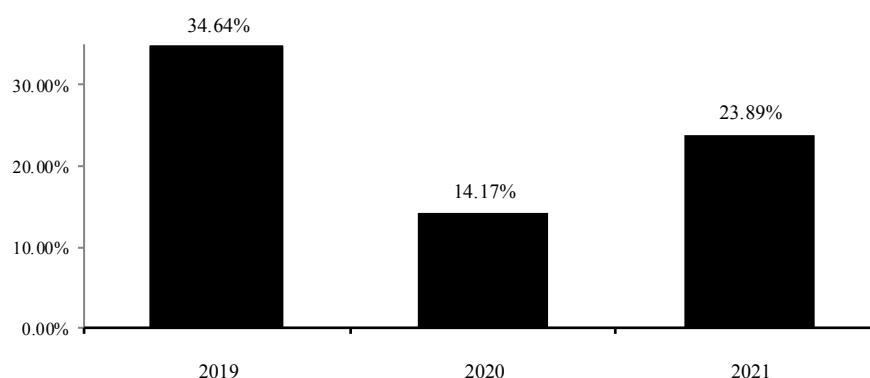

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, the Fund was combined with the JNL/The London Company Focused U.S. Equity Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund’s shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund’s dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL/Neuberger Berman Commodity Strategy Fund

Class A
Class I

Investment Objective. The investment objective of the Fund is to seek total return.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.45%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.15%
Acquired Fund Fees and Expenses ²		0.01%
Total Annual Fund Operating Expenses		0.91%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.45%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.15%
Acquired Fund Fees and Expenses ²		0.01%
Total Annual Fund Operating Expenses		0.61%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Neuberger Berman Commodity Strategy Fund Class A			
1 year	3 years	5 years	10 years
\$93	\$290	\$504	\$1,120

JNL/Neuberger Berman Commodity Strategy Fund Class I			
1 year	3 years	5 years	10 years
\$62	\$195	\$340	\$762

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	36%

Principal Investment Strategies. The Fund seeks to achieve its goal by investing under normal circumstances in commodity-linked derivative instruments and fixed-income instruments. Commodities are assets that have tangible properties, such as oil, natural gas, agricultural products or metals.

The Fund seeks to gain long and short exposure to the commodity markets by investing, directly or indirectly, in futures contracts on individual commodities and other commodity-linked derivative instruments. The performance of these commodity-linked derivative instruments is expected to correspond to the performance of the commodity underlying the derivative instrument, without requiring the Fund to invest directly in commodities.

Companies with similar characteristics may be grouped together in broad categories called sectors. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund.

Fund assets not invested in commodity-linked derivative instruments will be invested in fixed income securities, cash or cash equivalent instruments, or money market mutual funds.

The Fund may hold commodity-linked derivative instruments that provide leveraged exposure to commodities so that the Fund's investment exposure to commodities (through their use of commodity-linked derivative instruments) may, at times, equal or slightly exceed the Fund's net assets.

In managing the Fund's commodity investments, the Fund's sub-adviser, Neuberger Berman Investment Advisers LLC (the "Sub-Adviser") seeks to identify investment opportunities using quantitative investment models and fundamental analyses with an emphasis on risk management in an attempt to take advantage of both short-term and long-term opportunities in commodity markets. By managing a broadly diversified portfolio of commodity investments with an active investment approach, the Sub-Adviser seeks to provide returns that are not highly correlated with other major asset classes. The Fund may take short positions in one or more separate commodities. The short positions used by the Fund primarily involve buying a derivative on a commodity in anticipation that the price of the commodity will decline.

The Sub-Adviser will use various quantitative models employing strategies intended to identify investment opportunities and determine portfolio weightings in different commodity sectors and markets. These strategies include: (i) a risk-balancing strategy that considers the total portfolio risk the Sub-Adviser believes to be associated with each commodity; (ii) a strategy that endeavors to assess top down macro variables among various commodity sectors (such as, energy, industrial, precious metals, agricultural, livestock and softs (e.g., sugar, cotton, cocoa and coffee)); and/or (iii) a strategy that endeavors to assess the outlook for individual commodities within each commodity sector.

From time to time, the Fund's investment program may emphasize a particular sector of the commodities markets. If the Fund emphasizes one or more sectors, the performance of investments in the Fund will likely be affected by events affecting the performance of those sectors.

The Fund's fixed income investments will be mainly in investment grade fixed income securities and are intended to provide liquidity and preserve capital and may serve as collateral for the Fund's derivative instruments. These may include fixed income securities issued by the U.S. Government and its agencies and instrumentalities, bank certificates of deposit, mortgage backed securities, asset-backed securities, and corporate securities. The Fund considers fixed income securities to be investment grade if, at the time of investment, they are rated within the four highest categories by at least one independent credit rating agency or, if unrated, are determined by the Sub-Adviser to be of comparable quality.

The Fund may invest in cash or cash equivalent instruments. Because the Fund will use derivatives to gain exposure to commodities and because derivatives may not require the Fund to deposit the full notional amount of the investment, the Fund may invest a significant amount of its assets in money market mutual funds or other fixed income instruments, as described above. The Fund's use of commodity-linked derivative instruments to obtain long and short exposure to the commodity markets may result in leverage, which amplifies the risks that are associated with the commodities underlying the derivative instruments. The Fund's aggregate investment exposure, as measured on a notional basis, may be greater than 100% of the Fund's total assets from time to time.

Although the Fund invests primarily in domestic securities and other instruments, it may also invest in foreign securities and other instruments.

In an effort to achieve its goal, the Fund may engage in active and frequent trading.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Asset-based securities risk* – Asset-based securities are typically fixed-income securities whose value is related to the market price of certain commodities, interests, and other items, such as precious metals, as well as other assets, such as credit card receivables. Although the market price of these securities is expected to follow the market price of the related assets, there may not be perfect correlation. There are special risks associated with certain types of assets that will also affect the value of asset-based securities related to those assets. For an example of such special risks, please refer to “Precious metals related securities risk.”
- *Call risk* – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund’s income if the proceeds are reinvested at lower interest rates.
- *Clearance and settlement risk* – Foreign securities markets have different clearance and settlement procedures, and in certain markets there have been times when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct such transactions. This risk may be magnified in emerging markets because settlement systems may be less organized, creating a risk that settlements may be delayed or lost because of failures or defects in such systems.
- *Commodities regulatory risk* – Commodity-related operating companies typically are subject to significant foreign, federal, state and local government regulation in virtually every aspect of their operations, including how facilities are constructed, maintained and operated, environmental and safety controls, and the prices they may charge for the products and services they provide. The U.S. Commodity Futures Trading Commission (“CFTC”) and the exchanges on which futures contracts are traded are authorized to take extraordinary actions in the event of a market emergency, including, for example, increasing margin requirements, establishing daily limits and suspending trading. In addition, compliance with certain CFTC requirements may increase the Fund’s expenses. Future regulatory developments may impact the Fund’s ability to invest in commodity-linked derivatives.
- *Commodity risk* – Commodity prices can be extremely volatile and may be directly or indirectly affected by many factors, including changes in overall market movements, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, and factors affecting a particular industry or commodity, such as drought, floods, or other weather conditions, livestock disease, trade embargoes, competition from substitute products, transportation bottlenecks or shortages, fluctuations in supply and demand, tariffs, and international regulatory, political, and economic developments (e.g., regime changes and changes in economic activity levels).
- *Commodity-linked derivatives risk* – The value of a commodity-linked derivative investment is typically based upon the price movements of a commodity, a commodity futures contract or commodity index, or some other readily measurable economic variable. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, volatility of the underlying benchmark, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, volatility in the spot market, and political and regulatory developments. The value of commodity-linked derivatives will rise or fall in response to changes in the underlying commodity or related index. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. A liquid secondary market may not exist for certain commodity-linked derivatives, and there can be no assurance that one will develop. Commodity-linked derivatives also may be subject to credit and interest rate risks that generally affect the values of fixed-income securities. Therefore, at maturity, the Fund may receive more or less principal than it originally invested. The Fund may also receive interest payments that are more or less than the stated coupon interest payments.
- *Counterparty risk* – Transactions involving a counterparty are subject to the credit risk of the counterparty. A fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter (“OTC”) derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.

- *Extension risk* – When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- *Leverage risk* – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market

changes), financial markets may fluctuate or overall prices may decline, or the Fund's Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

- *Market direction risk* – Since the Fund will typically hold both long and short positions, an investment in the Fund will involve market risks associated with different types of investment decisions than those made for a typical “long only” fund. The Fund’s results could suffer when there is a general market advance and the Fund holds significant “short” positions, or when there is a general market decline and the Fund holds significant “long” positions. The markets may have considerable volatility from day to day and even in intra-day trading.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Prepayment risk* – During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund’s performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager’s choice of securities within such sector.
- *Short sales risk* – A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager’s ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund’s potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund’s long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund’s overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer’s obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Volatility risk* – The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund’s net asset value per share to experience significant appreciations or depreciations in value over short periods of time.

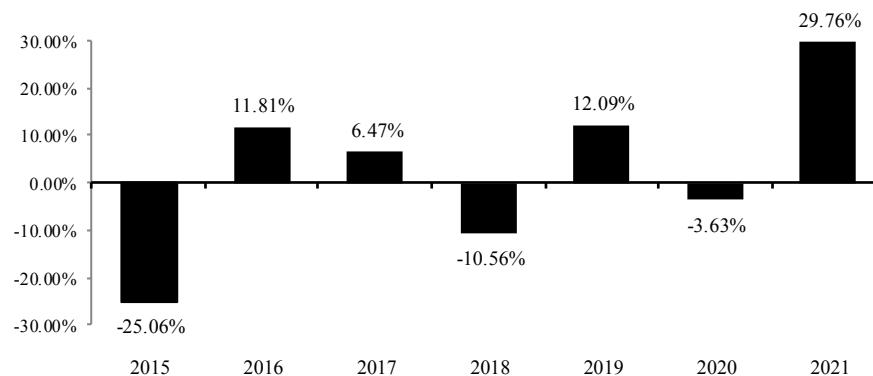

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/Neuberger Berman Commodity Strategy Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

David Yi Wan	April 2016	Senior Vice President, NBIA
Michael Foster	May 2021	Managing Director, NBIA

Messrs. Wan, Kaya and Foster are primarily responsible for the day-to-day management of the Fund's investments in commodity-linked derivative instruments. Mr. Foster is primarily responsible for the day-to-day management of the Fund's fixed-income securities.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/Neuberger Berman Gold Plus Strategy Fund Class A Class I

Investment Objective. The investment objective of the Fund is to seek total return.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

**Shareholder Fees
(fees paid directly from your investment)**

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.75%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.16%
Total Annual Fund Operating Expenses		1.21%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser") and are based on estimated amounts for the current fiscal year.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.75%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.16%
Total Annual Fund Operating Expenses		0.91%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser") and are based on estimated amounts for the current fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Neuberger Berman Gold Plus Strategy Fund Class A			
1 year	3 years	5 years	10 years
\$123	\$384	\$665	\$1,466

JNL/Neuberger Berman Gold Plus Strategy Fund Class I			
1 year	3 years	5 years	10 years
\$93	\$290	\$504	\$1,120

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance. The Fund does not have a portfolio turnover rate as of the date of this Prospectus as it commenced operations on the date of this Prospectus.

Principal Investment Strategies. Under normal conditions, the Fund will primarily invest in gold futures contracts that provide investment exposure to gold and in fixed-income instruments. The Fund may also invest in exchange-traded funds (“ETFs”) that provide investment exposure to physical gold. The Fund concentrates its investments in the metals and mining industry and therefore invests 25% or more of its total assets in such industry. The Fund may also invest in derivatives and ETFs that provide investment exposure to precious metals, including, but not limited to, silver, platinum, and palladium.

Because gold is a commodity, the Fund seeks to gain long exposure to the commodity markets by investing, directly or indirectly, in futures contracts on individual commodities and other commodity-linked derivative instruments. The performance of these commodity-linked derivative instruments is expected to correspond to the performance of the commodity underlying the derivative instrument, without requiring the Fund to invest directly in commodities. For purposes of calculating the Fund’s exposure to gold, the Fund’s investments in gold futures contracts are based on the notional value.

Fund assets not invested in commodity-linked derivative instruments, other commodity-related instruments, or exchange-traded funds that provide investment exposure to commodities will be invested in fixed income securities, cash or cash equivalent instruments, or money market mutual funds.

The Fund may hold commodity-linked derivative instruments that provide leveraged exposure to commodities so that the Fund’s investment exposure to commodities (through their use of commodity-linked derivative instruments) may, at times, equal or slightly exceed the Fund’s net assets.

In managing the Fund’s commodity investments, the Fund’s sub-adviser, Neuberger Berman Investment Advisers LLC (the “Sub-Adviser”) primarily seeks exposure to the gold commodity. The Sub-Adviser will also incorporate a marginal mix of investments with exposures to precious metal commodities and cash-settled bitcoin futures traded on the Chicago Mercantile Exchange (“CME”) to seek to diversify the Fund’s investment exposure. To gain exposure to gold and other precious metals commodities, the Fund will invest in futures contracts that are typically within 1 year to expiration. To gain exposure to bitcoin, the Fund may invest in cash-settled futures contracts traded on the CME that are typically within 1 year to expiration.

The Fund may invest up to 5% of its total assets in cash-settled bitcoin futures traded on the CME, which is currently the only futures exchange registered with the Commodity Futures Trading Commission (“CFTC”) with respect to bitcoin futures. Bitcoin is a digital currency, which is a means of payment that exists in a purely electronic form and is accounted for and transferred using online systems. Due to market appreciation or other fluctuations in the Fund’s net asset level, the Fund’s investments in cash-settled bitcoin futures traded on the CME will be rebalanced on a monthly basis. **The Fund will not directly invest in bitcoin or other cryptocurrencies.**

The Fund’s fixed income investments will be mainly in investment grade fixed income securities and are intended to provide liquidity and limit downside risk to capital and may serve as collateral for the Fund’s derivative instruments. These may include fixed income securities issued by the U.S. Government and its agencies and instrumentalities, bank certificates of deposit, mortgage-backed securities, asset-backed securities, and corporate securities. The Fund considers fixed income securities to be investment grade if, at the time of investment, they are rated within the four highest categories by at least one independent credit rating agency or, if unrated, are determined by the Sub-Adviser to be of comparable quality.

The Fund may invest in cash or cash equivalent instruments. Because the Fund will use derivatives to gain exposure to gold and other precious metals, as well as cash-settled bitcoin futures traded on the CME, and because derivatives may not require the Fund to deposit the full notional amount of the investment, the Fund may invest a significant amount of its assets in money market mutual funds or other fixed income instruments, as described above. The Fund’s use of commodity-linked derivative instruments to obtain long exposure to the commodity markets may result in leverage, which amplifies the risks that are associated with the commodities underlying the derivative instruments. The Fund’s aggregate investment exposure, as measured on a notional basis, may be greater than 100% of the Fund’s total assets from time to time.

In an effort to achieve its goal, the Fund may engage in active and frequent trading.

The Fund is a “non-diversified” fund, as defined in the Investment Company Act of 1940, as amended (the “1940 Act”), and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Bitcoin capacity risk* – If the Fund’s ability to obtain exposure to bitcoin futures contracts consistent with its investment objective is disrupted for any reason including, for example, limited liquidity in the bitcoin futures market, a disruption to the bitcoin futures market, or as a result of margin requirements or position limits imposed by the Fund’s futures commission merchants (“FCMs”), the Chicago Mercantile Exchange (“CME”), or the U.S. Commodity Futures Trading Commission (“CFTC”), the Fund

may not be able to achieve its investment objective and may experience significant losses. In addition, future regulatory changes involving buying and selling bitcoin futures may limit the ability of the Fund to achieve its investment objective.

- *Bitcoin futures risk* – The bitcoin futures contracts the Fund may invest in are traded on a futures exchange registered with the Commodity Futures Trading Commission. Bitcoin futures expose the Fund to all of the risks related to cryptocurrency discussed under “Cryptocurrency risk” below and also expose the Fund to risks specific to bitcoin futures.

The market for bitcoin futures may be less developed, and potentially less liquid and more volatile, than more established futures markets given that the bitcoin futures market is relatively new. In addition, the Chicago Mercantile Exchange (“CME”), the exchange on which bitcoin futures are traded, and its related clearinghouses and the Fund’s futures commission merchants (“FCMs”) generally require the Fund to maintain relatively high levels of initial margin at the clearinghouse and FCM in connection with bitcoin futures. Bitcoin futures are subject to collateral requirements and daily limits that may limit the Fund’s ability to achieve the desired exposure.

In addition, bitcoin futures have generally exhibited significant price volatility relative to traditional asset classes. Bitcoin futures may also experience significant price volatility as a result of being the target of market fraud and manipulation. Futures contracts based on bitcoin are also subject to the risks otherwise applicable to derivatives and, in particular, futures contracts, discussed below.

- *Call risk* – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund’s income if the proceeds are reinvested at lower interest rates.
- *Commodities regulatory risk* – Commodity-related operating companies typically are subject to significant foreign, federal, state and local government regulation in virtually every aspect of their operations, including how facilities are constructed, maintained and operated, environmental and safety controls, and the prices they may charge for the products and services they provide. The U.S. Commodity Futures Trading Commission (“CFTC”) and the exchanges on which futures contracts are traded are authorized to take extraordinary actions in the event of a market emergency, including, for example, increasing margin requirements, establishing daily limits and suspending trading. In addition, compliance with certain CFTC requirements may increase the Fund’s expenses. Future regulatory developments may impact the Fund’s ability to invest in commodity-linked derivatives.
- *Commodity risk* – Commodity prices can be extremely volatile and may be directly or indirectly affected by many factors, including changes in overall market movements, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, and factors affecting a particular industry or commodity, such as drought, floods, or other weather conditions, livestock disease, trade embargoes, competition from substitute products, transportation bottlenecks or shortages, fluctuations in supply and demand, tariffs, and international regulatory, political, and economic developments (e.g., regime changes and changes in economic activity levels).
- *Commodity-linked derivatives risk* – The value of a commodity-linked derivative investment is typically based upon the price movements of a commodity, a commodity futures contract or commodity index, or some other readily measurable economic variable. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, volatility of the underlying benchmark, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, volatility in the spot market, and political and regulatory developments. The value of commodity-linked derivatives will rise or fall in response to changes in the underlying commodity or related index. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. A liquid secondary market may not exist for certain commodity-linked derivatives, and there can be no assurance that one will develop. Commodity-linked derivatives also may be subject to credit and interest rate risks that generally affect the values of fixed-income securities. Therefore, at maturity, the Fund may receive more or less principal than it originally invested. The Fund may also receive interest payments that are more or less than the stated coupon interest payments.
- *Concentration risk* – The Fund may concentrate its investments in certain securities, including commodity-linked derivative instruments. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Counterparty risk* – Transactions involving a counterparty are subject to the credit risk of the counterparty. A fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter (“OTC”) derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of

hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.

- *Cryptocurrency risk* – Cryptocurrencies (also referred to as “virtual currencies” and “digital currencies”) are digital assets designed to act as a medium of exchange. Although cryptocurrency is an emerging asset class, there are thousands of cryptocurrencies, the most well-known of which is bitcoin (the only cryptocurrency that the Fund seeks exposure to via bitcoin futures contracts). Cryptocurrency is a newer technological innovation with limited history; it is highly speculative and future regulatory actions or policies may significantly affect the price of cryptocurrencies, and thus the value of the Fund’s bitcoin futures contracts. The growth of cryptocurrency markets and the acceptance of bitcoin as a digital currency is subject to significant uncertainty, and to the extent the pace of this growth slows or reverses, the price of bitcoin and the Fund’s bitcoin futures contracts may decline.

The value of cryptocurrencies is normally determined by the supply and demand for cryptocurrency in the global market for the trading of cryptocurrency, which consists primarily of transactions on electronic exchanges. The market price of bitcoin has been subject to extreme fluctuations, and may be highly volatile. If cryptocurrency markets continue to be subject to sharp fluctuations, the Fund’s exposure to bitcoin futures contracts could result in substantial losses to the Fund. Cryptocurrency generally operates without central authority (such as a bank), and the value is generally not backed by any government, corporation, or other identified body. Cryptocurrency is not legal tender; Federal, state and/or foreign governments may restrict the use and exchange of cryptocurrency, which could severely affect the value of any holdings. Regulation of cryptocurrencies in the United States is still developing and is subject to significant uncertainty. Similar to fiat currencies (i.e., a currency that is backed by a central bank or a national, supra-national or quasi-national organization), cryptocurrencies are susceptible to theft, loss and destruction.

Cryptocurrency exchanges and other trading venues on which cryptocurrencies trade are relatively new and, in most cases, largely unregulated and may therefore be more exposed to fraud and failure than established, regulated exchanges for securities, derivatives and other currencies. The Fund’s investment exposure to bitcoin through bitcoin futures contracts remains subject to volatility experienced by the cryptocurrency exchanges and other cryptocurrency trading venues. Cryptocurrency exchanges may stop operating or permanently shut down due to fraud, technical glitches, hackers or malware, which may also affect the price of bitcoin and thus the Fund’s investment exposure to bitcoin.

- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF’s shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF’s fees and expenses as well as their share of the Fund’s fees and expenses.
- *Extension risk* – When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser’s skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser’s inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance

of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Investment in money market funds risk* – Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. An investment in a money market fund is not insured or guaranteed by a Federal Deposit Insurance Corporation or any other government agency. Although such funds seek to maintain a net asset value of \$1.00 per share, it is possible to lose money by investing in a money market fund.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund’s investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund’s shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security’s value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer’s goods or services.
- *Leverage risk* – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund’s gains and losses in comparison to the amount of the Fund’s assets (that is, assets other than borrowed assets) at risk, which may cause the Fund’s portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* – The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Non-diversification risk* – The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund’s performance more than if the Fund were a diversified investment company.
- *Precious metals-related securities risk* – Prices of precious metals and of precious metals-related securities historically have been very volatile. The high volatility of precious metal prices may adversely affect the financial condition of companies involved with precious metals. The production and sale of precious metals by governments or central banks or other larger holders can be affected by various economic, financial, social and political factors, which may be unpredictable and may have a significant

impact on the prices of precious metals. Other factors that may affect the prices of precious metals and securities related to them include changes in inflation, the outlook for inflation and changes in industrial and commercial demand for precious metals.

- *Prepayment risk* – During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Volatility risk* – The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.

Performance. Performance for the Fund has not been included because the Fund commenced operations on the date of this Prospectus. Performance, which provides some indication of the risks of investing in the Fund, will be available once the Fund has completed one full calendar year of operations.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

Neuberger Berman Investment Advisers LLC ("NBIA")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Hakan Kaya	April 2022	Managing Director, NBIA
David Yi Wan	April 2022	Senior Vice President, NBIA
Michael Foster	April 2022	Managing Director, NBIA

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/Neuberger Berman Strategic Income Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek high current income with a secondary objective of long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class A
Management Fee	0.48%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.15%
Total Annual Fund Operating Expenses	0.93%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class I
Management Fee	0.48%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.15%
Total Annual Fund Operating Expenses	0.63%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Neuberger Berman Strategic Income Fund Class A			
1 year	3 years	5 years	10 years
\$95	\$296	\$515	\$1,143

JNL/Neuberger Berman Strategic Income Fund Class I			
1 year	3 years	5 years	10 years
\$64	\$202	\$351	\$786

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	68%

Principal Investment Strategies. To pursue its investment objective, the Fund invests primarily in a diversified mix of fixed rate and floating rate debt securities. The Fund's investments may include securities issued by domestic and foreign governments, corporate entities, and trust structures. The Fund may invest in a broad array of securities, including: securities issued or guaranteed as to principal or interest by the U.S. Government or any of its agencies or instrumentalities; corporate bonds; commercial paper; currencies and non-U.S. securities; mortgage-backed securities and other asset-backed securities; and loans. Securities in which the Fund may invest may be structured as fixed rate debt; floating rate debt; and debt that may not pay interest at the time of issuance.

The Fund may invest in debt securities across the credit spectrum, including investment grade securities, below investment grade securities ("high yield bonds," commonly called "junk bonds") and unrated securities. The Fund may invest without limit in below investment grade securities. The Fund considers debt securities to be below investment grade if, at the time of investment, they are rated below the four highest categories by at least one independent credit rating agency or, if unrated, are deemed by the Sub-Adviser to be of comparable quality. The Fund does not normally invest in or continue to hold securities that are in default or have defaulted with respect to the payment of interest or repayment of principal, but may do so depending on market conditions. The Fund may invest in securities whose ratings imply an imminent risk of default with respect to such payments.

The Fund may also invest without limit in derivative instruments as a means of hedging risk and/or for investment purposes, which may include altering the Fund's exposure to interest rates, sectors and individual issuers. These derivative instruments may include, but are not limited to, futures, forward foreign currency contracts, and swaps, such as total return swaps, credit default swaps and interest rate swaps.

The Fund may also invest without limit in foreign securities, but normally will not invest more than 50% of its total assets at the time of investment in obligations of issuers in emerging market countries. The Fund considers emerging market countries to be countries included in the JPMorgan Emerging Markets Bond Index - Global Diversified, the JPMorgan Corporate Emerging Markets Bond Index - Diversified, the JPMorgan Emerging Local Markets Index or the JPMorgan Government Bond Index - Emerging Markets Global Diversified, as well as those countries which are not defined as a High Income Organization for Economic Cooperation and Development (OECD) member country by the World Bank.

Additionally, the Fund may invest in convertible securities and preferred securities. The Fund may also engage in when-issued and delayed delivery transactions (such as to-be-announced mortgage-backed securities), which involve a commitment by the Fund to purchase securities that will be issued at a later date. The Fund may also hold short-term securities including cash, cash equivalents and other debt obligations.

The Fund may invest in debt securities of any maturity and does not have a target average duration.

In an effort to achieve its investment objective, the Fund may engage in active and frequent trading.

The Fund has the ability to invest in other investment companies, such as exchange-traded funds, money market funds, unit investment trusts, and open-end and closed-end funds, including affiliated investment companies.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Call risk* – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- *Corporate loan, sovereign entity loan, and bank loan risk* – Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the Secured Overnight Financing Rate ("SOFR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. As a result, sale proceeds related to the sale of loans may not be available to make additional investments until a substantial period after the sale of the loans. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.

- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Currency transaction risk* – Non-U.S. currency forward contracts, options, swaps, or other derivatives contracts on non-U.S. currencies involve a risk of loss if currency exchange rates move against the Fund. Forward contracts may not be guaranteed by an exchange or clearinghouse and a default by the counterparty may result in a loss to the Fund. Governmental authorities may impose credit controls to limit the level of forward trading to the detriment of the Fund. Neither the U.S. Commodities Future Trading Commission nor the U.S. banking authorities regulate forward currency transactions through banks. In respect of such trading, the Fund is subject to the risk of bank failure or the inability of or refusal by a bank to perform with respect to such contracts.
- *Debt securities ratings risk* – The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Distressed securities risk* – Distressed securities risk refers to the uncertainty of repayment of defaulted securities and obligations of distressed issuers. Because the issuer of such securities is likely to be in a distressed financial condition, repayment of distressed or defaulted securities (including insolvent issuers or issuers in payment or covenant default, in workout or restructuring or in bankruptcy or insolvency proceedings) is subject to significant uncertainties. Insolvency laws and practices in foreign jurisdictions are different than those in the U.S. and the effect of these laws and practices may be less favorable and predictable than in the U.S. Investments in defaulted securities and obligations of distressed issuers are considered highly speculative.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Extension risk* – When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will

weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.

- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Investment in money market funds risk* – Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. An investment in a money market fund is not insured or guaranteed by a Federal Deposit Insurance Corporation or any other government agency. Although such funds seek to maintain a net asset value of \$1.00 per share, it is possible to lose money by investing in a money market fund.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security’s value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer’s goods or services.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Prepayment risk* – During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund’s performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager’s choice of securities within such sector.

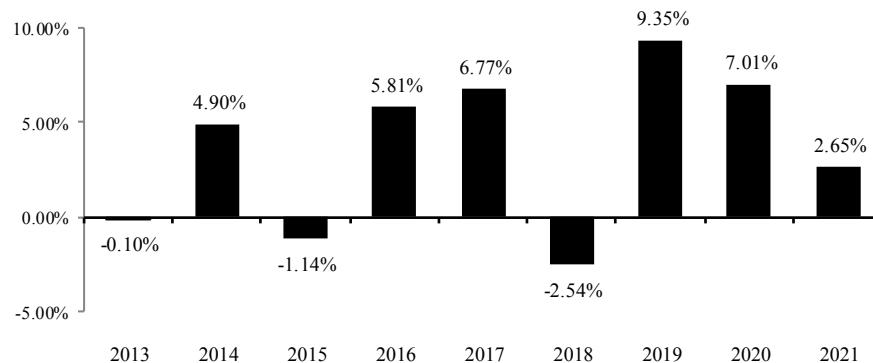

- *Settlement risk* – Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- *Sovereign debt risk* – Investments issued by a governmental entity are subject to the risk that the governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt due to, among other things, cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay its debt, request additional loans or otherwise restructure its debt. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt may be collected.
- *Structured investments risk* – A structured investment is a derivative security designed to offer a return linked to a particular underlying security, currency, commodity or market. Structured investments may come in various forms including notes (such as exchange-traded notes), warrants and options to purchase securities. A Fund will typically use structured investments to gain exposure to a particular underlying security, currency, commodity or market when direct access to the security, currency, commodity, or market is limited or inefficient from a tax or cost standpoint. There can be no assurance that structured investments will trade at the same price or have the same value as the underlying security, currency, commodity or market. Investments in structured investments involve risks including, but not limited to, issuer risk, counterparty risk and market risk. Holders of structured investments bear risks of the underlying investment and are subject to issuer or counterparty risk because a Fund is relying on the creditworthiness of such issuer or counterparty and has no rights with respect to the underlying investment. Certain structured investments may be thinly traded or have a limited trading market and may have the effect of increasing a Fund's illiquidity to the extent that a Fund, at a particular point in time, may be unable to find qualified buyers for these securities.
- *TIPS and inflation-linked bonds risk* – The value of inflation-protected securities generally fluctuates in response to changes in real interest rates, which are tied to the relationship between nominal interest rates and the rate of inflation. As a result, if inflation rates were to rise at a faster rate than nominal rates, real interest rates might decline, leading to an increase in the value of inflation-protected securities. In contrast, if nominal interest rates increased at a faster rate than inflation, real interest rates might rise, leading to a decrease in the value of inflation-protected securities.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *When-issued and delayed delivery securities and forward commitments risk* – When-issued, delayed delivery securities and forward commitments transactions arise when securities are purchased by the Fund with payment and delivery taking place in the future in order to secure what is considered to be an advantageous price or yield to the Fund at the time of entering into the transaction. When-issued and delayed delivery securities and forward commitments involve the risk that the security the Fund buys will lose value prior to its delivery. There also is the risk that the security will not be issued or that the other party to the transaction will not meet its obligation. If this occurs, the Fund loses both the investment opportunity for the assets it set aside to pay for the security and any gain in the security's price.
- *LIBOR replacement risk* – The Funds' payment obligations, financing terms and investments in certain instruments (including debt securities and derivatives) may be tied to floating rates, such as the London Interbank Offered Rate ("LIBOR"). In 2017, the UK Financial Conduct Authority ("FCA") announced its intention to cease compelling banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration, the administrator of LIBOR, ceased publication of most LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of a majority of U.S. dollar LIBOR settings on a representative basis after June 30, 2023. In addition, global regulators have announced that, with limited exceptions, no new LIBOR-based contracts should be entered into after 2021. Actions by regulators have resulted in the establishment of alternative reference rates to LIBOR in most major currencies (e.g., the Secured Overnight Financing Rate for U.S. dollar LIBOR and the Sterling Overnight Interbank Average Rate for GBP LIBOR). Various financial industry groups have been planning for the transition away from LIBOR and markets are developing in response to these new rates, but questions around the liquidity of the new rates and how to appropriately adjust these rates to eliminate any economic value transfer at the time of transition remain a significant concern. It is difficult to predict the full impact of the transition away from LIBOR on the Funds. The transition process may involve, among other things, increased volatility or illiquidity in markets for instruments that continue to rely on LIBOR. The transition may also result in a reduction in the value of certain LIBOR-based investments held by the Funds or reduce the effectiveness of related transactions such as hedges. Any such effects of the transition away from LIBOR, as well as other unforeseen effects, could result in losses for the Funds. Since the usefulness of LIBOR as a benchmark could also deteriorate during the transition period, effects could occur at any time.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Portfolio Management.**Investment Adviser to the Fund:**

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

Neuberger Berman Investment Advisers LLC ("NBIA")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Thanos Bardas	April 2012	Managing Director, NBIA
David M. Brown	April 2012	Managing Director, NBIA
Ashok Bhatia	December 2017	Managing Director, NBIA
Bradley C. Tank	April 2012	Managing Director, NBIA

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/Newton Equity Income Fund
(formerly, JNL/Mellon Equity Income Fund)
Class A
Class I

Investment Objective. The investment objective of the Fund is to seek total return (consisting of capital appreciation and income).

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.45%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.16%
Total Annual Fund Operating Expenses		0.91%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.45%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.16%
Total Annual Fund Operating Expenses		0.61%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Newton Equity Income Fund Class A			
1 year	3 years	5 years	10 years
\$93	\$290	\$504	\$1,120

JNL/Newton Equity Income Fund Class I			
1 year	3 years	5 years	10 years
\$62	\$195	\$340	\$762

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	96%

Principal Investment Strategies. Under normal market conditions, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities. The Fund seeks to focus on dividend-paying stocks and other investments and investment techniques that provide income, including covered call strategies. Newton Investment Management North America, LLC, the Fund's sub-adviser (the "Sub-Adviser"), chooses stocks through a disciplined investment process that combines computer modeling techniques, fundamental analysis, and risk management. The Fund will emphasize those stocks with value characteristics, although it also may purchase growth stocks. The Sub-Adviser's investment process is designed to provide investors with investment exposure to sector weightings and risk characteristics generally similar to those of the S&P 500 Value Index.

The Fund's equity investments may include common stocks, preferred stocks, convertible securities, and American Depository Receipts ("ADRs"), including those purchased in initial public offerings. The Fund may also invest in fixed income securities and money market instruments.

The Fund may, but is not required to, use derivatives, such as options, futures, and options on futures (including those relating to stocks, indices, and interest rates), as a substitute for investing directly in an underlying asset, to increase returns or income, or as a part of a hedging strategy.

The Fund may invest in securities issued by companies in the financial services sector.

The Fund primarily invests in securities of U.S. companies and does not currently intend to invest more than 15% in foreign securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of a security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, public health or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.

- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Depository receipts risk* – Depository receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an un-sponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject the Fund to liquidity risk.
- *Convertible securities risk* – Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- *Options risk* – If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- *Investments in IPOs risk* – IPOs issued by unseasoned companies with little or no operating history are risky and highly volatile.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund's Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

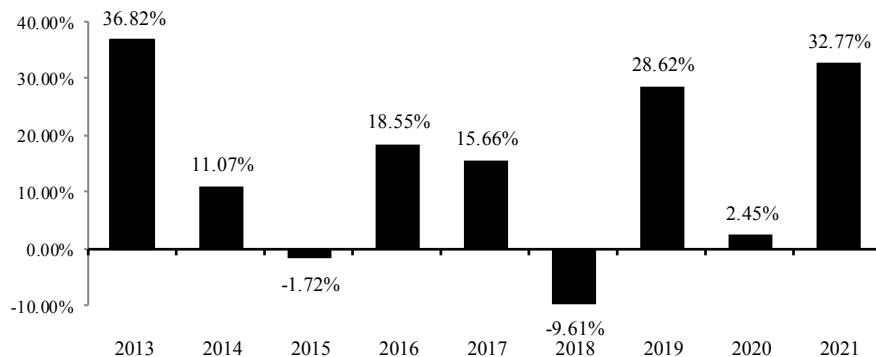

Effective June 24, 2019, the Fund was combined with JNL/Epoch Global Shareholder Yield Fund (the "Acquired Fund"), with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

The performance data includes the performance of the JNL/Mellon Equity Income Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the MSCI USA Value Index (Gross) with the Morningstar® US Large-Mid Cap Broad Value IndexSM as the Fund's primary benchmark.

Portfolio Management.**Investment Adviser to the Fund:**

Jackson National Asset Management, LLC (“JNAM”)

Sub-Adviser:

Newton Investment Management North America, LLC (“Newton”)

Portfolio Manager:

Name:	Joined Fund Management Team In:	Title:
John C. Bailer, CFA	March 2012	Deputy Head of Equity Income, Senior Portfolio Manager, Newton

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL/PIMCO Income Fund

Class A

Class I

Investment Objective. The primary investment objective of the Fund is to maximize current income. Long-term capital appreciation is a secondary objective.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.48%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.15%
Total Annual Fund Operating Expenses		0.93%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.48%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.15%
Total Annual Fund Operating Expenses		0.63%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/PIMCO Income Fund Class A			
1 year	3 years	5 years	10 years
\$95	\$296	\$515	\$1,143

JNL/PIMCO Income Fund Class I			
1 year	3 years	5 years	10 years
\$64	\$202	\$351	\$786

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	464%

Principal Investment Strategies. The Fund seeks to achieve its investment objectives by investing, under normal circumstances, at least 65% of its total assets in a multi-sector portfolio of Fixed-Income Instruments of varying maturities, which may be represented by forwards or derivatives such as options, futures contracts or swap agreements. “Fixed-Income Instruments” include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities. The Fund will seek to maintain a high and consistent level of dividend income by investing in a broad array of fixed-income sectors and utilizing income efficient implementation strategies. The capital appreciation sought by the Fund generally arises from decreases in interest rates or improving credit fundamentals for a particular sector or security.

The Fund will generally allocate its assets among several investment sectors, without limitation, which may include: (i) high yield securities (“junk bonds”) and investment grade corporate bonds of issuers located in the United States and non-U.S. countries, including emerging market countries; (ii) fixed-income securities issued by U.S. and non-U.S. governments (including emerging market governments), their agencies and instrumentalities; (iii) mortgage-related and other asset backed securities; and (iv) foreign currencies, including those of emerging market countries. However, the Fund is not required to gain exposure to any one investment sector, and the Fund’s exposure to any one investment sector will vary over time. The average portfolio duration of this Fund normally varies from zero to eight years based on Pacific Investment Management Company LLC’s (“PIMCO”) forecast for interest rates. Duration is a measure used to determine the sensitivity of a security’s price to changes in interest rates. The longer a security’s duration, the more sensitive it will be to changes in interest rates.

The Fund may invest up to 50% of its total assets in high yield securities rated below investment grade by Moody’s Investors Service, Inc. (“Moody’s”), or equivalently rated by S&P Global Ratings (“S&P”) or Fitch, Inc. (“Fitch”), or if unrated, determined by PIMCO to be of comparable quality (except such 50% limitation shall not apply to the Fund’s investments in mortgage- and asset-backed securities). In addition, the Fund may invest, without limitation, in securities denominated in foreign currencies. The Fund may invest up to 20% of its total assets in securities and instruments that are economically tied to emerging market countries (this limitation does not apply to investment grade sovereign debt denominated in the local currency with less than 1 year remaining to maturity, which means the Fund may invest in such instruments without limitation subject to any applicable legal or regulatory limitation). The Fund will normally limit its foreign currency exposure (from non-U.S. dollar denominated securities or currencies) to 10% of its total assets.

The Fund may invest, without limitation, in derivative instruments, such as options, futures contracts or swap agreements, or in mortgage- or asset backed securities, subject to applicable law and any other restrictions described in the Fund’s prospectus or Statement of Additional Information.

The Fund may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis and may engage in short sales. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buy backs or dollar rolls). The Fund may also invest up to 10% of its total assets in preferred securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Call risk* – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund’s income if the proceeds are reinvested at lower interest rates.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are

tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security’s value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer’s goods or services.
- *Leverage risk* – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund’s gains and losses in comparison to the amount of the Fund’s assets (that is, assets other than borrowed assets) at risk, which may cause the Fund’s portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

- *Short sales risk* – A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- *Sovereign debt risk* – Investments issued by a governmental entity are subject to the risk that the governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt due to, among other things, cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay its debt, request additional loans or otherwise restructure its debt. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt may be collected.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

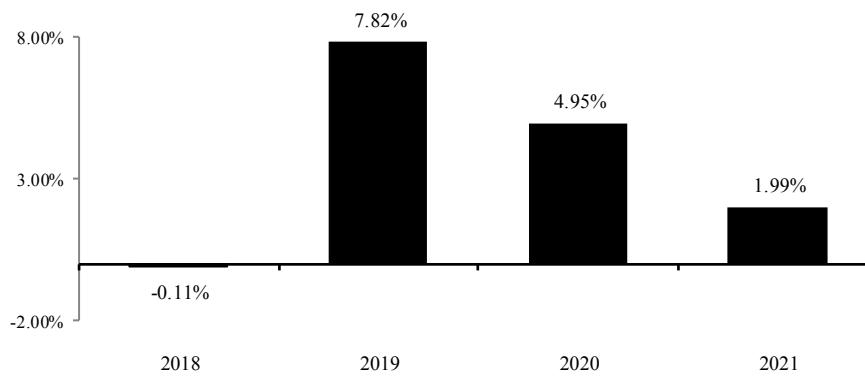

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, the Fund was combined with JNL/Neuberger Berman Currency Fund, a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNL/Neuberger Berman Currency Fund.

Effective April 27, 2020, the Fund was combined with JNL/Scout Unconstrained Bond Fund, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNL/Scout Unconstrained Bond Fund.

Daniel J. Ivascyn	September 2017	Group Chief Investment Officer, Managing Director, PIMCO
Josh Anderson	August 2018	Managing Director, PIMCO

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

JNL/PIMCO Investment Grade Credit Bond Fund

Class A
Class I

Investment Objective. The investment objective of the Fund is to seek maximum total return, consistent with preservation of capital and prudent investment management.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.33%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.10%
Total Annual Fund Operating Expenses		0.73%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/PIMCO Investment Grade Credit Bond Fund Class A			
1 year	3 years	5 years	10 years
\$75	\$233	\$406	\$906

JNL/PIMCO Investment Grade Credit Bond Fund Class I			
1 year	3 years	5 years	10 years
\$44	\$138	\$241	\$542

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	105%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of investment grade fixed income securities of varying maturities, which may be represented by forwards, repurchase agreements, reverse repurchase agreements or loan participations and assignments or derivatives such as options, futures contracts or swap agreements. Assets not invested in investment grade corporate fixed income securities may be invested in other types of Fixed Income Instruments. “Fixed Income Instruments” include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public-or private-sector entities. The average portfolio duration of this Fund normally varies within two years (plus or minus) of the duration of the Bloomberg U.S. Credit Index, as calculated by Pacific Investment Management Company LLC, the Fund’s sub-adviser (the “Sub-Adviser”). Duration is a measure of the expected life of a fixed income security that is used to determine the sensitivity of a security’s price to changes in interest rates.

The Fund invests primarily in investment grade debt securities, but may invest up to 15% of its total assets in high yield securities (“junk bonds”), as rated Moody's Investors Service, Inc. (“Moody's”), Standard and Poor's Ratings Services (“S&P”) or Fitch, Inc. (“Fitch”), or, if unrated, determined by the Sub-Adviser to be of comparable quality. The Fund may invest up to 30% of its total assets in securities denominated in foreign currencies, and may invest beyond this limit in U.S. dollar-denominated securities of foreign issuers. The Fund may invest up to 30% of its total assets in securities and instruments that are economically tied to emerging market countries. The Fund will normally limit its foreign currency exposure (from non-U.S. dollar-denominated securities or currencies) to 20% of its total assets.

The Fund may invest, without limitation, in derivative instruments, such as options, futures contracts or swap agreements, or in mortgage-or asset-backed securities, subject to applicable law and any other restrictions described in the Fund’s Prospectus or Statement of Additional Information (“SAI”). The Fund may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis and may engage in short sales. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buy backs or dollar rolls). The “total return” sought by the Fund consists of income earned on the Fund’s investments, plus capital appreciation, if any, which generally arises from decreases in interest rates, foreign currency appreciation, or improving credit fundamentals for a particular sector or security. The Fund may also invest up to 10% of its total assets in preferred securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Call risk* – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund’s income if the proceeds are reinvested at lower interest rates.
- *Corporate loan, sovereign entity loan, and bank loan risk* – Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as “loans” or “bank loans.” Borrowers generally pay interest on corporate loans at “floating” rates that change in response to changes in market interest rates such as the London Interbank Offered Rate (“LIBOR”) or the Secured Overnight Financing Rate (“SOFR”) or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. As a result, sale proceeds related to the sale of loans may not be available to make additional investments until a substantial period after the sale of the loans. Certain loans may be classified as “illiquid” securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- *Counterparty risk* – Transactions involving a counterparty are subject to the credit risk of the counterparty. A fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter (“OTC”) derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S.

and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.

- *Debt securities ratings risk* – The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Extension risk* – When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance

of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund’s investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund’s shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security’s value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer’s goods or services.
- *Leverage risk* – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund’s gains and losses in comparison to the amount of the Fund’s assets (that is, assets other than borrowed assets) at risk, which may cause the Fund’s portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund’s Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Options risk* – If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Preferred stock risk* – Preferred stock represents an equity interest in a company that generally entitles the holder to receive, in preference to the holders of other stocks such as common stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the company.
- *Prepayment risk* – During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.

- *Repurchase agreements, purchase and sale contracts risk* – If the other party to a repurchase agreement or purchase and sale contract defaults on its obligation under the agreement, the Fund may suffer delays and incur costs or lose money in exercising its rights under the agreement. If the seller fails to repurchase the security under a repurchase agreement or purchase and sale contract, and the market value of the security declines, the Fund may lose money.
- *Reverse repurchase agreements risk* – Reverse repurchase agreements involve the sale of securities held by the Fund with an agreement to repurchase the securities at an agreed-upon price, date and interest payment. Reverse repurchase agreements involve the risk that the other party may fail to return the securities in a timely manner or at all. The Fund could lose money if the value of collateral held by the Fund, including the value of the investments made with the cash received from the sale of securities, is less than the value of the securities sold by the Fund. These events could also trigger adverse tax consequences to the Fund.
- *Settlement risk* – Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- *Short sales risk* – A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- *Sovereign debt risk* – Investments issued by a governmental entity are subject to the risk that the governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt due to, among other things, cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay its debt, request additional loans or otherwise restructure its debt. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt may be collected.
- *Structured investments risk* – A structured investment is a derivative security designed to offer a return linked to a particular underlying security, currency, commodity or market. Structured investments may come in various forms including notes (such as exchange-traded notes), warrants and options to purchase securities. A Fund will typically use structured investments to gain exposure to a particular underlying security, currency, commodity or market when direct access to the security, currency, commodity, or market is limited or inefficient from a tax or cost standpoint. There can be no assurance that structured investments will trade at the same price or have the same value as the underlying security, currency, commodity or market. Investments in structured investments involve risks including, but not limited to, issuer risk, counterparty risk and market risk. Holders of structured investments bear risks of the underlying investment and are subject to issuer or counterparty risk because a Fund is relying on the creditworthiness of such issuer or counterparty and has no rights with respect to the underlying investment. Certain structured investments may be thinly traded or have a limited trading market and may have the effect of increasing a Fund's illiquidity to the extent that a Fund, at a particular point in time, may be unable to find qualified buyers for these securities.
- *Swaps risk* – Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd-Frank Act mandated a new regulatory framework for trading swaps in the United States. For example, certain standardized swaps are now, and others will be, required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The process of implementing regulations under the Dodd-Frank Act is ongoing and there may be further changes to the system including additional collateral requirements.

- *When-issued and delayed delivery securities and forward commitments risk* – When-issued, delayed delivery securities and forward commitments transactions arise when securities are purchased by the Fund with payment and delivery taking place in the future in order to secure what is considered to be an advantageous price or yield to the Fund at the time of entering into the transaction. When-issued and delayed delivery securities and forward commitments involve the risk that the security the Fund buys will lose value prior to its delivery. There also is the risk that the security will not be issued or that the other party to the transaction will not meet its obligation. If this occurs, the Fund loses both the investment opportunity for the assets it set aside to pay for the security and any gain in the security's price.
- *LIBOR replacement risk* – The Funds' payment obligations, financing terms and investments in certain instruments (including debt securities and derivatives) may be tied to floating rates, such as the London Interbank Offered Rate ("LIBOR"). In 2017, the UK Financial Conduct Authority ("FCA") announced its intention to cease compelling banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration, the administrator of LIBOR, ceased publication of most LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of a majority of U.S. dollar LIBOR settings on a representative basis after June 30, 2023. In addition, global regulators have announced that, with limited exceptions, no new LIBOR-based contracts should be entered into after 2021. Actions by regulators have resulted in the establishment of alternative reference rates to LIBOR in most major currencies (e.g., the Secured Overnight Financing Rate for U.S. dollar LIBOR and the Sterling Overnight Interbank Average Rate for GBP LIBOR). Various financial industry groups have been planning for the transition away from LIBOR and markets are developing in response to these new rates, but questions around the liquidity of the new rates and how to appropriately adjust these rates to eliminate any economic value transfer at the time of transition remain a significant concern. It is difficult to predict the full impact of the transition away from LIBOR on the Funds. The transition process may involve, among other things, increased volatility or illiquidity in markets for instruments that continue to rely on LIBOR. The transition may also result in a reduction in the value of certain LIBOR-based investments held by the Funds or reduce the effectiveness of related transactions such as hedges. Any such effects of the transition away from LIBOR, as well as other unforeseen effects, could result in losses for the Funds. Since the usefulness of LIBOR as a benchmark could also deteriorate during the transition period, effects could occur at any time.

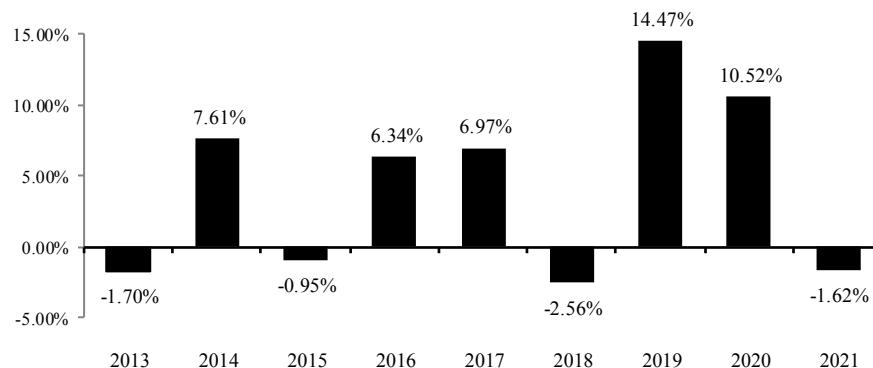

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/PIMCO Investment Grade Credit Bond Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Annual Total Returns as of December 31

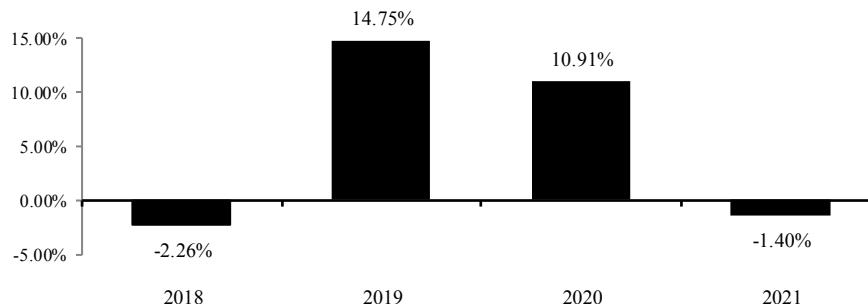

Class A

Best Quarter (ended 6/30/2020): 8.39%; Worst Quarter (ended 3/31/2021): -4.35%

Annual Total Returns as of December 31

Class I

Best Quarter (ended 6/30/2020): 8.54%; Worst Quarter (ended 3/31/2021): -4.26%

Average Annual Total Returns as of 12/31/2021

	1 year	5 year	Life of Fund (February 06, 2012)
JNL/PIMCO Investment Grade Credit Bond Fund (Class A)	-1.62%	5.35%	4.47%
Bloomberg U.S. Credit Bond Index (reflects no deduction for fees, expenses, or taxes)	-1.08%	5.05%	4.27%

Average Annual Total Returns as of 12/31/2021

	1 year	Life of Class (September 25, 2017)
JNL/PIMCO Investment Grade Credit Bond Fund (Class I)	-1.40%	5.05%

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

Pacific Investment Management Company LLC ("PIMCO")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Amit Arora, CFA, FRM	October 2016	Executive Vice President and Portfolio Manager, PIMCO
Mohit Mittal	October 2016	Managing Director and Portfolio Manager, PIMCO
Mark R. Kiesel	March 2012	Managing Director and Chief Investment Officer Global Credit, PIMCO

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/PIMCO Real Return Fund Class A Class I

Investment Objective. The investment objective of the Fund is to seek maximum real return, consistent with preservation of real capital and prudent investment management.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.38%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ^{1,2}		0.13%
Total Annual Fund Operating Expenses		0.81%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² "Other Expenses" are based on amounts incurred during the period ended December 31, 2021. The amount includes financing costs associated with secured borrowings. The annualized ratios of financing costs related to secured borrowings were 0.02%. The Fund's actual financing costs may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's involvement with secured borrowings and the costs associated with those transactions, each of which is expected to vary over time.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.38%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ^{1,2}		0.13%
Total Annual Fund Operating Expenses		0.51%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² "Other Expenses" are based on amounts incurred during the period ended December 31, 2021. The amount includes financing costs associated with secured borrowings. The annualized ratios of financing costs related to secured borrowings were 0.02%. The Fund's actual financing costs may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's involvement with secured borrowings and the costs associated with those transactions, each of which is expected to vary over time.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/PIMCO Real Return Fund Class A			
1 year	3 years	5 years	10 years
\$83	\$259	\$450	\$1,002

JNL/PIMCO Real Return Fund Class I			
1 year	3 years	5 years	10 years
\$52	\$164	\$285	\$640

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	49%

Principal Investment Strategies. The Fund seeks its investment objective by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in inflation-indexed bonds of varying maturities issued by the U.S. and non-U.S. governments, their agencies or instrumentalities, and corporations, which may be represented by forwards or derivatives such as options, futures contracts, or swap agreements. Assets not invested in inflation-indexed bonds may be invested in other types of fixed-income instruments. “Fixed-income instruments” include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities. Inflation-indexed bonds are fixed-income securities that are structured to provide protection against inflation. The value of the bond’s principal or the interest income paid on the bond is adjusted to track changes in an official inflation measure. The U.S. Treasury uses the Consumer Price Index for All Urban Consumers (“CPI-U”) as the inflation measure. Inflation-indexed bonds issued by a foreign government are generally adjusted to reflect a comparable inflation index, calculated by that government. “Real return” equals total return less the estimated rate of inflation, which is typically measured by the change in an official inflation measure, such as CPI-U. The average portfolio duration of this Fund normally varies within three years (plus or minus) of the duration of the Bloomberg U.S. TIPS Index, as calculated by Pacific Investment Management Company LLC (“PIMCO”). For these purposes, in calculating the Fund’s average portfolio duration, PIMCO includes the real duration of the inflation-indexed portfolio.

The Fund invests primarily in investment grade securities, but may invest up to 10% of its total assets in high yield securities (“junk bonds”) rated B or higher by Moody’s or equivalently rated by S&P Global Ratings or Fitch Inc., or, if unrated, determined by PIMCO to be of comparable quality (except that within such 10% limitation, the Fund may invest in mortgage-related securities rated below B). The Fund also may invest up to 30% of its total assets in securities denominated in foreign currencies, and may invest beyond this limit in U.S. dollar denominated securities of foreign issuers. The Fund may invest up to 15% of its total assets in securities and instruments that are economically tied to emerging market countries. Foreign currency exposure (from non-U.S. dollar-denominated securities or currencies) normally will be limited to 20% of the Fund’s total assets.

The Fund may invest all of its assets in derivative instruments, such as futures, options, or swap agreements, or in mortgage or asset-backed securities. The Fund may purchase or sell securities on a when-issued basis, delayed delivery or forward commitment basis and may engage in short sales. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buybacks or dollar rolls). The Fund may also invest up to 10% of its total assets in preferred securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Call risk* – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund’s income if the proceeds are reinvested at lower interest rates.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Debt securities ratings risk* – The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer’s current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.

- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Extension risk* – When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Inflation-indexed securities risk* – Inflation-indexed securities have a tendency to react to changes in real interest rates. Real interest rates represent nominal (stated) interest rates lowered by the anticipated effect of inflation. In general, the price of an inflation-indexed security can decrease when real interest rates increase, and can increase when real interest rates decrease. Interest payments on inflation-indexed securities will fluctuate as the principal and/or interest is adjusted for inflation and can be unpredictable. In periods of deflation, the Fund may not receive any income from such investments. In certain interest rate

environments, such as when real interest rates are rising faster than normal interest rates, inflation-indexed securities may experience greater losses than other fixed-income securities with similar durations.

- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- *Leverage risk* – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Options risk* – If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- *Prepayment risk* – During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- *Short sales risk* – A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- *Swaps risk* – Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject

to the general risks relating to derivatives described herein. The Dodd-Frank Act mandated a new regulatory framework for trading swaps in the United States. For example, certain standardized swaps are now, and others will be, required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The process of implementing regulations under the Dodd-Frank Act is ongoing and there may be further changes to the system including additional collateral requirements.

- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

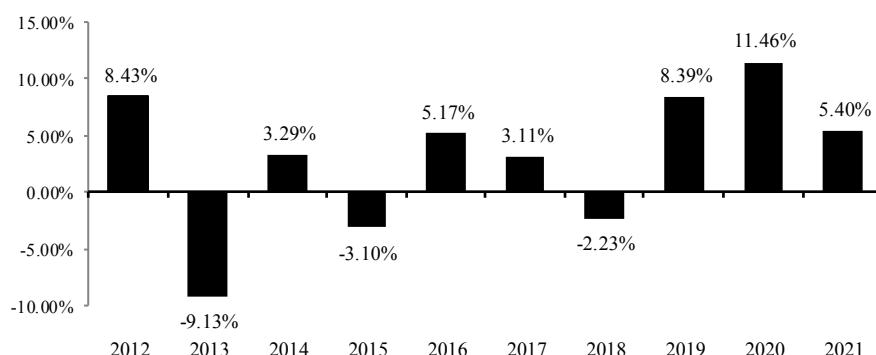

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective August 13, 2018, the Fund was combined with JNL Real Assets Fund ("Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Daniel He	December 2019	Senior Vice President and Portfolio Manager, PIMCO

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/PPM America Floating Rate Income Fund

Class A
Class I

Investment Objective. The investment objective of the Fund is to seek to provide a high level of current income.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.47%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.16%
Acquired Fund Fees and Expenses ²		0.02%
Total Annual Fund Operating Expenses		0.95%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.47%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.16%
Acquired Fund Fees and Expenses ²		0.02%
Total Annual Fund Operating Expenses		0.65%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/PPM America Floating Rate Income Fund Class A			
1 year	3 years	5 years	10 years
\$97	\$303	\$525	\$1,166

JNL/PPM America Floating Rate Income Fund Class I			
1 year	3 years	5 years	10 years
\$66	\$208	\$362	\$810

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	106%

Principal Investment Strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in income-producing floating rate instruments, including floating rate loans, floating rate notes, other floating rate debt securities, structured products (including commercial mortgage-backed securities, asset-backed securities, and collateralized loan obligations, which are debt securities typically issued by special purpose vehicles and secured by loans), and repurchase agreements.

Additionally, for purposes of satisfying the 80% requirement, the Fund has the ability to invest in other investment companies, such as exchange-traded funds (“ETFs”) comprised of the securities described above, short term bond funds and floating rate funds. The Fund generally uses ETFs as a tool to obtain exposure to the securities in which it primarily invests. Money market holdings with a remaining maturity of less than 60 days will be deemed floating rate assets for purposes of the 80% requirement.

The Fund invests primarily in U.S. dollar denominated senior floating rate loans of domestic and foreign borrowers (“Senior Loans”). Senior Loans typically are of below investment grade quality and have below investment grade credit ratings, which ratings are associated with securities having high risk and speculative characteristics, and are commonly known as “junk bonds.”

The Fund may also invest in secured and unsecured subordinated loans, second lien loans and subordinated bridge loans (“Junior Loans”), debtor-in-possession loans, mezzanine loans, fixed-income debt obligations, corporate bonds and money market instruments. Junior Loans typically are of below investment grade quality and have below investment grade credit ratings, which ratings are associated with securities having high risk and speculative characteristics.

The Fund may invest up to 20% of its net assets in cash and non-floating rate debt securities, including lower-rated debt securities (“high yield”), commonly known as “junk bonds,” and equity securities. Below investment grade securities typically offer a higher yield, but generally carry more risks than higher rated securities with similar maturities. As a result, an investment in below investment grade securities is considered speculative.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Corporate loan, sovereign entity loan, and bank loan risk* – Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as “loans” or “bank loans.” Borrowers generally pay interest on corporate loans at “floating” rates that change in response to changes in market interest rates such as the London Interbank Offered Rate (“LIBOR”) or the Secured Overnight Financing Rate (“SOFR”) or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. As a result, sale proceeds related to the sale of loans may not be available to make additional investments until a substantial period after the sale of the loans. Certain loans may be classified as “illiquid” securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- *Senior loans risk* – The senior loans in which the Fund invests are usually rated below investment grade. The amount of public information with respect to loans may be less extensive than that available for registered or exchange listed securities. An economic downturn generally leads to a higher non-payment rate, and a senior loan may lose significant value before a default occurs. A secured senior loan may not be adequately collateralized. Moreover, any specific collateral used to secure a senior loan may decline in value or become illiquid, which would adversely affect the senior loan’s value.
- *Second lien loans risk* – Second lien loans generally are subject to similar risks as those associated with investments in senior loans. Because second lien loans are subordinated and thus lower in priority of payment to senior loans, they are subject to the additional risk that the cash flow of the borrower and property securing the loan or debt, if any, may be insufficient to meet scheduled payments after giving effect to the senior secured obligations of the borrower.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security’s value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer’s goods or services.

- *Settlement risk* – Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- *Consumer discretionary risk* – If a Fund invests a significant portion of its assets in issuers in the consumer discretionary sector of the market, the Fund may be more affected by events influencing the consumer discretionary sector than a fund that is more diversified across numerous sectors. An investment in issuers in the consumer discretionary sector can be significantly affected by the performance of the overall economy, interest rates, competition and consumer confidence. Success of these companies can depend heavily on disposable household income and consumer spending. Changes in demographics and consumer tastes can also affect the demand for, and success of, products of consumer discretionary companies.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Prepayment risk* – During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Debt securities ratings risk* – The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- *LIBOR replacement risk* – The Funds' payment obligations, financing terms and investments in certain instruments (including debt securities and derivatives) may be tied to floating rates, such as the London Interbank Offered Rate (“LIBOR”). In 2017, the UK Financial Conduct Authority (“FCA”) announced its intention to cease compelling banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration, the administrator of LIBOR, ceased publication of most LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of a majority of U.S. dollar LIBOR settings on a representative basis after June 30, 2023. In addition, global regulators have announced that, with limited exceptions, no new LIBOR-based contracts should be entered into after 2021. Actions by regulators have resulted in the establishment of alternative reference rates to LIBOR in most major currencies (e.g., the Secured Overnight Financing Rate for U.S. dollar LIBOR and the Sterling Overnight Interbank Average Rate for GBP LIBOR). Various financial industry groups have been planning for the transition away from LIBOR and markets are developing in response to these new rates, but questions around the liquidity of the new rates and how to appropriately adjust these rates to eliminate any economic value transfer at the time of transition remain a significant concern. It is difficult to predict the full impact of the transition away from LIBOR on the Funds. The transition process may involve, among other things, increased volatility or illiquidity in markets for instruments that continue to rely on LIBOR. The transition may also result in a reduction in the value of certain LIBOR-based investments held by the Funds or reduce the effectiveness of related transactions such as hedges. Any such effects of the transition away from LIBOR, as well as other unforeseen effects, could result in losses for the Funds. Since the usefulness of LIBOR as a benchmark could also deteriorate during the transition period, effects could occur at any time.
- *Income risk* – The Fund is subject to the risk that the income generated from the Fund's investments may decline in the event of falling interest rates. Income risk may be high if the Fund's income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund's distributions to shareholders may decline when interest rates fall.
- *Leverage risk* – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.

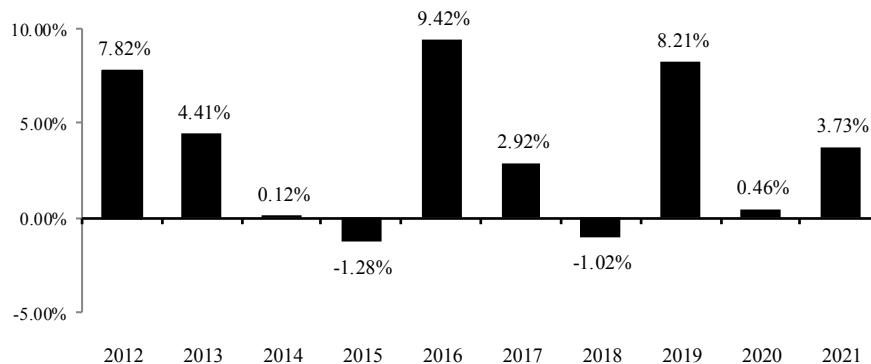

- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Counterparty risk* – Transactions involving a counterparty are subject to the credit risk of the counterparty. A fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter (“OTC”) derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Temporary defensive positions and large cash positions risk* – In anticipation of, or in response to, adverse market or other conditions, or atypical circumstances such as unusually large cash inflows or redemptions, and/or Fund mergers or rebalances, the Fund may temporarily hold all or a significant portion of its assets in cash, cash equivalents, affiliated and unaffiliated money market funds, or high quality debt instruments. Taking a defensive or large cash position may reduce the potential for appreciation of the portfolio and may affect performance.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF’s shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF’s fees and expenses as well as their share of the Fund’s fees and expenses.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Investment in money market funds risk* – Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. An investment in a money market fund is not insured or guaranteed by a Federal Deposit Insurance Corporation or any other government agency. Although such funds seek to maintain a net asset value of \$1.00 per share, it is possible to lose money by investing in a money market fund.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Name:	Joined Fund Management Team In:	Title:
Adam Spielman	June 2018	Senior Managing Director, Head of Leveraged Credit, PPM
David Wagner	2011	Senior Managing Director, PPM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL/PPM America High Yield Bond Fund

Class A
Class I

Investment Objective. The investment objective of the Fund is to maximize current income. As a secondary objective, the Fund seeks capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class A
Management Fee	0.34%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.10%
Total Annual Fund Operating Expenses	0.74%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class I
Management Fee	0.34%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.10%
Total Annual Fund Operating Expenses	0.44%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/PPM America High Yield Bond Fund Class A			
1 year	3 years	5 years	10 years
\$76	\$237	\$411	\$918

JNL/PPM America High Yield Bond Fund Class I			
1 year	3 years	5 years	10 years
\$45	\$141	\$246	\$555

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	62%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in high-yield, high-risk debt securities (“junk bonds”) and related investments that are rated below investment grade (i.e., rated below BBB- or Baa3) by at least one major credit rating agency, or, if not rated by any credit rating agency, determined to be below investment-grade quality by PPM America, Inc. (“Sub-Adviser”). Below investment grade securities could include split-rated securities, which are securities that are rated as investment grade by at least one credit rating agency but rated below investment grade by another agency. Below investment grade securities offer a higher yield, but generally carry more risks than higher rated securities with similar maturities. As a result, an investment in below investment grade securities is considered speculative.

The Fund may also invest up to 20% of its total assets in equity securities (other than preferred stock, in which the Fund may invest without limit). The Fund may invest in securities sold pursuant to Rule 144A of the Securities Act of 1933, as amended. Rule 144A securities are restricted securities that can be resold to qualified institutional buyers but not to the general public. The Fund may also invest in bank loans.

The Fund may also invest up to 35% of its total assets in securities of foreign issuers. To the extent that the Fund invests in emerging market debt rated below BBB- or Baa3 by at least one major credit rating agency, or, if not rated by any credit rating agency, determined by Sub-Adviser to be below investment-grade quality, this will be considered as an investment in a high-yield security for purposes of the 80% investment minimum requirement.

Additionally, the Fund has the ability to invest in other investment companies, such as exchange-traded funds (“ETFs”), money market funds, unit investment trusts and open-end and closed-end funds, including affiliated investment companies. For purposes of satisfying the 80% requirement, the Fund may invest in high yield ETFs comprised of the securities described above. The Fund generally uses high yield ETFs as a tool to obtain exposure to the securities in which it primarily invests.

In seeking to maximize income, the Sub-Adviser seeks to identify the best relative value investment opportunities across various debt sectors by analyzing overall economic conditions within and among these sectors. In pursuing capital appreciation, the Sub-Adviser looks for those companies that it believes have the highest potential for improving credit fundamentals. In light of the risks associated with high yield securities, the Sub-Adviser takes various factors into consideration in evaluating the creditworthiness of an issuer.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security’s value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer’s goods or services.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Distressed debt risk* – The Fund may invest in securities of issuers that are, or are about to be, involved in reorganizations, financial restructurings, or bankruptcy (also known as “distressed debt”). Such distressed debt securities involve substantial risk in addition to the risks of investing in lower-grade debt securities. To the extent that the Fund invests in distressed debt, the Fund

is subject to the risk that it may lose a portion or all or its investment in the distressed debt and may incur higher expenses trying to protect its interests in distressed debt.

- *Income risk* – The Fund is subject to the risk that the income generated from the Fund’s investments may decline in the event of falling interest rates. Income risk may be high if the Fund’s income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund’s distributions to shareholders may decline when interest rates fall.
- *Corporate loan, sovereign entity loan, and bank loan risk* – Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as “loans” or “bank loans.” Borrowers generally pay interest on corporate loans at “floating” rates that change in response to changes in market interest rates such as the London Interbank Offered Rate (“LIBOR”) or the Secured Overnight Financing Rate ("SOFR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. As a result, sale proceeds related to the sale of loans may not be available to make additional investments until a substantial period after the sale of the loans. Certain loans may be classified as “illiquid” securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- *Senior loans risk* – The senior loans in which the Fund invests are usually rated below investment grade. The amount of public information with respect to loans may be less extensive than that available for registered or exchange listed securities. An economic downturn generally leads to a higher non-payment rate, and a senior loan may lose significant value before a default occurs. A secured senior loan may not be adequately collateralized. Moreover, any specific collateral used to secure a senior loan may decline in value or become illiquid, which would adversely affect the senior loan’s value.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Debt securities ratings risk* – The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF’s shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF’s fees and expenses as well as their share of the Fund’s fees and expenses.

- *Call risk* – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund’s income if the proceeds are reinvested at lower interest rates.
- *Rule 144A securities risk* – Rule 144A securities are securities offered as exempt from registration with the SEC, but may be treated as liquid securities because there is a market for such securities. Rule 144A securities may have an active trading market, but carry the risk that the active trading market may not continue. To the extent that institutional buyers become, for a time, uninterested in purchasing Rule 144A securities, investing in such securities could increase the Fund’s level of illiquidity.
- *Second lien loans risk* – Second lien loans generally are subject to similar risks as those associated with investments in senior loans. Because second lien loans are subordinated and thus lower in priority of payment to senior loans, they are subject to the additional risk that the cash flow of the borrower and property securing the loan or debt, if any, may be insufficient to meet scheduled payments after giving effect to the senior secured obligations of the borrower.
- *Prepayment risk* – During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- *Settlement risk* – Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- *Leverage risk* – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund’s gains and losses in comparison to the amount of the Fund’s assets (that is, assets other than borrowed assets) at risk, which may cause the Fund’s portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Mezzanine securities risk* – Mezzanine securities carry the risk that the issuer will not be able to meet its obligations and that the equity securities purchased with the mezzanine investments may lose value.
- *LIBOR replacement risk* – The Funds’ payment obligations, financing terms and investments in certain instruments (including debt securities and derivatives) may be tied to floating rates, such as the London Interbank Offered Rate (“LIBOR”). In 2017, the UK Financial Conduct Authority (“FCA”) announced its intention to cease compelling banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration, the administrator of LIBOR, ceased publication of most LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of a majority of U.S. dollar LIBOR settings on a representative basis after June 30, 2023. In addition, global regulators have announced that, with limited exceptions, no new LIBOR-based contracts should be entered into after 2021. Actions by regulators have resulted in the establishment of alternative reference rates to LIBOR in most major currencies (e.g., the Secured Overnight Financing Rate for U.S. dollar LIBOR and the Sterling Overnight Interbank Average Rate for GBP LIBOR). Various financial industry groups have been planning for the transition away from LIBOR and markets are developing in response to these new rates, but questions around the liquidity of the new rates and how to appropriately adjust these rates to eliminate any economic value transfer at the time of transition remain a significant concern. It is difficult to predict the full impact of the transition away from LIBOR on the Funds. The transition process may involve, among other things, increased volatility or illiquidity in markets for instruments that continue to rely on LIBOR. The transition may also result in a reduction in the value of certain LIBOR-based investments held by the Funds or reduce the effectiveness of related transactions such as hedges. Any such effects of the transition away from LIBOR, as well as other unforeseen effects, could result in losses for the Funds. Since the usefulness of LIBOR as a benchmark could also deteriorate during the transition period, effects could occur at any time.
- *Investment in money market funds risk* – Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. An investment in a money market fund is not insured or guaranteed by a Federal Deposit Insurance Corporation or any other government agency. Although such funds seek to maintain a net asset value of \$1.00 per share, it is possible to lose money by investing in a money market fund.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing

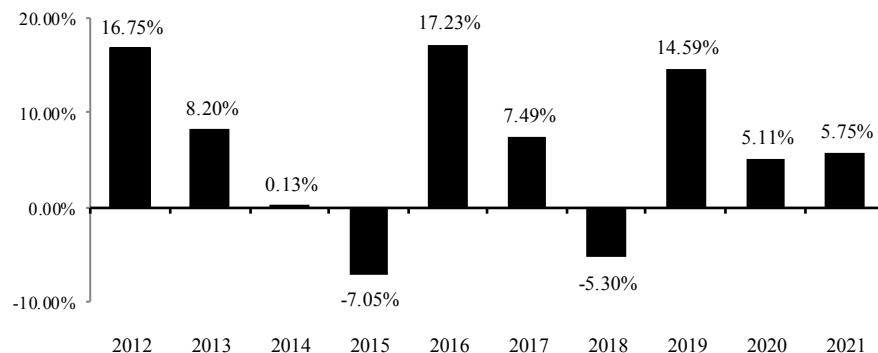

changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, the Fund was combined with JNL/PPM America Long Short Credit Fund ("Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

John Broz (CPA inactive)	May 2019	Managing Director, PPM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/PPM America Total Return Fund
Class A
Class I

Investment Objective. The investment objective of the Fund is to realize maximum total return, consistent with the preservation of capital and prudent investment management.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class A
Management Fee	0.38%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.10%
Total Annual Fund Operating Expenses	0.78%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class I
Management Fee	0.38%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.10%
Total Annual Fund Operating Expenses	0.48%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/PPM America Total Return Fund Class A			
1 year	3 years	5 years	10 years
\$80	\$249	\$433	\$966

JNL/PPM America Total Return Fund Class I			
1 year	3 years	5 years	10 years
\$49	\$154	\$269	\$604

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	105%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of fixed-income investments of U.S. and foreign issuers such as government, corporate, mortgage-backed securities and other asset-backed securities and cash equivalents. The Fund's average portfolio duration normally varies within two years (plus or minus) of the duration of the Bloomberg U.S. Aggregate Bond Index. Duration is a measure of a bond price's sensitivity to a change in interest rates. Generally, the longer a bond's duration, the greater its price sensitivity to a change in interest rates. For example, portfolio duration of two years means that if interest rates increased by one percent, the value of the portfolio would decrease by approximately two percent. The Fund seeks to manage duration versus the duration of the benchmark as a reflection of its expectation for future changes in interest rates.

The Fund may invest up to 20% of its total assets in securities rated below investment grade (sometimes referred to as "high yield" securities or "junk bonds"), including floating rate loans and securities of distressed companies. High yield or junk bonds are bonds that are rated below investment grade (i.e., rated below BBB- or Baa3) by at least one major credit rating agency or, if not rated by any credit rating agency, deemed to be below investment-grade quality by PPM America, Inc. ("Sub-Adviser"). Investment grade securities could include split-rated securities, which are securities that are rated as investment grade by at least one credit rating agency but rated below investment grade by another agency. Below investment grade securities offer a higher yield, but generally carry more risks than higher rated securities with similar maturities. As a result, an investment in below investment grade securities is considered speculative. The Fund may invest up to 30% of its total assets in securities denominated in foreign currencies of which up to 15% may include securities of issuers based in emerging markets. Emerging market countries are generally considered to be countries with developing economies or markets and may include any country recognized to be an emerging market country by the International Monetary Fund, Morningstar, Inc. or Standard & Poor's Corporation or recognized to be a developing country by the United Nations. The Fund may invest without limit in U.S. dollar-denominated securities of foreign issuers. The Fund will generally seek to hedge foreign currency exposure (from non-U.S. dollar-denominated securities or currencies) such that foreign currency exposure will normally be limited to 10% of the Fund's total assets.

For purposes of satisfying the 80% requirement, the Fund may also invest in derivative instruments that have economic characteristics similar to the fixed income instruments mentioned above such as futures contracts or swap agreements. Specifically, the Fund may use futures to hedge duration or to increase or decrease the Fund's exposure to interest rate or yield curve risk. The Fund may also use credit default swaps or credit default swap indices (CDX) to increase or decrease the Fund's exposure to credit risk or to hedge credit risk in a particular name, industry or sector. The Fund may invest without limitation in derivative instruments. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into purchase and sale contracts of mortgage pools or by using other investment techniques (such as dollar rolls).

Additionally, the Fund has the ability to invest in money market funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Income risk* – The Fund is subject to the risk that the income generated from the Fund’s investments may decline in the event of falling interest rates. Income risk may be high if the Fund’s income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund’s distributions to shareholders may decline when interest rates fall.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security’s value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer’s goods or services.
- *Prepayment risk* – During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- *Call risk* – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund’s income if the proceeds are reinvested at lower interest rates.
- *Asset-based securities risk* – Asset-based securities are typically fixed-income securities whose value is related to the market price of certain commodities, interests, and other items, such as precious metals, as well as other assets, such as credit card receivables. Although the market price of these securities is expected to follow the market price of the related assets, there may not be perfect correlation. There are special risks associated with certain types of assets that will also affect the value of asset-based securities related to those assets. For an example of such special risks, please refer to “Precious metals related securities risk.”
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.
- *Debt securities ratings risk* – The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer’s current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Extension risk* – When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *When-issued and delayed delivery securities and forward commitments risk* – When-issued, delayed delivery securities and forward commitments transactions arise when securities are purchased by the Fund with payment and delivery taking place in the future in order to secure what is considered to be an advantageous price or yield to the Fund at the time of entering into the

transaction. When-issued and delayed delivery securities and forward commitments involve the risk that the security the Fund buys will lose value prior to its delivery. There also is the risk that the security will not be issued or that the other party to the transaction will not meet its obligation. If this occurs, the Fund loses both the investment opportunity for the assets it set aside to pay for the security and any gain in the security's price.

- *Leverage risk* – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Counterparty risk* – Transactions involving a counterparty are subject to the credit risk of the counterparty. A fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Rule 144A securities risk* – Rule 144A securities are securities offered as exempt from registration with the SEC, but may be treated as liquid securities because there is a market for such securities. Rule 144A securities may have an active trading market, but carry the risk that the active trading market may not continue. To the extent that institutional buyers become, for a time, uninterested in purchasing Rule 144A securities, investing in such securities could increase the Fund's level of illiquidity.
- *Settlement risk* – Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.

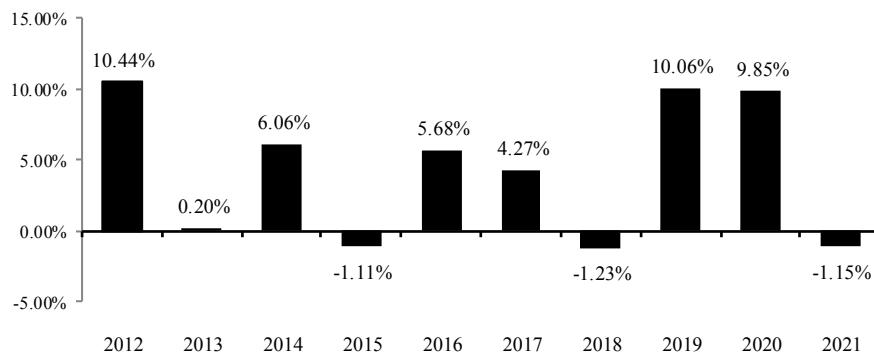

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data below includes the performance of the JNL/PPM America Total Return Fund, then a series of JNL Investors Series Trust, for periods before the Fund's registration statement became effective.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL/RAFI® Fundamental U.S. Small Cap Fund

Class A
Class I

Investment Objective. The investment objective of the Fund is to track the performance of the RAFI® Fundamental U.S. Small Company Index.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.18%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.19%
Total Annual Fund Operating Expenses		0.67%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.18%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.19%
Total Annual Fund Operating Expenses		0.37%
Less Waiver/Reimbursement ²		0.05%
Total Annual Fund Operating Expenses After Waiver/Reimbursement		0.32%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² JNAM has contractually agreed to waive 0.05% of the administrative fees of the Class. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. This example also assumes that the Class I administrative fee waiver is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/RAFI® Fundamental U.S. Small Cap Fund Class A			
1 year	3 years	5 years	10 years
\$68	\$214	\$373	\$835

JNL/RAFI® Fundamental U.S. Small Cap Fund Class I			
1 year	3 years	5 years	10 years
\$33	\$114	\$203	\$463

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	40%

Principal Investment Strategies. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the component securities (“Component Securities”) of the RAFI Fundamental U.S. Small Company Index (the “Index”). The Fund may invest the remainder of its assets in cash, securities, and instruments that are not Component Securities but which Mellon Investments Corporation, the Fund’s sub-adviser (“Sub-Adviser”), believes will help the Fund track its Index. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

The Index is constructed by RAFI Indices, LLC (the “Index Provider”). The Index Provider uses a fundamental weighting approach to construct the Index, which includes a diversified universe of U.S. small companies determined by the relative size of each company based on a company’s fundamental footprint, including adjusted sales, cash flow, dividends and buybacks, and book value.

As of December 31, 2021, the Index consisted of 804 Component Securities. The Index is reconstituted annually and rebalanced on a quarterly staggered basis on the last business day of March, June, and September and the third Friday of December. The Index is split into four equal parts (tranches), and each tranche has equal weight at the March rebalance. Each tranche is rebalanced once a year to target weights determined for that quarter.

The Sub-Adviser uses a “passive” or “indexing” approach to try to achieve the Fund’s investment objective. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund’s use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may also invest in exchange-traded funds ("ETFs") to assist with index rebalances and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest, without limitation, in U.S. equity and equity-related securities, including common and preferred securities. In addition to futures, as described above, the Fund may also invest in other derivative instruments, such as options or swap agreements.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *License termination risk* – The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party’s intellectual property in connection with the Fund’s name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market

decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

- *Index investing risk* – The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should the Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as fund diversification requirements, may limit the ability of the Fund to completely replicate an index.
- *Tracking error risk* – Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.
- *Limited management, trading cost and rebalance risk* – Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

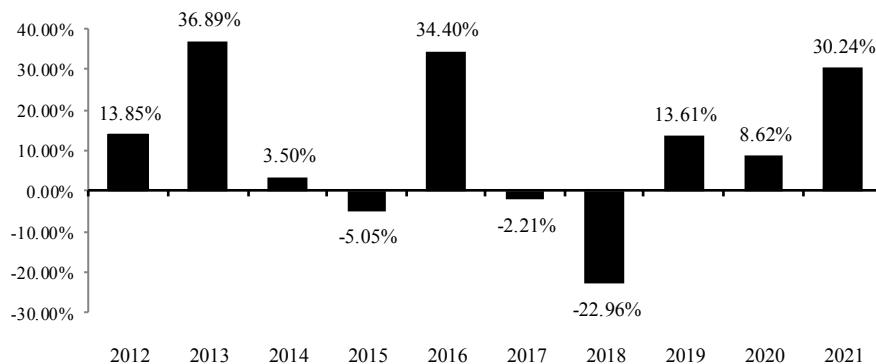

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Performance shown below reflects the historical performance of the JNL/Mellon Capital S&P® SMid 60 Fund, then a series of JNL Variable Fund LLC, for periods before the Fund's registration statement became effective on June 24, 2019.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the MSCI Small Cap Index (Gross) with the Morningstar® US Small Cap Extended Index□ as the Fund's secondary benchmark.

Portfolio Management.**Investment Adviser to the Fund:**

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

Mellon Investments Corporation ("Mellon")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Marlene Walker Smith	October 2020	Director, Head of Equity Index – Portfolio Management, Mellon
David France, CFA	October 2020	Vice President and Senior Portfolio Manager, Mellon
Todd Frysinger, CFA	October 2020	Vice President and Senior Portfolio Manager, Mellon
Vlasta Sheremeta, CFA	October 2020	Vice President and Senior Portfolio Manager, Mellon
Michael Stoll	October 2020	Vice President and Senior Portfolio Manager, Mellon

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/RAFI® Multi-Factor U.S. Equity Fund

Class A
Class I

Investment Objective. The investment objective of the Fund is to track the performance of the RAFI® Multi-Factor U.S. Index.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.17%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.20%
Total Annual Fund Operating Expenses		0.67%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.17%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.20%
Total Annual Fund Operating Expenses		0.37%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/RAFI® Multi-Factor U.S. Equity Fund Class A			
1 year	3 years	5 years	10 years
\$68	\$214	\$373	\$835

JNL/RAFI® Multi-Factor U.S. Equity Fund Class I			
1 year	3 years	5 years	10 years
\$38	\$119	\$208	\$468

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	36%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the component securities

(“Component Securities”) of the RAFI Multi-Factor U.S. Index (the “Index”). The Fund may invest the remainder of its assets in cash, securities, and instruments that are not Component Securities but which Mellon Investments Corporation, the Fund’s sub-adviser (“Sub-Adviser”), believes will help the Fund track its Index. The Index is designed to provide long-only exposure to multiple equity factors that seek to produce attractive long-term returns, and which may lower risk compared to less diversified strategies. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

The Index is constructed by RAFI Indices, LLC (the “Index Provider”). The Index Provider uses a rules-based approach to construct five factor portfolios within the Index. The Index equally weights each of the factor portfolios into a combined portfolio of stocks that are weighted by their fundamental size (e.g., earnings, revenues, book value).

The Index consists of five “factor portfolios,” each of which emphasizes one of the following factors: value, low volatility, quality, momentum, and size.

The value factor emphasizes companies with high ratio of company fundamental weight to its market capitalization weight.

The low volatility factor emphasizes companies with low risk measure calculated as the variance of a company’s daily excess return over five years explained by global, local country groups, and global industry excess returns.

The quality factor emphasizes companies that are high in profitability and low in investment spending.

The momentum factor emphasizes stocks with high momentum.

The size factor is the equal weight of the small company portions, based on a company’s fundamental weight, of the other four factors. A company’s fundamental weight may be adjusted by a “free float factor,” which is the ratio of the total market capitalization of the shares of the company in free float to the total market capitalization of the company.

For the value, low volatility, and quality “factor portfolios,” eligible securities are ranked by their factor score, and the top 25% of companies by fundamental weight are selected for inclusion within that “factor portfolio.” For the momentum “factor portfolio,” eligible securities are ranked by their momentum score and the top 50% of companies by fundamental weight are selected for inclusion.

The Index is reconstituted on an annual basis and rebalanced on a quarterly basis. As of December 31, 2021, the Index consisted of 877 Component Securities. The Index allocates an equal weight to each factor at each quarterly rebalance. Each factor (other than momentum) is reconstituted annually on the last business day of March and rebalanced on a quarterly staggered basis on the last business day of March, June, and September and the third Friday of December. This staggered rebalancing is intended to diversify risk and decrease market impact. The momentum factor, unlike the other factors, is reconstituted and fully rebalanced quarterly.

The Sub-Adviser uses a “passive” or “indexing” approach to try to achieve the Fund’s investment objective. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund’s objective. The Fund’s use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may also invest in exchange-traded funds (“ETFs”) to assist with index rebalances and to meet redemption or purchase requests. The Fund’s holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest, without limitation, in U.S. equity and equity-related securities, including common and preferred securities. In addition to futures, as described above, the Fund may also invest in other derivative instruments, such as options or swap agreements.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company

or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- *License termination risk* – The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- *Index investing risk* – The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should the Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as fund diversification requirements, may limit the ability of the Fund to completely replicate an index.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *Tracking error risk* – Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.
- *Limited management, trading cost and rebalance risk* – Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a

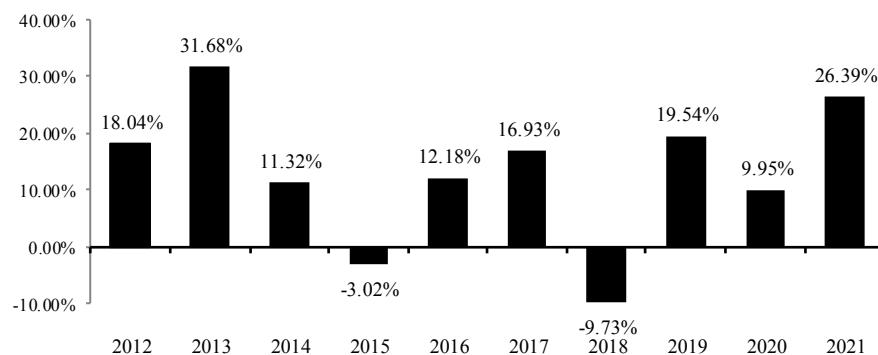

broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Performance shown below reflects the historical performance of the JNL/Mellon Capital JNL 5 Fund, then a series of JNL Variable Fund LLC, for periods before the Fund's registration statement became effective on June 24, 2019.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/T. Rowe Price Balanced Fund

Class A

Class I

Investment Objectives. The investment objective of the Fund is to seek capital growth, current income, and preservation of capital through a portfolio of stocks and fixed-income securities.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class A
Management Fee	0.54%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.16%
Total Annual Fund Operating Expenses	1.00%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class I
Management Fee	0.54%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.16%
Total Annual Fund Operating Expenses	0.70%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price Balanced Fund Class A			
1 year	3 years	5 years	10 years
\$102	\$318	\$552	\$1,225

JNL/T. Rowe Price Balanced Fund Class I			
1 year	3 years	5 years	10 years
\$72	\$224	\$390	\$871

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	156%

Principal Investment Strategies. The Fund normally invests approximately 65% of its total assets in common stocks and 35% in fixed income securities, money market securities, and cash reserves. The Fund may invest up to 35% of its total assets in foreign securities.

The Fund has significant flexibility to invest in a broad range of equity, fixed income, and alternative asset classes in the U.S. and other markets throughout the world, both developed and emerging.

T. Rowe Price Associates, Inc. (“Sub-Adviser”) may decide to overweight and underweight a particular asset class based on its outlook for the economy and financial markets. Under normal conditions, the Fund’s allocation to the broad asset classes will be within the following ranges, each as a percentage of the Fund’s net assets: stocks (55%-75%), and fixed income securities, money market securities, and cash reserves (25%-45%). When deciding upon allocations within these prescribed limits, the Sub-Adviser may favor fixed income securities if the economy is expected to slow sufficiently to hurt corporate profit growth. When strong economic growth is expected, the Sub-Adviser may favor stocks. The Fund will invest in bonds, including foreign issues, which are primarily investment grade (i.e., assigned one of the four highest credit ratings by established credit rating agencies) and are chosen from across the entire government, corporate, and asset- and mortgage-backed securities markets. Maturities generally reflect the Sub-Adviser’s outlook for interest rates. The Fund may at times invest significantly in certain sectors.

When selecting particular stocks, the Sub-Adviser will examine relative values and prospects among growth- and value-oriented stocks, domestic and international stocks, small- to large-cap stocks, and stocks of companies involved in activities related to commodities and other real assets. Domestic stocks are drawn from the overall U.S. market and international stocks are selected primarily from large companies in developed countries, although stocks in emerging markets may also be purchased. This process draws heavily upon the Sub-Adviser’s proprietary stock research expertise. While the Fund maintains a well-diversified portfolio, the Sub-Adviser may at a particular time shift stock selection toward markets or market sectors that appear to offer attractive value and appreciation potential.

A similar security selection process applies to bonds. When deciding whether to adjust duration, credit risk exposure, or allocations among the various sectors (for example, high yield “junk” bonds, mortgage- and asset-backed securities, international bonds and emerging market bonds), the Sub-Adviser weighs such factors as the outlook for inflation and the economy, corporate earnings, expected interest rate movements and currency valuations, and the yield advantage that lower-rated bonds may offer over investment grade bonds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.

- *Extension risk* – When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- *Prepayment risk* – During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds

are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 13, 2018, reflects the Fund's results when managed by the former sub-adviser, Milliman Financial Risk Management LLC. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

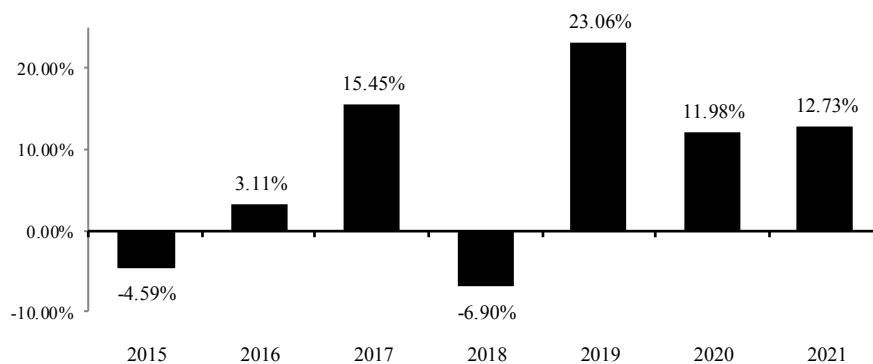

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, the Fund was combined with JNL/AQR Risk Parity Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the 45% S&P 500 Index/20% MSCI EAFE Index (Net)/35% Bloomberg U.S. Aggregate Bond Index with the 45% S&P 500 Index/20% Morningstar® Developed Markets ex-North America Target Market Exposure IndexSM (Net)/35% Bloomberg U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

T. Rowe Price Associates, Inc. ("T. Rowe Price")

Sub-Sub-Adviser:

T. Rowe Price Investment Management, Inc. ("Price Investment Management")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Charles M. Shriver, CFA	August 2018	Vice President, T. Rowe Price
Toby M. Thompson, CFA, CAIA	August 2018	Vice President, T. Rowe Price

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/T. Rowe Price Capital Appreciation Fund Class A Class I

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation by investing primarily in common stocks. It may also hold fixed income and other securities to help preserve principal value.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.52%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.14%
Total Annual Fund Operating Expenses		0.96%

¹ "Other Expenses" include an Administrative Fee of 0.14% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.52%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.14%
Total Annual Fund Operating Expenses		0.66%

¹ "Other Expenses" include an Administrative Fee of 0.14% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price Capital Appreciation Fund Class A			
1 year	3 years	5 years	10 years
\$98	\$306	\$531	\$1,178

JNL/T. Rowe Price Capital Appreciation Fund Class I			
1 year	3 years	5 years	10 years
\$67	\$211	\$368	\$822

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	51%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 50% of its total assets in common stocks. The remaining assets are generally invested in convertible securities, corporate and government debt (including mortgage- and asset-backed securities), bank loans (which represent an interest in amounts owed by a borrower to a syndicate of lenders), and foreign securities, in keeping with the Fund’s objective. The Fund has significant flexibility to invest in a broad range of equity and fixed income securities. The Fund may invest up to 25% of its total assets in foreign securities.

The Fund’s investments in common stocks generally fall into one of two categories: the larger category comprises long-term core holdings whose prices when T. Rowe Price Associates, Inc., the Fund’s sub-adviser (“Sub-Adviser”) buys them are considered low in terms of company assets, earnings, or other factors; the smaller category comprises opportunistic investments whose prices the Sub-Adviser expects to rise in the short term but not necessarily over the long term. There are no limits on the market capitalization of the issuers of the stocks in which the Fund may invest. Because the Sub-Adviser attempts to prevent losses as well as achieve gains, the Sub-Adviser typically uses a value approach in selecting investments. The Sub-Adviser’s research team seeks to identify companies that seem undervalued by various measures, such as price/book value, and may be temporarily out of favor but the Sub-Adviser believes have good prospects for capital appreciation. The Sub-Adviser may establish relatively large positions in companies it finds particularly attractive. The Fund may at times invest significantly in certain sectors.

The Sub-Adviser seeks to reduce risk and to maximize gains and may seek to realize gains rather than lose them in market declines. In addition, the Sub-Adviser searches for attractive risk/reward values among all types of securities. The portion of the Fund invested in a particular type of security, such as common stocks, results largely from case-by-case investment decisions, and the size of the Fund’s cash reserves may reflect the Sub-Adviser’s ability to find companies that meet its valuation criteria rather than its market outlook.

The Fund may purchase bonds, convertible securities and bank loans for their income or other features or to gain additional exposure to a company. Maturity and quality are not necessarily major considerations, and there are no limits on the maturities or credit ratings of the debt instruments in which the Fund may invest. The Fund may not invest more than 30% of its total assets in below investment-grade debt securities (“junk bonds”) and bank loans combined. If a security is split rated (i.e., rated investment grade by at least one rating agency and noninvestment grade by another rating agency), the higher rating will be used for purposes of this requirement. The Fund may also write (i.e., sell) call options, primarily in an effort to protect against downside risk or to generate additional income.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company’s stock.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company’s value or the factors that are expected to increase the price of a security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).

- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *LIBOR replacement risk* – The Funds' payment obligations, financing terms and investments in certain instruments (including debt securities and derivatives) may be tied to floating rates, such as the London Interbank Offered Rate ("LIBOR"). In 2017, the UK Financial Conduct Authority ("FCA") announced its intention to cease compelling banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration, the administrator of LIBOR, ceased publication of most LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of a majority of U.S. dollar LIBOR settings on a representative basis after June 30, 2023. In addition, global regulators have announced that, with limited exceptions, no new LIBOR-based contracts should be entered into after 2021. Actions by regulators have resulted in the establishment of alternative reference rates to LIBOR in most major currencies (e.g., the Secured Overnight Financing Rate for U.S. dollar LIBOR and the Sterling Overnight Interbank Average Rate for GBP LIBOR). Various financial industry groups have been planning for the transition away from LIBOR and markets are developing in response to these new rates, but questions around the liquidity of the new rates and how to appropriately adjust these rates to eliminate any economic value transfer at the time of transition remain a significant concern. It is difficult to predict the full impact of the transition away from LIBOR on the Funds. The transition process may involve, among other things, increased volatility or illiquidity in markets for instruments that continue to rely on LIBOR. The transition may also result in a reduction in the value of certain LIBOR-based investments held by the Funds or reduce the effectiveness of related transactions such as hedges. Any such effects of the transition away from LIBOR, as well as other unforeseen effects, could result in losses for the Funds. Since the usefulness of LIBOR as a benchmark could also deteriorate during the transition period, effects could occur at any time.
- *Convertible securities risk* – Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Corporate loan, sovereign entity loan, and bank loan risk* – Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the Secured Overnight Financing Rate ("SOFR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. As a result, sale proceeds related to the sale of loans may not be available to make additional investments until a substantial period after the sale of the loans. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- *Options risk* – If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a

premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.

- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund’s Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund’s investment manager to identify appropriate investment opportunities.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company’s financial condition.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

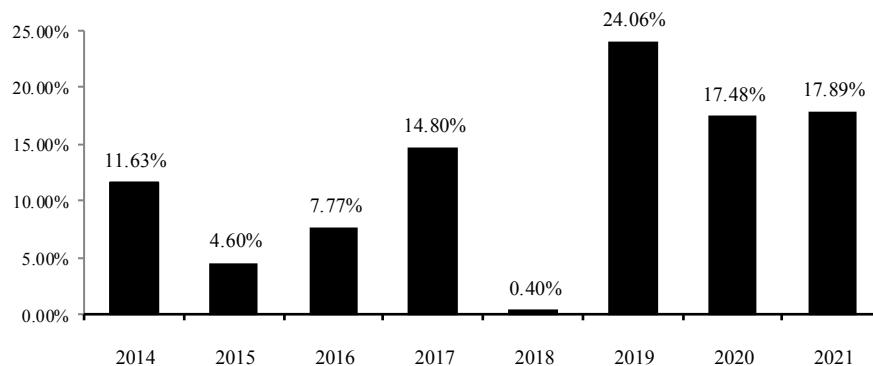

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/T. Rowe Price Capital Appreciation Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund’s registration statement became effective.

Consistent with the Fund’s principal investment strategies, the Fund uses the 60% S&P 500 Index, 40% Bloomberg U.S. Aggregate Bond Index as the Fund’s secondary benchmark.

Portfolio Management.**Investment Adviser to the Fund:**

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

T. Rowe Price Associates, Inc. ("T. Rowe Price")

Sub-Sub-Adviser:

T. Rowe Price Investment Management, Inc. ("Price Investment Management")

Portfolio Manager:

Name:	Joined Fund Management Team In:	Title:
David R. Giroux, CFA	September 2013	Chief Investment Officer, U.S. Equity Multi-Discipline and Chairman of Investment Advisory Committee, T. Rowe Price

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/T. Rowe Price Established Growth Fund

Class A
Class I

Investment Objective. The investment objective of the Fund is long-term capital growth through investments in stocks.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.43%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.10%
Total Annual Fund Operating Expenses		0.83%

¹ "Other Expenses" include an Administrative Fee of 0.09% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.43%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.10%
Total Annual Fund Operating Expenses		0.53%

¹ "Other Expenses" include an Administrative Fee of 0.09% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price Established Growth Fund Class A			
1 year	3 years	5 years	10 years
\$85	\$265	\$460	\$1,025

JNL/T. Rowe Price Established Growth Fund Class I			
1 year	3 years	5 years	10 years
\$54	\$170	\$296	\$665

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	29%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing generally in common stocks of large-capitalization companies. T. Rowe Price Associates, Inc. (“Sub-Adviser”) generally seeks investments in stocks of large-capitalization companies, which the Sub-Adviser defines as a company whose market capitalization is larger than the median market capitalization of companies in the Russell 1000 Growth Index, and that has one or more of the following characteristics: strong cash flow and an above-average rate of earnings growth; the ability to sustain earnings momentum during economic downturns; and occupation of a lucrative niche in the economy and the ability to expand even during times of slow economic growth. While the Fund invests typically in U.S. common stocks, other securities may also be purchased, including foreign stocks, futures and options, in keeping with Fund objectives. The Fund may at times invest significantly in technology stocks.

The Fund may invest up to 30% of its total assets (excluding reserves) in foreign securities, including securities and instruments that are economically tied to emerging markets.

The Fund's investments may include holdings in companies that only recently began to trade publicly.

The Fund is a “non-diversified” fund, as defined in the Investment Company Act of 1940, as amended (the “1940 Act”), and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company’s stock.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company’s value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund’s investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign

markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Privately placed securities risk* – The Fund’s investments may also include privately-placed securities, which are subject to resale restrictions. Investments in these securities usually will decrease a Fund’s liquidity level to the extent the Fund may be unable to sell or transfer these securities due to restrictions on transfers or on the ability to find buyers interested in purchasing the securities. The illiquid nature of the market for privately placed securities, as well as the lack of publicly available information regarding these securities, may also adversely affect the Fund’s ability to fair value such securities at certain times and could make it difficult for the Fund to sell them. The Fund could lose money on such investments.
- *Investments in IPOs risk* – IPOs issued by unseasoned companies with little or no operating history are risky and highly volatile.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser’s skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser’s inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Options risk* – If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund’s investment manager to identify appropriate investment opportunities.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company’s financial condition.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund’s investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund’s shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.

- **Non-diversification risk** – The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

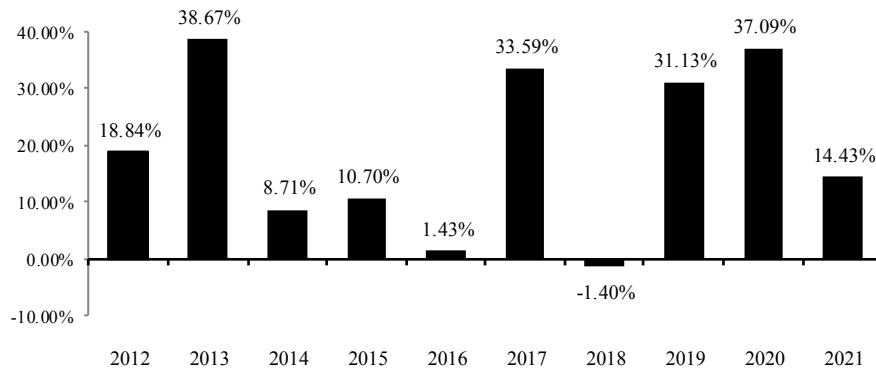

Effective April 26, 2021, the Fund was combined with JNL/Vanguard Capital Growth Fund ("Acquired Fund"), with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Index as the Fund's secondary benchmark.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the MSCI USA Growth Index (Gross) with the Morningstar® US Large-Mid Cap Broad Growth IndexSM as the Fund's primary benchmark.

Joseph B. Fath, CPA	2014	Chairman of Investment Advisory Committee, T. Rowe Price

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/T. Rowe Price Mid-Cap Growth Fund

Class A
Class I

Investment Objective. The investment objective of the Fund is long-term growth of capital.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.57%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.09%
Total Annual Fund Operating Expenses ²		0.96%

¹ "Other Expenses" include an Administrative Fee of 0.09% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Expense information has been restated to reflect current fees.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.57%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.09%
Total Annual Fund Operating Expenses ²		0.66%

¹ "Other Expenses" include an Administrative Fee of 0.09% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Expense information has been restated to reflect current fees.

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is discontinued after one year. The example does not reflect the voluntary fee waiver. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price Mid-Cap Growth Fund Class A			
1 year	3 years	5 years	10 years
\$98	\$306	\$531	\$1,178

JNL/T. Rowe Price Mid-Cap Growth Fund Class I			
1 year	3 years	5 years	10 years
\$67	\$211	\$368	\$822

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	19%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes), under normal circumstances, in a broadly diversified portfolio of common stocks of medium-sized (mid-capitalization) companies whose earnings T. Rowe Price Associates, Inc., the Fund’s sub-adviser (“Sub-Adviser”), expects to grow at a faster rate than the average company.

The Sub-Adviser defines mid-capitalization companies as those whose market capitalization, at the time of acquisition by the Fund, falls within the capitalization range of companies in the S&P Mid Cap 400 Index or the Russell MidCap® Growth Index. The market capitalization of companies in the Fund’s portfolio, the S&P Mid Cap 400 Index and the Russell MidCap® Growth Index changes over time. As of December 31, 2021, the market capitalization range for the S&P Mid Cap 400 is \$1.74 billion to \$33.68 billion. As of December 31, 2021, the market capitalization range for the Russell MidCap Growth is \$1.22 billion to \$58.76 billion. However, the Fund will not automatically sell or cease to purchase stock of a company it already owns just because the company’s market capitalization subsequently grows or otherwise falls outside these ranges.

The Fund may at times invest significantly in certain sectors.

In addition, the Fund on occasion will purchase stock of some larger and smaller companies that have qualities consistent with the portfolio’s core characteristics but whose market capitalization is outside the capitalization range of mid-cap companies (as defined above) at the time of purchase. The Fund may also invest up to 25% of its total assets, (excluding reserves) in foreign securities, including securities and instruments that are economically tied to emerging markets, and 10% of its assets in futures.

The Fund's investments may include holdings in companies that only recently began to trade publicly.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company’s value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund’s investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund’s performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager’s choice of securities within such sector.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments,

such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Privately placed securities risk* – The Fund's investments may also include privately-placed securities, which are subject to resale restrictions. Investments in these securities usually will decrease a Fund's liquidity level to the extent the Fund may be unable to sell or transfer these securities due to restrictions on transfers or on the ability to find buyers interested in purchasing the securities. The illiquid nature of the market for privately placed securities, as well as the lack of publicly available information regarding these securities, may also adversely affect the Fund's ability to fair value such securities at certain times and could make it difficult for the Fund to sell them. The Fund could lose money on such investments.
- *Investments in IPOs risk* – IPOs issued by unseasoned companies with little or no operating history are risky and highly volatile.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.

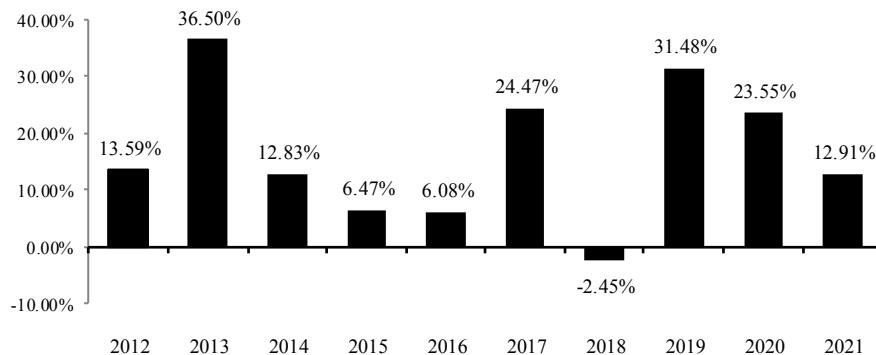

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the MSCI USA Mid Cap Growth Index (Gross) with the Morningstar® US Mid Cap Broad Growth IndexSM as the Fund's primary benchmark.

Sub-Sub-Adviser:

T. Rowe Price Investment Management, Inc. ("Price Investment Management")

Portfolio Manager:

Name:	Joined Fund Management Team In:	Title:
Brian W.H. Berghuis, CFA	1995	Chairman of Investment Advisory Committee, T. Rowe Price

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/T. Rowe Price Short-Term Bond Fund

Class A
Class I

Investment Objective. The investment objective of the Fund is a high level of income consistent with minimal fluctuation in principal value and liquidity.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.30%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.11%
Total Annual Fund Operating Expenses		0.71%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.30%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.11%
Total Annual Fund Operating Expenses		0.41%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price Short-Term Bond Fund Class A			
1 year	3 years	5 years	10 years
\$73	\$227	\$395	\$883

JNL/T. Rowe Price Short-Term Bond Fund Class I			
1 year	3 years	5 years	10 years
\$42	\$132	\$230	\$518

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	77%

Principal Investment Strategies. The Fund will invest in a diversified portfolio of short- and intermediate-term investment-grade corporate, government, and asset- and mortgage-backed securities. The Fund may also invest in money market securities, bank obligations, collateralized mortgage obligations, and foreign securities, including securities of issuers in emerging markets. Normally, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in bonds. The Fund’s average effective maturity will normally not exceed three (3) years. The Fund will only purchase securities that are rated within one of the four highest credit categories (e.g. AAA, AA, A, BBB, or equivalent) at the time of purchase by at least one major credit rating agency or, if unrated, deemed by T. Rowe Price Associates, Inc. (“Sub-Adviser”) to be of comparable quality. The Fund may continue to hold a security that has been downgraded after purchase.

Within this broad structure, investment decisions generally reflect the Sub-Adviser’s outlook for interest rates and the economy as well as the prices, yields and credit quality of the various securities. For example, if the Sub-Adviser expects interest rates to fall, it may purchase longer-term securities (within the framework of the Fund’s investment program) in an attempt to seek higher yields and/or capital appreciation. Conversely, if the Sub-Adviser expects interest rates to rise, the Fund may seek securities with shorter maturities.

In keeping with the Fund’s objective, it may also invest in other securities and use futures, options, swaps, and other derivative-type instruments.

In addition, the Fund uses interest rate futures primarily in an effort to manage its exposure to changes in interest rates or to adjust portfolio duration, and credit default swaps primarily in an effort to protect the value of certain portfolio holdings or to manage the Fund’s overall exposure to changes in credit quality.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Extension risk* – When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.

- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *LIBOR replacement risk* – The Funds' payment obligations, financing terms and investments in certain instruments (including debt securities and derivatives) may be tied to floating rates, such as the London Interbank Offered Rate ("LIBOR"). In 2017, the UK Financial Conduct Authority ("FCA") announced its intention to cease compelling banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration, the administrator of LIBOR, ceased publication of most LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of a majority of U.S. dollar LIBOR settings on a representative basis after June 30, 2023. In addition, global regulators have announced that, with limited exceptions, no new LIBOR-based contracts should be entered into after 2021. Actions by regulators have resulted in the establishment of alternative reference rates to LIBOR in most major currencies (e.g., the Secured Overnight Financing Rate for U.S. dollar LIBOR and the Sterling Overnight Interbank Average Rate for GBP LIBOR). Various financial industry groups have been planning for the transition away from LIBOR and markets are developing in response to these new rates, but questions around the liquidity of the new rates and how to appropriately adjust these rates to eliminate any economic value transfer at the time of transition remain a significant concern. It is difficult to predict the full impact of the transition away from LIBOR on the Funds. The transition process may involve, among other things, increased volatility or illiquidity in markets for instruments that continue to rely on LIBOR. The transition may also result in a reduction in the value of certain LIBOR-based investments held by the Funds or reduce the effectiveness of related transactions such as hedges. Any such effects of the transition away from LIBOR, as well as other unforeseen effects, could result in losses for the Funds. Since the usefulness of LIBOR as a benchmark could also deteriorate during the transition period, effects could occur at any time.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Swaps risk* – Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd-Frank Act mandated a new regulatory framework for trading swaps in the United States. For example, certain standardized swaps are now, and others will be, required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The process of implementing regulations under the Dodd-Frank Act is ongoing and there may be further changes to the system including additional collateral requirements.
- *Income risk* – The Fund is subject to the risk that the income generated from the Fund's investments may decline in the event of falling interest rates. Income risk may be high if the Fund's income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund's distributions to shareholders may decline when interest rates fall.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S.

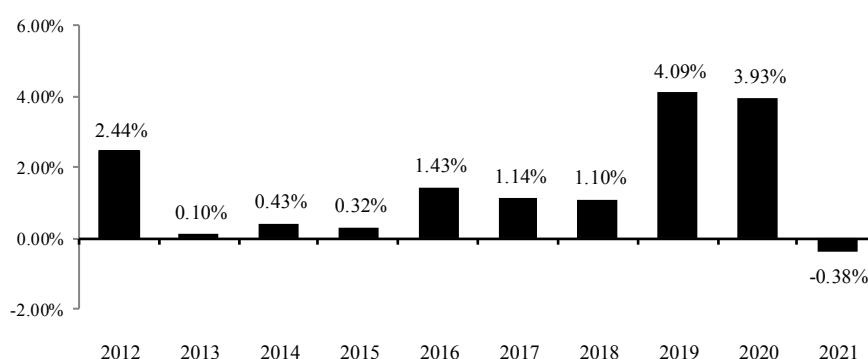

Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Class A
Class I

Investment Objective. The investment objective of the Fund is to seek total return, and secondarily, current income.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.49%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.15%
Total Annual Fund Operating Expenses ²		0.94%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Expense information has been restated to reflect current fees.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.49%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.15%
Total Annual Fund Operating Expenses ²		0.64%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Expense information has been restated to reflect current fees.

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price U.S. High Yield Fund Class A			
1 year	3 years	5 years	10 years
\$96	\$300	\$520	\$1,155

JNL/T. Rowe Price U.S. High Yield Fund Class I			
1 year	3 years	5 years	10 years
\$65	\$205	\$357	\$798

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	95%

Principal Investment Strategies. The Fund normally invests at least 80% of its net assets (including any borrowings for investment purposes) in U.S. high yield instruments (commonly referred to as “junk” bonds), which are debt instruments that are, at the time of purchase, rated below investment grade by a credit rating agency (i.e., Baa3 by Moody’s Investors Service, Inc. or below BBB- by S&P Global Ratings or Fitch Ratings, Inc.), or, if not rated by any major credit rating agency, deemed by T. Rowe Price Associates, Inc. (“Sub-Adviser”) to be below investment grade. The Fund considers U.S. high yield instruments to include noninvestment-grade bonds, bank loans, and other debt instruments issued by U.S. issuers, as well as bonds denominated in U.S. dollars that are issued by foreign banks and corporations and registered with the SEC for sale in the U.S. (such as Yankee bonds). If a holding is split rated (i.e., rated investment grade by at least one rating agency and below investment grade by another rating agency), the lower rating will be used for purposes of the Fund’s 80% investment policy. The Fund focuses its investments on high yield corporate bonds but may also invest in other income producing instruments including bank loans, convertible securities, and preferred stocks. In selecting bonds, the Sub-Adviser generally evaluates the income provided by the bond and the bond’s appreciation potential, as well as the issuer’s ability to make income and principal payments.

High yield instruments tend to provide high income in an effort to compensate investors for their higher risk of default, which is the failure to make required interest or principal payments. High yield bond issuers include small or relatively new companies lacking the history or capital to merit investment grade status, former blue-chip companies downgraded because of financial problems, companies electing to borrow heavily to finance or avoid a takeover or buyout, and firms with heavy debt loads.

While high yield corporate bonds are typically issued with a fixed interest rate, bank loans have floating interest rates that reset periodically (typically quarterly or monthly). Bank loans represent amounts borrowed by companies or other entities from banks and other lenders. In many cases, the borrowing companies have significantly more debt than equity and the loans have been issued in connection with recapitalizations, acquisitions, leveraged buyouts, or refinancings. The loans held by the Fund may be senior or subordinate obligations of the borrower.

The Fund may purchase securities of any maturity, and its weighted average maturity and duration will vary with market conditions.

While most assets will typically be invested in U.S. issued instruments and U.S. dollar-denominated instruments, the Fund may also invest in non-U.S. dollar-denominated bonds of foreign issuers (including securities of issuers in emerging markets). The Fund may invest up to 20% of its total assets in non-U.S. dollar-denominated foreign instruments.

While most assets will typically be invested directly in bonds and other debt instruments, the Fund may buy or sell credit default swaps involving a specific issuer or an index in order to adjust the Fund’s overall credit quality, to protect against fluctuations in the prices of certain holdings, to gain exposure to a particular issuer or security, or to manage certain investment risks such as changes in an issuer’s creditworthiness.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security

before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.

- *Corporate loan, sovereign entity loan, and bank loan risk* – Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as “loans” or “bank loans.” Borrowers generally pay interest on corporate loans at “floating” rates that change in response to changes in market interest rates such as the London Interbank Offered Rate (“LIBOR”) or the Secured Overnight Financing Rate (“SOFR”) or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. As a result, sale proceeds related to the sale of loans may not be available to make additional investments until a substantial period after the sale of the loans. Certain loans may be classified as “illiquid” securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Call risk* – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund’s income if the proceeds are reinvested at lower interest rates.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Convertible securities risk* – Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Preferred stock risk* – Preferred stock represents an equity interest in a company that generally entitles the holder to receive, in preference to the holders of other stocks such as common stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the company.

- *LIBOR replacement risk* – The Funds' payment obligations, financing terms and investments in certain instruments (including debt securities and derivatives) may be tied to floating rates, such as the London Interbank Offered Rate ("LIBOR"). In 2017, the UK Financial Conduct Authority ("FCA") announced its intention to cease compelling banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration, the administrator of LIBOR, ceased publication of most LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of a majority of U.S. dollar LIBOR settings on a representative basis after June 30, 2023. In addition, global regulators have announced that, with limited exceptions, no new LIBOR-based contracts should be entered into after 2021. Actions by regulators have resulted in the establishment of alternative reference rates to LIBOR in most major currencies (e.g., the Secured Overnight Financing Rate for U.S. dollar LIBOR and the Sterling Overnight Interbank Average Rate for GBP LIBOR). Various financial industry groups have been planning for the transition away from LIBOR and markets are developing in response to these new rates, but questions around the liquidity of the new rates and how to appropriately adjust these rates to eliminate any economic value transfer at the time of transition remain a significant concern. It is difficult to predict the full impact of the transition away from LIBOR on the Funds. The transition process may involve, among other things, increased volatility or illiquidity in markets for instruments that continue to rely on LIBOR. The transition may also result in a reduction in the value of certain LIBOR-based investments held by the Funds or reduce the effectiveness of related transactions such as hedges. Any such effects of the transition away from LIBOR, as well as other unforeseen effects, could result in losses for the Funds. Since the usefulness of LIBOR as a benchmark could also deteriorate during the transition period, effects could occur at any time.
- *Securities lending risk* – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to April 27, 2020 reflects the Fund's results when managed by the former sub-adviser, Crescent Capital Group LP. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, the Fund was combined with JNL/BlackRock Global Long Short Credit Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/T. Rowe Price Value Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to provide long-term capital appreciation by investing in common stocks believed to be undervalued. Income is a secondary objective.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class A
Management Fee	0.46%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.10%
Total Annual Fund Operating Expenses	0.86%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class I
Management Fee	0.46%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.10%
Total Annual Fund Operating Expenses	0.56%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is discontinued after one year. The example does not reflect the voluntary fee waiver. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price Value Fund Class A			
1 year	3 years	5 years	10 years
\$88	\$274	\$477	\$1,061

JNL/T. Rowe Price Value Fund Class I			
1 year	3 years	5 years	10 years
\$57	\$179	\$313	\$701

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	104%

Principal Investment Strategies. At least 65% of the Fund’s total assets will normally be invested in common stocks that T. Rowe Price Associates, Inc. (“Sub-Adviser”) regards as undervalued. Stock holdings are expected to consist primarily of large-company stocks, but may also include mid-cap and small-cap companies. In taking a value approach to investment selection, the Sub-Adviser’s research team seeks to identify companies that appear to be undervalued by various measures and may be temporarily out of favor, but which the Sub-Adviser believes have good prospects for capital appreciation.

The Fund may invest up to 25% of its total assets (excluding reserves) in foreign securities, including securities that are economically tied to emerging markets. The Fund may at times invest significantly in certain sectors.

In keeping with the Fund’s objective, it may also invest in other securities and use futures, options, swaps, and other derivative-type instruments.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company’s value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company’s stock.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund’s performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager’s choice of securities within such sector.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.

- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.

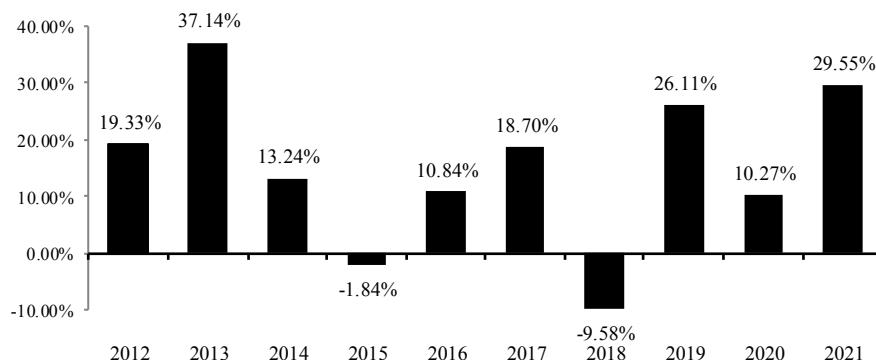

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the MSCI USA Value Index (Gross) with the Morningstar® US Large-Mid Cap Broad Value IndexSM as the Fund's primary benchmark.

Sub-Adviser:

T. Rowe Price Associates, Inc. ("T. Rowe Price")

Portfolio Manager:

Name:	Joined Fund Management Team In:	Title:
Mark S. Finn, CFA, CPA	2009	Chairman of Investment Advisory Committee, T. Rowe Price

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts.

You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/Vanguard Moderate ETF Allocation Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital through investment in exchange-traded funds (“Underlying ETFs”).

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class A
Management Fee	0.20%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.15%
Acquired Fund Fees and Expenses ²	0.05%
Total Annual Fund Operating Expenses	0.70%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class I
Management Fee	0.20%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.15%
Acquired Fund Fees and Expenses ²	0.05%
Total Annual Fund Operating Expenses	0.40%
Less Waiver/Reimbursement ³	0.13%
Total Annual Fund Operating Expenses After Waiver/Reimbursement	0.27%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

³ JNAM has contractually agreed to waive 0.13% of the administrative fees of the Class. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the Class I administrative fee waiver is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Vanguard Moderate ETF Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$72	\$224	\$390	\$871

JNL/Vanguard Moderate ETF Allocation Fund Class I			
1 year	3 years	5 years	10 years
\$28	\$115	\$211	\$492

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	20%

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of Underlying ETFs. An ETF is an investment fund that is traded on a stock exchange and holds an underlying basket of securities generally designed to track an index. ETFs can be bought and sold through the trading day in the secondary market or at net asset value directly with an authorized participant. The Underlying ETFs are affiliated with The Vanguard Group, Inc. Please refer to the statutory prospectus for a list of available Underlying ETFs.

The asset allocation of the Fund is determined through the use of a proprietary asset allocation model developed and managed by the Adviser in conjunction with third-party service providers. The asset allocation models provide initial guidance to specific asset allocations among various asset classes and sub-asset classes. Final allocations are determined by the Adviser through the use of both internal and external resources.

Mellon Investments Corporation ("Mellon"), the Fund’s sub-adviser (“Sub-Adviser”), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund’s allocations are rebalanced periodically, generally monthly, based on the allocation instructions provided by the Adviser.

There are no geographic limitations to the Underlying ETFs’ investments, and the Underlying ETFs may invest in securities of companies located in developed or emerging markets. Generally, emerging markets include nations transitioning from less developed (often pre-industrial) economies with low per-capita incomes to modern industrial economies with higher standards of living.

During the month, when cash inflows and outflows occur, the Sub-Adviser makes new purchases and sales based on the Fund’s current existing market weights.

Under normal market conditions, the Adviser allocates approximately 30% to 50% (with a target allocation of 40%) of the Fund’s assets to Underlying ETFs that invest primarily in equity securities and 50% to 70% (with a target allocation of 60%) of the Fund’s assets to Underlying ETFs that invest primarily in fixed income securities and/or cash alternatives. The Adviser may also allocate the Fund’s assets to securities and derivative contracts to meet the Fund’s allocation targets.

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser.

The Sub-Adviser may invest in ETFs in excess of the Investment Company Act of 1940, as amended (the “1940 Act”) limits on investment in other investment companies as instructed by the Adviser.

The Fund may invest, directly or indirectly, in illiquid or thinly traded securities.

The Fund may invest, indirectly through ETFs, in bank loans.

The Fund may lend securities to increase its income.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying ETFs include:

- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF’s shares may not develop or be maintained; and (vi) the risk that an

ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying ETFs based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying ETFs.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying ETF Fund could decline if the financial condition of the companies an Underlying ETF Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Settlement risk* – Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to,

foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Counterparty risk* – Transactions involving a counterparty are subject to the credit risk of the counterparty. A fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter (“OTC”) derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.
- *Leverage risk* – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund’s gains and losses in comparison to the amount of the Fund’s assets (that is, assets other than borrowed assets) at risk, which may cause the Fund’s portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Securities lending risk* – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.

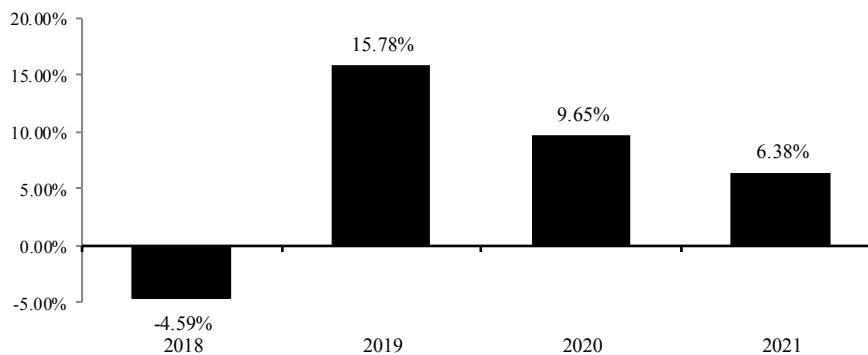

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown, and if such arrangements had not been in place, performance for those periods would have been lower. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the 40% MSCI All Country World Index (Net)/60% Bloomberg U.S. Aggregate Bond Index with the 40% Morningstar® Global Target Market Exposure IndexSM (Net)/60% Bloomberg U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

The asset allocation of the Fund is determined through the use of a proprietary asset allocation model developed and managed by the Adviser in conjunction with third-party service providers. The asset allocation models provide initial guidance to specific asset allocations among various asset classes and sub-asset classes. Final allocations are determined by the Adviser through the use of both internal and external resources.

Mellon Investments Corporation ("Mellon"), the Fund’s sub-adviser (“Sub-Adviser”), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund’s allocations are rebalanced periodically, generally monthly, based on the allocation instructions provided by the Adviser.

During the month, when cash inflows and outflows occur, the Sub-Adviser makes new purchases and sales based on the Fund’s current existing market weights.

Under normal market conditions, the Adviser allocates approximately 50% to 70% (with a target allocation of 60%) of the Fund’s assets to Underlying ETFs that invest primarily in equity securities and 30% to 50% (with a target allocation of 40%) of the Fund’s assets to Underlying ETFs that invest primarily in fixed income securities and/or cash alternatives. The Adviser may also allocate the Fund’s assets to securities and derivative contracts to meet the Fund’s allocation targets.

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser.

There are no geographic limitations to the Underlying ETFs’ investments, and the Underlying ETFs may invest in securities of companies located in developed or emerging markets. Generally, emerging markets include nations transitioning from less developed (often pre-industrial) economies with low per-capita incomes to modern industrial economies with higher standards of living.

The Sub-Adviser may invest in ETFs in excess of the Investment Company Act of 1940, as amended (the “1940 Act”) limits on investment in other investment companies as instructed by the Adviser.

The Fund may invest, directly or indirectly, in illiquid or thinly traded securities.

The Fund may invest, indirectly through ETFs, in bank loans.

The Fund may lend securities to increase its income.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying ETFs include:

- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF’s shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests

in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying ETFs based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying ETFs.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying ETF Fund could decline if the financial condition of the companies an Underlying ETF Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Settlement risk* – Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are

tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Counterparty risk* – Transactions involving a counterparty are subject to the credit risk of the counterparty. A fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter (“OTC”) derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.
- *Leverage risk* – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund’s gains and losses in comparison to the amount of the Fund’s assets (that is, assets other than borrowed assets) at risk, which may cause the Fund’s portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Securities lending risk* – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown, and if such arrangements had not been in place, performance for those periods would have been lower. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

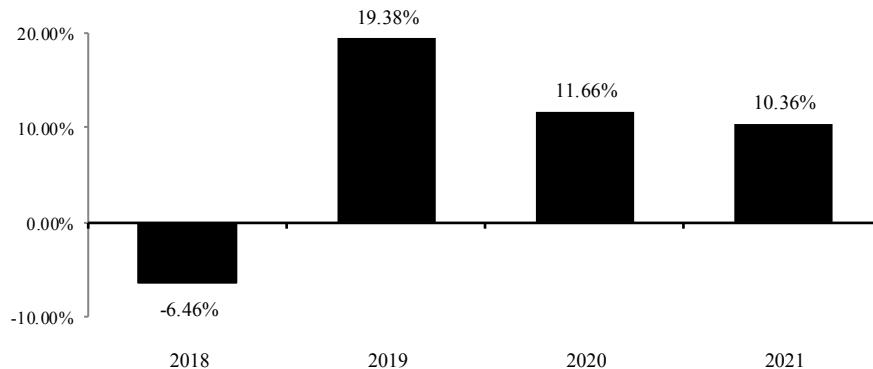

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 26, 2021, the Fund was combined with JNL/DFA Moderate Growth Allocation Fund ("Acquired Fund"), with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the 60% MSCI All Country World Index (Net)/40% Bloomberg U.S. Aggregate Bond Index with the 60% Morningstar® Global Target Market Exposure IndexSM (Net)/40% Bloomberg U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the

intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/Vanguard Growth ETF Allocation Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital through investment in exchange-traded funds (“Underlying ETFs”).

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class A
Management Fee	0.19%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.15%
Acquired Fund Fees and Expenses ²	0.05%
Total Annual Fund Operating Expenses	0.69%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class I
Management Fee	0.19%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.15%
Acquired Fund Fees and Expenses ²	0.05%
Total Annual Fund Operating Expenses	0.39%
Less Waiver/Reimbursement ³	0.12%
Total Annual Fund Operating Expenses After Waiver/Reimbursement	0.27%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

³ JNAM has contractually agreed to waive 0.12% of the administrative fees of the Class. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example assumes that the Class I administrative fee waiver is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Vanguard Growth ETF Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$70	\$221	\$384	\$859

JNL/Vanguard Growth ETF Allocation Fund Class I			
1 year	3 years	5 years	10 years
\$28	\$113	\$207	\$481

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	5%

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of Underlying ETFs. An ETF is an investment fund that is traded on a stock exchange and holds an underlying basket of securities generally designed to track an index. ETFs can be bought and sold through the trading day in the secondary market or at net asset value directly with an authorized participant. The Underlying ETFs are affiliated with The Vanguard Group, Inc. Please refer to the statutory prospectus for a list of available Underlying ETFs.

The asset allocation of the Fund is determined through the use of a proprietary asset allocation model developed and managed by the Adviser in conjunction with third-party service providers. The asset allocation models provide initial guidance to specific asset allocations among various asset classes and sub-asset classes. Final allocations are determined by the Adviser through the use of both internal and external resources.

Mellon Investments Corporation ("Mellon"), the Fund’s sub-adviser (“Sub-Adviser”), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund’s allocations are rebalanced periodically, generally monthly, based on the allocation instructions provided by the Adviser.

During the month, when cash inflows and outflows occur, the Sub-Adviser makes new purchases and sales based on the Fund’s current existing market weights.

Under normal market conditions, the Adviser allocates approximately 70% to 90% (with a target allocation of 80%) of the Fund’s assets to Underlying ETFs that invest primarily in equity securities and 10% to 30% (with a target allocation of 20%) of the Fund’s assets to Underlying ETFs that invest primarily in fixed income securities and/or cash alternatives. The Adviser may also allocate the Fund’s assets to securities and derivative contracts to meet the Fund’s allocation targets.

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser.

There are no geographic limitations to the Underlying ETFs’ investments, and the Underlying ETFs may invest in securities of companies located in developed or emerging markets. Generally, emerging markets include nations transitioning from less developed (often pre-industrial) economies with low per-capita incomes to modern industrial economies with higher standards of living.

The Sub-Adviser may invest in ETFs in excess of the Investment Company Act of 1940, as amended (the “1940 Act”) limits on investment in other investment companies as instructed by the Adviser.

The Fund may invest, directly or indirectly, in illiquid or thinly traded securities.

The Fund may invest, indirectly through ETFs, in bank loans.

The Fund may lend securities to increase its income.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying ETFs include:

- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF’s shares may not develop or be maintained; and (vi) the risk that an

ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying ETFs based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying ETFs.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying ETF Fund could decline if the financial condition of the companies an Underlying ETF Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if an Underlying ETF Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, an Underlying ETF Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Settlement risk* – Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to,

foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Counterparty risk* – Transactions involving a counterparty are subject to the credit risk of the counterparty. A fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter (“OTC”) derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.
- *Leverage risk* – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund’s gains and losses in comparison to the amount of the Fund’s assets (that is, assets other than borrowed assets) at risk, which may cause the Fund’s portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Securities lending risk* – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown, and if such arrangements had not been in place, performance for those periods would have been lower. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

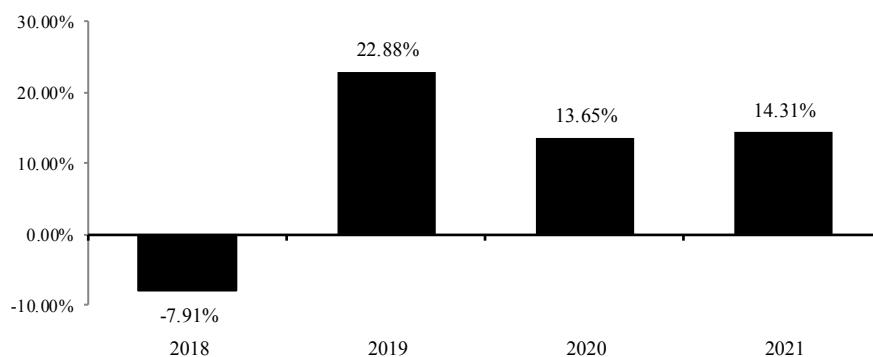

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 26, 2021, the Fund was combined with JNL/DFA Growth Allocation Fund and JNL/Mellon Index 5 Fund ("Acquired Funds"), with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Funds.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the 80% MSCI All Country World Index (Net)/20% Bloomberg U.S. Aggregate Bond Index with the 80% Morningstar® Global Target Market Exposure IndexSM (Net)/20% Bloomberg U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a

fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/WCM China Quality Growth Fund
Class A
Class I

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.85%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.16%
Total Annual Fund Operating Expenses		1.31%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser") and are based on estimated amounts for the current fiscal year.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.85%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.16%
Total Annual Fund Operating Expenses		1.01%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser") and are based on estimated amounts for the current fiscal year..

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WCM China Quality Growth Fund Class A			
1 year	3 years	5 years	10 years
\$133	\$415	\$718	\$1,579

JNL/WCM China Quality Growth Fund Class I			
1 year	3 years	5 years	10 years
\$103	\$322	\$558	\$1,236

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance. The Fund does not have a portfolio turnover rate as of the date of this Prospectus as it commenced operations on the date of this Prospectus.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities of Chinese companies. WCM Investment Management, LLC ("WCM"), the Fund's sub-adviser (the "Sub-Adviser"), considers a company to be a Chinese company if it has been organized under the laws of, has its principal offices in, or has its securities principally traded in, China, or if the company derives at least 50% of its revenues, net profits or incremental revenue growth (typically over the past five years) from, or has at least 50% of assets or production capacities in, China. For purposes of the Fund's investments, China also includes its special administrative regions and other districts, such as Hong Kong and Taiwan.

The Fund may invest in A Shares of companies based in China that trade on the Shanghai Stock Exchange and the Shenzhen Stock Exchange through the Shanghai – Hong Kong and Shenzhen – Hong Kong Stock Connect programs ("Stock Connect"). Stock Connect is a mutual stock market access program designed to, among other things, enable foreign investments in China.

The Fund's investments in equity securities may include common stock, including A-Shares, and depository receipts. The Fund's investments in depository receipts may include American, European, Canadian, and Global Depository Receipts ("ADRs", "EDRs", "CDRs", and "GDRs", respectively). ADRs and CDRs are receipts that represent interests in foreign securities held on deposit by U.S. and Canadian banks or trust companies, respectively. EDRs and GDRs have the same qualities as ADRs, although they may be traded in several international trading markets. The Fund may also use participation certificates issued by foreign banks or brokers evidencing ownership of underlying stock issued by a foreign company. Participation certificates are used by foreign investors to access local markets and to gain exposure to, primarily, equity securities of issuers listed on a local exchange.

The Sub-Adviser uses a bottom-up approach that seeks to identify companies believed to be quality companies and have above-average potential for growth in assets and the rate of return on invested capital. The Sub-Adviser considers quality growth companies to: (i) have a history of predictable and consistent earnings growth, (ii) have regular, growing dividend payments, (iii) be industry leaders with sustainable competitive advantages, (iv) have corporate cultures emphasizing strong, quality and experienced management, (v) have little or no debt, (vi) have attractive relative valuations, and (vii) have potential for asset base growth. In selecting securities, the Sub-Adviser also considers other factors including, among others, political risk, monetary policy risk, and regulatory risk. The Sub-Adviser will generally hold the equity securities of approximately 30 to 50 issuers, and the Fund may invest in securities of any market capitalization. The Fund generally invests in companies in any sector, however, from time to time the Fund may invest a significant portion of its assets in the securities of companies in one or more sectors.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *China risk* – The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions and policy in China and surrounding Asian countries. A relatively small number of Chinese companies represents a large portion of China's total market and thus may be more sensitive to adverse political or economic circumstances and market movements. The economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, allocation of resources and capital reinvestment, among others. Under China's political and economic system, the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership. In addition, expropriation, including nationalization, repatriation of capital, confiscatory taxation, political, economic or social instability or other developments could adversely affect and significantly diminish the values of the Chinese companies in which the Fund invests. The Chinese securities markets are subject to more frequent trading halts and low trading volume,

resulting in substantially less liquidity and greater price volatility. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

- *Hong Kong investment risk* – If China were to exert its authority so as to alter the economic, political or legal structures or the existing social policy of Hong Kong, investor and business confidence in Hong Kong could be negatively affected, which in turn could negatively affect markets and business performance and have an adverse effect on the Fund's investments.
- *Taiwan investment risk* – Although the relationship between China and Taiwan has been improving, there is the potential for future political or economic disturbances that may have an adverse impact on the values of investments in either China or Taiwan, or make investments in China and/or Taiwan impractical or impossible.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Investing in China A Shares risk* – Investments in Class A Shares of Chinese companies involve certain risks and special considerations not typically associated with investments in U.S. companies, such as greater government control over the economy, political and legal uncertainty, currency fluctuations or blockage, the risk that the Chinese government may decide not to continue to support economic reform programs and the risk of nationalization or expropriation of assets. Additionally, the Chinese securities markets are emerging markets subject to the special risks applicable to developing and emerging market countries described elsewhere in this prospectus.
- *Investing through Stock Connect risk* – The Fund may invest directly in China A shares through Stock Connect, and will be subject to the following risks: sudden changes in quota limitations, application of trading suspensions, differences in trading days between the PRC and Stock Connect, operational risk, clearing and settlement risk and regulatory and taxation risk.
- *Depository receipts risk* – Depository receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an un-sponsored program, the issuer may not be directly involved in the creation of the program. Depository receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject the Fund to liquidity risk.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary

suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.

- *Participation note risk* – An investment in a participation note involves additional risks beyond the risks normally associated with a direct investment in the underlying security and a participation note's performance may differ from the underlying security's performance. Holders of participation notes do not have the same rights as an owner of the underlying stock and are subject to the credit risk of the issuer, and participation notes are privately issued and may be illiquid.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Non-diversification risk* – The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

Performance. Performance for the Fund has not been included because the Fund commenced operations on the date of this Prospectus. Performance, which provides some indication of the risks of investing in the Fund, will be available once the Fund has completed one full calendar year of operations.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/WCM Focused International Equity Fund

Class A
Class I

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation by investing primarily in companies located outside of the United States.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Management Fee		0.66%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.15%
Total Annual Fund Operating Expenses		0.81%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WCM Focused International Equity Fund Class A			
1 year	3 years	5 years	10 years
\$113	\$353	\$612	\$1,352

JNL/WCM Focused International Equity Fund Class I			
1 year	3 years	5 years	10 years
\$83	\$259	\$450	\$1,002

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	22%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities.

The Fund's investments in equity securities may include common stocks, preferred stocks and warrants. The Fund invests primarily in equity securities or depositary receipts of non-U.S. domiciled companies located in developed countries, but may also invest in emerging markets and less developed countries.

The Fund's investments in depositary receipts may include American Depository Receipts ("ADRs"). ADRs are receipts that represent interests in foreign securities held on deposit by U.S. banks.

WCM Investment Management, LLC, the Fund's sub-adviser (the "Sub-Adviser"), uses a bottom-up approach that seeks to identify companies with attractive fundamentals, such as long-term growth in revenue and earnings, and that show a high probability for superior future growth. The Sub-Adviser's investment process focuses on seeking industry leading companies that the Sub-Adviser believes possess growing competitive advantages; corporate cultures emphasizing strong, quality and experienced management; low or no debt; and attractive relative valuations. The Sub-Adviser also considers other factors in selecting securities, including political risk, monetary policy risk, and regulatory risk.

Although the Fund may invest in companies in any capitalization range, it will generally invest in large, established multinational companies. The Fund generally will invest in securities of companies located in different regions and in at least three different countries. From time to time, the Fund may have a significant portion of its assets invested in the securities of companies in one or a few countries or regions.

The Sub-Adviser will generally reduce position size in the portfolio based on individual holding size, industry/sector weight, as well as other relevant factors. When performing a fundamental analysis, the Sub-Adviser views valuation as the most significant factor in managing position size. The key factors that the Sub-Adviser considers when determining whether to sell out of a position completely are its evaluation(s) of whether a company's competitive advantage is deteriorating or no longer expanding; there are more attractive names in an essentially similar industry; a company's leadership is not performing as expected; a company's culture is challenged; it deems valuation to be excessive; and/or there is material geopolitical or currency risk.

The Fund may also invest in A Shares of companies based in the People's Republic of China ("China") that trade on the Shanghai Stock Exchange and the Shenzhen Stock Exchange through the Shanghai – Hong Kong and Shenzhen – Hong Kong Stock Connect programs ("Stock Connect"). Stock Connect is a mutual stock market access program designed to, among other things, enable foreign investments in China.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Depositary receipts risk* – Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an un-sponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject the Fund to liquidity risk.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund's Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Investing through Stock Connect risk* – The Fund may invest directly in China A shares through Stock Connect, and will be subject to the following risks: sudden changes in quota limitations, application of trading suspensions, differences in trading days between the PRC and Stock Connect, operational risk, clearing and settlement risk and regulatory and taxation risk.
- *Investing in China A Shares risk* – Investments in Class A Shares of Chinese companies involve certain risks and special considerations not typically associated with investments in U.S. companies, such as greater government control over the economy, political and legal uncertainty, currency fluctuations or blockage, the risk that the Chinese government may decide not to continue to support economic reform programs and the risk of nationalization or expropriation of assets. Additionally, the Chinese securities markets are emerging markets subject to the special risks applicable to developing and emerging market countries described elsewhere in this prospectus.
- *China risk* – The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions and policy in China and surrounding Asian countries. A relatively small number of Chinese companies represents a large portion of China's total market and thus may be more sensitive to adverse political or economic circumstances and market movements. The economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, allocation of resources and capital reinvestment, among others. Under China's political and economic system, the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership. In addition, expropriation, including nationalization, repatriation of capital, confiscatory taxation, political, economic or social instability or other developments could adversely affect and significantly diminish the values of the Chinese companies in which the Fund invests. The Chinese securities markets are subject to more frequent trading halts and low trading volume, resulting in substantially less liquidity and greater price volatility. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

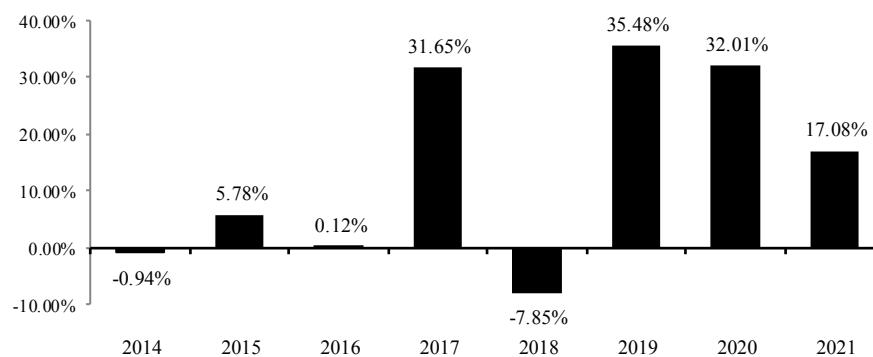

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/WCM Focused International Equity Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the MSCI All Country World ex USA Index (Net) with the Morningstar® Global ex-US Target Market Exposure IndexSM (Net) as the Fund's primary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund’s shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund’s dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL/Westchester Capital Event Driven Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek to provide attractive risk-adjusted returns with low relative volatility in virtually all market environments. Risk-adjusted return is a concept that considers not only an investment's return, but also the amount of potential risk involved in producing that return.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		1.05%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ^{1,2,3}		0.29%
Acquired Fund Fees and Expenses ⁴		0.02%
Total Annual Fund Operating Expenses		1.66%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² "Other Expenses" are based on amounts incurred during the period ended December 31, 2021. The amount includes the costs associated with the Fund's short sales on equity securities. When a cash dividend is declared on a security for which the Fund holds a short position, the Fund incurs the obligation to pay an amount equal to that dividend to the lender of the shorted security. In addition, the Fund incurs borrowing fees related to short sale transactions. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales to assets for the period were 0.04%. The Fund's actual dividend expense and borrowing fees on securities sold short in future periods may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's short positions, the actual dividends paid with respect to the securities the Fund sells short, and the actual timing of the Fund's short sale transactions, each of which is expected to vary over time. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales have been restated to reflect current fees.

³ "Other Expenses" are based on amounts incurred during the period ended December 31, 2021. The amount includes financing costs associated with secured borrowings. The annualized ratios of financing costs related to secured borrowings were 0.14%. The Fund's actual financing costs may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's involvement with secured borrowings and the costs associated with those transactions, each of which is expected to vary over time.

⁴ Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		1.05%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ^{1,2,3}		0.29%
Acquired Fund Fees and Expenses ⁴		0.02%
Total Annual Fund Operating Expenses		1.36%

- ¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Westchester Capital Event Driven Fund Class A			
1 year	3 years	5 years	10 years
\$169	\$523	\$902	\$1,965

JNL/Westchester Capital Event Driven Fund Class I			
1 year	3 years	5 years	10 years
\$138	\$431	\$745	\$1,635

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	315%

Principal Investment Strategies. The Fund primarily employs investment strategies designed to capture price movements generated by specific events, including, but not limited to, securities of companies involved in mergers, acquisitions, asset sales or other divestitures, restructurings, refinancings, recapitalizations, reorganizations or other special situations (referred to as "event-driven opportunities"). Among the investment strategies the sub-adviser, Westchester Capital Management, LLC ("Sub-Adviser") may use on behalf of the Fund are the following:

Merger-Arbitrage Strategy: The Fund may purchase the securities of companies that are involved in publicly announced mergers, takeovers and other corporate reorganizations, and use one or more arbitrage strategies in connection with the purchase. Although a variety of strategies may be employed depending upon the nature of the reorganizations, the most common merger-arbitrage strategy involves purchasing the shares of an announced acquisition target at a discount to their expected value upon completion of the acquisition. The size of this discount, known as the arbitrage "spread," generally determines the Fund's potential profit on any given investment. In conjunction with investment in a target company, the Fund may employ a variety of hedging strategies to protect against issuer-related risk, including selling short the securities of the company that proposes to acquire the target company and/or the purchase and sale of put and call options.

Special Situations Strategy: The Fund may invest in the securities of issuers based upon the expectation of the Sub-Adviser that the price of such securities may change in the short term due to a special situation, such as a stock buy-back, spinoffs and split-offs, credit rating upgrade, the outcome of litigation or other dispute, a positive earnings report, legislative or regulatory changes or other catalyst-driven event.

Capital Structure Arbitrage: Capital structure arbitrage is an investment strategy that seeks to profit from relative pricing discrepancies between related securities, such as securities of different classes issued by the same issuer. For example, when the Sub-Adviser believes that unsecured debt securities are overvalued in relation to senior secured debt securities of the same issuer, the Fund may purchase the senior secured debt securities of the issuer and take a short position in the unsecured debt securities of the same issuer.

Convertible Arbitrage: Convertible arbitrage is a strategy that seeks to profit from mispricings between a firm's convertible securities and the underlying equity securities. A common convertible arbitrage approach matches a long position in a convertible security with a short position in the underlying common stock when an investor believes the convertible security is undervalued relative to the value of the underlying equity security. In such a case, the investor may seek to sell short shares of the underlying common stock in order to hedge exposure to the issuer of the equity securities. Convertible arbitrage positions may be designed to earn income from coupon or dividend payments on the investment in the convertible securities.

Distressed/Restructuring: The Fund may invest in securities, including debt securities, of financially distressed companies and companies undergoing or expected to undergo bankruptcy or other insolvency proceeding. The Fund may invest in corporate bonds, privately held loans and other securities or obligations of companies that are highly leveraged, are experiencing financial difficulties or have filed for bankruptcy. The Fund may profit from its investments in such issuers if the issuer undergoes a successful restructuring or recapitalization, undertakes asset sales or participates in spin-off transactions. The Fund may also purchase securities in anticipation of a company's recovery or turnaround or the liquidation of all or some of the company's assets.

Option Income Strategies: The Fund may sell, or "write," call options on its portfolio securities. The Fund may also write call options on one or more basket of stocks, such as the S&P 500 Index or an industry sub-group of the S&P 500 Index. The options written by the Fund are considered "covered" if the Fund owns the stocks or basket of stocks against which the options are written. The Sub-Adviser may determine to purchase shares and sell call options on those shares at approximately the same time, although the sale of options on the Fund's portfolio securities may occur at any time or not at all. The Sub-Adviser may utilize the option writing strategy at any time, including in a relatively flat or declining market environment, to earn premium income. The Fund may sell call options on substantially all of its portfolio securities.

The Fund may utilize other options strategies, such as writing options on securities it does not currently own (known as "uncovered" options), buying or selling options when the Sub-Adviser believes they may be mispriced or may provide attractive opportunities to earn income, or engaging in risk-reversal transactions. In a risk-reversal transaction, the Sub-Adviser may buy put options and sell call options against a long stock position.

In implementing the Fund's investment strategies, the Fund may invest in a wide variety of investments, such as equity securities of any kind, debt securities of any kind, including those that pay a fixed or floating rate of interest, warrants, convertible securities, master limited partnerships, derivative instruments of any kind, including options, futures, currency forwards and swaps.

The Fund may purchase fixed- and floating-rate income investments of any credit quality or maturity, including corporate bonds, bank debt and preferred securities. Certain of the debt securities in which the Fund invests may carry non-investment-grade ratings (rated BB+ or lower by S&P Global Ratings, or comparably rated by another nationally recognized statistical rating organization), or may be unrated investments of comparable quality, commonly referred to as "high-yield" or "junk" bonds.

The Fund may enter into derivative transactions and other instruments of any kind for hedging purposes, duration or volatility management purposes, or otherwise to gain, or reduce, long or short exposure to one or more asset classes or issuers. For example, the Fund may write call options on its portfolio securities or a market index that is representative of its portfolio with the expectation of generating additional income. The Sub-Adviser may seek to hedge the Fund's portfolio against a decline in the value of its portfolio securities or a decline in the market generally by purchasing put options.

The Fund also may use derivative transactions with the purpose or effect of creating investment leverage.

The Fund may invest in derivative instruments in any manner consistent with its investment strategies.

The Fund may invest in other investment companies, including exchange-traded funds ("ETFs"). Those investments may be made for the purpose of, among other things, gaining or hedging market exposure, hedging exposure to a particular industry, sector or component of an event-driven opportunity, or managing the Fund's cash position. The Fund may hold a significant portion of its assets in cash, money market investments, money market funds or other similar short-term investments for defensive purposes or to preserve the Fund's ability to capitalize quickly on new market opportunities. During periods when the Fund is so invested, its investment returns may be lower than if it were not so invested and the Fund may not achieve its investment objective. The Fund may also invest in special purpose acquisition companies, a form of investment vehicle typically formed for the purpose of acquiring an operating business.

In making investments for the Fund, the Sub-Adviser is guided by the following general considerations:

- before an initial position in an event-driven opportunity is established, a preliminary analysis is made of the expected event to determine the probability and timing of the event;
- in deciding whether or to what extent to invest, the Sub-Adviser evaluates, among other things, the credibility, strategic motivation and financial resources of the relevant participants, and the liquidity of the securities involved in the transaction; and

- the risk-reward characteristics of each event-driven opportunity are assessed on an ongoing basis.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Event driven and special situations risk* – At times, the Fund may seek to benefit from what are considered “special situations,” such as mergers, acquisitions, consolidations, liquidations, spin-offs, tender or exchange offers, reorganizations, restructurings or other unusual events that are expected to affect a particular issuer. Such special situations may involve so-called “distressed companies,” the debt obligations of which typically are unrated, lower-rated, in default or close to default. Also, securities of distressed companies are generally more likely to become worthless. There is a risk that the expected change or event might not occur, which could cause the price of the security to fall, perhaps sharply.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Special purpose acquisition companies risk* – The Fund may invest in stock of, warrants to purchase stock of, and other interests in special purpose acquisition companies or similar special purpose entities that pool funds to seek potential acquisition opportunities (collectively, “SPACs”). Because SPACs and similar entities have no operating history or ongoing business other than seeking acquisitions, the value of their securities is particularly dependent on the ability of the entity’s management to identify and complete a profitable acquisition. Some SPACs may pursue acquisitions only within certain industries or regions, which may increase the volatility of their prices.
- *Distressed securities risk* – Distressed securities risk refers to the uncertainty of repayment of defaulted securities and obligations of distressed issuers. Because the issuer of such securities is likely to be in a distressed financial condition, repayment of distressed or defaulted securities (including insolvent issuers or issuers in payment or covenant default, in workout or restructuring or in bankruptcy or insolvency proceedings) is subject to significant uncertainties. Insolvency laws and practices in foreign jurisdictions are different than those in the U.S. and the effect of these laws and practices may be less favorable and predictable than in the U.S. Investments in defaulted securities and obligations of distressed issuers are considered highly speculative.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Leverage risk* – Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Options risk* – If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Short sales risk* – A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- *Speculative exposure risk* – If a Fund invests in a derivative instrument (or engages in a similarly speculative practice) not for the purpose of hedging, the Fund is directly exposed to the risks associated with an investment in that derivative. Gains or losses from speculative positions in a derivative may be much greater than the derivative's original cost and, in certain instances, potential losses may be unlimited.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Master limited partnership risk* – An investment in MLP units involves some risks that differ from an investment in the common stock of a corporation. Holders of MLP units have limited control on matters affecting the partnership. Investing in MLPs involves certain risks related to investing in the underlying assets of the MLPs and risks associated with pooled investment vehicles. MLPs holding credit-related investments are subject to interest rate risk and the risk of default on payment obligations by debt issuers. MLPs that concentrate in a particular industry or a particular geographic region are subject to risks associated with such industry or region. The benefit derived from the Fund’s investment in MLPs is largely dependent on the MLPs being treated as partnerships for federal income tax purposes. Certain MLPs may be illiquid securities.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, public health or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments,

such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- *Hedging instruments risk* – The Fund may attempt, from time to time, to hedge (protect) against currency risks, largely using forward foreign currency exchange contracts, where available and when, in the Sub-Adviser's opinion, it would be advantageous to the Fund. A forward foreign currency exchange contract is an agreement to buy or sell a specific currency at a future date and at a price set at the time of the contract. Forward foreign currency exchange contracts may reduce the risk of loss from a change in value of a currency, but they also limit any potential gains and do not protect against fluctuations in the value of the underlying position. For example, during periods when the U.S. dollar weakens in relation to a foreign currency, the Fund's use of a currency hedging program will result in lower returns than if no currency hedging programs were in effect. Forward foreign currency exchange contracts and put options are considered derivative investments, because their value and performance depend, at least in part, on the value and performance of an underlying asset. The Fund may also use futures, swaps, and other derivative instruments to hedge risk. The Fund's investment in derivatives may involve a small investment relative to the amount of risk assumed. To the extent the Fund enters into these transactions, its success will depend on the Sub-Adviser's ability to predict market movements, and their use may have the opposite effect of that intended. Risks include potential loss due to the imposition of controls by a government on the exchange of foreign currencies, the loss of any premium paid to enter into the transaction, delivery failure, default by any other party, or inability to close out a position because the trading market becomes illiquid. In addition, for certain reasons, the Fund may not seek to establish a perfect correlation between such hedging instruments and the portfolio instruments being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. It is not possible to hedge fully or perfectly against any risk.
- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Call risk* – Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- *Convertible securities risk* – Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- *Privately placed securities risk* – The Fund's investments may also include privately-placed securities, which are subject to resale restrictions. Investments in these securities usually will decrease a Fund's liquidity level to the extent the Fund may be unable to sell or transfer these securities due to restrictions on transfers or on the ability to find buyers interested in purchasing the securities. The illiquid nature of the market for privately placed securities, as well as the lack of publicly available information regarding these securities, may also adversely affect the Fund's ability to fair value such securities at certain times and could make it difficult for the Fund to sell them. The Fund could lose money on such investments.

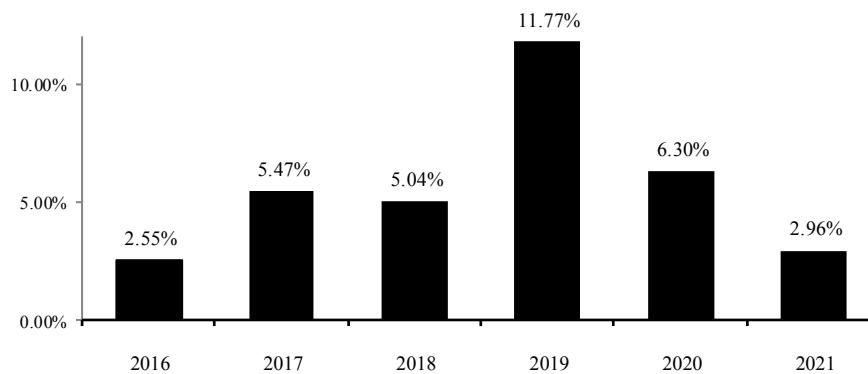

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing

changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Roy D. Behren	March 2016	Portfolio Manager, Westchester

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/Western Asset Global Multi-Sector Bond Fund
(formerly, JNL/Franklin Templeton Global Multisector Bond Fund)

Class A
Class I

Investment Objective. The investment objective of the Fund is to maximize total return through income and capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.52%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.17%
Acquired Fund Fees and Expenses ²		0.01%
Total Annual Fund Operating Expenses ³		1.00%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

³ Expense information has been restated to reflect current fees.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.52%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.17%
Acquired Fund Fees and Expenses ²		0.01%
Total Annual Fund Operating Expenses ³		0.70%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

³ Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Western Asset Global Multi-Sector Bond Fund Class A			
1 year	3 years	5 years	10 years
\$102	\$318	\$552	\$1,225

JNL/Western Asset Global Multi-Sector Bond Fund Class I			
1 year	3 years	5 years	10 years
\$72	\$224	\$390	\$871

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	36%

Portfolio turnover for the period of January 1, 2021 to December 31, 2021 is from the prior sub-adviser, Franklin Advisers, Inc.

Principal Investment Strategies. Under normal market conditions, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of fixed-income instruments of varying maturities and quality across different industries and sectors of the fixed-income market.

The Fund invests in globally diversified fixed income securities and rotates portfolio allocations among global sectors, including, below-investment grade (*i.e.*, high yield securities or “junk” bonds) and investment grade corporate securities located in the United States and in non-U.S. developed and emerging markets; obligations issued or guaranteed by the U.S. Government, its agencies and instrumentalities, banks and corporations and foreign governments, banks and corporations of developed and emerging markets; mortgage- and asset-backed securities; bank loans, structured notes, contingent convertible securities, common stock and warrants held as part of a corporate action.

The Fund will invest at least 40% of its assets, unless market conditions are not deemed favorable, in which case the Fund would invest at least 30% of its assets, in securities of non-U.S. issuers. A corporate issuer is considered to be from the country where it is headquartered or incorporated, where the majority of its assets are located or where it generates the majority of its operating income. The Fund will allocate its assets among no less than three countries.

The Fund may invest a substantial portion of total assets in securities denominated in foreign currencies and in U.S. dollar denominated securities of foreign issuers. In addition, the Fund may hedge its exposure to foreign currency. Both long and short currency exposures are permissible.

The Fund may invest up to 70% of its assets in below investment grade securities (*i.e.*, high yield securities or “junk” bonds) (“Ba” or lower by Moody’s Investment Service or the equivalent by S&P Global Ratings or Fitch, Inc./Fitch Ratings Ltd.). Mortgage- and asset-backed securities held by the Fund may include those backed by loans to subprime borrowers.

The average dollar-weighted effective duration of the Fund normally varies between zero and ten years. Duration measures the sensitivity of a fixed income security’s price to changes in interest rates. The longer a fixed income security’s duration, the more sensitive that security will be to changes in interest rates. Similarly, the longer the Fund’s dollar-weighted average duration, the more sensitive the Fund will be to interest rate changes than a fund with a shorter dollar-weighted average duration.

The Fund may use various types of derivative instruments for hedging and for investment purposes including, but not limited to, futures contracts and options on futures (including U.S. Treasury futures contracts and options on futures) to alter the duration of the Fund and increase potential returns; forward currency exchange contracts; currency futures and options thereon; interest rate swaps, floors and caps; and credit default swaps and currency swaps. The Fund may also use other types of derivative instruments, such as futures and options, contracts, forward contracts and swap agreements as a substitute for investing directly in an underlying asset, to increase returns, to manage market, foreign currency and/or duration or interest rate risk, or as part of a hedging strategy.

The Fund may invest its uninvested cash in high-quality, short-term debt securities, which may include repurchase agreements and high-quality money market instruments.

For purposes of satisfying the 80% requirement, the Fund may also invest in derivative instruments that have economic characteristics similar to the fixed-income instruments mentioned above.

The Fund is a “non-diversified” fund, as defined in the Investment Company Act of 1940, as amended (the “1940 Act”), and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.

- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Volatility risk* – The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Sovereign debt risk* – Investments issued by a governmental entity are subject to the risk that the governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt due to, among other things, cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay its debt, request additional loans or otherwise restructure its debt. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt may be collected.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Currency management strategies risk* – Currency management strategies may substantially change the Fund's exposure to currency exchange rates and could result in losses to the Fund if currencies do not perform as the investment manager expects. In addition, currency management strategies, to the extent that they reduce the Fund's exposure to currency risks, may also reduce the Fund's ability to benefit from favorable changes in currency exchange rates. Using currency management strategies for purposes other than hedging further increases the Fund's exposure to foreign investment losses. Currency markets generally are not as regulated as securities markets. In addition, currency rates may fluctuate significantly over short periods of time, and can reduce returns.
- *Foreign exchange and currency derivatives trading risk* – The Fund intends to actively trade in spot and forward currency positions and related currency derivatives in order to increase the value of the Fund. The trading of foreign currencies directly generates risks separate from those associated with inactive or indirect exposures to non-U.S. dollar denominated instruments and currency derivative instruments. Specifically, the Fund may directly take a loss from the buying and selling of currencies without any related exposure to non-U.S. dollar-denominated assets.

- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund’s investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund’s shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Market direction risk* – Since the Fund will typically hold both long and short positions, an investment in the Fund will involve market risks associated with different types of investment decisions than those made for a typical “long only” fund. The Fund’s results could suffer when there is a general market advance and the Fund holds significant “short” positions, or when there is a general market decline and the Fund holds significant “long” positions. The markets may have considerable volatility from day to day and even in intra-day trading.
- *Asset-based securities risk* – Asset-based securities are typically fixed-income securities whose value is related to the market price of certain commodities, interests, and other items, such as precious metals, as well as other assets, such as credit card receivables. Although the market price of these securities is expected to follow the market price of the related assets, there may not be perfect correlation. There are special risks associated with certain types of assets that will also affect the value of asset-based securities related to those assets. For an example of such special risks, please refer to “Precious metals related securities risk.”
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund’s performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager’s choice of securities within such sector.
- *Issuer risk* – The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security’s value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer’s goods or services.
- *Banking industry investment risk* – Investment in securities issued by banks may be affected by factors influencing the health and performance of the banking industry. These factors may include, among others, economic trends, industry competition and governmental actions, as well as factors affecting the financial stability of borrowers. Bank securities typically are not insured by the U.S. government, foreign governments, or their agencies. Bank securities that do not represent deposits have lower priority in the bank’s capital structure than those securities comprised of deposits. This lower priority means that, in the event of insolvency of the bank that issued the security, the security could become worth less than the Fund paid for it.
- *Commercial mortgage-backed securities risk* – Commercial mortgage-backed securities include securities that reflect an interest in, and are secured by, mortgage loans on commercial real property. Many of the risks of investing in commercial mortgage-backed securities reflect the risks of investing in the real estate securing the underlying mortgage loans. These risks reflect the effects of local and other economic conditions on real estate markets, the ability of tenants to make loan payments, and the ability of a property to attract and retain tenants. Commercial mortgage-backed securities may be less liquid and exhibit greater price volatility than other types of mortgage- or asset-backed securities.

- *Corporate loan, sovereign entity loan, and bank loan risk* – Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as “loans” or “bank loans.” Borrowers generally pay interest on corporate loans at “floating” rates that change in response to changes in market interest rates such as the London Interbank Offered Rate (“LIBOR”) or the Secured Overnight Financing Rate (“SOFR”) or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. As a result, sale proceeds related to the sale of loans may not be available to make additional investments until a substantial period after the sale of the loans. Certain loans may be classified as “illiquid” securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- *Debt securities ratings risk* – The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *European investment risk* – Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. The European financial markets have recently experienced volatility and adverse trends due to concerns about economic downturns in, or rising government debt levels of, several European countries as well as acts of war in the region. These events may spread to other countries in Europe and may affect the value and liquidity of certain of the Fund's investments. Additionally, the United Kingdom's withdrawal from the EU, commonly known as “Brexit,” may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there was an eleven-month transition period, ending December 31, 2020, during which the United Kingdom negotiated its future relationship with the EU. On January 1, 2021, the EU UK Trade and Cooperation Agreement, a bilateral trade and cooperation deal governing the future relationship between the UK and the EU went into effect. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, public health or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Government regulatory risk* – Certain industries or sectors, including, but not limited to, real estate, financial services, utilities, oil and natural gas exploration and production, and health care are subject to increased regulatory requirements. There can be no guarantee that companies in which the Fund invests will meet all applicable regulatory requirements. Certain companies could incur substantial fines and penalties for failing to meet government regulatory requirements. These requirements may also result in additional compliance expenses and costs. Such increased regulatory compliance costs could hurt a company's performance.
- *Hedging instruments risk* – The Fund may attempt, from time to time, to hedge (protect) against currency risks, largely using forward foreign currency exchange contracts, where available and when, in the Sub-Adviser's opinion, it would be advantageous to the Fund. A forward foreign currency exchange contract is an agreement to buy or sell a specific currency at a future date and

at a price set at the time of the contract. Forward foreign currency exchange contracts may reduce the risk of loss from a change in value of a currency, but they also limit any potential gains and do not protect against fluctuations in the value of the underlying position. For example, during periods when the U.S. dollar weakens in relation to a foreign currency, the Fund's use of a currency hedging program will result in lower returns than if no currency hedging programs were in effect. Forward foreign currency exchange contracts and put options are considered derivative investments, because their value and performance depend, at least in part, on the value and performance of an underlying asset. The Fund may also use futures, swaps, and other derivative instruments to hedge risk. The Fund's investment in derivatives may involve a small investment relative to the amount of risk assumed. To the extent the Fund enters into these transactions, its success will depend on the Sub-Adviser's ability to predict market movements, and their use may have the opposite effect of that intended. Risks include potential loss due to the imposition of controls by a government on the exchange of foreign currencies, the loss of any premium paid to enter into the transaction, delivery failure, default by any other party, or inability to close out a position because the trading market becomes illiquid. In addition, for certain reasons, the Fund may not seek to establish a perfect correlation between such hedging instruments and the portfolio instruments being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. It is not possible to hedge fully or perfectly against any risk.

- *Income risk* – The Fund is subject to the risk that the income generated from the Fund's investments may decline in the event of falling interest rates. Income risk may be high if the Fund's income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund's distributions to shareholders may decline when interest rates fall.
- *Latin America concentration risk* – The Fund's performance is expected to be closely tied to social, political and economic conditions within Latin American countries. Funds that concentrate in specific countries and regions, such as Latin America, tend to have more performance volatility than the performance of more geographically diversified funds. Investment primarily in equity and equity-related securities in Latin America will expose the Fund specifically to their market, currency and other risks, including volatility and structural risks. Stable economic growth may be hampered by a number of factors, including, burdensome regulatory requirements, inflation, poor allocation of resources and the reinvestment of capital, government price controls and capital restrictions, and social instability with a corresponding effect on securities holdings and volatility.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Russia investment risk* – The Fund may invest a portion of its assets in securities issued by companies located in Russia. Because of the recent formation of the Russian securities markets as well as the underdeveloped state of Russia's banking system, settlement, clearing and registration of securities transactions are subject to significant risks. With the implementation of the National Settlement Depository ("NSD") in Russia as a recognized central securities depository, title to Russian equity securities is now based on the records of the NSD and not the registrars. Although the implementation of the NSD is generally expected to decrease the risk of loss in connection with recording and transferring title to securities, issues resulting in loss still might occur. In addition, issuers and registrars are still prominent in the validation and approval of documentation requirements for corporate action processing in Russia. Because the documentation requirements and approval criteria vary between registrars and/or issuers, there remain unclear and inconsistent market standards in the Russian market with respect to the completion and submission of corporate action elections. To the extent that the Fund suffers a loss relating to title or corporate actions relating to its portfolio securities, it may be difficult for the Fund to enforce its rights or otherwise remedy the loss.
- *Speculative exposure risk* – If a Fund invests in a derivative instrument (or engages in a similarly speculative practice) not for the purpose of hedging, the Fund is directly exposed to the risks associated with an investment in that derivative. Gains or losses from speculative positions in a derivative may be much greater than the derivative's original cost and, in certain instances, potential losses may be unlimited.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *China risk* – The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions and policy in China and surrounding Asian countries. A relatively small number of Chinese companies represents a large portion of China's total market and thus may be more sensitive to adverse political or economic circumstances and market movements. The economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, allocation of resources and capital reinvestment, among others. Under China's political and economic system, the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership. In addition, expropriation, including nationalization, repatriation of capital, confiscatory taxation, political, economic or social instability or other developments could adversely affect and significantly diminish the values of the Chinese companies in which the Fund invests. The Chinese securities markets are subject to more frequent trading halts and low trading volume,

resulting in substantially less liquidity and greater price volatility. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Convertible securities risk* – Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *LIBOR replacement risk* – The Funds' payment obligations, financing terms and investments in certain instruments (including debt securities and derivatives) may be tied to floating rates, such as the London Interbank Offered Rate ("LIBOR"). In 2017, the UK Financial Conduct Authority ("FCA") announced its intention to cease compelling banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration, the administrator of LIBOR, ceased publication of most LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of a majority of U.S. dollar LIBOR settings on a representative basis after June 30, 2023. In addition, global regulators have announced that, with limited exceptions, no new LIBOR-based contracts should be entered into after 2021. Actions by regulators have resulted in the establishment of alternative reference rates to LIBOR in most major currencies (e.g., the Secured Overnight Financing Rate for U.S. dollar LIBOR and the Sterling Overnight Interbank Average Rate for GBP LIBOR). Various financial industry groups have been planning for the transition away from LIBOR and markets are developing in response to these new rates, but questions around the liquidity of the new rates and how to appropriately adjust these rates to eliminate any economic value transfer at the time of transition remain a significant concern. It is difficult to predict the full impact of the transition away from LIBOR on the Funds. The transition process may involve, among other things, increased volatility or illiquidity in markets for instruments that continue to rely on LIBOR. The transition may also result in a reduction in the value of certain LIBOR-based investments held by the Funds or reduce the effectiveness of related transactions such as hedges. Any such effects of the transition away from LIBOR, as well as other unforeseen effects, could result in losses for the Funds. Since the usefulness of LIBOR as a benchmark could also deteriorate during the transition period, effects could occur at any time.
- *Investment in money market funds risk* – Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. An investment in a money market fund is not insured or guaranteed by a Federal Deposit Insurance Corporation or any other government agency. Although such funds seek to maintain a net asset value of \$1.00 per share, it is possible to lose money by investing in a money market fund.
- *Non-diversification risk* – The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to April 25, 2022, reflects the Fund's results when managed by the former sub-adviser, Franklin Advisers, Inc. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

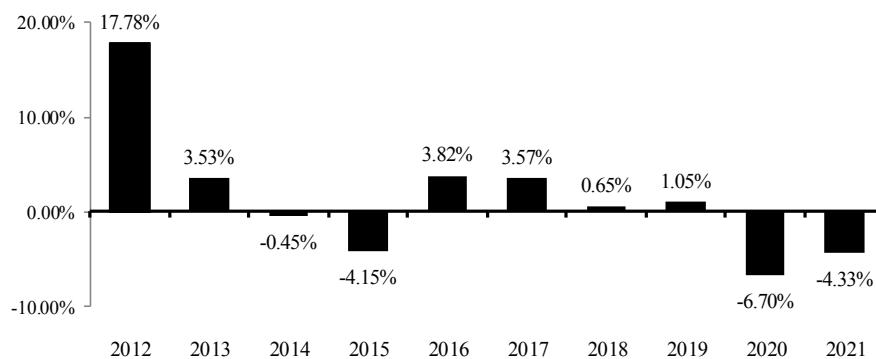

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 25, 2022, for consistency with the Fund's principal investment strategies, the Fund replaced the Bloomberg Multiverse Bond Index with the Bloomberg Global Aggregate Index (unhedged) as the Fund's primary benchmark.

Effective April 25, 2022, for consistency with the Fund's principal investment strategies, the Fund added the 50% Bloomberg Global Aggregate Index (unhedged), 25% JPMorgan Emerging Markets Bond Index Plus, 25% Bloomberg U.S. High Yield 2% Issuer Cap Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/William Blair International Leaders Fund
(formerly, JNL/Invesco International Growth Fund)

Class A
Class I

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.51%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.16%
Total Annual Fund Operating Expenses ²		0.97%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Expense information has been restated to reflect current fees.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.51%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.16%
Total Annual Fund Operating Expenses ²		0.67%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/William Blair International Leaders Fund Class A			
1 year	3 years	5 years	10 years
\$99	\$309	\$536	\$1,190

JNL/William Blair International Leaders Fund Class I			
1 year	3 years	5 years	10 years
\$68	\$214	\$373	\$835

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	38%

Portfolio turnover for the period of January 1, 2021 to December 31, 2021 is from the prior sub-adviser, Invesco Advisers, Inc.

Principal Investment Strategies. Under normal market conditions, the Fund invests primarily in a diversified portfolio of equity securities, including common stocks and other forms of equity investments (e.g., securities convertible into common stocks) issued by companies of all sizes domiciled outside the United States that William Blair Investment Management, LLC, the Fund's sub-adviser (the "Sub-Adviser"), believes have above-average growth, profitability, and quality characteristics. Under normal market conditions, the Fund typically holds a limited number of securities (i.e., 40-70 securities).

The Sub-Adviser seeks investment opportunities in companies at different stages of development ranging from large, well-established companies to smaller companies at earlier stages of development that are leaders in their country, industry, or globally in terms of products, services, or execution. The Fund's investments are normally allocated among at least six different countries and no more than 50% of the Fund's equity holdings may be invested in securities of issuers in one country at any given time. Normally, the Fund's investments will be divided among Continental Europe, the United Kingdom, Canada, Japan, and the markets of the Pacific Basin. The Fund may invest up to 40% of its net assets in emerging markets, which include every country in the world except the United States, Canada, Japan, Australia, New Zealand, Hong Kong, Singapore, and most Western European countries.

In choosing investments, the Sub-Adviser performs fundamental company analysis and focuses on stock selection. The Sub-Adviser generally seeks equity securities, including common stocks of companies that historically have had superior growth, profitability and quality relative to local markets and relative to companies within the same industry worldwide and that are expected to continue such performance. The Sub-Adviser believes that such companies generally will exhibit superior business fundamentals, including leadership in their field, quality products or services, distinctive marketing and distribution, pricing flexibility and revenue from products or services consumed on a steady, recurring basis. These business characteristics should be accompanied by management that is shareholder return-oriented and that uses conservative accounting policies. Companies with above-average returns on equity, strong balance sheets, and consistent, above average earnings growth will be the primary focus. Stock selection will take into account both local and global comparisons.

The Sub-Adviser will vary the Fund's sector and geographic diversification based upon the Sub-Adviser's ongoing evaluation of economic, market, and political trends throughout the world. In making decisions regarding country allocation, the Sub-Adviser will consider such factors as the conditions and growth potential of various economies and securities markets, currency exchange rates, technological developments in the various countries, and other pertinent financial, social, national and political factors.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Sector risk* – Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

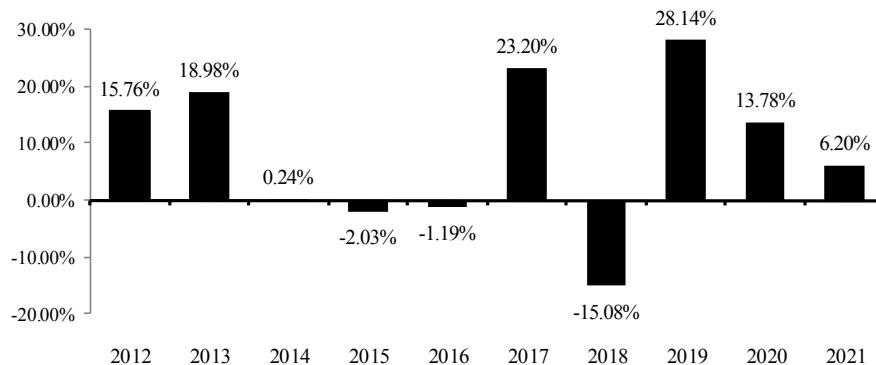

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to April 25, 2022 reflects the Fund's results when managed by the former sub-adviser, Invesco Advisers, Inc. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the MSCI All Country World ex USA Growth Index (Net) with the Morningstar® Global ex-US Target Market Exposure IndexSM (Net) as the Fund's primary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Summary Prospectus – April 25, 2022

JNL/WMC Balanced Fund Class A Class I

Investment Objective. The investment objective of the Fund is reasonable income and long-term capital growth.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

**Shareholder Fees
(fees paid directly from your investment)**

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.32%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.09%
Total Annual Fund Operating Expenses		0.71%

¹ "Other Expenses" include an Administrative Fee of 0.09% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.32%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.09%
Total Annual Fund Operating Expenses		0.41%

¹ "Other Expenses" include an Administrative Fee of 0.09% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WMC Balanced Fund Class A			
1 year	3 years	5 years	10 years
\$73	\$227	\$395	\$883

JNL/WMC Balanced Fund Class I			
1 year	3 years	5 years	10 years
\$42	\$132	\$230	\$518

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	69%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing primarily in a diversified portfolio of common stocks and investment grade fixed-income securities. The Fund may invest in any type or class of security. The anticipated mix of the

Fund's holdings is typically 60-70% of its assets in equities and 30-40% in fixed-income securities, including, investment-grade corporate bonds, U.S. Treasury and government agency bonds, mortgage-backed securities, asset-backed securities, and commercial-backed securities. Cash and cash equivalents are included in the fixed income fund weighting.

The Fund may invest in derivatives to reduce fixed-income exposure to facilitate meeting the Fund's objective.

The Fund may invest up to 25% of its assets in foreign equity and foreign fixed-income securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, public health or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

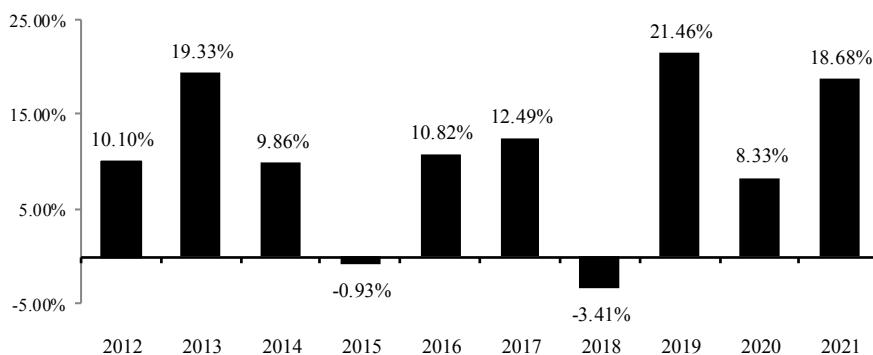

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the 65% S&P 500 Index, 35% Bloomberg U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/WMC Equity Income Fund Class A Class I

Investment Objective. The investment objective of the Fund is an above-average level of current income and reasonable long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.44%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.15%
Total Annual Fund Operating Expenses ²		0.89%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Expense information has been restated to reflect current fees.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.44%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.15%
Total Annual Fund Operating Expenses ²		0.59%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WMC Equity Income Fund Class A			
1 year	3 years	5 years	10 years
\$91	\$284	\$493	\$1,096

JNL/WMC Equity Income Fund Class I			
1 year	3 years	5 years	10 years
\$60	\$189	\$329	\$738

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	50%

Portfolio turnover for the period of January 1, 2021 to April 25, 2021 is for the Fund's master fund when operating under its former investment strategy as a feeder fund in a master-feeder fund arrangement.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities.

The Fund invests mainly in common stocks of mid-size and large companies whose stocks typically pay above-average levels of dividend income and are, in the opinion of Wellington Management Company LLP ("Sub-Adviser"), undervalued relative to similar stocks. The Sub-Adviser generally considers mid-size and large companies to be those companies that, at the time of initial purchase, have market capitalizations of \$10 billion or higher. In addition, the Sub-Adviser generally looks for companies that it believes are committed to paying dividends consistently.

The Fund may invest up to 25% of its assets in foreign securities, either directly or through depositary receipts.

The Sub-Adviser employs active investment management methods, which means that securities are bought and sold according to the Sub-Adviser's evaluations of companies and their financial prospects, the prices of the securities, and the stock market and the economy in general.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market

changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

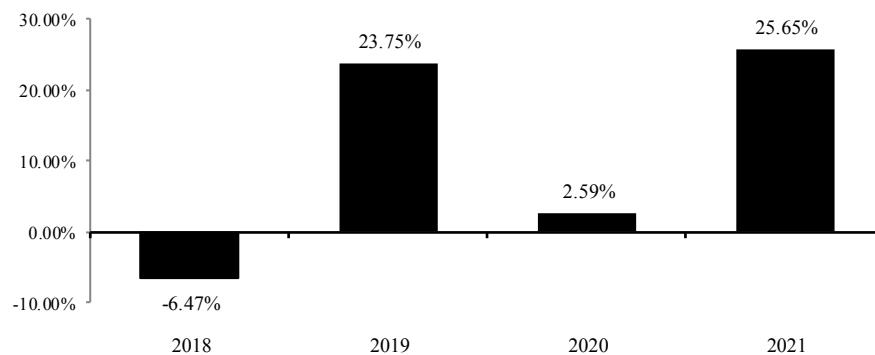

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. Performance prior to April 26, 2021 reflects the Fund's results when the Fund did not have a sub-adviser and operated as a feeder fund in a master-feeder arrangement. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the MSCI USA High Dividend Yield Index (Gross) with the Morningstar® Dividend Composite IndexSM as the Fund's primary benchmark.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

Wellington Management Company LLP ("Wellington Management")

Portfolio Manager:

Name:	Joined Fund Management Team In:	Title:
W. Michael Reckmeyer, III, CFA*	April 2021**	Senior Managing Director, Partner, and Equity Portfolio Manager, Wellington Management
Adam H. Illfelder, CFA	April 2021	Senior Managing Director, Partner and Equity Portfolio Manager, Wellington Management
Matthew C. Hand, CFA	April 2021	Senior Managing Director, Partner and Equity Portfolio Manager, Wellington Management

* Effective June 30, 2022, Mr. Reckmeyer will be removed as a portfolio manager for the Fund. ** From September 25, 2017 to April 26, 2021, the Fund operated as a "feeder fund" in a master-feeder arrangement. During that time, Mr. Reckmeyer was a portfolio manager of the master fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL/WMC Global Real Estate Fund
Class A
Class I

Investment Objective. The investment objective of the Fund is long-term total return.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.58%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.16%
Total Annual Fund Operating Expenses ²		1.04%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Expense information has been restated to reflect current fees.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.58%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.16%
Total Annual Fund Operating Expenses ²		0.74%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WMC Global Real Estate Fund Class A			
1 year	3 years	5 years	10 years
\$106	\$331	\$574	\$1,271

JNL/WMC Global Real Estate Fund Class I			
1 year	3 years	5 years	10 years
\$76	\$237	\$411	\$918

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	147%

Portfolio turnover for the period of January 1, 2021 to April 25, 2021 is from the prior sub-adviser, Invesco Advisers, Inc.

Principal Investment Strategies. The Fund seeks to meet its investment objective by investing, normally, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities of real estate and real estate-related issuers and derivatives and other instruments that have economic characteristics similar to such securities. The Fund's common stock investments may also include China A-shares (shares of companies based on mainland China that trade on the Shanghai Stock Exchange and the Shenzhen Stock Exchange). The Fund invests primarily in real estate investment trusts ("REITs"), depositary receipts and equity securities (including common and preferred stock, and convertible stock) of domestic and foreign issuers. The Fund invests, under normal circumstances, in securities of issuers located in at least three different countries, including the United States. The Fund may invest up to 20% of its net assets in securities of issuers located in emerging markets countries, i.e., those that are in the initial stages of their industrial cycles. These companies include REITs or other real estate operating companies.

Investment in equity and debt securities of companies unrelated to the real estate industry are generally limited to securities that the portfolio managers believe are undervalued and have potential for growth of capital. The Fund may purchase debt securities including U.S. Treasury and agency bonds and notes. The Fund may also invest up to 10% of its total assets in non-investment grade debt securities (commonly known as "junk-bonds") of real estate and real estate-related issuers.

The Fund also may engage in short sales of securities.

The Fund can invest in derivative instruments including forward foreign currency contracts.

The Fund can use forward foreign currency contracts to hedge against adverse movements in the foreign currencies in which portfolio securities are denominated; though the Fund has not historically used these instruments.

The Fund may invest in securities of issuers of all capitalization sizes. Real estate companies tend to have smaller asset bases compared with other market sectors, therefore, the Fund may hold a significant amount of securities of small- and mid-capitalization issuers.

The Fund will concentrate its investments in the securities of domestic and foreign real estate and real estate-related companies. For purposes of this concentration, real estate and real estate-related companies shall consist of companies (i) where at least 50% of its assets, gross income or net profits are attributable to ownership, construction, management, or sale of residential, commercial or industrial real estate, including listed equity REITs that own property, and mortgage REITs which make short-term construction and development mortgage loans or which invest in long-term mortgages or mortgage pools, or (ii) whose products and services are related to the real estate industry, such as manufacturers and distributors of building supplies and financial institutions which issue or service mortgages.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Real estate investment risk* – Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- *European investment risk* – Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. The European financial markets have recently experienced volatility and adverse trends due to concerns about economic downturns in, or rising government debt levels of, several European countries as well as acts of war in the region. These events may spread to other countries in Europe and may affect the value and liquidity of certain of the Fund's investments. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there was an eleven-month transition period, ending December 31, 2020, during which the United Kingdom negotiated its future relationship with the EU. On January 1, 2021, the EU UK Trade and Cooperation Agreement, a bilateral trade and cooperation deal governing the future relationship between the UK and the EU went into effect. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Investing in China A Shares risk* – Investments in Class A Shares of Chinese companies involve certain risks and special considerations not typically associated with investments in U.S. companies, such as greater government control over the economy, political and legal uncertainty, currency fluctuations or blockage, the risk that the Chinese government may decide not to continue to support economic reform programs and the risk of nationalization or expropriation of assets. Additionally, the Chinese securities markets are emerging markets subject to the special risks applicable to developing and emerging market countries described elsewhere in this prospectus.
- *Portfolio turnover risk* – Frequent changes in the securities held by the Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Depository receipts risk* – Depository receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an un-

sponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject the Fund to liquidity risk.

- *Convertible securities risk* – Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Preferred stock risk* – Preferred stock represents an equity interest in a company that generally entitles the holder to receive, in preference to the holders of other stocks such as common stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the company.
- *Short sales risk* – A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager’s ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund’s potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund’s long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund’s overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.

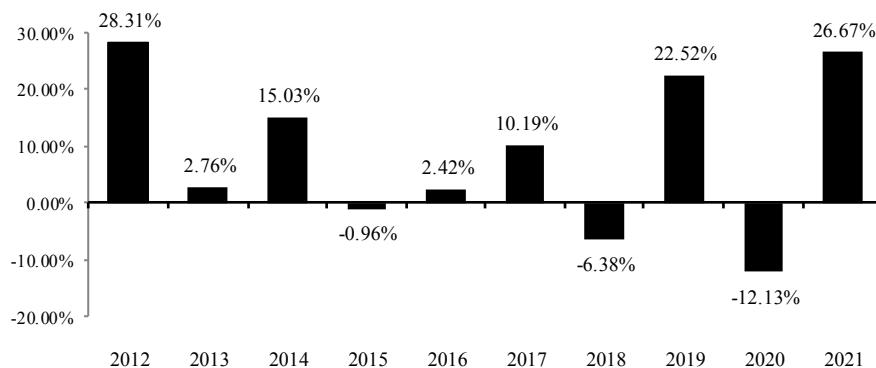

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. Performance prior to April 26, 2021 reflects the Fund’s results when managed by the former sub-adviser, Invesco Advisers, Inc. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 26, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the FTSE EPRA/Nareit Global Real Estate Index with the FTSE EPRA/Nareit Developed Index as the Fund's primary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL/WMC Government Money Market Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to achieve as high a level of current income as is consistent with the preservation of capital and maintenance of liquidity.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class A
Management Fee	0.16%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.10%
Total Annual Fund Operating Expenses	0.56%
Less Waiver/Reimbursement ^{2,3}	0.19%
Total Annual Fund Operating Expenses After Waiver/Reimbursement³	0.37%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² JNAM has contractually agreed to waive fees and/or reimburse expenses of the Fund to the extent necessary to limit the total operating expenses of each class of share of the Fund, transactional costs, if any, interest, taxes and dividend and extraordinary expenses, to an annual rate (as a percentage of the average daily net assets of the Fund) equal to or less than the Fund's investment income for the period. The Fund will suspend or reduce 12b-1 fee payments as needed in order to maintain a yield for Class A shares of at least 0%. Jackson National Life Distributors LLC may not recapture any suspended or reduced amounts. The fee waiver will continue through April 30, 2023. The fee waiver will automatically renew for additional subsequent one-year terms unless the Board of Trustees approves the elimination of the fee waiver. In addition, when the Fund receives income sufficient to pay a dividend, the Adviser may recapture previously waived fees and expenses for a period of three years. Any future reimbursement by the Fund to the Adviser of such previously waived fees and expenses would increase the Fund's expenses and may reduce the Fund's yield.

³ Expense information has been restated to reflect current fees.

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class I
Management Fee	0.16%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ^{1,3}	0.21%
Total Annual Fund Operating Expenses^{2,3}	0.37%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² JNAM has contractually agreed to waive fees and/or reimburse expenses of the Fund to the extent necessary to limit the total operating expenses of each class of share of the Fund, transactional costs, if any, interest, taxes and dividend and extraordinary expenses, to an annual rate (as a percentage of the average daily net assets of the Fund) equal to or less than the Fund's investment income for the period. The Fund will suspend or reduce 12b-1 fee payments as needed in order to maintain a yield for Class A shares of at least 0%. Jackson National Life Distributors LLC may not recapture any suspended or reduced amounts. The fee waiver will continue through April 30, 2023. The fee waiver will automatically renew for additional subsequent one-year terms unless the Board of Trustees approves the elimination of the fee waiver. In addition, when the Fund receives income sufficient to pay a dividend, the Adviser may recapture previously waived fees and expenses for a period of three years. Any future reimbursement by the Fund to the Adviser of such previously waived fees and expenses would increase the Fund's expenses and may reduce the Fund's yield.

³ Amounts restated to reflect current fees in connection with the recapture provision.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is in effect through April 30, 2023. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WMC Government Money Market Fund Class A			
1 year	3 years	5 years	10 years
\$38	\$160	\$294	\$683

JNL/WMC Government Money Market Fund Class I			
1 year	3 years	5 years	10 years
\$38	\$119	\$208	\$468

Principal Investment Strategies. Under normal circumstances, the Fund seeks to achieve its investment objective by investing at least 99.5% of its total assets in cash, U.S. Government securities, and/or repurchase agreements that are “collateralized fully” (i.e., collateralized by cash or government securities). The government securities typically have a maximum remaining maturity of 397 calendar days and the repurchase agreements are collateralized by cash or government securities with a maximum remaining maturity of 397 days. Under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in government securities or repurchase agreements collateralized by government securities. As a government money market fund, the Fund is exempt from requirements that permit money market funds to impose a liquidity fee and/or temporary redemption gate. While the Fund’s Board of Trustees may elect to subject the Fund to liquidity fee and gate requirements in the future, the Board of Trustees has not elected to do so at this time.

The Fund seeks to maintain a stable net asset value of \$1.00 per share, neither the Federal Deposit Insurance Company, nor any other government agency insures or protects your investment.

Principal Risks of Investing in the Fund. You could lose money by investing in the Fund. Although the Fund seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so. An investment in the Fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The Fund’s sponsor has no legal obligation to provide financial support to the Fund, and you should not expect that the sponsor will provide financial support to the Fund at any time.

As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. While the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to shares of the Fund itself. The principal risks associated with investing in the Fund include:

- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Income risk* – The Fund is subject to the risk that the income generated from the Fund’s investments may decline in the event of falling interest rates. Income risk may be high if the Fund’s income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund’s distributions to shareholders may decline when interest rates fall.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Repurchase agreements, purchase and sale contracts risk* – If the other party to a repurchase agreement or purchase and sale contract defaults on its obligation under the agreement, the Fund may suffer delays and incur costs or lose money in exercising its rights under the agreement. If the seller fails to repurchase the security under a repurchase agreement or purchase and sale contract, and the market value of the security declines, the Fund may lose money.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer’s obligations; or (iv) supported only by the credit of the issuer. The maximum potential

liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Prior to September 19, 2016, the Fund was operated as a prime money market fund.

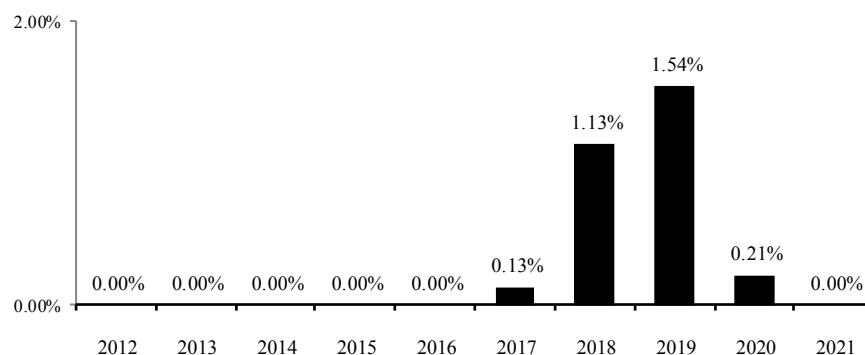

Effective September 19, 2016, the Fund operates as a government money market fund and, as such, invests at least 99.5% of its total assets in cash, government securities and/or repurchase agreements that are "collateralized fully" (i.e., backed by cash or government securities).

The 7-day yield of Class A on December 31, 2021, was 0.00%.

The 7-day yield of Class I on December 31, 2021, was 0.00%.

Portfolio Management.**Investment Adviser to the Fund:**

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

Wellington Management Company LLP ("Wellington Management")

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/WMC Value Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term growth of capital.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

JNL/WMC Value Fund Class I			
1 year	3 years	5 years	10 years
\$49	\$154	\$269	\$604

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	29%

Principal Investment Strategies. The Fund seeks to meet its objective by investing under normal circumstances at least 65% of its total assets in common stocks of domestic companies. Although the Fund may invest in companies with a broad range of market

capitalizations, the Fund will tend to focus on companies with large market capitalizations (generally above \$10 billion). Using a value approach, the Fund seeks to invest in stocks that Wellington Management Company LLP (“Sub-Adviser”) believes are underpriced relative to other stocks.

The Fund may invest up to 20% of its total assets in the securities of foreign issuers.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Accounting risk* – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund’s investment manager to identify appropriate investment opportunities.
- *Company risk* – Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company’s financial condition.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, public health or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company’s value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Managed portfolio risk* – As an actively managed portfolio, the value of the Fund’s investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser’s investment techniques could fail to achieve the Fund’s investment objective or negatively affect the Fund’s investment performance.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Stock risk* – Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company’s stock.

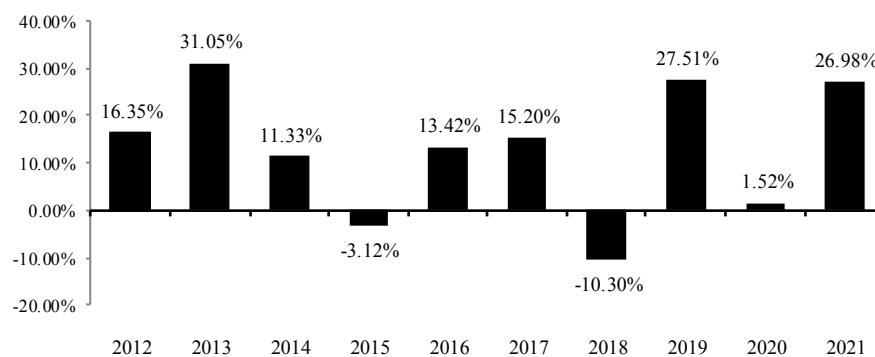

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

For consistency with the Fund's principal investment strategies, the Fund replaced the MSCI USA Value Index (Gross) with the Morningstar® US Large-Mid Cap Broad Value IndexSM as the Fund's primary benchmark.

* Effective June 30, 2022, Mr. Reckmeyer will be removed as a portfolio manager for the Fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL/Goldman Sachs Managed Conservative Fund

Class A
Class I

Investment Objectives. The investment objective of the Fund is to seek current income. Capital growth is a secondary objective.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.10%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.05%
Acquired Fund Fees and Expenses ²		0.57%
Total Annual Fund Operating Expenses		1.02%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.10%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.05%
Acquired Fund Fees and Expenses ²		0.57%
Total Annual Fund Operating Expenses		0.72%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Conservative Fund Class A			
1 year	3 years	5 years	10 years
\$104	\$325	\$563	\$1,248

JNL/Goldman Sachs Managed Conservative Fund Class I			
1 year	3 years	5 years	10 years
\$74	\$230	\$401	\$894

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	9%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust. Not all Funds of the JNL Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 10% to 30% of its assets to Underlying Funds that invest primarily in equity securities, 70% to 90% to Underlying Funds that invest primarily in fixed-income securities and 0% to 30% to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Allocation
- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-Income
- International
- International Fixed-Income
- Sector

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund’s investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Principal Risks of Investing” and “Glossary of Risks” sections of the Fund’s prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. (“GSAM”) or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund’s investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund’s shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *TIPS and inflation-linked bonds risk* – The value of inflation-protected securities generally fluctuates in response to changes in real interest rates, which are tied to the relationship between nominal interest rates and the rate of inflation. As a result, if inflation rates were to rise at a faster rate than nominal rates, real interest rates might decline, leading to an increase in the value of inflation-protected securities. In contrast, if nominal interest rates increased at a faster rate than inflation, real interest rates might rise, leading to a decrease in the value of inflation-protected securities.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.

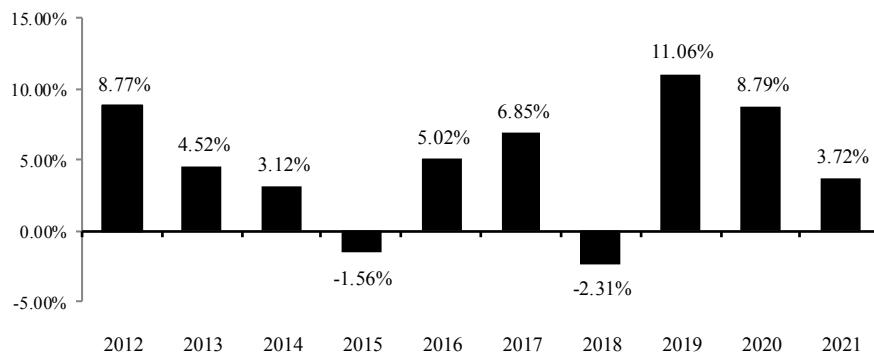

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the 80% Bloomberg U.S. Aggregate Bond Index/15% S&P 500 Index/5% MSCI EAFE Index (Net) with the 80% Bloomberg U.S. Aggregate Bond Index/15% S&P 500 Index/5% Morningstar® Developed Markets ex-North America Target Market Exposure IndexSM (Net) as the Fund's secondary benchmark.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC (“JNAM”)

Sub-Adviser:

Goldman Sachs Asset Management, L.P. (“GSAM”)

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Michael Carapucci	2010	Vice President, GSAM
Neill Nuttal	May 2021	Managing Director, GSAM
Alexandra Wilson-Elizondo	January 2022	Managing Director, GSAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL/Goldman Sachs Managed Moderate Fund

Class A
Class I

Investment Objective. The investment objective of the Fund is current income and capital growth.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.09%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.05%
Acquired Fund Fees and Expenses ²		0.60%
Total Annual Fund Operating Expenses		1.04%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.09%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.05%
Acquired Fund Fees and Expenses ²		0.60%
Total Annual Fund Operating Expenses		0.74%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Moderate Fund Class A			
1 year	3 years	5 years	10 years
\$106	\$331	\$574	\$1,271

JNL/Goldman Sachs Managed Moderate Fund Class I			
1 year	3 years	5 years	10 years
\$76	\$237	\$411	\$918

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	9%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust. Not all Funds of the JNL Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 30% to 50% of its assets to Underlying Funds that invest primarily in equity securities, 50% to 70% to Underlying Funds that invest primarily in fixed-income securities and 0-25% to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Allocation
- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-Income
- International
- International Fixed-Income
- Sector

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund’s investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Principal Risks of Investing” and “Glossary of Risks” sections of the Fund’s prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. (“GSAM”) or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *TIPS and inflation-linked bonds risk* – The value of inflation-protected securities generally fluctuates in response to changes in real interest rates, which are tied to the relationship between nominal interest rates and the rate of inflation. As a result, if inflation rates were to rise at a faster rate than nominal rates, real interest rates might decline, leading to an increase in the value of inflation-protected securities. In contrast, if nominal interest rates increased at a faster rate than inflation, real interest rates might rise, leading to a decrease in the value of inflation-protected securities.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.

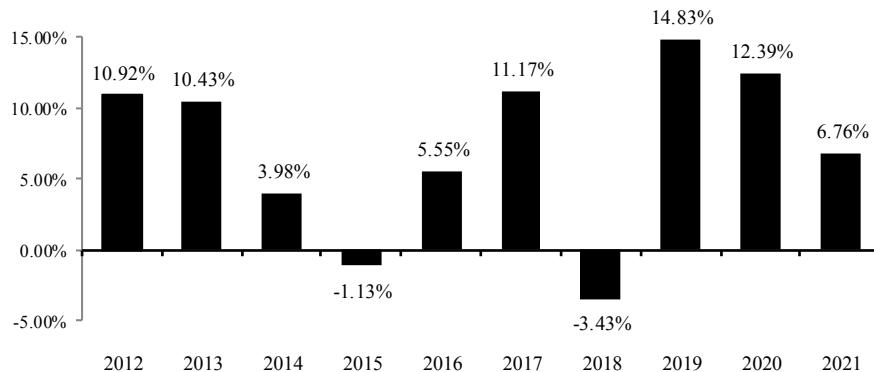

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund’s results when managed by the former sub-adviser, Standard & Poor’s Investment Advisory Services LLC. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective December 31, 2021, for consistency with the Fund’s principal investment strategies, the Fund replaced the 60% Bloomberg U.S. Aggregate Bond Index/30% S&P 500 Index/10% MSCI EAFE Index (Net) with the 60% Bloomberg U.S. Aggregate Bond Index/30% S&P 500 Index/10% Morningstar® Developed Markets ex-North America Target Market Exposure IndexSM (Net) as the Fund’s secondary benchmark.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC (“JNAM”)

Sub-Adviser:

Goldman Sachs Asset Management, L.P. (“GSAM”)

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Michael Carapucci	2010	Vice President, GSAM
Neill Nuttall	May 2021	Managing Director, GSAM
Alexandra Wilson-Elizondo	January 2022	Managing Director, GSAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL/Goldman Sachs Managed Moderate Growth Fund

Class A
Class I

Investment Objective. The investment objective of the Fund is capital growth and current income.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

**Shareholder Fees
(fees paid directly from your investment)**

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.08%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.05%
Acquired Fund Fees and Expenses ²		0.63%
Total Annual Fund Operating Expenses		1.06%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.08%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.05%
Acquired Fund Fees and Expenses ²		0.63%
Total Annual Fund Operating Expenses		0.76%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Moderate Growth Fund Class A			
1 year	3 years	5 years	10 years
\$108	\$337	\$585	\$1,294

JNL/Goldman Sachs Managed Moderate Growth Fund Class I			
1 year	3 years	5 years	10 years
\$78	\$243	\$422	\$942

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	7%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust. Not all Funds of the JNL Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 50% to 70% of its assets to Underlying Funds that invest primarily in equity securities, 30% to 50% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Allocation
- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-Income
- International
- International Fixed-Income
- Sector

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund’s investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Principal Risks of Investing” and “Glossary of Risks” sections of the Fund’s prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. (“GSAM”) or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an

investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.

- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *TIPS and inflation-linked bonds risk* – The value of inflation-protected securities generally fluctuates in response to changes in real interest rates, which are tied to the relationship between nominal interest rates and the rate of inflation. As a result, if inflation rates were to rise at a faster rate than nominal rates, real interest rates might decline, leading to an increase in the value of inflation-protected securities. In contrast, if nominal interest rates increased at a faster rate than inflation, real interest rates might rise, leading to a decrease in the value of inflation-protected securities.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.

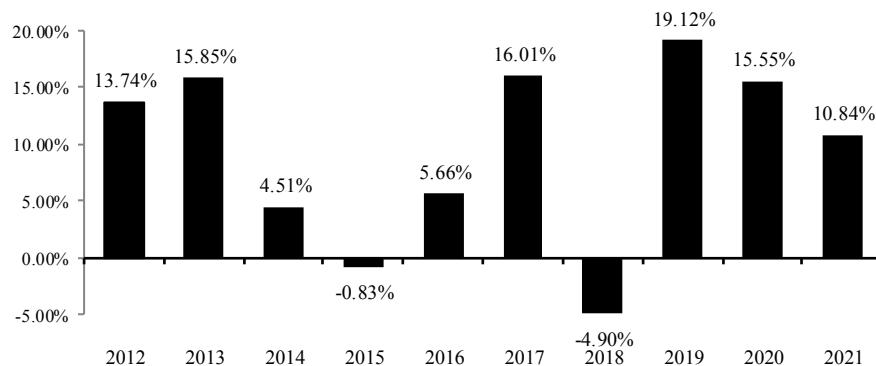

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the 45% S&P 500 Index/40% Bloomberg U.S. Aggregate Bond Index/15% MSCI EAFE Index (Net) with the 45% S&P 500 Index/40% Bloomberg U.S. Aggregate Bond Index/15% Morningstar® Developed Markets ex-North America Target Market Exposure IndexSM (Net) as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL/Goldman Sachs Managed Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek capital growth. Current income is a secondary objective.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

**Shareholder Fees
(fees paid directly from your investment)**

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.08%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.05%
Acquired Fund Fees and Expenses ²		0.65%
Total Annual Fund Operating Expenses		1.08%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.08%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.05%
Acquired Fund Fees and Expenses ²		0.65%
Total Annual Fund Operating Expenses		0.78%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Managed Growth Fund Class A			
1 year	3 years	5 years	10 years
\$110	\$343	\$595	\$1,317

JNL/Goldman Sachs Managed Growth Fund Class I			
1 year	3 years	5 years	10 years
\$80	\$249	\$433	\$966

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	8%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust. Not all Funds of the JNL Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 70% to 90% of its assets to Underlying Funds that invest primarily in equity securities, 10% to 30% to Underlying Funds that invest primarily in fixed-income securities and 0-15% to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Allocation
- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-Income
- International
- International Fixed-Income
- Sector

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund’s investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Principal Risks of Investing” and “Glossary of Risks” sections of the Fund’s prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. (“GSAM”) or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based

on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer’s obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *TIPS and inflation-linked bonds risk* – The value of inflation-protected securities generally fluctuates in response to changes in real interest rates, which are tied to the relationship between nominal interest rates and the rate of inflation. As a result, if inflation rates were to rise at a faster rate than nominal rates, real interest rates might decline, leading to an increase in the value of inflation-protected securities. In contrast, if nominal interest rates increased at a faster rate than inflation, real interest rates might rise, leading to a decrease in the value of inflation-protected securities.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.

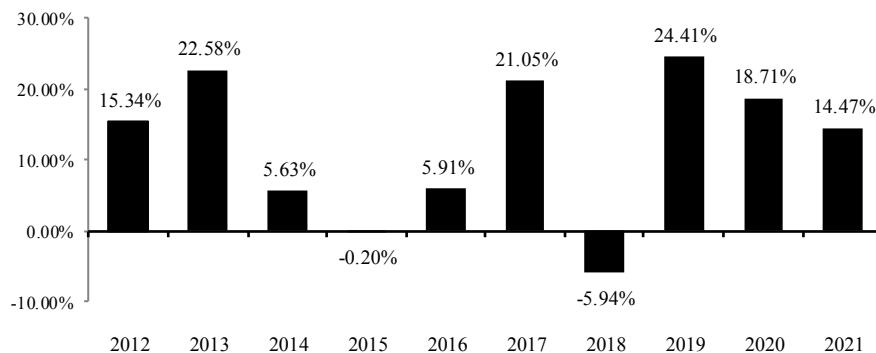

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund’s results when managed by the former sub-adviser, Standard & Poor’s Investment Advisory Services LLC. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective December 31, 2021, for consistency with the Fund’s principal investment strategies, the Fund replaced the 60% S&P 500 Index/20% Bloomberg U.S. Aggregate Bond Index/20% MSCI EAFE Index (Net) with the 60% S&P 500 Index/20% Bloomberg U.S. Aggregate Bond Index/20% Morningstar® Developed Markets ex-North America Target Market Exposure IndexSM (Net) as the Fund’s secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Period	
1/1/2021 - 12/31/2021	7%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust. Not all Funds of the JNL Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates up to 80% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 20% to Underlying Funds that invest primarily in fixed-income securities and 0% to 10% to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Allocation
- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-Income
- International
- International Fixed-Income
- Sector

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies. The Fund does not anticipate investing significant amounts in the alternative categories.

In determining allocations to any particular Underlying Fund, the Fund’s investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

The Fund does not take direct positions in asset-backed securities, mortgage-backed securities or junk bonds. Through the implementation of the Fund’s asset allocation model, the Fund may seek exposure to asset-backed securities, mortgage-backed securities or junk bonds by purchasing shares of mutual funds that may have direct or indirect exposure to these asset classes. Consequently, the risks to the Fund are limited to the risks associated with investing in mutual funds that have investments in these asset classes. The principal risks to investing in the Fund, including those that may arise from indirect exposure to asset-backed securities, mortgage-backed securities or junk bonds are detailed in the “Principal Risks of Investing” and “Glossary of Risks” sections of the Fund’s prospectus.

In addition, while the Fund will generally not invest in Underlying Funds that are sub-advised by Goldman Sachs Asset Management, L.P. (“GSAM”) or an affiliate of GSAM (each an “Affiliated Underlying Fund”), it may invest in an Affiliated Underlying Fund over other Underlying Funds when the Affiliated Underlying Fund is the only option available under the Fund’s asset allocation model.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Investment strategy risk* – The Sub-Adviser uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the Sub-Adviser in accordance with these investment strategies may not produce the returns the Sub-Adviser expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Investment style risk* – The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.

- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer’s obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *TIPS and inflation-linked bonds risk* – The value of inflation-protected securities generally fluctuates in response to changes in real interest rates, which are tied to the relationship between nominal interest rates and the rate of inflation. As a result, if inflation rates were to rise at a faster rate than nominal rates, real interest rates might decline, leading to an increase in the value of inflation-protected securities. In contrast, if nominal interest rates increased at a faster rate than inflation, real interest rates might rise, leading to a decrease in the value of inflation-protected securities.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives’ original cost.

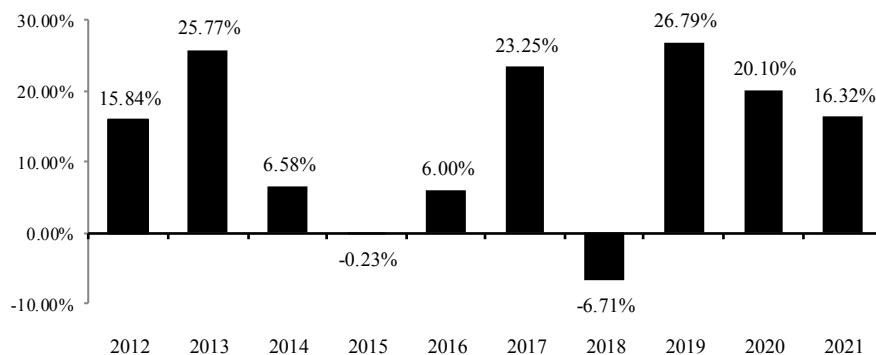

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to on or about July 1, 2019 reflects the Fund’s results when managed by the former sub-adviser, Standard & Poor’s Investment Advisory Services LLC. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective December 31, 2021, for consistency with the Fund’s principal investment strategies, the Fund replaced the 65% S&P 500 Index/10% Bloomberg U.S. Aggregate Bond Index/25% MSCI EAFE Index (Net) with the 65% S&P 500 Index/25% Morningstar® Developed Markets ex-North America Target Market Exposure IndexSM (Net)/10% Bloomberg U.S. Aggregate Bond Index as the Fund’s secondary benchmark.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC (“JNAM”)

Sub-Adviser:

Goldman Sachs Asset Management, L.P. (“GSAM”)

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Michael Carapucci	2010	Vice President, GSAM
Neill Nuttal	May 2021	Managing Director, GSAM
Alexandra Wilson-Elizondo	January 2022	Managing Director, GSAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL Conservative Allocation Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek the generation of income through investment in other funds (the “Underlying Funds”).

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class A
Management Fee	0.11%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.06%
Acquired Fund Fees and Expenses ²	0.64%
Total Annual Fund Operating Expenses	1.11%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class I
Management Fee	0.11%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.06%
Acquired Fund Fees and Expenses ²	0.64%
Total Annual Fund Operating Expenses	0.81%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Conservative Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$113	\$353	\$612	\$1,352

JNL Conservative Allocation Fund Class I			
1 year	3 years	5 years	10 years
\$83	\$259	\$450	\$1,002

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	25%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust. Not all Funds of the JNL Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

The Fund allocates its assets to Underlying Funds that invest primarily in fixed-income and other income-oriented securities (including high-yield (“junk”) bonds) of issuers in the U.S. and foreign countries, including emerging markets. An “emerging market country” is a country that, at the time of investment, is classified as an emerging or developing country by any supranational organization such as an institution in the World Bank Group or the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

Under normal circumstances, the Fund allocates approximately 0% to 40% of its assets to Underlying Funds that invest primarily in equity securities, 60% to 100% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Allocation
- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-Income
- International
- International Fixed-Income
- Sector

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Each Underlying Fund has its own investment objective and invests in certain types of securities or other assets in order to implement its investment strategy and seek to achieve its investment objective. Those types of securities or other assets include, but are not limited to: equity securities (such as common stock, preferred stock, and convertible securities), equity futures, equity swaps, currency forwards, currency futures, commodity futures and swaps, bond futures, fixed income swaps, interest rate swaps, and inflation swaps; U.S. and foreign government bonds, including inflation protected bonds (such as Treasury Inflation Protected Securities); bank loans; cash and cash equivalents, including but not limited to money market fund shares. These holdings can include investment exposure to both developed and emerging markets, and may be illiquid or thinly traded. Securities held by the Underlying Funds may be denominated in U.S. and/or non-U.S. currencies.

An Underlying Fund may be leveraged and therefore could be subject to a heightened risk of loss. The leverage involved in certain derivative transactions may result in an Underlying Fund’s net asset value being more sensitive to changes in the value of the related investment.

Some of the Underlying Funds, particularly those classified as fixed-income strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategies.

In determining allocations to any particular Underlying Fund, the Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Settlement risk* – Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

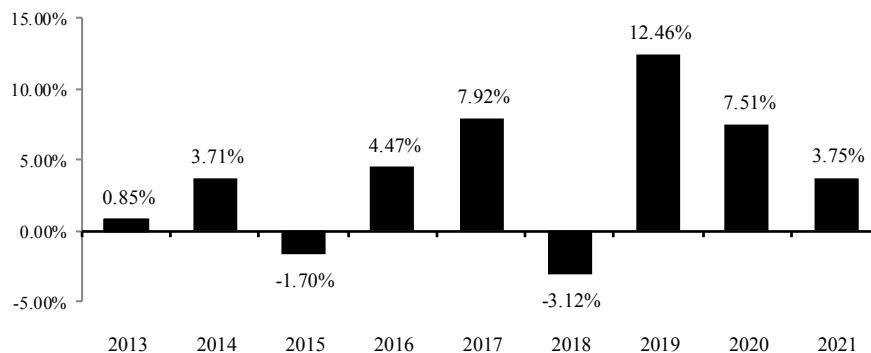

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the Fund, then a series of the Jackson Variable Series Trust for periods before the Fund’s registration statement became effective. Effective April 27, 2020, the Fund was combined with JNL/Nicholas Convertible Arbitrage Fund (the “Acquired Fund”), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund’s historic performance and does not reflect the performance of the Acquired Fund.

Effective December 31, 2021, for consistency with the Fund’s principal investment strategies, the Fund replaced the 20% MSCI All Country World Index (Net)/80% Bloomberg U.S. Aggregate Bond Index with the 20% Morningstar® Global Target Market Exposure IndexSM (Net)/80% Bloomberg U.S. Aggregate Bond Index as the Fund’s secondary benchmark.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC (“JNAM”)

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
William Harding, CFA	April 2015	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2015	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2015	Assistant Vice President and Portfolio Manager, JNAM
Kyle Ottwell, CFA, CAIA	April 2022	Director and Portfolio Manager, JNAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL Moderate Allocation Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek a balance between the generation of income and the long-term growth of capital through investment in other funds (the “Underlying Funds”).

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class A
Management Fee	0.09%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.05%
Acquired Fund Fees and Expenses ²	0.68%
Total Annual Fund Operating Expenses	1.12%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

	Class I
Management Fee	0.09%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses ¹	0.05%
Acquired Fund Fees and Expenses ²	0.68%
Total Annual Fund Operating Expenses	0.82%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Moderate Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$114	\$356	\$617	\$1,363

JNL Moderate Allocation Fund Class I			
1 year	3 years	5 years	10 years
\$84	\$262	\$455	\$1,014

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	
1/1/2021 - 12/31/2021	10%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust. Not all Funds of the JNL Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

The Fund allocates its assets to Underlying Funds that invest primarily in fixed-income and other income-oriented securities (including high-yield (“junk”) bonds) as well as dividend-paying equity securities of issuers in the U.S. and foreign countries, including emerging markets. An “emerging market country” is a country that, at the time of investment, is classified as an emerging or developing country by any supranational organization such as an institution in the World Bank Group or the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

Under normal circumstances, the Fund allocates approximately 20% to 60% of its assets to Underlying Funds that invest primarily in equity securities, 40% to 80% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Allocation
- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-Income
- International
- International Fixed-Income
- Sector

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Each Underlying Fund has its own investment objective and invests in certain types of securities or other assets in order to implement its investment strategy and seek to achieve its investment objective. Those types of securities or other assets include, but are not limited to: equity securities (such as common stock, preferred stock, and convertible securities), equity futures, equity swaps, currency forwards, currency futures, commodity futures and swaps, bond futures, fixed income swaps, interest rate swaps, and inflation swaps; U.S. and foreign government bonds, including inflation protected bonds (such as Treasury Inflation Protected Securities); bank loans; cash and cash equivalents, including but not limited to money market fund shares. These holdings can include investment exposure to both developed and emerging markets, and may be illiquid or thinly traded. Securities held by the Underlying Funds may be denominated in U.S. and/or non-U.S. currencies.

An Underlying Fund may be leveraged and therefore could be subject to a heightened risk of loss. The leverage involved in certain derivative transactions may result in an Underlying Fund’s net asset value being more sensitive to changes in the value of the related investment.

Some of the Underlying Funds, particularly those classified as fixed-income strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategies.

In determining allocations to any particular Underlying Fund, the Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Settlement risk* – Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing how the Fund’s average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

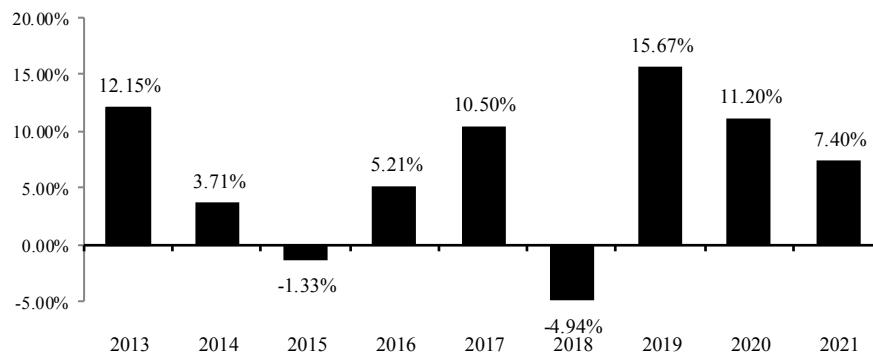

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the Fund, then a series of the Jackson Variable Series Trust for periods before the Fund’s registration statement became effective. Effective April 27, 2020, the Fund was combined with JNL Institutional Alt 50 Fund (the “Acquired Fund”), a series of JNL Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund’s historic performance and does not reflect the performance of the Acquired Fund.

Effective December 31, 2021, for consistency with the Fund’s principal investment strategies, the Fund replaced the 40% MSCI All Country World Index (Net)/60% Bloomberg U.S. Aggregate Bond Index with the 40% Morningstar® Global Target Market Exposure IndexSM (Net)/60% Bloomberg U.S. Aggregate Bond Index as the Fund’s secondary benchmark.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.08%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.05%
Acquired Fund Fees and Expenses ²		0.71%
Total Annual Fund Operating Expenses		0.84%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Moderate Growth Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$116	\$362	\$628	\$1,386

JNL Moderate Growth Allocation Fund Class I			
1 year	3 years	5 years	10 years
\$86	\$268	\$466	\$1,037

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	10%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust. Not all Funds of the JNL Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 40% to 80% of its assets to Underlying Funds that invest primarily in equity securities, 20% to 60% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Allocation
- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-Income
- International
- International Fixed-Income
- Sector

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

In determining allocations to any particular Underlying Fund, the Fund’s Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

Some of the Underlying Funds may invest in securities issued by companies located in countries outside the United States, including a range of developing and emerging market countries. An “emerging market country” is a country that, at the time of investment, is classified as an emerging or developing country by any supranational organization such as an institution in the World Bank Group or the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19).

19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the

costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective September 25, 2017, the Fund was combined with the JNAM Guidance – Moderate Growth Fund, a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNAM Guidance – Moderate Growth Fund.

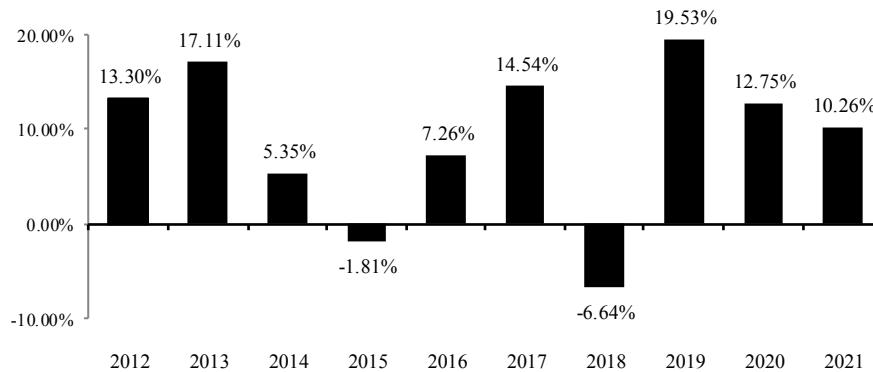

The performance data includes the performance of the Fund, then a series of the Jackson Variable Series Trust for periods before the Fund's registration statement became effective. Effective April 27, 2020, the Fund was combined with JNL Institutional Alt 25 Fund, a series of JNL Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNL Institutional Alt 25 Fund.

Effective April 26, 2021, the Fund was combined with the JNL/AQR Managed Futures Strategy Fund ("Acquired Fund"), with the Fund as the surviving Fund. The performance shown is the Fund's historical performance and does not reflect the performance of the Acquired Fund.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the 60% MSCI All Country World Index (Net)/40% Bloomberg U.S. Aggregate Bond Index with the 60% Morningstar® Global Target Market Exposure IndexSM (Net)/40% Bloomberg U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC (“JNAM”)

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
William Harding, CFA	November 2012	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Kyle Ottwell, CFA, CAIA	April 2022	Director and Portfolio Manager, JNAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL Growth Allocation Fund Class A Class I

Investment Objective. The investment objective of the Fund is to seek capital growth and current income.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

**Shareholder Fees
(fees paid directly from your investment)**

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.09%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.05%
Acquired Fund Fees and Expenses ²		0.73%
Total Annual Fund Operating Expenses		1.17%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.09%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.05%
Acquired Fund Fees and Expenses ²		0.73%
Total Annual Fund Operating Expenses		0.87%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Growth Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$119	\$372	\$644	\$1,420

JNL Growth Allocation Fund Class I			
1 year	3 years	5 years	10 years
\$89	\$278	\$482	\$1,073

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	12%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust. Not all Funds of the JNL Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 60% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 40% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Allocation
- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-Income
- International
- International Fixed-Income
- Sector

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

In determining allocations to any particular Underlying Fund, the Fund’s Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

Some of the Underlying Funds may invest in securities issued by companies located in countries outside the United States, including a range of developing and emerging market countries. An “emerging market country” is a country that, at the time of investment, is classified as an emerging or developing country by any supranational organization such as an institution in the World Bank Group or the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19).

19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the

costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

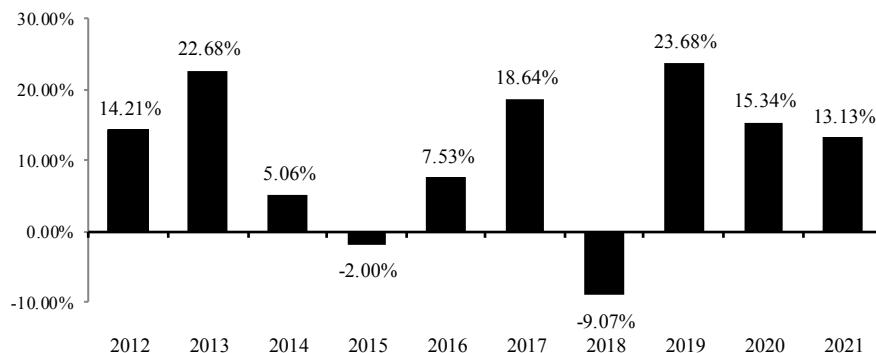

Effective September 25, 2017, the Fund was combined with the JNAM Guidance – Growth Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective April 25, 2022, the Fund was combined with the JNL/Franklin Templeton Growth Allocation Fund ("Acquired Fund"), with the Fund as the surviving Fund. The performance shown is the Fund's historical performance and does not reflect the performance of the Acquired Fund.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the 80% MSCI All Country World Index (Net)/20% Bloomberg U.S. Aggregate Bond Index with the 80% Morningstar® Global Target Market Exposure IndexSM (Net)/20% Bloomberg U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC (“JNAM”)

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
William Harding, CFA	November 2012	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Kyle Ottwell, CFA, CAIA	April 2022	Director and Portfolio Manager, JNAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s Website for more information.

Summary Prospectus – April 25, 2022

JNL Aggressive Growth Allocation Fund Class A Class I

Investment Objective. The investment objective of the Fund is capital growth.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

**Shareholder Fees
(fees paid directly from your investment)**

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class A
Management Fee		0.09%
Distribution and/or Service (12b-1) Fees		0.30%
Other Expenses ¹		0.06%
Acquired Fund Fees and Expenses ²		0.74%
Total Annual Fund Operating Expenses		1.19%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.09%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses ¹		0.06%
Acquired Fund Fees and Expenses ²		0.74%
Total Annual Fund Operating Expenses		0.89%

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Aggressive Growth Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$121	\$378	\$654	\$1,443

JNL Aggressive Growth Allocation Fund Class I			
1 year	3 years	5 years	10 years
\$91	\$284	\$493	\$1,096

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2021 - 12/31/2021	12%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust. Not all Funds of the JNL Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 70% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 30% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Allocation
- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-Income
- International
- International Fixed-Income
- Sector

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, and Sector investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Allocation investment category include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund’s exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund’s relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

In determining allocations to any particular Underlying Fund, the Fund’s Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

Some of the Underlying Funds may invest in securities issued by companies located in countries outside the United States, including a range of developing and emerging market countries. An “emerging market country” is a country that, at the time of investment, is classified as an emerging or developing country by any supranational organization such as an institution in the World Bank Group or the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- *Allocation risk* – The Fund’s ability to achieve its investment objective depends upon the investment manager’s analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* – The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19).

19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* – The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* – High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as “junk bonds,” and are considered below “investment-grade” by national ratings agencies. Junk bonds are subject to the increased risk of an issuer’s inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Investment in other investment companies risk* – As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the

costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 29, 2011 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

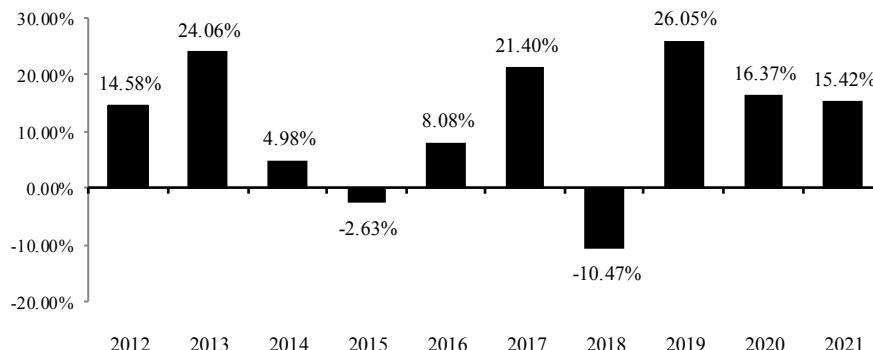

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective September 25, 2017, the Fund was combined with the JNAM Guidance – Equity 100 Fund and JNAM Guidance – Maximum Growth Fund (together, the "Acquired Funds"), series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Funds.

Effective December 31, 2021, for consistency with the Fund's principal investment strategies, the Fund replaced the 90% MSCI All Country World Index (Net)/10% Bloomberg U.S. Aggregate Bond Index with the 90% Morningstar® Global Target Market Exposure IndexSM (Net)/10% Bloomberg U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC (“JNAM”)

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
William Harding, CFA	November 2012	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	April 2014	Assistant Vice President and Portfolio Manager, JNAM
Kyle Ottwell, CFA, CAIA	April 2022	Director and Portfolio Manager, JNAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company (“Jackson”) or Jackson National Life Insurance Company of New York (“Jackson NY”) and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts.

You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL Bond Index Fund Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Master Fund”) is to track the performance of the Bloomberg U.S. Aggregate Bond Index to provide a moderate rate of income by investing in domestic fixed-income investments.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.20%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses		0.01%
Acquired Fund Fees and Expenses ¹		0.01%
Total Annual Fund Operating Expenses		0.22%
Less Waiver/Reimbursement ²		0.13%
Total Annual Fund Operating Expenses After Waiver/Reimbursement		0.09%

¹ Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

² JNAM has contractually agreed to waive 0.13% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Bond Index Fund Class I			
1 year	3 years	5 years	10 years
\$9	\$58	\$111	\$267

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	Master Fund
4/26/2021 - 12/31/2021	41%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in fixed-income securities that seek to track the performance and characteristics of the Bloomberg U.S. Aggregate Bond Index (“Index”) that Mellon Investments Corporation (“Mellon” or “Sub-Adviser”) believes to be important such as Option Adjusted Duration, Maturity, Average Quality Rating, Sector/Industries, and Yield to worst. The Index includes Treasuries, government-related credit, mortgage-backed securities (agency fixed-rate pass-throughs), asset-backed securities and commercial mortgage backed securities (agency and non-agency). Research and experience indicate that it is impractical to attempt to fully replicate most broad fixed-income securities market indices. The Index includes thousands of issues, many of which may be illiquid and unavailable in the secondary markets. Additionally, reinvestment of cash flows would be costly in a full

replication environment, as it would entail trading many issues in uneven amounts. Given these difficulties, the Sub-Adviser utilizes a representative sampling approach that combines analysis and the experience and judgment of its investment professionals.

Through the representative sampling approach, the Sub-Adviser selects what it believes is a representative basket of securities in order to match the important risk characteristics of the Index. Given this fixed income index cannot be fully replicated, the Fund uses a representative sampling approach to select bonds that match the important risk characteristics of the Index. The Fund's holdings are rebalanced on a monthly basis to reflect changes in the composition of the Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through representative sampling. The Fund does not employ traditional methods of active investment management, such as actively buying and selling bonds based upon interest rate bets or sector rotation. Indexing may offer a cost-effective approach to gaining diversified market exposure over the long-term.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Interest rate risk* – When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Fixed-income risk* – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *U.S. Government securities risk* – Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Credit risk* – The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *Mortgage-related and other asset-backed securities risk* – Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Extension risk* – When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- *Tracking error risk* – Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

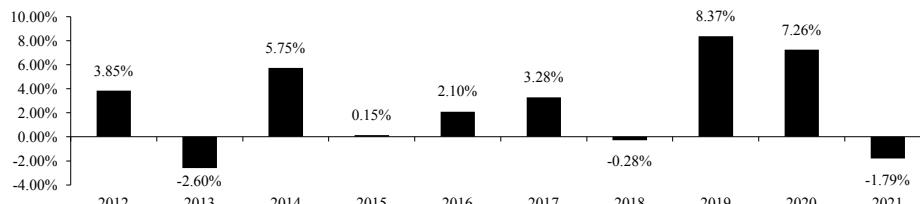

- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Index investing risk* – The Fund’s indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should the Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund’s shares, changes in the composition of the index, and the Fund’s expenses. Certain regulatory limitations, such as fund diversification requirements, may limit the ability of the Fund to completely replicate an index.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.

Performance. The Fund is newly formed and does not have performance information of its own prior to April 26, 2021. Effective April 26, 2021, the Fund serves as the Master Fund for the JNL/Mellon Bond Index Fund (“Feeder Fund”). Performance, which provides some indication of the risks of investing in the Fund, will be available once the Fund has completed one full calendar year of operations. The performance information set forth below is the performance of the Feeder Fund. The performance information shown provides some indication of the risks of investing in the Feeder Fund by showing changes in the Feeder Fund’s performance from year to year and by showing how the Feeder Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Feeder Fund. The Feeder Fund’s past performance is not necessarily an indication of how the Feeder Fund or the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Class I

Best Quarter (ended 3/31/2020): 3.27%; Worst Quarter (ended 3/31/2021): -3.35%

Average Annual Total Returns as of 12/31/2021

	1 year	5 year	10 year
JNL/Mellon Bond Index Fund (Class I)	-1.79%	3.29%	2.55%

Portfolio Management.**Investment Adviser to the Fund:**

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

Mellon Investments Corporation ("Mellon")

Portfolio Managers:

Name:	Joined Fund Management Team In:	Title:
Nancy Rogers, CFA	April 2021*	Managing Director, Head of Fixed Income Index – Portfolio Management, Mellon
Gregg A. Lee, CFA	April 2021*	Director, Senior Portfolio Manager – Fixed Income, Mellon

* Nancy Rogers and Gregg Lee joined the Feeder Fund's management team in 2015 and 2014, respectively.

Purchase and Redemption of Fund Shares

Shares of the Fund are currently offered to life insurance company separate accounts, as well as a "feeder fund" in a master-feeder arrangement.

All such shares may be purchased or redeemed at net asset value without any sales or redemption charges. These purchases and redemptions are made at the price next determined after such purchases and redemptions of units of the separate accounts or the Feeder Fund.

Separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL Emerging Markets Index Fund Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Master Fund”) is to track the performance of the Morningstar® Emerging Markets Target Market Exposure Index□ (Net), which is a rules-based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the emerging markets equity markets.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.20%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses		0.03%
Total Annual Fund Operating Expenses		0.23%
Less Waiver/Reimbursement ¹		0.06%
Total Annual Fund Operating Expenses After Waiver/Reimbursement		0.17%

¹ JNAM has contractually agreed to waive 0.06% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Emerging Markets Index Fund Class I			
1 year	3 years	5 years	10 years
\$17	\$68	\$123	\$287

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	Master Fund
4/26/2021 - 12/31/2021	20%

Principal Investment Strategies. The Fund seeks to invest under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities included in the Morningstar® Emerging Markets Target Market Exposure Index□ (Net) (“Index”), including depositary receipts representing securities of the Index; which may be in the form of American Depository receipts (“ADRs”), Global Depository receipts (“GDRs”) and European Depository receipts (“EDRs”).

The Index is a rules-based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the Emerging Markets equity markets. Morningstar Indexes classifies Brazil, Chile, Colombia, Mexico, Peru, China, India, Indonesia, South Korea, Malaysia, Pakistan, Philippines, Taiwan, Thailand, Czech Republic, Greece, Hungary, Poland, Russia, Turkey, Egypt, Qatar, South Africa, Saudi Arabia, and United Arab Emirates as Emerging Markets. Morningstar Indexes reviews the

market classification annually and consecutively updates the list. Effective at the June 2021 reconstitution, Poland is expected to be reclassified as a developed market.

There is no specific tilt based on region. While the Index will contain securities from China and Russia, their weights are determined solely in accordance with their float market capitalization. As of December 31, 2021, total percentage weight of securities from China was 31.29% and that from Russia was 3.24%.

The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and is effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and is effective the following Monday.

As of December 31, 2021, the Index had 1,418 constituents and the full market capitalization range was \$67.02 million to \$1,905.98 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the performance of the Index by investing all or substantially all of its assets in the securities that comprise the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

Emerging market issuers may not be subject to accounting, auditing, legal and financial reporting standards comparable to those in developed markets, and emerging markets generally have less diverse and less mature economic structures, as well as less stable political systems, than those of developed countries. Because the Fund seeks to track an index comprised of foreign securities, it may be more susceptible to such risks than a Fund that seeks to track an index comprised of domestic securities.

When attempting to replicate the Index, portfolio turnover is typically limited to what the Index adds and deletes, contract owner contributions and withdrawals, fund of fund purchases and redemptions, and reinvestment income. The replicated portfolio does not require rebalancing as a result of market movement. The Fund stays aligned with the Index automatically with the change in share price, due to the close similarity between the holdings of the Index and those of the Fund. The Fund will rebalance on or about the dates that the Index rebalances.

The Fund will use to a significant degree derivative instruments, such as options, futures, and options on futures (including those relating to securities, indexes, foreign currencies and interest rates), forward contracts, swaps and hybrid instruments (typically structured notes), as a substitute for investing directly in equities, bonds and currencies in connection with its investment strategy. The Fund also may use such derivatives as part of a hedging strategy or for other purposes related to the management of the Fund. Derivatives may be entered into on established exchanges or through privately negotiated transactions referred to as over-the-counter derivatives. The Fund also may purchase or sell securities on a forward commitment (including “TBA” (to be announced) basis). These transactions involve a commitment by the Fund to purchase or sell particular securities with payment and delivery taking place at a future date and permit the Fund to lock in a price or yield on a security it owns or intends to purchase, regardless of future changes in interest rates or market conditions.

The Fund also may invest in derivative securities to manage cash flows and equitize dividend accruals.

In addition, the Fund may also invest in exchange-traded funds (“ETFs”). ETFs may be used in the Fund to invest cash until such time as the Fund purchases local securities. ETFs may also be used to gain exposure to local markets that may be closed, or that are expensive or difficult to trade in local shares.

The Fund may concentrate its investments in an industry or group of industries to the extent that the Index is designed to track is also so concentrated.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Emerging markets and less developed countries risk* – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks,

investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *China risk* – The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions and policy in China and surrounding Asian countries. A relatively small number of Chinese companies represents a large portion of China's total market and thus may be more sensitive to adverse political or economic circumstances and market movements. The economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, allocation of resources and capital reinvestment, among others. Under China's political and economic system, the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership. In addition, expropriation, including nationalization, repatriation of capital, confiscatory taxation, political, economic or social instability or other developments could adversely affect and significantly diminish the values of the Chinese companies in which the Fund invests. The Chinese securities markets are subject to more frequent trading halts and low trading volume, resulting in substantially less liquidity and greater price volatility. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.
- *Russia investment risk* – The Fund may invest a portion of its assets in securities issued by companies located in Russia. Because of the recent formation of the Russian securities markets as well as the underdeveloped state of Russia's banking system, settlement, clearing and registration of securities transactions are subject to significant risks. With the implementation of the National Settlement Depository ("NSD") in Russia as a recognized central securities depository, title to Russian equity securities is now based on the records of the NSD and not the registrars. Although the implementation of the NSD is generally expected to decrease the risk of loss in connection with recording and transferring title to securities, issues resulting in loss still might occur. In addition, issuers and registrars are still prominent in the validation and approval of documentation requirements for corporate action processing in Russia. Because the documentation requirements and approval criteria vary between registrars and/or issuers, there remain unclear and inconsistent market standards in the Russian market with respect to the completion and submission of corporate action elections. To the extent that the Fund suffers a loss relating to title or corporate actions relating to its portfolio securities, it may be difficult for the Fund to enforce its rights or otherwise remedy the loss.

- *Liquidity risk* – Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Concentration risk* – The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Counterparty risk* – Transactions involving a counterparty are subject to the credit risk of the counterparty. A fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter (“OTC”) derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- *Depository receipts risk* – Depository receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an un-sponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject the Fund to liquidity risk.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Index investing risk* – The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should the Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as fund diversification requirements, may limit the ability of the Fund to completely replicate an index.
- *Tracking error risk* – Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax

gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

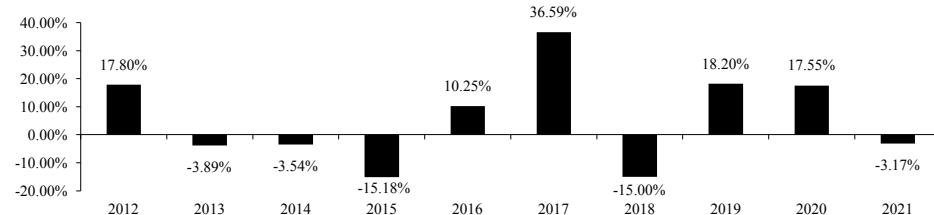

- *Clearance and settlement risk* – Foreign securities markets have different clearance and settlement procedures, and in certain markets there have been times when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct such transactions. This risk may be magnified in emerging markets because settlement systems may be less organized, creating a risk that settlements may be delayed or lost because of failures or defects in such systems.

Performance. The Fund is newly formed and does not have performance information of its own prior to April 26, 2021. Effective April 26, 2021, the Fund serves as the Master Fund for the JNL/Mellon Emerging Markets Index Fund (“Feeder Fund”). Performance, which provides some indication of the risks of investing in the Fund, will be available once the Fund has completed one full calendar year of operations. The performance information set forth below is the performance of the Feeder Fund. The performance information shown provides some indication of the risks of investing in the Feeder Fund by showing changes in the Feeder Fund’s performance from year to year and by showing how the Feeder Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Feeder Fund. The Feeder Fund’s past performance is not necessarily an indication of how the Feeder Fund or the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

* Marlene Walker Smith, David France, Todd Frysinger, Vlasta Sheremeta, and Michael Stoll joined the Feeder Fund's management team in 2020.

Purchase and Redemption of Fund Shares

Shares of the Fund are currently offered to life insurance company separate accounts, as well as a "feeder fund" in a master-feeder arrangement.

All such shares may be purchased or redeemed at net asset value without any sales or redemption charges. These purchases and redemptions are made at the price next determined after such purchases and redemptions of units of the separate accounts or the Feeder Fund.

Separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL International Index Fund Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Master Fund”) is to track the performance of the Morningstar® Developed Markets ex-North America Target Market Exposure Index□ (Net) (“Index”) to provide long-term capital growth by investing in international equity securities.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

Shareholder Fees
(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.20%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses		0.02%
Total Annual Fund Operating Expenses		0.22%
Less Waiver/Reimbursement ¹		0.11%
Total Annual Fund Operating Expenses After Waiver/Reimbursement		0.11%

¹ JNAM has contractually agreed to waive 0.11% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL International Index Fund Class I			
1 year	3 years	5 years	10 years
\$11	\$60	\$113	\$269

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	Master Fund
4/26/2021 - 12/31/2021	5%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the Index or derivative securities economically related to the Index. The Fund seeks to track the performance and characteristics of the Index, a rules-based, float market capitalization-weighted index designed to cover 85% of the equity float-adjusted market capitalization of the Developed Markets ex-North America equity markets. As of December 31, 2021, the Index included equities listed in Austria, Australia, Belgium, Switzerland, Germany, Denmark, Spain, Finland, France, Great Britain, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, Norway, New Zealand, Portugal, Sweden, Singapore, and the U.S. (the sole current U.S. holding is a British entity listed in the U.S.).

The Index is reconstituted semiannually and implemented after the close of business on the third Friday of June and December and is effective the following Monday. The Index is rebalanced quarterly and implemented after the close of business on the third Friday of March, June, September, and December and is effective the following Monday.

As of December 31, 2021, the Index had 974 constituents and the full market capitalization range was \$350 million to \$417.31 billion. The number of securities is not fixed and can vary from reconstitution to reconstitution.

To implement this strategy, the Fund may invest up to 50% of its net asset value in financial futures, a type of derivative, to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. In addition, the Fund may use foreign currency forward contracts, a type of derivative, to maintain the approximate currency exposure of the Index. The Fund's use of financial futures and foreign currency forward contracts is intended to assist replicating the investment performance of the Index.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its Index, to assist with Index rebalances, and to meet redemption or purchase requests.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective approach to gaining diversified market exposure over the long term. The Fund's holdings are rebalanced on a quarterly basis to reflect changes in the composition of the Index.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Foreign securities risk* – Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *License termination risk* – The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests

in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.

- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, public health or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Forward and futures contract risk* – The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *Index investing risk* – The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should the Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as fund diversification requirements, may limit the ability of the Fund to completely replicate an index.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *Tracking error risk* – Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.
- *Asian investment risk* – Investing in Asia involves many of the same risks as investing in foreign securities. In addition, since Asia includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Asia and to be more volatile than the performance of more geographically diversified funds.
- *Currency risk* – Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *European investment risk* – Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. The European financial markets have recently experienced volatility and adverse trends due to concerns about economic downturns in, or rising government debt levels of, several European countries as well as acts of war in the region. These events may spread to other countries in Europe and may affect the value and liquidity of certain of the Fund's investments. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be

a member of the EU. Following the withdrawal, there was an eleven-month transition period, ending December 31, 2020, during which the United Kingdom negotiated its future relationship with the EU. On January 1, 2021, the EU UK Trade and Cooperation Agreement, a bilateral trade and cooperation deal governing the future relationship between the UK and the EU went into effect. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.

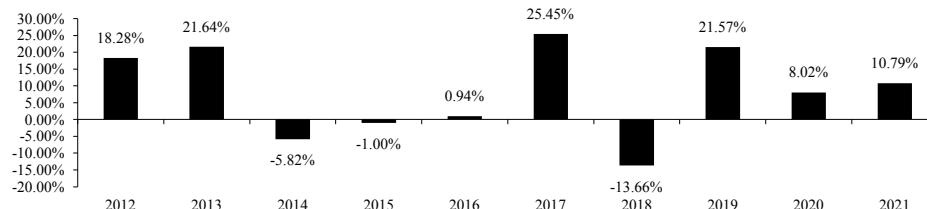

- **Market risk** – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.

Performance. The Fund is newly formed and does not have performance information of its own prior to April 26, 2021. Effective April 26, 2021, the Fund serves as the Master Fund for the JNL/Mellon International Index Fund (“Feeder Fund”). Performance, which provides some indication of the risks of investing in the Fund, will be available once the Fund has completed one full calendar year of operations. The performance information set forth below is the performance of the Feeder Fund. The performance information shown provides some indication of the risks of investing in the Feeder Fund by showing changes in the Feeder Fund’s performance from year to year and by showing how the Feeder Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Feeder Fund. The Feeder Fund’s past performance is not necessarily an indication of how the Feeder Fund or the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Shares of the Fund are currently offered to life insurance company separate accounts, as well as a "feeder fund" in a master-feeder arrangement.

All such shares may be purchased or redeemed at net asset value without any sales or redemption charges. These purchases and redemptions are made at the price next determined after such purchases and redemptions of units of the separate accounts or the Feeder Fund.

Separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL Mid Cap Index Fund Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Master Fund”) is to track the performance of the S&P MidCap 400 Index to provide long-term capital growth by investing in equity securities of medium capitalization-weighted domestic corporations.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

**Shareholder Fees
(fees paid directly from your investment)**

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.20%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses		0.03%
Total Annual Fund Operating Expenses		0.23%
Less Waiver/Reimbursement ¹		0.12%
Total Annual Fund Operating Expenses After Waiver/Reimbursement		0.11%

¹ JNAM has contractually agreed to waive 0.12% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Mid Cap Index Fund Class I			
1 year	3 years	5 years	10 years
\$11	\$62	\$117	\$281

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	Master Fund
4/26/2021 - 12/31/2021	12%

Principal Investment Strategies. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the S&P MidCap 400 Index in proportion to their market capitalization weighting in the S&P MidCap 400 Index. The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the S&P MidCap 400 Index through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the S&P MidCap 400 Index by investing all or substantially all of its assets in the stocks that make up the S&P MidCap 400 Index. As of December 31, 2021, the market capitalization range of the S&P MidCap 400 Index is \$1.37 billion to \$18.58 billion. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long term.

When attempting to replicate a capitalization-weighted index such as the S&P MidCap 400 Index, portfolio turnover is reduced to what the index adds and deletes, contract owner contributions and withdrawals, and reinvestment of income. The replicated portfolio does not require rebalancing as a result of market movement. It is rebalanced automatically with the change in share prices of the securities owned. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization investing risk* – The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *License termination risk* – The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, public health or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Index investing risk* – The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should the Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as fund diversification requirements, may limit the ability of the Fund to completely replicate an index.

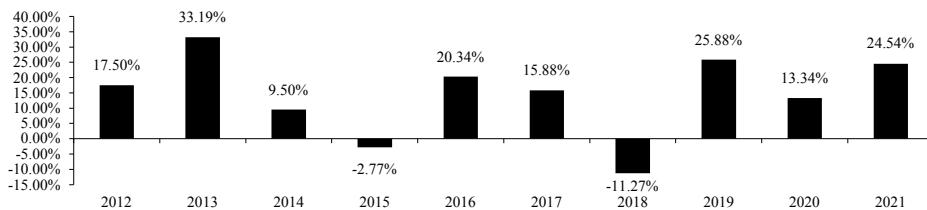

- *Large-capitalization investing risk* – Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund’s performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *Tracking error risk* – Tracking error is the divergence of the Fund’s performance from that of the Index. The Fund’s return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund’s portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund’s holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The Fund is newly formed and does not have performance information of its own prior to April 26, 2021. Effective April 26, 2021, the Fund serves as the Master Fund for the JNL/Mellon S&P 400 MidCap Index Fund (“Feeder Fund”). Performance, which provides some indication of the risks of investing in the Fund, will be available once the Fund has completed one full calendar year of operations. The performance information set forth below is the performance of the Feeder Fund. The performance information shown provides some indication of the risks of investing in the Feeder Fund by showing changes in the Feeder Fund’s performance from year to year and by showing how the Feeder Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Feeder Fund. The Feeder Fund’s past performance is not necessarily an indication of how the Feeder Fund or the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Shares of the Fund are currently offered to life insurance company separate accounts, as well as a "feeder fund" in a master-feeder arrangement.

All such shares may be purchased or redeemed at net asset value without any sales or redemption charges. These purchases and redemptions are made at the price next determined after such purchases and redemptions of units of the separate accounts or the Feeder Fund.

Separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 25, 2022

JNL Small Cap Index Fund Class I

Investment Objective. The investment objective of the Fund (“Fund” or “Master Fund”) is to track the performance of the S&P SmallCap 600 Index to provide long-term growth of capital by investing in equity securities of small- to mid-size domestic companies.

Expenses. This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.

**Shareholder Fees
(fees paid directly from your investment)**

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		Class I
Management Fee		0.20%
Distribution and/or Service (12b-1) Fees		0.00%
Other Expenses		0.03%
Total Annual Fund Operating Expenses		0.23%
Less Waiver/Reimbursement ¹		0.12%
Total Annual Fund Operating Expenses After Waiver/Reimbursement		0.11%

¹ JNAM has contractually agreed to waive 0.12% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is discontinued after one year. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Small Cap Index Fund Class I			
1 year	3 years	5 years	10 years
\$11	\$62	\$117	\$281

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund’s performance.

Period	Master Fund
4/26/2021 - 12/31/2021	17%

Principal Investment Strategies. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the S&P SmallCap 600 Index in proportion to their market capitalization weighting in the S&P SmallCap 600 Index. The S&P SmallCap 600 Index is a quarterly-rebalanced, float-adjusted market cap weighted index comprised of approximately 600 U.S. common equities and REITs that meet the index provider’s criteria for market capitalization, public float, financial viability, liquidity, price reasonableness, and sector representation. The S&P SmallCap 600 Index may invest across all GICS sectors and may include investments in financial services companies. The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the S&P SmallCap 600 Index through representative sampling. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the S&P

SmallCap 600 Index by investing all or substantially all of its assets in the stocks that make up the S&P SmallCap 600 Index. As of December 31, 2021, the market capitalization range for the S&P SmallCap 600 Index was \$188.65 million to \$7.93 billion.

When attempting to replicate a capitalization-weighted index such as the S&P SmallCap 600 Index, portfolio turnover is reduced to what the index adds and deletes, contract owner contributions and withdrawals, and reinvestment of income. The replicated portfolio does not require rebalancing as a result of market movement. It is rebalanced automatically with the change in share prices of the securities owned. The Fund's holdings are rebalanced on a quarterly basis to reflect changes in the composition of the S&P SmallCap 600 Index.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the S&P SmallCap 600 Index.

The Fund may lend its securities to increase its income.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- *Equity securities risk* – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased or held by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Small-capitalization investing risk* – Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *License termination risk* – The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- *Derivatives risk* – Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost.
- *Exchange-traded funds investing risk* – An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Financial services risk* – An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, public health or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.

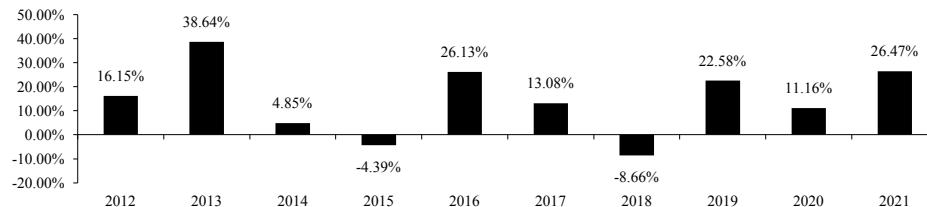

- *Index investing risk* – The Fund’s indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should the Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund’s shares, changes in the composition of the index, and the Fund’s expenses. Certain regulatory limitations, such as fund diversification requirements, may limit the ability of the Fund to completely replicate an index.
- *Market risk* – Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, including widespread disease and virus epidemics or pandemics such as the coronavirus (COVID-19) pandemic, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Passive investment risk* – The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund’s performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *Tracking error risk* – Tracking error is the divergence of the Fund’s performance from that of the Index. The Fund’s return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund’s portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund’s holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The Fund is newly formed and does not have performance information of its own prior to April 26, 2021. Effective April 26, 2021, the Fund serves as the Master Fund for the JNL/Mellon Small Cap Index Fund (“Feeder Fund”). Performance, which provides some indication of the risks of investing in the Fund, will be available once the Fund has completed one full calendar year of operations. The performance information set forth below is the performance of the Feeder Fund. The performance information shown provides some indication of the risks of investing in the Feeder Fund by showing changes in the Feeder Fund’s performance from year to year and by showing how the Feeder Fund’s average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Feeder Fund. The Feeder Fund’s past performance is not necessarily an indication of how the Feeder Fund or the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Class I

Best Quarter (ended 12/31/2020): 31.26%; Worst Quarter (ended 3/31/2020): -32.68%

Purchase and Redemption of Fund Shares

Shares of the Fund are currently offered to life insurance company separate accounts, as well as a "feeder fund" in a master-feeder arrangement.

All such shares may be purchased or redeemed at net asset value without any sales or redemption charges. These purchases and redemptions are made at the price next determined after such purchases and redemptions of units of the separate accounts or the Feeder Fund.

Separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

ADDITIONAL INFORMATION ABOUT EACH FUND

JNL/American Funds Balanced Fund

Class A

Class I

Investment Objective. The Fund (“Feeder Fund”) seeks high total return (including income and capital gains) consistent with preservation of capital over the long term through exclusive investment in the shares of the American Funds Insurance Series[®] - Asset Allocation Fund□ (“Master Fund”).

Principal Investment Strategies. The Fund operates as a “feeder fund” and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund.

The Master Fund invests in a diversified portfolio of common stocks and other equity securities, bonds and other intermediate and long-term debt securities including U.S. Government securities, and money market instruments (debt securities maturing in one year or less). In seeking to pursue its investment objective, the Master Fund varies its mix of equity securities, debt securities, and money market instruments. Although the Master Fund focuses on investments in medium to larger capitalization companies, the Master Fund’s investments are not limited to a particular capitalization size. Under normal market conditions, the Master Fund’s investment adviser expects (but is not required) to maintain an investment mix falling within the following ranges: 40%-80% in equity securities, 20%-50% in debt securities and 0%-40% in money market instruments and cash. As of December 31, 2021, the Master Fund was approximately 72% invested in equity securities, 26% invested in debt securities and 2% invested in money market instruments and cash. The proportion of equities, debt and money market securities held by the Master Fund varies with market conditions and the Master Fund’s investment adviser’s assessment of their relative attractiveness as investment opportunities.

The Master Fund may invest up to 15% of its assets in common stocks and other equity securities of issuers domiciled outside the United States and up to 5% of its assets in debt securities of issuers domiciled outside the United States. In addition, the Master Fund may invest up to 25% of its debt assets in lower quality debt securities (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the Master Fund or unrated but determined to be of equivalent quality by the Master Fund). Such securities are sometimes referred to as “junk bonds.”

Investors in the Master Fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

The Master Fund may also invest in certain derivative instruments. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The Master Fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objectives and strategies of the Master Fund as disclosed in this prospectus and in the Master Fund’s statement of additional information.

The Master Fund may invest in futures contracts and interest rate swaps in order to seek to manage the Master Fund’s sensitivity to interest rates. A futures contract is a standardized exchange-traded agreement to buy or sell a specific quantity of an underlying asset, rate or index at an agreed-upon price at a stipulated future date. An interest rate swap is an agreement between two parties to exchange or swap payments based on changes in one or more interest rates, one of which is typically fixed and the other of which is typically a floating rate based on a designated short-term interest rate, such as the Secured Overnight Financing Rate, a prime rate or other benchmark.

The Master Fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. Government, its agencies and instrumentalities. The percentage of the Master Fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The Master Fund’s investment adviser may determine that it is appropriate to invest a substantial portion of the Master Fund’s assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the Master Fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a Master Fund’s investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a Master Fund’s loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The Master Fund may invest in other funds managed by the Master Fund’s investment adviser or its affiliates (“Central Funds”) to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the Master Fund’s investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the Master Fund’s investment adviser and its affiliates. When investing in Central Funds, the Master Fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the Master Fund’s assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The Master Fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The Master Fund relies on the professional judgment of its investment adviser to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. The investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The Master Fund's investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund's investment in any particular type of security, or assurance of the Master Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund's investment adviser otherwise failing to achieve the Master Fund's investment objective.

The principal risks of investing in the Fund include:

- *Accounting risk*
- *Currency risk*
- *Debt securities ratings risk*
- *Equity securities risk*
- *Foreign securities risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Income risk*
- *Investment style risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market risk*
- *U.S. Government securities risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *Special situations.* The Fund may invest in "special situations" from time to time. A special situation arises when, in the opinion of the Sub-Adviser, the securities of a particular issuer will be recognized and appreciate in value due to a specific development with respect to that issuer. Developments creating special situations might include, among others, a new product or process, a technological breakthrough, a management change or other extraordinary corporate event, or differences in market supply of and demand for the security. Investment in special situations may carry an additional risk of loss in the event that the anticipated development does not occur or does not attract the expected attention. The impact of this strategy on the Fund will depend on the Fund's size and the extent of its holdings of special situation issuers relative to total net assets.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *Forward and futures contract risk*
- *Investment strategy risk*

- *Issuer risk*
- *Mortgage-related and other asset-backed securities risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

MANAGEMENT

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Capital Research and Management Company (“CRMC”), an experienced investment management organization founded in 1931. CRMC is a wholly owned subsidiary of The Capital Group Companies, Inc. and is located at 333 South Hope Street, Los Angeles, California 90071, and 6455 Irvine Center Drive, Irvine, California 92618. CRMC manages the investment portfolio and business affairs of the Master Fund.

The Master Fund relies on the professional judgment of its investment adviser, CRMC, to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of CRMC is to seek to invest in attractively priced securities that, in its opinion, represent good long-term investment opportunities. Securities may be sold when CRMC believes that they no longer represent relatively attractive investment opportunities.

CRMC manages equity assets through three equity investment divisions and fixed-income assets through its fixed-income division, Capital Fixed Income Investors. The three equity investment divisions Capital International Investors, Capital Research Global Investors and Capital World Investors – make investment decisions independently of one another.

The equity investment divisions may, in the future, be incorporated as wholly owned subsidiaries of CRMC. In that event, CRMC would continue to be the investment adviser, and day-to-day investment management of equity assets would continue to be carried out through one or more of these subsidiaries. Although not currently contemplated, CRMC could incorporate its fixed-income division in the future and engage it to provide day-to-day investment management of fixed-income assets. CRMC and each of the funds it advises have received an exemptive order from the U.S. Securities and Exchange Commission (“SEC”) that allows CRMC to use, upon approval of the Master Fund's board, its management subsidiaries and affiliates to provide day-to-day investment management services to the fund, including making changes to the management subsidiaries and affiliates providing such services. The Master Fund's shareholders have approved this arrangement; however, there is no assurance that CRMC will incorporate its investment divisions or exercise any authority under the exemptive order.

In addition, shareholders of the Master Fund approved a proposal to reorganize the Master Fund into a Delaware statutory trust. However, the Master Fund reserves the right to delay implementing the reorganization and has elected to do so.

The Master Fund's and the Feeder Fund's annual management fee and expenses, expressed as a percentage of each Fund's average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.26%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.04%
Total Annual Portfolio Operating Expenses	0.30%

Feeder Fund	
Class A	
Management Fee	0.77%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.14%
Total Annual Fund Operating Expenses	1.21%

	Feeder Fund
	Class I
Management Fee	0.77%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.14%
Total Annual Fund Operating Expenses	0.91%

Information regarding the effect of any waiver on total annual operating expenses can be found in the Financial Highlights table in the Master Fund's prospectus and in the Master Fund's annual report which is available upon request.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by CRMC. Pursuant to its investment advisory and management agreement with the Trust, Jackson National Asset Management, LLC ("JNAM"), located at 225 W. Wacker Drive, Chicago, Illinois 60606, will provide those services for the Feeder Fund that are normally provided by a fund's investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund's other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund's average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

A discussion regarding the basis for the Board's approval of investment advisory agreement for the Feeder Fund is available in the Fund's Annual Report to shareholders for the period ended December 31, 2021.

JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund's assets are invested in its respective Master Fund's portfolio, which is managed by CRMC, the Master Fund's investment adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund's investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a "feeder fund."

Portfolio Management of the Master Fund

CRMC uses a system of multiple portfolio managers in managing mutual fund assets. Under this approach, the portfolio of the Master Fund is divided into segments managed by individual portfolio managers. In addition to the portfolio managers below, CRMC's investment analysts may make investment decisions with respect to a portion of a Master Fund's portfolio. Investment decisions are subject to a Master Fund's objective(s), policies and restrictions and the oversight of the appropriate investment-related committees of CRMC and its investment divisions. CRMC manages equity through three investment divisions and fixed income assets through its fixed income investment division, Capital Fixed Income Investors. The three equity investment divisions - Capital International Investors, Capital World Investors and Capital Research Global Investors – make investment decisions independently of one another. The Master Fund portfolio managers primarily responsible for the day-to-day management of the Master Fund's portfolio are listed below:

Alan N. Berro is a Partner of Capital World Investors and has been an investment professional for 37 years in total; 31 years with CRMC or its affiliates.

David A. Daigle is a Partner of Capital Fixed Income Investors and has been an investment professional for 28 years, all with CRMC or its affiliates.

Peter Eliot is a Partner of Capital International Investors and has been an investment professional for 27 years in total; 18 years with CRMC or its affiliates.

Jeffery T. Lager is a Partner of Capital International Investors and has been an investment professional for 27 years in total; 26 years with CRMC or its affiliates.

Jin Lee is a Partner of Capital World Investors and has been an investment professional for 26 years in total; 25 years with CRMC or its affiliates.

John R. Queen is a Partner of Capital Fixed Income Investors and has been an investment professional for 32 years in total; 20 years with CRMC or its affiliates.

The SAI of the Trust and the SAI of the Master Fund, which are available upon request, provide additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/American Funds Bond Fund of America Fund

Class A

Class I

Investment Objective. The Fund (“Fund” or “Feeder Fund”) seeks to provide as high a level of current income as is consistent with the preservation of capital through exclusive investment in the Class 1 shares of the American Funds Insurance Series® - The Bond Fund of America® (“Master Fund”).

Principal Investment Strategies. The Fund operates as a “feeder fund” and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund.

The Master Fund seeks to maximize the level of current income and preserve capital by investing primarily in bonds. Normally, the Master Fund invests at least 80% of its assets in bonds and other debt securities, which may be represented by derivatives. The Master Fund invests at least 60% of its assets in debt securities (excluding derivatives) rated A3 or better or A- or better by Nationally Recognized Statistical Rating Organizations, designated by the Master Fund’s investment adviser, or in debt securities that are unrated but determined to be of equivalent quality by the Master Fund’s investment adviser, and in U.S. Government securities, money market instruments, cash or cash equivalents.

The Master Fund may invest in debt securities and mortgage-backed securities issued by government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government. The Master Fund may invest in debt securities of any maturity or duration. Duration is a measure used to determine the sensitivity of a security’s price to changes in interest rates. The longer a security’s duration, the more sensitive it will be to changes in interest rates.

The Master Fund may invest in inflation-linked bonds issued by the U.S. and non-U.S. governments, their agencies or instrumentalities, and corporations. Inflation-linked bonds are structured to protect against inflation by linking the bond’s principal and interest payments to an inflation index, such as the Consumer Price Index for Urban Consumers, so that principal and interest adjust to reflect changes in the index.

The Master Fund may invest in futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The Master Fund may invest in a derivative only if, in the opinion of the Master Fund’s investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the Master Fund.

The Master Fund may invest in futures contracts and interest rate swaps in order to seek to manage the Master Fund’s sensitivity to interest rates, and in credit default swap indices, or CDSI, in order to assume exposure to a diversified portfolio of credits or to hedge against existing credit risks. A futures contract is a standardized exchange-traded agreement to buy or sell a specific quantity of an underlying asset, rate or index at an agreed-upon price at a stipulated future date. An interest rate swap is an agreement between two parties to exchange or swap payments based on changes in one or more interest rates, one of which is typically fixed and the other of which is typically a floating rate based on a designated short-term interest rate, such as the Secured Overnight Financing Rate, prime rate or other benchmark. A CDSI is based on a portfolio of credit default swaps with similar characteristics, such as credit default swaps on high-yield bonds. In a typical CDSI transaction, one party – the protection buyer – is obligated to pay the other party – the protection seller – a stream of periodic payments over the term of the contract, provided generally that no credit event on an underlying reference obligation has occurred. If such a credit event has occurred, the protection seller must pay the protection buyer the loss on those credits.

The Master Fund may also enter into currency transactions to provide for the purchase or sale of a currency needed to purchase a security denominated in such currency. In addition, the Master Fund may enter into forward currency contracts to protect against changes in currency exchange rates, to increase exposure to a particular foreign currency, to shift exposure to currency fluctuations from one currency to another or to seek to increase returns. A forward currency contract is an agreement to purchase or sell a specific currency at a future date at a fixed price.

The Master Fund may invest up to 10% of its assets in debt securities rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the Master Fund’s investment adviser, or in debt securities that are unrated but determined to be of equivalent quality by the Master Fund’s investment adviser. Securities rated Ba1 or below and BB+ or below are sometimes referred to as "junk bonds."

The Master Fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. Government, its agencies and instrumentalities. The percentage of the Master Fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of Master Fund shares. The Master Fund’s investment adviser may determine that it is appropriate to invest a substantial portion of the Master Fund’s assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the Master Fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a fund’s investment results in a period of rising

market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The Master Fund may invest in other funds managed by the Master Fund's investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the Master Fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the Master Fund's investment adviser and its affiliates. When investing in Central Funds, the Master Fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the Master Fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The Master Fund uses a system of multiple portfolio managers in managing the Master Fund's assets. Under this approach, the portfolio of the Master Fund is divided into segments managed by individual portfolio managers.

The Master Fund relies on the professional judgment of its investment adviser to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of the Master Fund's investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. The Master Fund's investment adviser believes that an important way to accomplish this is through fundamental research, which may include analysis of credit quality, general economic conditions and various quantitative measures and, in the case of corporate obligations, meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the Master Fund's investment adviser believes that they no longer represent relatively attractive investment opportunities.

The Master Fund's investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund's investment in any particular type of security, or assurance of the Master Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund's investment adviser otherwise failing to achieve the Master Fund's investment objective.

The principal risks of investing in the Fund include:

- *Market risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Issuer risk*
- *Debt securities ratings risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Credit risk*
- *Mortgage-related and other asset-backed securities risk*
- *U.S. Government securities risk*
- *Liquidity risk*
- *Foreign securities risk*
- *Forward and futures contract risk*
- *TIPS and inflation-linked bonds risk*
- *Derivatives risk*
- *Managed portfolio risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Currency transaction risk*
- *Cybersecurity risk*
- *Sector risk*
- *Swaps risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

MANAGEMENT

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Capital Research and Management Company ("CRMC"), an experienced investment management organization founded in 1931. CRMC is a wholly owned subsidiary of The Capital Group Companies, Inc. and is located at 333 South Hope Street, Los Angeles, California 90071, and 6455 Irvine Center Drive, Irvine, California 92618. CRMC manages the investment portfolio and business affairs of the Master Fund.

The Master Fund relies on the professional judgment of its investment adviser, CRMC, to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of CRMC is to seek to invest in attractively priced securities that, in its opinion, represent good long-term investment opportunities. Securities may be sold when CRMC believes that they no longer represent relatively attractive investment opportunities.

CRMC manages equity assets through three equity investment divisions and fixed-income assets through its fixed-income division, Capital Fixed Income Investors. The three equity investment divisions Capital International Investors, Capital Research Global Investors and Capital World Investors – make investment decisions independently of one another.

The equity investment divisions may, in the future, be incorporated as wholly owned subsidiaries of CRMC. In that event, CRMC would continue to be the investment adviser, and day-to-day investment management of equity assets would continue to be carried out through one or more of these subsidiaries. Although not currently contemplated, CRMC could incorporate its fixed-income division in the future and engage it to provide day-to-day investment management of fixed-income assets. CRMC and each of the funds it advises have received an exemptive order from the U.S. Securities and Exchange Commission ("SEC") that allows CRMC to use, upon approval of the Master Fund's board, its management subsidiaries and affiliates to provide day-to-day investment management services to the fund, including making changes to the management subsidiaries and affiliates providing such services. The Master Fund's shareholders have approved this arrangement; however, there is no assurance that CRMC will incorporate its investment divisions or exercise any authority under the exemptive order.

In addition, shareholders of the Master Fund approved a proposal to reorganize the Master Fund into a Delaware statutory trust. However, the Master Fund reserves the right to delay implementing the reorganization and has elected to do so.

The Master Fund's and the Feeder Fund's annual management fee and expenses, expressed as a percentage of each Fund's average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.35%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.04%
Total Annual Portfolio Operating Expenses	0.39%

Feeder Fund	
Class A	
Management Fee	0.75%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.15%
Total Annual Fund Operating Expenses	1.20%

Feeder Fund

	Class I
Management Fee	0.75%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.15%
Total Annual Fund Operating Expenses	0.90%

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by CRMC. Pursuant to its investment advisory and management agreement with the Trust, Jackson National Asset Management, LLC (“JNAM”), located at 225 W. Wacker Drive, Chicago, Illinois 60606, will provide those services for the Feeder Fund that are normally provided by a fund’s investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund’s other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust’s investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund’s average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

A discussion regarding the basis for the Board’s approval of investment advisory agreement for the Feeder Fund is available in the Fund’s Annual Report to shareholders for the period ended December 31, 2020.

JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund’s assets are invested in its respective Master Fund’s portfolio, which is managed by CRMC, the Master Fund’s investment adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund’s investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust’s investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a “feeder fund.”

Portfolio Management of the Master Fund

CRMC uses a system of multiple portfolio managers in managing mutual fund assets. Under this approach, the portfolio of the Master Fund is divided into segments managed by individual portfolio managers. In addition to the portfolio managers below, CRMC’s investment analysts may make investment decisions with respect to a portion of a Master Fund’s portfolio. Investment decisions are subject to a Master Fund’s objective(s), policies and restrictions and the oversight of the appropriate investment-related committees of

CRMC and its investment divisions. The Master Fund portfolio managers primarily responsible for the day-to-day management of the Master Fund's portfolio are listed below:

Pramod Atluri is a Partner of Capital Fixed Income Investors and has been an investment professional for 24 years in total; 6 years with CRMC or its affiliates.

David J. Betanzos is a Partner of Capital Fixed Income Investors and has been an investment professional for 22 years in total; 20 years with CRMC or its affiliates.

David A. Hoag is a Partner of Capital Fixed Income Investors and has been an investment professional for 34 years in total, 31 years with CRMC or its affiliates.

Fergus N. MacDonald is a Partner of Capital Fixed Income Investors and has been an investment professional for 30 years in total; 19 years with CRMC or its affiliates.

The SAI of the Trust and the SAI of the Master Fund, which are available upon request, provide additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/American Funds Capital Income Builder Fund

Class A

Class I

Investment Objective. The Fund (“Feeder Fund”) seeks both to provide a level of current income that exceeds the average yield on U.S. stocks generally and to provide a growing stream of income over the years by investing through exclusive investment in the Class 1 shares of the American Funds Insurance Series® - Capital Income Builder Fund™ (“Master Fund”), with a secondary objective to provide growth of capital.

Principal Investment Strategies. The Fund operates as a “feeder fund” and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund.

The Master Fund invests primarily in a broad range of income-producing securities, including common stocks and bonds. In seeking to provide a level of current income that exceeds the average yield on U.S. stocks, the Master Fund generally looks to the average yield on stocks of companies listed on the S&P 500 Index. The Master Fund may also invest significantly in common stocks, bonds and other securities of issuers domiciled outside the United States, including developing countries.

The Master Fund normally invests at least 90% of its assets in income producing securities (with at least 50% of its assets in common stocks and other equity securities, including preferred stocks and convertible preferred stocks). Generally, the Master Fund may invest in common stocks of companies with a broad range of capitalizations. In addition, the Master Fund may invest in bonds and other debt securities of any maturity or duration, including securities issued and guaranteed by the U.S. Government, securities issued by federal agencies and instrumentalities, and securities backed by mortgages or other assets. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates. The Master Fund's debt obligations will consist primarily of investment-grade bonds (rated Baa3 or better or BBB- or better by Nationally Recognized Statistical Rating Organizations, or NRSROs, designated by the Master Fund or unrated but determined to be of equivalent quality by the Master Fund). The Master Fund may invest up to 5% in lower quality, higher yielding debt securities (rated Ba1 or below and BB+ or below by NRSROs or unrated but determined to be of equivalent quality by the Master Fund). Such securities are sometimes referred to as “junk bonds”).

The Master Fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. Government, its agencies, and instrumentalities. The percentage of the Master Fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The Master Fund may determine that it is appropriate to invest a substantial portion of the Master Fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the Master Fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate the Master Fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of the Master Fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The Master Fund may be invested in other funds managed by the Master Fund's investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the Master Fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the Master Fund's investment adviser and its affiliates. When investing in Central Funds, the Master Fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the Master Fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The Master Fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The Feeder Fund relies on the professional judgment of its Master Fund to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of the Master Fund is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. The Master Fund believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers, and competitors. Securities may be sold when the Master Fund believes that they no longer represent relatively attractive investment opportunities.

The Master Fund's investment adviser may consider environmental, social and governance (“ESG”) factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund's investment in any particular type of security, or assurance of the Master Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund's investment adviser otherwise failing to achieve the Master Fund's investment objective.

The principal risks of investing in the Fund include:

- *Accounting risk*
- *Company risk*
- *Credit risk*
- *Debt securities ratings risk*
- *Equity securities risk*
- *Fixed-income risk*
- *Foreign securities risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Interest rate risk*
- *Issuer risk*
- *Managed portfolio risk*
- *Market risk*
- *Stock risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment in money market funds risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Sector risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

MANAGEMENT

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Capital Research and Management Company ("CRMC"), an experienced investment management organization founded in 1931. CRMC is a wholly owned subsidiary of The Capital Group Companies, Inc. and is located at 333 South Hope Street, Los Angeles, California 90071, and 6455 Irvine Center Drive, Irvine, California 92618. CRMC manages the investment portfolio and business affairs of the Master Fund.

The Master Fund relies on the professional judgment of its investment adviser, CRMC, to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of CRMC is to seek to invest in attractively priced securities that, in its

opinion, represent good long-term investment opportunities. Securities may be sold when CRMC believes that they no longer represent relatively attractive investment opportunities.

CRMC manages equity assets through three equity investment divisions and fixed-income assets through its fixed-income division, Capital Fixed Income Investors. The three equity investment divisions Capital International Investors, Capital Research Global Investors and Capital World Investors – make investment decisions independently of one another.

The equity investment divisions may, in the future, be incorporated as wholly owned subsidiaries of CRMC. In that event, CRMC would continue to be the investment adviser, and day-to-day investment management of equity assets would continue to be carried out through one or more of these subsidiaries. Although not currently contemplated, CRMC could incorporate its fixed-income division in the future and engage it to provide day-to-day investment management of fixed-income assets. CRMC and each of the funds it advises have received an exemptive order from the U.S. Securities and Exchange Commission (“SEC”) that allows CRMC to use, upon approval of the Master Fund’s board, its management subsidiaries and affiliates to provide day-to-day investment management services to the fund, including making changes to the management subsidiaries and affiliates providing such services. The Master Fund’s shareholders have approved this arrangement; however, there is no assurance that CRMC will incorporate its investment divisions or exercise any authority under the exemptive order.

In addition, shareholders of the Master Fund approved a proposal to reorganize the Master Fund into a Delaware statutory trust. However, the Master Fund reserves the right to delay implementing the reorganization and has elected to do so.

The Master Fund’s and the Feeder Fund’s annual management fee and expenses, expressed as a percentage of each Fund’s average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.36%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.05%
Total Annual Portfolio Operating Expenses	0.41%

Feeder Fund	
Class A	
Management Fee	0.89%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.15%
Total Annual Fund Operating Expenses	1.34%

Feeder Fund	
Class I	
Management Fee	0.89%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.15%
Total Annual Fund Operating Expenses	1.04%

Information regarding the effect of any waiver on total annual operating expenses can be found in the Financial Highlights table in the Master Fund’s prospectus and in the Master Fund’s annual report which is available upon request.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by CRMC. Pursuant to its investment advisory and management agreement with the Trust, Jackson National Asset Management, LLC (“JNAM”), located at 225 W. Wacker Drive, Chicago, Illinois 60606, will provide those services for the Feeder Fund that are normally provided by a fund’s investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund’s other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund's average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

A discussion regarding the basis for the Board's approval of investment advisory agreement for the Feeder Fund is available in the Fund's Annual Report to shareholders for the period ended December 31, 2021.

JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund's assets are invested in its respective Master Fund's portfolio, which is managed by CRMC, the Master Fund's investment adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund's investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a "feeder fund."

Portfolio Management of the Master Fund

CRMC uses a system of multiple portfolio managers in managing mutual fund assets. Under this approach, the portfolio of the Master Fund is divided into segments managed by individual portfolio managers. In addition to the portfolio managers below, CRMC's investment analysts may make investment decisions with respect to a portion of a Master Fund's portfolio. Investment decisions are subject to a Master Fund's objective(s), policies and restrictions and the oversight of the appropriate investment-related committees of CRMC and its investment divisions. CRMC manages equity assets through three equity investment divisions and fixed income assets through its fixed income investment division, Capital Fixed Income Investors. The three equity investment divisions - Capital International Investors, Capital Research Global Investors and Capital World Investors - make investment decisions independently of one another. The Master Fund portfolio managers primarily responsible for the day-to-day management of the Master Fund's portfolio are listed below:

Aline Avzaradel is a Partner of Capital International Investors and has been an investment professional for 19 years in total; 18 years with CRMC or its affiliates.

Alfonso Barroso is a Partner of Capital Research Global Investors and has been an investment professional for 28 years, all with CRMC or its affiliates.

Grant L. Cambridge is a Partner of Capital International Investors and has been an investment professional for 29 years in total; 25 years with CRMC or its affiliates.

Charles E. Ellwein is a Partner of Capital Research Global Investors and has been an investment professional for 26 years in total; 16 years with CRMC or its affiliates.

David A. Hoag is a Partner of Capital Fixed Income Investors and has been an investment professional for 34 years in total, 31 years with CRMC or its affiliates.

Winnie Kwan is a Partner of Capital Research Global Investors and has been an investment professional for 26 years in total; 22 years with CRMC or its affiliates.

James B. Lovelace is a Partner of Capital Research Global Investors and has been an investment professional for 40 years, all with CRMC or its affiliates.

Fergus N. MacDonald is a Partner of Capital Fixed Income Investors and has been an investment professional for 30 years in total; 19 years with CRMC or its affiliates.

Caroline Randall is a Partner of Capital Research Global Investors and has been an investment professional for 25 years in total; 17 years with CRMC or its affiliates.

Bradley J. Vogt is a Partner of Capital Research Global Investors and has been an investment professional for 35 years, all with CRMC or its affiliates.

Steven T. Watson is a Partner of Capital International Investors and has been an investment professional for 35 years in total; 32 years with CRMC or its affiliates.

Philip Winston is a Partner of Capital International Investors and has been an investment professional for 37 years in total; 25 years with CRMC or its affiliates.

The SAI of the Trust and the SAI of the Master Fund, which are available upon request, provide additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/American Funds Capital World Bond Fund

Class A

Class I

Investment Objective. The Fund (“Feeder Fund”) seeks, over the long term, a high level of total return consistent with prudent investment management through exclusive investment in the shares of the American Funds Insurance Series® - Capital World Bond FundSM (“Master Fund”). Total return comprises the income generated by the Master Fund and the changes in the market value of the Master Fund’s investments.

Principal Investment Strategies. The Feeder Fund invests primarily in Class 1 shares of the Master Fund. The Master Fund seeks to provide you, over the long term, with as high a level of total return as is consistent with prudent management. Under normal circumstances, the Master Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in bonds and other debt securities, which may be represented by derivatives. The Master Fund invests primarily in debt securities, including asset-backed and mortgage-backed securities of governmental, supranational and corporate issuers denominated in various currencies, including U.S. dollars. The Master Fund will invest substantially in securities of issuers domiciled in a number of countries outside the United States, and such investments may include securities of issuers domiciled in developing countries.

Normally, the Master Fund invests substantially in investment-grade bonds (rated Baa3 or better or BBB- or better by Nationally Recognized Statistical Rating Organizations designated by the Master Fund’s investment adviser or unrated but determined to be of equivalent quality by the Master Fund’s investment adviser). The Master Fund may also invest up to 25% of its assets in lower quality, higher yielding debt securities (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations or unrated but determined to be of equivalent quality by the Master Fund’s investment adviser). Such securities are sometimes referred to as “junk bonds.” The total return of the Master Fund will be the result of interest income, changes in the market value of the Master Fund’s investments and changes in values of other currencies related to the U.S. dollar. The Master Fund may invest in debt securities of any maturity or duration. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates.

The Master Fund may invest in forward currency contracts, futures contracts and swaps, which are types of derivatives. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The Fund may invest in a derivative only if, in the opinion of the Master Fund’s investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the Fund.

The Master Fund may invest in futures contracts and interest rate swaps in order to seek to manage the Master Fund’s sensitivity to interest rates, and in credit default swap indices, or CDSI, in order to assume exposure to a diversified portfolio of credits or to hedge against existing credit risk. A futures contract is a standardized exchange-traded agreement to buy or sell a specific quantity of an underlying asset, rate or index at an agreed-upon price at a stipulated future date. An interest rate swap is an agreement between two parties to exchange or swap payments based on changes in one or more interest rates, one of which is typically fixed and the other of which is typically a floating rate based on a designated short-term interest rate, such as the Secured Overnight Financing Rate, prime rate or other benchmark. A CDSI is based on a portfolio of credit default swaps with similar characteristics, such as credit default swaps on high-yield bonds. In a typical CDSI transaction, one party – the protection buyer – is obligated to pay the other party – the protection seller – a stream of periodic payments over the term of the contract, provided generally that no credit event on an underlying reference obligation has occurred. If such a credit event has occurred, the protection seller must pay the protection buyer the loss on those credits.

The Master Fund may also enter into currency transactions to provide for the purchase or sale of a currency needed to purchase a security denominated in such currency. In addition, the Master Fund may enter into forward currency contracts to protect against changes in currency exchange rates, to increase exposure to a particular foreign currency, to shift exposure to currency fluctuations from one currency to another or to seek to increase returns. A forward currency contract is an agreement to purchase or sell a specific currency at a future date at a fixed price.

The Master Fund is non-diversified, which allows it to invest a greater percentage of its assets in any one issuer than would otherwise be the case. However, the Master Fund intends to limit its investments in the securities of any single issuer.

The Master Fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. Government, its agencies and instrumentalities. The percentage of the Master Fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The Master Fund’s investment adviser may determine that it is appropriate to invest a substantial portion of the Master Fund’s assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the Master Fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a Master Fund’s investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a Master Fund’s loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The Master Fund's may invest in other funds managed by Master Fund's investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the Master Fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the Master Fund's investment adviser and its affiliates. When investing in Central Funds, the Master Fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the Master Fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The Master Fund relies on the professional judgment of its investment adviser to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of the Master Fund's investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. The Master Fund's investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with government officials, central banks and company executives. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

From time to time, primarily due to purchases and redemptions, the Fund may hold a portion of its assets in cash and cash equivalents.

The Master Fund's investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund's investment in any particular type of security, or assurance of the Master Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund's investment adviser otherwise failing to achieve the Master Fund's investment objective.

The principal risks of investing in the Fund include:

- *Accounting risk*
- *Company risk*
- *Credit risk*
- *Currency risk*
- *Debt securities ratings risk*
- *Derivatives risk*
- *Emerging markets and less developed countries risk*
- *Financial services risk*
- *Fixed-income risk*
- *Foreign securities risk*
- *Forward and futures contract risk*
- *Government regulatory risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Interest rate risk*
- *Issuer risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market risk*
- *Non-diversification risk*
- *Portfolio turnover risk*
- *Swaps risk*
- *U.S. Government securities risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Convertible securities risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Counterparty risk*
- *Cybersecurity risk*
- *Expense risk*
- *Forward foreign currency exchange contracts risk*
- *Investment style risk*
- *Leverage risk*
- *Pacific Rim investing risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Senior loans risk*
- *Settlement risk*
- *Structured investments risk*
- *Temporary defensive positions and large cash positions risk*
- *TIPS and inflation-linked bonds risk*
- *Volatility risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

MANAGEMENT

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Capital Research and Management Company ("CRMC"), an experienced investment management organization founded in 1931. CRMC is a wholly owned subsidiary of The Capital Group Companies, Inc. and is located at 333 South Hope Street, Los Angeles, California 90071, and 6455 Irvine Center Drive, Irvine, California 92618. CRMC manages the investment portfolio and business affairs of the Master Fund.

The Master Fund relies on the professional judgment of its investment adviser, CRMC, to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of CRMC is to seek to invest in attractively priced securities that, in its opinion, represent good long-term investment opportunities. Securities may be sold when CRMC believes that they no longer represent relatively attractive investment opportunities.

CRMC manages equity assets through three equity investment divisions and fixed-income assets through its fixed-income division, Capital Fixed Income Investors. The three equity investment divisions Capital International Investors, Capital Research Global Investors and Capital World Investors – make investment decisions independently of one another.

The equity investment divisions may, in the future, be incorporated as wholly owned subsidiaries of CRMC. In that event, CRMC would continue to be the investment adviser, and day-to-day investment management of equity assets would continue to be carried out through one or more of these subsidiaries. Although not currently contemplated, CRMC could incorporate its fixed-income division in the future and engage it to provide day-to-day investment management of fixed-income assets. CRMC and each of the funds it advises have received an exemptive order from the U.S. Securities and Exchange Commission ("SEC") that allows CRMC to use, upon approval of the Master Fund's board, its management subsidiaries and affiliates to provide day-to-day investment management services to the fund, including making changes to the management subsidiaries and affiliates providing such services. The Master Fund's shareholders have approved this arrangement; however, there is no assurance that CRMC will incorporate its investment divisions or exercise any authority under the exemptive order.

In addition, shareholders of the Master Fund approved a proposal to reorganize the Master Fund into a Delaware statutory trust. However, the Master Fund reserves the right to delay implementing the reorganization and has elected to do so.

The Master Fund's and the Feeder Fund's annual management fee and expenses, expressed as a percentage of each Fund's average daily net assets and not taking into account any applicable waivers, are as follows:

Management Fee	0.43%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.07%
Total Annual Portfolio Operating Expenses	0.50%

Feeder Fund	
Class A	
Management Fee	1.03%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.17%
Total Annual Fund Operating Expenses	1.50%

Feeder Fund	
Class I	
Management Fee	1.03%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.17%
Total Annual Fund Operating Expenses	1.20%

Information regarding the effect of any waiver on total annual operating expenses can be found in the Financial Highlights table in the Master Fund's prospectus and in the Master Fund's annual report which is available upon request.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by CRMC. Pursuant to its investment advisory and management agreement with the Trust, Jackson National Asset Management, LLC ("JNAM"), located at 225 W. Wacker Drive, Chicago, Illinois 60606, will provide those services for the Feeder Fund that are normally provided by a fund's investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund's other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund's average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

A discussion regarding the basis for the Board's approval of investment advisory agreement for the Feeder Fund is available in the Fund's Annual Report to shareholders for the period ended December 31, 2021.

JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund's assets are invested in its respective Master Fund's portfolio, which is managed by CRMC, the Master Fund's investment adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider

what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund's investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a "feeder fund."

Portfolio Management of the Master Fund

CRMC uses a system of multiple portfolio managers in managing mutual fund assets. Under this approach, the portfolio of the Master Fund is divided into segments managed by individual portfolio managers. In addition to the portfolio managers below, CRMC's investment analysts may make investment decisions with respect to a portion of a Master Fund's portfolio. Investment decisions are subject to a Master Fund's objective(s), policies and restrictions and the oversight of the appropriate investment-related committees of CRMC and its investment divisions. The Master Fund portfolio managers primarily responsible for the day-to-day management of the Master Fund's portfolio are listed below:

Philip Chitty is a Partner of Capital Fixed Income Investors and has been an investment professional for 28 years in total; 18 years with CRMC or its affiliates.

Andrew A. Cormack is a Vice President of Capital Fixed Income Investors and has been an investment professional for 18 years in total; 4 years with CRMC or its affiliates.

Thomas H. Hogh is a Partner of Capital Fixed Income Investors and has been an investment professional for 35 years in total; 32 years with CRMC or its affiliates.

The SAI of the Trust and the SAI of the Master Fund, which are available upon request, provide additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/American Funds Global Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund ("Feeder Fund") is to seek long-term growth of capital through exclusive investment in Class 1 shares of the American Funds Insurance Series[®] - Global Growth FundSM (the "Master Fund").

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund.

The Master Fund invests primarily in common stocks of companies around the world that the Master Fund's investment adviser believes have the potential for growth. The Master Fund may also invest in securities of foreign issuers in the form of depositary receipts or other instruments by which the Master Fund may obtain exposure to equity investments in local markets. As a fund that seeks to invest globally, the Master Fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the Master Fund will significantly invest in issuers domiciled outside the United States (i.e., at least 40% of its net assets, unless market conditions are not deemed favorable by the Master Fund's investment adviser, in which case the Master Fund would invest at least 30% of its net assets in issuers domiciled outside of the United States). Although the Master Fund focuses on investments in medium to larger capitalization companies, the Master Fund's investments are not limited to a particular capitalization size.

The Master Fund is designed for investors seeking capital appreciation through investments in stocks. Investors in the Master Fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

The Master Fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. Government, its agencies and instrumentalities. The percentage of the Master Fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The Master Fund's investment adviser may determine that it is appropriate to invest a substantial portion of the Master Fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the Master Fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a fund's loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The Master Fund may invest in other funds managed by the Master Fund's investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the Master Fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the Master Fund's investment adviser and its affiliates. When investing in Central Funds, the Master Fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the Master Fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The Master Fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The Master Fund relies on the professional judgment of its investment adviser to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. The Master Fund's investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The Master Fund's investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund's investment in any particular type of security, or assurance of the Master Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund's investment adviser otherwise failing to achieve the Master Fund's investment objective.

The principal risks of investing in the Fund include:

- *Accounting risk*
- *Company risk*
- *Currency risk*
- *Emerging markets and less developed countries risk*
- *Equity securities risk*
- *Foreign securities risk*
- *Investment style risk*
- *Issuer risk*
- *Large-capitalization investing risk*
- *Managed portfolio risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Stock risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Banking industry investment risk*
- *China and India country specific risk*
- *Counterparty risk*
- *Cybersecurity risk*
- *Cyclical opportunities risk*
- *Depository receipts risk*
- *Derivatives risk*
- *European investment risk*
- *Expense risk*
- *Financial services risk*
- *Government regulatory risk*
- *Investment strategy risk*
- *Leverage risk*
- *Liquidity risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Pacific Rim investing risk*
- *Portfolio turnover risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Sector risk*
- *Securities lending risk*
- *Settlement risk*
- *Small-capitalization investing risk*
- *Temporary defensive positions and large cash positions risk*
- *Volatility risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

MANAGEMENT

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Capital Research and Management Company (“CRMC”), an experienced investment management organization founded in 1931. CRMC is a wholly owned subsidiary of The Capital Group Companies, Inc. and is located at 333 South Hope Street, Los Angeles, California 90071, and 6455 Irvine Center Drive, Irvine, California 92618. CRMC manages the investment portfolio and business affairs of the Master Fund.

The Master Fund relies on the professional judgment of its investment adviser, CRMC, to make decisions about the Master Fund’s portfolio investments. The basic investment philosophy of CRMC is to seek to invest in attractively priced securities that, in its opinion, represent good long-term investment opportunities. Securities may be sold when CRMC believes that they no longer represent relatively attractive investment opportunities.

CRMC manages equity assets through three equity investment divisions and fixed-income assets through its fixed-income division, Capital Fixed Income Investors. The three equity investment divisions Capital International Investors, Capital Research Global Investors and Capital World Investors – make investment decisions independently of one another.

The equity investment divisions may, in the future, be incorporated as wholly owned subsidiaries of CRMC. In that event, CRMC would continue to be the investment adviser, and day-to-day investment management of equity assets would continue to be carried out through one or more of these subsidiaries. Although not currently contemplated, CRMC could incorporate its fixed-income division in the future and engage it to provide day-to-day investment management of fixed-income assets. CRMC and each of the funds it advises have received an exemptive order from the U.S. Securities and Exchange Commission (“SEC”) that allows CRMC to use, upon approval of the Master Fund’s board, its management subsidiaries and affiliates to provide day-to-day investment management services to the fund, including making changes to the management subsidiaries and affiliates providing such services. The Master Fund’s shareholders have approved this arrangement; however, there is no assurance that CRMC will incorporate its investment divisions or exercise any authority under the exemptive order.

In addition, shareholders of the Master Fund approved a proposal to reorganize the Master Fund into a Delaware statutory trust. However, the Master Fund reserves the right to delay implementing the reorganization and has elected to do so.

The Master Fund’s and the Feeder Fund’s annual management fee and expenses, expressed as a percentage of each Fund’s average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.48%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.05%
Total Annual Portfolio Operating Expenses	0.53%

Feeder Fund	
Class A	
Management Fee	1.13%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.15%
Total Annual Fund Operating Expenses	1.58%

Feeder Fund	
Class I	
Management Fee	1.13%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.15%
Total Annual Fund Operating Expenses	1.28%

Information regarding the effect of any waiver on total annual operating expenses can be found in the Financial Highlights table in the Master Fund’s prospectus and in the Master Fund’s annual report which is available upon request.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by CRMC. Pursuant to its investment advisory and management agreement with the Trust, Jackson National Asset Management,

LLC (“JNAM”), located at 225 W. Wacker Drive, Chicago, Illinois 60606, will provide those services for the Feeder Fund that are normally provided by a fund’s investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund’s other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust’s investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund’s average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

A discussion regarding the basis for the Board’s approval of investment advisory agreement for the Feeder Fund is available in the Fund’s Annual Report to shareholders for the period ended December 31, 2021.

JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund’s assets are invested in its respective Master Fund’s portfolio, which is managed by CRMC, the Master Fund’s investment adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund’s investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust’s investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a “feeder fund.”

Portfolio Management of the Master Fund

CRMC uses a system of multiple portfolio managers in managing mutual fund assets. Under this approach, the portfolio of the Master Fund is divided into segments managed by individual portfolio managers. In addition to the portfolio managers below, CRMC’s investment analysts may make investment decisions with respect to a portion of a Master Fund’s portfolio. Investment decisions are subject to a Master Fund’s objective(s), policies and restrictions and the oversight of the appropriate investment-related committees of CRMC and its investment divisions. The Master Fund portfolio managers primarily responsible for the day-to-day management of the Master Fund’s portfolio are listed below:

Patrice Collette is a Partner of Capital World Investors and has been an investment professional for 28 years in total; 22 years with CRMC or its affiliates.

Paul Flynn is a Partner of Capital World Investors and has been an investment professional for 26 years in total; 24 years with CRMC or its affiliates.

Jonathan Knowles is a Partner of Capital World Investors, and has been an investment professional for 30 years in total; all with CRMC or its affiliates.

Roz Hongsaranagon, is a Partner of Capital World Investors and has been an investment profession for 20 years in total; all with CRMC or its affiliates.

The SAI of the Trust and the SAI of the Master Fund, which are available upon request, provide additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/American Funds Global Small Capitalization Fund

Class A

Class I

Investment Objective. The Fund (“Feeder Fund”) seeks growth of capital over time through exclusive investment in the shares of the American Funds Insurance Series[®] - Global Small Capitalization FundSM (“Master Fund”).

Principal Investment Strategies. The Fund operates as a “feeder fund” and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund. Normally, the Master Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in growth-oriented common stocks and other equity-type securities of companies with small market capitalizations, measured at the time of purchase. However, the Master Fund’s holdings of small capitalization stocks may fall below the 80% threshold due to subsequent market action. The Master Fund currently defines “small market capitalization” companies as companies with market capitalizations of \$6 billion or less. The Master Fund periodically re-evaluates and adjusts this definition and may continue to do so in the future. The Master Fund seeks to invest globally; the Master Fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the Master Fund will invest significantly in issuers domiciled outside the United States (i.e. at least 40% of its net assets, unless market conditions are not deemed favorable by the Master Fund, in which case the Master Fund would invest at least 30% of its net assets in issuers outside the United States).

The Master Fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. Government, its agencies and instrumentalities. The percentage of the Master Fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The Master Fund’s investment adviser may determine that it is appropriate to invest a substantial portion of the Master Fund’s assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the Master Fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a fund’s investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a fund’s loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The Master Fund’s daily cash balance may be invested in one or more money market or similar funds managed by the Master Fund’s investment adviser or its affiliates (“Central Funds”) to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the Master Fund’s investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the Master Fund’s investment adviser and its affiliates. When investing in Central Funds, the Master Fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the Master Fund’s assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The Master Fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The Master Fund relies on the professional judgment of its investment adviser to make decisions about the Master Fund’s portfolio investments. The basic investment philosophy of the Master Fund’s investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

From time to time, primarily due to purchases and redemptions, the Fund may hold a portion of its assets in cash and cash equivalents.

The Master Fund's investment adviser may consider environmental, social and governance (“ESG”) factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society’s response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund’s investment in any particular type of security, or assurance of the Master Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund’s investment adviser otherwise failing to achieve the Master Fund’s investment objective.

The principal risks of investing in the Fund include:

- *Accounting risk*
- *Company risk*
- *Currency risk*
- *Equity securities risk*
- *Financial services risk*
- *Foreign securities risk*
- *Investment strategy risk*
- *Investment style risk*
- *Issuer risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Stock risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Banking industry investment risk*
- *China and India country specific risk*
- *Convertible securities risk*
- *Counterparty risk*
- *Cybersecurity risk*
- *Cyclical opportunities risk*
- *Depository receipts risk*
- *Emerging markets and less developed countries risk*
- *European investment risk*
- *Expense risk*
- *Government regulatory risk*
- *Leverage risk*
- *Pacific Rim investing risk*
- *Portfolio turnover risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Sector risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

MANAGEMENT

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Capital Research and Management Company (“CRMC”), an experienced investment management organization founded in 1931. CRMC is a wholly owned subsidiary of The Capital Group Companies, Inc. and is located at 333 South Hope Street, Los Angeles, California 90071, and 6455 Irvine Center Drive, Irvine, California 92618. CRMC manages the investment portfolio and business affairs of the Master Fund.

The Master Fund relies on the professional judgment of its investment adviser, CRMC, to make decisions about the Master Fund’s portfolio investments. The basic investment philosophy of CRMC is to seek to invest in attractively priced securities that, in its opinion, represent good long-term investment opportunities. Securities may be sold when CRMC believes that they no longer represent relatively attractive investment opportunities.

CRMC manages equity assets through three equity investment divisions and fixed-income assets through its fixed-income division, Capital Fixed Income Investors. The three equity investment divisions Capital International Investors, Capital Research Global Investors and Capital World Investors – make investment decisions independently of one another.

The equity investment divisions may, in the future, be incorporated as wholly owned subsidiaries of CRMC. In that event, CRMC would continue to be the investment adviser, and day-to-day investment management of equity assets would continue to be carried out through one or more of these subsidiaries. Although not currently contemplated, CRMC could incorporate its fixed-income division in the future and engage it to provide day-to-day investment management of fixed-income assets. CRMC and each of the funds it advises have received an exemptive order from the U.S. Securities and Exchange Commission (“SEC”) that allows CRMC to use, upon approval of the Master Fund’s board, its management subsidiaries and affiliates to provide day-to-day investment management services to the fund, including making changes to the management subsidiaries and affiliates providing such services. The Master Fund’s shareholders have approved this arrangement; however, there is no assurance that CRMC will incorporate its investment divisions or exercise any authority under the exemptive order.

In addition, shareholders of the Master Fund approved a proposal to reorganize the Master Fund into a Delaware statutory trust. However, the Master Fund reserves the right to delay implementing the reorganization and has elected to do so.

The Master Fund’s and the Feeder Fund’s annual management fee and expenses, expressed as a percentage of each Fund’s average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.65%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.05%
Total Annual Portfolio Operating Expenses	0.70%

Feeder Fund	
Class A	
Management Fee	1.30%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.15%
Total Annual Fund Operating Expenses	1.75%

Feeder Fund	
Class I	
Management Fee	1.30%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.15%
Total Annual Fund Operating Expenses	1.45%

Information regarding the effect of any waiver on total annual operating expenses can be found in the Financial Highlights table in the Master Fund’s prospectus and in the Master Fund’s annual report which is available upon request.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by CRMC. Pursuant to its investment advisory and management agreement with the Trust, Jackson National Asset Management,

LLC (“JNAM”), located at 225 W. Wacker Drive, Chicago, Illinois 60606, will provide those services for the Feeder Fund that are normally provided by a fund’s investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund’s other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust’s investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund’s average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

A discussion regarding the basis for the Board’s approval of investment advisory agreement for the Feeder Fund is available in the Fund’s Annual Report to shareholders for the period ended December 31, 2021.

JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund’s assets are invested in its respective Master Fund’s portfolio, which is managed by CRMC, the Master Fund’s investment adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund’s investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust’s investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a “feeder fund.”

Portfolio Management of the Master Fund

CRMC uses a system of multiple portfolio managers in managing mutual fund assets. Under this approach, the portfolio of the Master Fund is divided into segments managed by individual portfolio managers. In addition to the portfolio managers below, CRMC’s investment analysts may make investment decisions with respect to a portion of a Master Fund’s portfolio. Investment decisions are subject to a Master Fund’s objective(s), policies and restrictions and the oversight of the appropriate investment-related committees of CRMC and its investment divisions. The Master Fund portfolio managers primarily responsible for the day-to-day management of the Master Fund’s portfolio are listed below:

Michael Beckwith is a Vice President of Capital Research Global Investors, and has been an investment professional for 20 years in total; 3 years with CRMC or its affiliates.

Bradford F. Freer is a Partner of Capital Research Global Investors and has been an investment professional for 30 years in total, 28 years with CRMC or its affiliates.

Harold H. La is a Partner of Capital Research Global Investors and has been an investment professional for 24 years in total; 23 years with CRMC or its affiliates.

Aidan O'Connell is a Partner of Capital Research Global Investors and has been an investment professional for 24 years in total; 18 years with CRMC or its affiliates.

Renaud H. Samyn is a Partner of Capital Research Global Investors and has been an investment professional for 21 years in total; all with CRMC or its affiliates.

Gregory W. Wendt is a Partner of Capital Research Global Investors and has been an investment professional for 35 years, all with CRMC or its affiliates.

The SAI of the Trust and the SAI of the Master Fund, which are available upon request, provide additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/American Funds Growth Fund

Class A

Class I

Investment Objective. The Fund ("Feeder Fund") seeks growth of capital through exclusive investment in Class 1 shares of the American Funds Insurance Series[®] - Growth FundSM (the "Master Fund").

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund. The Master Fund invests primarily in common stocks and seeks to invest in companies that the Master Fund's investment adviser believes offer superior opportunities for growth of capital. The Master Fund may invest up to 25% of its assets in common stocks and other securities (including convertible and nonconvertible preferred stocks, bonds, and other debt securities) of issuers domiciled outside the United States, including, to a more limited extent, in emerging markets. Although the Master Fund focuses on investments in medium to larger capitalization companies, the Master Fund's investments are not limited to a particular capitalization size. The Master Fund may also invest in other equity type securities, such as preferred stocks, convertible preferred stocks, and convertible bonds.

Investors in the Fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

The Master Fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. Government, its agencies, and instrumentalities. The percentage of the Master Fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The Master Fund's investment adviser may determine that it is appropriate to invest a substantial portion of the Master Fund's assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the Master Fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a fund's investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a fund's losses in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The Master Fund may invest in other funds managed by the Master Fund's investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the Master Fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the Master Fund's investment adviser and its affiliates. When investing in Central Funds, the Master Fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the Master Fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The Master Fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The Master Fund relies on the professional judgment of its investment adviser to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of the Master Fund's investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The Master Fund's investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund's investment in any particular type of security, or assurance of the Master Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund's investment adviser otherwise failing to achieve the Master Fund's investment objective.

The principal risks of investing in the Fund include:

- *Accounting risk*
- *Company risk*
- *Emerging markets and less developed countries risk*
- *Equity securities risk*

- *Foreign securities risk*
- *Investment style risk*
- *Issuer risk*
- *Large-capitalization investing risk*
- *Mid-capitalization investing risk*
- *Managed portfolio risk*
- *Market risk*
- *Stock risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Depository receipts risk*
- *Expense risk*
- *Financial services risk*
- *Government regulatory risk*
- *Investment in money market funds risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

MANAGEMENT

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Capital Research and Management Company (“CRMC”), an experienced investment management organization founded in 1931. CRMC is a wholly owned subsidiary of The Capital Group Companies, Inc. and is located at 333 South Hope Street, Los Angeles, California 90071, and 6455 Irvine Center Drive, Irvine, California 92618. CRMC manages the investment portfolio and business affairs of the Master Fund.

The Master Fund relies on the professional judgment of its investment adviser, CRMC, to make decisions about the Master Fund’s portfolio investments. The basic investment philosophy of CRMC is to seek to invest in attractively priced securities that, in its opinion, represent good long-term investment opportunities. Securities may be sold when CRMC believes that they no longer represent relatively attractive investment opportunities.

CRMC manages equity assets through three equity investment divisions and fixed-income assets through its fixed-income division, Capital Fixed Income Investors. The three equity investment divisions Capital International Investors, Capital Research Global Investors and Capital World Investors – make investment decisions independently of one another.

The equity investment divisions may, in the future, be incorporated as wholly owned subsidiaries of CRMC. In that event, CRMC would continue to be the investment adviser, and day-to-day investment management of equity assets would continue to be carried out through one or more of these subsidiaries. Although not currently contemplated, CRMC could incorporate its fixed-income division in

the future and engage it to provide day-to-day investment management of fixed-income assets. CRMC and each of the funds it advises have received an exemptive order from the U.S. Securities and Exchange Commission (“SEC”) that allows CRMC to use, upon approval of the Master Fund’s board, its management subsidiaries and affiliates to provide day-to-day investment management services to the fund, including making changes to the management subsidiaries and affiliates providing such services. The Master Fund’s shareholders have approved this arrangement; however, there is no assurance that CRMC will incorporate its investment divisions or exercise any authority under the exemptive order.

In addition, shareholders of the Master Fund approved a proposal to reorganize the Master Fund into a Delaware statutory trust. However, the Master Fund reserves the right to delay implementing the reorganization and has elected to do so.

The Master Fund’s and the Feeder Fund’s annual management fee and expenses, expressed as a percentage of each Fund’s average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.31%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.04%
Total Annual Portfolio Operating Expenses	0.35%

Feeder Fund	
Class A	
Management Fee	0.92%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.14%
Total Annual Fund Operating Expenses	1.36%

Feeder Fund	
Class I	
Management Fee	0.92%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.14%
Total Annual Fund Operating Expenses	1.06%

Information regarding the effect of any waiver on total annual operating expenses can be found in the Financial Highlights table in the Master Fund’s prospectus and in the Master Fund’s annual report which is available upon request.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by CRMC. Pursuant to its investment advisory and management agreement with the Trust, Jackson National Asset Management, LLC (“JNAM”), located at 225 W. Wacker Drive, Chicago, Illinois 60606, will provide those services for the Feeder Fund that are normally provided by a fund’s investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund’s other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust’s investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund’s average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

A discussion regarding the basis for the Board’s approval of investment advisory agreement for the Feeder Fund is available in the Fund’s Annual Report to shareholders for the period ended December 31, 2021.

JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund's assets are invested in its respective Master Fund's portfolio, which is managed by CRMC, the Master Fund's investment adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund's investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a "feeder fund."

Paul Benjamin is a Partner of Capital World Investors, and has been an investment professional for 17 years in total; all with CRMC or its affiliates.

Mark L. Casey is a Partner of Capital International Investors and has been an investment professional for 22 years, all with CRMC or its affiliates.

Irfan M. Furniturewala is a Partner of Capital International Investors and has been an investment professional for 22 years; 21 years with CRMC or its affiliates.

Anne-Marie Peterson is a Partner of Capital World Investors and has been an investment professional for 28 years in total, 17 years with CRMC or its affiliates.

Andraz Razen is a Partner of Capital World Investors and has been an investment professional for 24 years in total, 18 years with CRMC or its affiliates.

Alan J. Wilson is a Partner of Capital World Investors and has been an investment professional for 37 years in total, 31 years with CRMC or its affiliates.

The SAI of the Trust and the SAI of the Master Fund, which are available upon request, provide additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/American Funds Growth-Income Fund

Class A Class I

Investment Objective. The JNL/American Funds Growth-Income Fund (“Fund” or “Feeder Fund”) seeks long-term growth of capital and income through exclusive investment in the shares of the American Funds Insurance Series[®] - Growth-Income FundSM (“Master Fund”).

Principal Investment Strategies. The Feeder Fund invests primarily in shares of the “Master Fund.” The Master Growth-Income Fund seeks to make your investment grow and provide you with income over time by investing primarily in common stocks or other equity-type securities, such as preferred stocks, convertible preferred stocks and convertible bonds, that the investment adviser to the Master Growth-Income Fund believes demonstrate the potential for appreciation and/or dividends. Although the Master Growth-Income Fund focuses on investments in medium to larger capitalization companies, the Master Fund’s investments are not limited to a particular capitalization size. The Master Fund may invest up to 15% of its assets, at the time of purchase, in securities of issuers domiciled outside the United States, including to a more limited extent, in emerging markets. The Master Fund is designed for investors seeking both capital appreciation and income.

Investors in the Master Fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

The Master Fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. Government, its agencies and instrumentalities. The percentage of the Master Fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The Master Fund’s investment adviser may determine that it is appropriate to invest a substantial portion of the Master Fund’s assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the Master Fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a Master Fund’s investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a Master Fund’s loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The Master Fund’s daily cash balance may be invested in one or more money market or similar funds managed by the Master Fund’s investment adviser or its affiliates (“Central Funds”) to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the Master Fund’s investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the Master Fund’s investment adviser and its affiliates. When investing in Central Funds, the Master Fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the Master Fund’s assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The Master Fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The Master Fund relies on the professional judgment of its investment adviser to make decisions about the Master Fund’s portfolio investments. The basic investment philosophy of the Master Fund’s investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

From time to time, primarily due to purchases and redemptions, the Fund may hold a portion of its assets in cash and cash equivalents.

The Master Fund’s investment adviser may consider environmental, social and governance (“ESG”) factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society’s response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund’s investment in any particular type of security, or assurance of the Master Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund’s investment adviser otherwise failing to achieve the Master Fund’s investment objective.

The principal risks of investing in the Fund include:

- *Accounting risk*
- *Company risk*
- *Currency risk*
- *Equity securities risk*
- *Financial services risk*
- *Foreign securities risk*
- *Investment style risk*
- *Issuer risk*
- *Large-capitalization investing risk*
- *Managed portfolio risk*
- *Mid-capitalization investing risk*
- *Market risk*
- *Stock risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Depository receipts risk*
- *Emerging markets and less developed countries risk*
- *Expense risk*
- *Government regulatory risk*
- *Investment in money market funds risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

MANAGEMENT

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Capital Research and Management Company (“CRMC”), an experienced investment management organization founded in 1931. CRMC is a wholly owned subsidiary of The Capital Group Companies, Inc. and is located at 333 South Hope Street, Los Angeles, California 90071, and 6455 Irvine Center Drive, Irvine, California 92618. CRMC manages the investment portfolio and business affairs of the Master Fund.

The Master Fund relies on the professional judgment of its investment adviser, CRMC, to make decisions about the Master Fund’s portfolio investments. The basic investment philosophy of CRMC is to seek to invest in attractively priced securities that, in its opinion, represent good long-term investment opportunities. Securities may be sold when CRMC believes that they no longer represent relatively attractive investment opportunities.

CRMC manages equity assets through three equity investment divisions and fixed-income assets through its fixed-income division, Capital Fixed Income Investors. The three equity investment divisions Capital International Investors, Capital Research Global Investors and Capital World Investors – make investment decisions independently of one another.

The equity investment divisions may, in the future, be incorporated as wholly owned subsidiaries of CRMC. In that event, CRMC would continue to be the investment adviser, and day-to-day investment management of equity assets would continue to be carried out through one or more of these subsidiaries. Although not currently contemplated, CRMC could incorporate its fixed-income division in the future and engage it to provide day-to-day investment management of fixed-income assets. CRMC and each of the funds it advises have received an exemptive order from the U.S. Securities and Exchange Commission (“SEC”) that allows CRMC to use, upon approval of the Master Fund’s board, its management subsidiaries and affiliates to provide day-to-day investment management services to the fund, including making changes to the management subsidiaries and affiliates providing such services. The Master Fund’s shareholders have approved this arrangement; however, there is no assurance that CRMC will incorporate its investment divisions or exercise any authority under the exemptive order.

In addition, shareholders of the Master Fund approved a proposal to reorganize the Master Fund into a Delaware statutory trust. However, the Master Fund reserves the right to delay implementing the reorganization and has elected to do so.

The Master Fund’s and the Feeder Fund’s annual management fee and expenses, expressed as a percentage of each Fund’s average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.25%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.04%
Total Annual Portfolio Operating Expenses	0.29%

Feeder Fund	
Class A	
Management Fee	0.79%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.13%
Total Annual Fund Operating Expenses	1.22%

Feeder Fund	
Class I	
Management Fee	0.79%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.13%
Total Annual Fund Operating Expenses	0.92%

Information regarding the effect of any waiver on total annual operating expenses can be found in the Financial Highlights table in the Master Fund’s prospectus and in the Master Fund’s annual report which is available upon request.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by CRMC. Pursuant to its investment advisory and management agreement with the Trust, Jackson National Asset Management, LLC (“JNAM”), located at 225 W. Wacker Drive, Chicago, Illinois 60606, will provide those services for the Feeder Fund that are normally provided by a fund’s investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund’s other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust’s investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee

based on the Feeder Fund's average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

A discussion regarding the basis for the Board's approval of investment advisory agreement for the Feeder Fund is available in the Fund's Annual Report to shareholders for the period ended December 31, 2021.

JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund's assets are invested in its respective Master Fund's portfolio, which is managed by CRMC, the Master Fund's investment adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund's investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a "feeder fund."

Portfolio Management of the Master Fund

CRMC uses a system of multiple portfolio managers in managing mutual fund assets. Under this approach, the portfolio of the Master Fund is divided into segments managed by individual portfolio managers. In addition to the portfolio managers below, CRMC's investment analysts may make investment decisions with respect to a portion of a Master Fund's portfolio. Investment decisions are subject to a Master Fund's objective(s), policies and restrictions and the oversight of the appropriate investment-related committees of CRMC and its investment divisions. CRMC manages equity assets through three equity investment divisions and fixed income assets through its fixed income investment division, Capital Fixed Income Investors. The three equity investment divisions - Capital World Investors, Capital Research Global Investors and Capital International Investors - make investment decisions independently of one another. The Master Fund portfolio managers primarily responsible for the day-to-day management of the Master Fund's portfolio are listed below:

Donald D. O'Neal is a Partner of Capital International Investors and has been an investment professional for 37 years, all with CRMC or its affiliates.

Keiko McKibben is a Partner of Capital Research Global Investors and has been an investment professional for 28 years in total; 24 years with CRMC or its affiliates.

Charles E. Ellwein is a Partner of Capital Research Global Investors and has been an investment professional for 26 years in total; 16 years with CRMC or its affiliates.

J. Blair Frank is a Partner of Capital Research Global Investors and has been an investment professional for 29 years in total; 28 years with CRMC or its affiliates.

William L. Robbins is a Partner of Capital International Investors and has been an investment professional for 30 years in total; 27 years with CRMC or its affiliates.

Carlos A. Schonfeld is a Partner of Capital International Investors and has been an investment professional for 24 years in total, all with CRMC or its affiliates.

The SAI of the Trust and the SAI of the Master Fund, which are available upon request, provide additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/American Funds International Fund

Class A

Class I

Investment Objective. The Fund (“Feeder Fund”) seeks long-term growth of capital through exclusive investment in the shares of the American Funds Insurance Series[®] - International FundSM (“Master Fund”).

Principal Investment Strategies. The Feeder Fund invests primarily in the Class 1 shares of the “Master Fund.” The Master Fund seeks to make your investment grow over time by investing primarily in common stocks of companies domiciled outside the United States, including companies domiciled in emerging markets, that the Master Fund’s investment adviser believes have the potential for growth. The Master Fund may also invest in securities of foreign issuers in the form of depositary receipts or other instruments by which the Master Fund may obtain exposure to equity investments in local markets. Although the Master Fund focuses on investments in medium to larger capitalization companies, the Master Fund’s investments are not limited to a particular capitalization size.

The Master Fund is designed for investors seeking capital appreciation through stocks. Investors in the Master Fund should have a long-term perspective and, for example, be able to tolerate potentially sharp, short-term declines in value.

The Master Fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. Government, its agencies and instrumentalities. The percentage of the Master Fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The Master Fund’s investment adviser may determine that it is appropriate to invest a substantial portion of the Master Fund’s assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the Master Fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a fund’s investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a fund’s loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The Master Fund may invest in other funds managed by the Master Fund’s investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the Master Fund’s investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the Master Fund’s investment adviser and its affiliates. When investing in Central Funds, the Master Fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the Master Fund’s assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The Master Fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The Master Fund relies on the professional judgment of its investment adviser to make decisions about the Master Fund’s portfolio investments. The basic investment philosophy of the Master Fund’s investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

From time to time, primarily due to purchases and redemptions, the Master Fund may hold a portion of its assets in cash and cash equivalents.

The Master Fund's investment adviser may consider environmental, social and governance (“ESG”) factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society’s response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund’s investment in any particular type of security, or assurance of the Master Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund’s investment adviser otherwise failing to achieve the Master Fund’s investment objective.

The principal risks of investing in the Fund include:

- *Accounting risk*

- *Company risk*
- *Currency risk*
- *Emerging markets and less developed countries risk*
- *Equity securities risk*
- *European investment risk*
- *Financial services risk*
- *Foreign securities risk*
- *Investment strategy risk*
- *Investment style risk*
- *Large-capitalization investing risk*
- *Managed portfolio risk*
- *Market risk*
- *Mid-capitalization investing risk*
- *Stock risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Banking industry investment risk*
- *China and India country specific risk*
- *Counterparty risk*
- *Cybersecurity risk*
- *Cyclical opportunities risk*
- *Depository receipts risk*
- *Derivatives risk*
- *Expense risk*
- *Government regulatory risk*
- *Issuer risk*
- *Leverage risk*
- *Liquidity risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Pacific Rim investing risk*
- *Portfolio turnover risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Sector risk*
- *Securities lending risk*
- *Settlement risk*
- *Small-capitalization investing risk*
- *Temporary defensive positions and large cash positions risk*
- *Volatility risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

MANAGEMENT

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Capital Research and Management Company (“CRMC”), an experienced investment management organization founded in 1931. CRMC is a wholly owned subsidiary of The Capital Group Companies, Inc. and is located at 333 South Hope Street, Los Angeles, California 90071, and 6455 Irvine Center Drive, Irvine, California 92618. CRMC manages the investment portfolio and business affairs of the Master Fund.

The Master Fund relies on the professional judgment of its investment adviser, CRMC, to make decisions about the Master Fund’s portfolio investments. The basic investment philosophy of CRMC is to seek to invest in attractively priced securities that, in its opinion, represent good long-term investment opportunities. Securities may be sold when CRMC believes that they no longer represent relatively attractive investment opportunities.

CRMC manages equity assets through three equity investment divisions and fixed-income assets through its fixed-income division, Capital Fixed Income Investors. The three equity investment divisions Capital International Investors, Capital Research Global Investors and Capital World Investors – make investment decisions independently of one another.

The equity investment divisions may, in the future, be incorporated as wholly owned subsidiaries of CRMC. In that event, CRMC would continue to be the investment adviser, and day-to-day investment management of equity assets would continue to be carried out through one or more of these subsidiaries. Although not currently contemplated, CRMC could incorporate its fixed-income division in the future and engage it to provide day-to-day investment management of fixed-income assets. CRMC and each of the funds it advises have received an exemptive order from the U.S. Securities and Exchange Commission (“SEC”) that allows CRMC to use, upon approval of the Master Fund’s board, its management subsidiaries and affiliates to provide day-to-day investment management services to the fund, including making changes to the management subsidiaries and affiliates providing such services. The Master Fund’s shareholders have approved this arrangement; however, there is no assurance that CRMC will incorporate its investment divisions or exercise any authority under the exemptive order.

In addition, shareholders of the Master Fund approved a proposal to reorganize the Master Fund into a Delaware statutory trust. However, the Master Fund reserves the right to delay implementing the reorganization and has elected to do so.

The Master Fund’s and the Feeder Fund’s annual management fee and expenses, expressed as a percentage of each Fund’s average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.48%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.06%
Total Annual Portfolio Operating Expenses	0.54%

Feeder Fund	
Class A	
Management Fee	1.21%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.16%
Total Annual Fund Operating Expenses	1.67%

Feeder Fund	
Class I	
Management Fee	1.21%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.16%
Total Annual Fund Operating Expenses	1.37%

Information regarding the effect of any waiver on total annual operating expenses can be found in the Financial Highlights table in the Master Fund’s prospectus and in the Master Fund’s annual report which is available upon request.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by CRMC. Pursuant to its investment advisory and management agreement with the Trust, Jackson National Asset Management,

LLC (“JNAM”), located at 225 W. Wacker Drive, Chicago, Illinois 60606, will provide those services for the Feeder Fund that are normally provided by a fund’s investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund’s other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust’s investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund’s average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

A discussion regarding the basis for the Board’s approval of investment advisory agreement for the Feeder Fund is available in the Fund’s Annual Report to shareholders for the period ended December 31, 2021.

JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund’s assets are invested in its respective Master Fund’s portfolio, which is managed by CRMC, the Master Fund’s investment adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund’s investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust’s investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a “feeder fund.”

Portfolio Management of the Master Fund

CRMC uses a system of multiple portfolio managers in managing mutual fund assets. Under this approach, the portfolio of the Master Fund is divided into segments managed by individual portfolio managers. In addition to the portfolio managers below, CRMC’s investment analysts may make investment decisions with respect to a portion of a Master Fund’s portfolio. Investment decisions are subject to a Master Fund’s objective(s), policies and restrictions and the oversight of the appropriate investment-related committees of CRMC and its investment divisions. CRMC manages equity assets through three equity investment divisions and fixed income assets through its fixed income investment division, Capital Fixed Income Investors. The three equity investment divisions -Capital International Investors, Capital Research Global Investors and Capital World Investors - make investment decisions independently of one another. The Master Fund portfolio managers primarily responsible for the day-to-day management of the Master Fund’s portfolio are listed below:

Sung Lee is a Partner of Capital Research Global Investors and has been an investment professional for 28 years, all with CRMC or its affiliates.

Renaud H. Samyn is a Partner of Capital Research Global Investors and has been an investment professional for 21 years in total; all with CRMC or its affiliates.

Nicholas J. Grace is a Partner of Capital Research Global Investors and has been an investment professional for 32 years in total, 28 years with CRMC or its affiliates.

Christopher Thomsen is a Partner of Capital Research Global Investors and has been an investment professional for 25 years, all with CRMC or its affiliates.

The SAI of the Trust and the SAI of the Master Fund, which are available upon request, provide additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/American Funds New World Fund

Class A

Class I

Investment Objective. The Fund (“Feeder Fund”) seeks long-term capital appreciation through exclusive investment in the shares of the American Funds Insurance Series® - New World Fund® (“Master Fund”).

Principal Investment Strategies. The Feeder Fund invests primarily in Class 1 shares of the “Master Fund.” The Master Fund seeks to make your investment grow over time by investing primarily in common stocks of companies with significant exposure to countries with developing economies and/or markets. The securities markets of these countries may be referred to as emerging markets.

The Master Fund may invest in equity securities of any company, regardless of where it is based, if the Master Fund’s investment adviser determines that a significant portion of the company’s assets or revenues (generally 20% or more) is attributable to developing countries. Under normal market conditions, the Master Fund will invest at least 35% of its assets in equity and debt securities of issuers primarily based in qualified countries that have developing economies and/or markets. The Master Fund may also, to a limited extent, invest in securities of issuers based in developing countries not on the investment adviser’s list of qualified developing countries.

In determining whether a country is qualified, the Master Fund’s investment adviser will consider such factors as the country’s per capita gross domestic product; the percentage of the country’s economy that is industrialized; market capital as a percentage of gross domestic product; the overall regulatory environment; the presence of government regulation limiting or banning foreign ownership; and restrictions on repatriation of initial capital, dividends, interest and/or capital gains. The investment adviser to the Master Fund maintains a list of qualified countries and securities in which the Master Fund may invest. Qualified developing countries in which the Master Fund may invest currently include, but are not limited to, Argentina, Bahrain, Bangladesh, Belarus, Belize, Bolivia, Botswana, Brazil, Bulgaria, Chile, China, Colombia, Costa Rica, Côte d’Ivoire, Croatia, Cyprus, Czech Republic, Dominican Republic, Ecuador, Egypt, El Salvador, Estonia, Gabon, Ghana, Greece, Hungary, India, Indonesia, Iraq, Jamaica, Jordan, Kazakhstan, Kenya, Kuwait, Latvia, Lebanon, Lithuania, Macau, Malaysia, Malta, Mauritius, Mexico, Morocco, Nigeria, Oman, Pakistan, Panama, Paraguay, Peru, Philippines, Poland, Qatar, Romania, Russian Federation, Saudi Arabia, Serbia, Slovakia, Slovenia, South Africa, Sri Lanka, Thailand, Trinidad and Tobago, Tunisia, Turkey, Ukraine, United Arab Emirates, Uruguay, Venezuela, Vietnam and Zambia.

The Master Fund may also invest in debt securities of issuers, including issuers of lower rated bonds (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Ratings Organizations designated by the Master Fund’s investment adviser or unrated but determined to be of equivalent quality by the Master Fund’s investment adviser), with exposure to these countries. Bonds rated Ba1 or BB+ or below are sometimes referred to as “junk bonds.”

In addition, the Master Fund may invest in nonconvertible debt securities of issuers, including issuers of lower rated bonds and government bonds, primarily based in qualified countries or that have a significant portion of their assets or revenues attributable to developing countries.

The Master Fund may also hold cash or cash equivalents, including commercial paper and short-term securities issued by the U.S. Government, its agencies and instrumentalities. The percentage of the Master Fund invested in such holdings varies and depends on various factors, including market conditions and purchases and redemptions of fund shares. The Master Fund’s investment adviser may determine that it is appropriate to invest a substantial portion of the Master Fund’s assets in such instruments in response to certain circumstances, such as periods of market turmoil. For temporary defensive purposes, the Master Fund may invest without limitation in such instruments. A larger percentage of such holdings could moderate a fund’s investment results in a period of rising market prices. Alternatively, a larger percentage of such holdings could reduce the magnitude of a fund’s loss in a period of falling market prices and provide liquidity to make additional investments or to meet redemptions.

The Master Fund may invest in other funds managed by the Master Fund’s investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the Master Fund’s investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the Master Fund’s investment adviser and its affiliates. When investing in Central Funds, the Master Fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the Master Fund’s assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The Master Fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

The Master Fund relies on the professional judgment of its investment adviser to make decisions about the Master Fund’s portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. The Master Fund’s investment adviser believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers,

customers and competitors. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

The Master Fund's investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund's investment in any particular type of security, or assurance of the Master Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund's investment adviser otherwise failing to achieve the Master Fund's investment objective.

The principal risks of investing in the Fund include:

- *Accounting risk*
- *Company risk*
- *Credit risk*
- *Currency risk*
- *Emerging markets and less developed countries risk*
- *Equity securities risk*
- *European investment risk*
- *Financial services risk*
- *Foreign securities risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Interest rate risk*
- *Investment strategy risk*
- *Investment style risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Small-capitalization investing risk*
- *Stock risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Banking industry investment risk*
- *China and India country specific risk*
- *Convertible securities risk*
- *Counterparty risk*
- *Custody risk*
- *Cybersecurity risk*
- *Cyclical opportunities risk*
- *Depository receipts risk*
- *Derivatives risk*
- *Expense risk*
- *Government regulatory risk*
- *Issuer risk*

- *Large-capitalization investing risk*
- *Leverage risk*
- *Mid-capitalization investing risk*
- *Pacific Rim investing risk*
- *Portfolio turnover risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Russia investment risk*
- *Sector risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*
- *Volatility risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

MANAGEMENT

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Capital Research and Management Company (“CRMC”), an experienced investment management organization founded in 1931. CRMC is a wholly owned subsidiary of The Capital Group Companies, Inc. and is located at 333 South Hope Street, Los Angeles, California 90071, and 6455 Irvine Center Drive, Irvine, California 92618. CRMC manages the investment portfolio and business affairs of the Master Fund.

The Master Fund relies on the professional judgment of its investment adviser, CRMC, to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of CRMC is to seek to invest in attractively priced securities that, in its opinion, represent good long-term investment opportunities. Securities may be sold when CRMC believes that they no longer represent relatively attractive investment opportunities.

CRMC manages equity assets through three equity investment divisions and fixed-income assets through its fixed-income division, Capital Fixed Income Investors. The three equity investment divisions Capital International Investors, Capital Research Global Investors and Capital World Investors – make investment decisions independently of one another.

The equity investment divisions may, in the future, be incorporated as wholly owned subsidiaries of CRMC. In that event, CRMC would continue to be the investment adviser, and day-to-day investment management of equity assets would continue to be carried out through one or more of these subsidiaries. Although not currently contemplated, CRMC could incorporate its fixed-income division in the future and engage it to provide day-to-day investment management of fixed-income assets. CRMC and each of the funds it advises have received an exemptive order from the U.S. Securities and Exchange Commission (“SEC”) that allows CRMC to use, upon approval of the Master Fund's board, its management subsidiaries and affiliates to provide day-to-day investment management services to the fund, including making changes to the management subsidiaries and affiliates providing such services. The Master Fund's shareholders have approved this arrangement; however, there is no assurance that CRMC will incorporate its investment divisions or exercise any authority under the exemptive order.

In addition, shareholders of the Master Fund approved a proposal to reorganize the Master Fund into a Delaware statutory trust. However, the Master Fund reserves the right to delay implementing the reorganization and has elected to do so.

The Master Fund's and the Feeder Fund's annual management fee and expenses, expressed as a percentage of each Fund's average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.58%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.06%
Total Annual Portfolio Operating Expenses	0.64%

Feeder Fund

	Class A
Management Fee	1.51%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.16%
Total Annual Fund Operating Expenses	1.97%

	Feeder Fund
	Class I
Management Fee	1.51%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.16%
Total Annual Fund Operating Expenses	1.67%

Information regarding the effect of any waiver on total annual operating expenses can be found in the Financial Highlights table in the Master Fund's prospectus and in the Master Fund's annual report which is available upon request.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by CRMC. Pursuant to its investment advisory and management agreement with the Trust, Jackson National Asset Management, LLC ("JNAM"), located at 225 W. Wacker Drive, Chicago, Illinois 60606, will provide those services for the Feeder Fund that are normally provided by a fund's investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund's other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund's average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

A discussion regarding the basis for the Board's approval of investment advisory agreement for the Feeder Fund is available in the Fund's Annual Report to shareholders for the period ended December 31, 2021.

JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund's assets are invested in its respective Master Fund's portfolio, which is managed by CRMC, the Master Fund's investment adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund's investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a “feeder fund.”

Portfolio Management of the Master Fund

CRMC uses a system of multiple portfolio managers in managing mutual fund assets. Under this approach, the portfolio of the Master Fund is divided into segments managed by individual portfolio managers. In addition to the portfolio managers below, CRMC’s investment analysts may make investment decisions with respect to a portion of a Master Fund’s portfolio. Investment decisions are subject to a Master Fund’s objective(s), policies and restrictions and the oversight of the appropriate investment-related committees of CRMC and its investment divisions. CRMC manages equity assets through three equity investment divisions and fixed income assets through its fixed income investment division, Capital Fixed Income Investors. The three equity investment divisions -Capital International Investors, Capital Research Global Investors and Capital World Investors - make investment decisions independently of one another. The Master Fund portfolio managers primarily responsible for the day-to-day management of the Master Fund’s portfolio are listed below:

Carl M. Kawaja is a Partner of Capital World Investors and has been an investment professional for 35 years in total; 31 years with CRMC or its affiliates.

Bradford F. Freer is a Partner of Capital Research Global Investors and has been an investment professional for 30 years in total, 28 years with CRMC or its affiliates.

Nicholas J. Grace is a Partner of Capital Research Global Investors and has been an investment professional for 32 years in total, 28 years with CRMC or its affiliates.

Dawid Justus is a Partner of Capital World Investors and has been an investment professional for 23 years in total, 17 years with CRMC or its affiliates.

Jonathan Knowles is a Partner of Capital World Investors, and has been an investment professional for 30 years in total; all with CRMC or its affiliates.

Winnie Kwan is a Partner of Capital Research Global Investors and has been an investment professional for 26 years in total; 22 years with CRMC or its affiliates.

Robert W. Lovelace is a Partner of Capital International Investors and has been an investment professional for 37 years, all with CRMC or its affiliates.

Piyada Phanaphat is a Partner of Capital World Investors and has been an investment professional for 19 years in total; 15 years with CRMC or its affiliates.

Akira Shiraishi is a Partner of Capital International Investors and has been an investment professional for 25 years in total; 19 years with CRMC or its affiliates.

Kirstie Spence is a Partner of Capital Fixed Income Investors and has been an investment professional for 27 years, all with CRMC or its affiliates.

Tomonori Tani is a Partner of Capital World Investors and has been an investment professional for 24 years in total; 18 years with CRMC or its affiliates.

Lisa Thompson is a Partner of Capital International Investors and has been an investment professional for 34 years in total; 28 years with CRMC or its affiliates.

Christopher Thomsen is a Partner of Capital Research Global Investors and has been an investment professional for 25 years, all with CRMC or its affiliates.

The SAI of the Trust and the SAI of the Master Fund, which are available upon request, provide additional information about each portfolio manager’s compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL/American Funds Washington Mutual Investors Fund

Class A

Class I

Investment Objective. The Fund ("Feeder Fund") seeks to produce income and to provide an opportunity for growth of principal consistent with sound common stock investing through exclusive investment in the shares of the American Funds Insurance Series[®] - Washington Mutual Investors FundSM ("Master Fund").

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund.

The Master Fund seeks to produce income and to provide an opportunity for growth of principal consistent with sound common stock investing. The Master Fund strives to accomplish its objective through fundamental research, careful selection and broad diversification. In the selection of common stocks and other securities for investment, current and potential income as well as the potential for long-term capital appreciation are considered. The Master Fund seeks to provide an above-average yield in its quarterly income distribution in relation to the S&P 500 Index (a broad, unmanaged index). The Master Fund strives to maintain a fully invested, diversified portfolio, consisting primarily of high-quality common stocks.

The Master Fund has an "Eligible List" of investments considered appropriate for a prudent investor seeking opportunities for income and growth of principal consistent with common stock investing. The Master Fund's investment adviser generates and maintains the Eligible List and selects the Master Fund's investments exclusively from the issuers on the Eligible List.

The Master Fund is designed to provide fiduciaries, organizations, institutions and individuals with a convenient and prudent medium of investment in common stocks and securities convertible into common stocks, such as convertible bonds and debentures and convertible preferred stocks, that meet the Master Fund's criteria for investing. It is especially designed to serve those individuals who are charged with the responsibility of investing retirement plan trusts, other fiduciary-type reserves or family funds but who are reluctant to undertake the selection and supervision of individual stocks.

Although the Master Fund's policy is to maintain at all times a fully invested and widely diversified portfolio of securities, the Master Fund may hold, to a limited extent, short-term U.S. government securities, cash and cash equivalents.

The Master Fund may invest in other funds managed by the Master Fund's investment adviser or its affiliates ("Central Funds") to more effectively invest in a diversified set of securities in a specific asset class such as money market instruments, bonds and other securities. Shares of Central Funds are only offered for purchase to the Master Fund's investment adviser and its affiliates and other funds, investment vehicles and accounts managed by the Master Fund's investment adviser and its affiliates. When investing in Central Funds, the Master Fund bears its proportionate share of the expenses of the Central Funds in which it invests but does not bear additional management fees through its investment in such Central Funds. The investment results of the portions of the Master Fund's assets invested in the Central Funds will be based upon the investment results of the Central Funds.

The Master Fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

From time to time, primarily due to purchases and redemptions, the Feeder Fund may hold a portion of its assets in cash and cash equivalents.

The Master Fund's investment adviser may consider environmental, social and governance ("ESG") factors that, depending on the facts and circumstances, are material to the value of an issuer or instrument. ESG factors may include, but are not limited to, environmental-related events resulting from climate change or society's response to environmental change, social conditions (e.g., labor relations, investment in human capital, accident prevention, changing customer behavior) or governance issues (e.g., board composition, significant breaches of international agreements, unsound business practices).

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Master Fund's investment in any particular type of security, or assurance of the Master Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Master Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Master Fund's investment adviser otherwise failing to achieve the Master Fund's investment objective.

The principal risks of investing in the Fund include:

- *Accounting risk*
- *Company risk*

- *Equity securities risk*
- *Investment style risk*
- *Issuer risk*
- *Large-capitalization investing risk*
- *Managed portfolio risk*
- *Market risk*
- *Stock risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Depository receipts risk*
- *Emerging markets and less developed countries risk*
- *Expense risk*
- *Financial services risk*
- *Foreign securities risk*
- *Government regulatory risk*
- *Investment in money market funds risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Mid-capitalization investing risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

MANAGEMENT

Investment Adviser to the Master Fund

The Investment Adviser to the Master Fund is Capital Research and Management Company (“CRMC”), an experienced investment management organization founded in 1931. CRMC is a wholly owned subsidiary of The Capital Group Companies, Inc. and is located at 333 South Hope Street, Los Angeles, California 90071, and 6455 Irvine Center Drive, Irvine, California 92618. CRMC manages the investment portfolio and business affairs of the Master Fund.

The Master Fund relies on the professional judgment of its investment adviser, CRMC, to make decisions about the Master Fund’s portfolio investments. The basic investment philosophy of CRMC is to seek to invest in attractively priced securities that, in its opinion, represent good long-term investment opportunities. Securities may be sold when CRMC believes that they no longer represent relatively attractive investment opportunities.

CRMC manages equity assets through three equity investment divisions and fixed-income assets through its fixed-income division, Capital Fixed Income Investors. The three equity investment divisions Capital International Investors, Capital Research Global Investors and Capital World Investors – make investment decisions independently of one another.

The equity investment divisions may, in the future, be incorporated as wholly owned subsidiaries of CRMC. In that event, CRMC would continue to be the investment adviser, and day-to-day investment management of equity assets would continue to be carried out through one or more of these subsidiaries. Although not currently contemplated, CRMC could incorporate its fixed-income division in the future and engage it to provide day-to-day investment management of fixed-income assets. CRMC and each of the funds it advises have received an exemptive order from the U.S. Securities and Exchange Commission (“SEC”) that allows CRMC to use, upon approval of the Master Fund’s board, its management subsidiaries and affiliates to provide day-to-day investment management services to the fund, including making changes to the management subsidiaries and affiliates providing such services. The Master Fund’s shareholders have approved this arrangement; however, there is no assurance that CRMC will incorporate its investment divisions or exercise any authority under the exemptive order.

In addition, shareholders of the Master Fund approved a proposal to reorganize the Master Fund into a Delaware statutory trust. However, the Master Fund reserves the right to delay implementing the reorganization and has elected to do so.

The Master Fund’s and the Feeder Fund’s annual management fee and expenses, expressed as a percentage of each Fund’s average daily net assets and not taking into account any applicable waivers, are as follows:

Master Fund	
Management Fee	0.37%
Distributions and/or Service (12b-1) Fee	0.00%
Other Expenses	0.04%
Total Annual Portfolio Operating Expenses	0.41%

Feeder Fund	
Class A	
Management Fee	0.93%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses	0.14%
Total Annual Fund Operating Expenses	1.37%

Feeder Fund	
Class I	
Management Fee	0.93%
Distribution and/or Service (12b-1) Fees	0.00%
Other Expenses	0.14%
Total Annual Fund Operating Expenses	1.07%

Information regarding the effect of any waiver on total annual operating expenses can be found in the Financial Highlights table in the Master Fund’s prospectus and in the Master Fund’s annual report which is available upon request.

Investment Adviser to the Feeder Fund

Because the Feeder Fund invests its assets in the Master Fund, investment advisory services are currently provided at the Master Fund level by CRMC. Pursuant to its investment advisory and management agreement with the Trust, Jackson National Asset Management, LLC (“JNAM”), located at 225 W. Wacker Drive, Chicago, Illinois 60606, will provide those services for the Feeder Fund that are normally provided by a fund’s investment adviser with the exception of portfolio management.

JNAM will provide master-feeder operational support services to the Feeder Fund under its investment advisory and management agreement with the Trust so long as the Feeder Fund is part of a master-feeder fund structure. Such services will include, but are not limited to: (1) monitoring the ongoing investment performance of the Master Fund; (2) monitoring the Feeder Fund’s other service providers; (3) facilitating the distribution of Master Fund shareholder materials to Feeder Fund shareholders; and (4) providing such other services as are necessary or appropriate to the efficient operation of the Feeder Fund with respect to its investment in the corresponding Master Fund.

If the Feeder Fund ceased to operate as part of a master-feeder fund structure JNAM, upon the approval of the Board, would provide the Feeder Fund with investment advisory services, including portfolio management, either directly or with a sub-adviser under the Trust’s investment advisory and management agreement with JNAM. For these services, JNAM would be entitled to receive a fee based on the Feeder Fund’s average daily net assets, accrued daily and paid monthly, as shown in the "Management of the Trust" section of this Prospectus.

A discussion regarding the basis for the Board’s approval of investment advisory agreement for the Feeder Fund is available in the Fund’s Annual Report to shareholders for the period ended December 31, 2021.

JNAM was organized in 2000 under the laws of Michigan, and managed or advised assets totaling \$285.37 billion as of December 31, 2021.

JNAM has received an exemptive order from the SEC that permits JNAM, subject to certain conditions, to enter into agreements relating to the Trust with unaffiliated sub-advisers approved by the Board without obtaining shareholder approval. Thus, in the event that the Feeder Fund is no longer part of a master-feeder structure, the exemptive order permits JNAM, subject to the approval of the Board but without shareholder approval, to employ unaffiliated sub-advisers for the Feeder Fund, change the terms of particular agreements with unaffiliated sub-advisers or continue the employment of existing unaffiliated sub-advisers after events that would otherwise cause an automatic termination of a sub-advisory agreement. Investors will be notified of any affiliated or unaffiliated sub-adviser hiring or changes. Shareholders of the Fund have the right to terminate an agreement with an affiliated or unaffiliated sub-adviser for the Fund at any time by a vote of the majority of the outstanding voting securities of such Fund.

The Fund does not pay JNAM for portfolio management services because the Feeder Fund's assets are invested in its respective Master Fund's portfolio, which is managed by CRMC, the Master Fund's investment adviser. Under the master-feeder structure, however, the Feeder Fund may withdraw its entire investment from its corresponding Master Fund if the Board determines that it is in the best interests of the Feeder Fund and its shareholders to do so. At the time of such withdrawal, the Board would have to consider what action might be taken, including: (1) investing all of the assets of the Feeder Fund in another pooled investment entity (i.e., another master fund); (2) electing to have JNAM, the Feeder Fund's investment adviser, manage the Feeder Fund either directly or with a sub-adviser under the Trust's investment advisory and management agreement with JNAM; or (3) taking any other appropriate action. This may result in the termination of the current fee waiver and JNAM would receive its full contractual advisory fee for the Feeder Fund, effectively maintaining the total advisory fee payable by the Feeder Fund, subject to any voluntary or contractual fee waivers and/or expense reimbursements agreed to between JNAM and the Trust at that time.

The Trust has entered into an investment advisory and management agreement with JNAM pursuant to which JNAM will provide the services set forth above. JNAM will provide portfolio management under the Investment Advisory and Management Agreement for the Feeder Fund if the Feeder Fund ceases to operate as a "feeder fund."

Portfolio Management of the Master Fund

CRMC uses a system of multiple portfolio managers in managing mutual fund assets. Under this approach, the portfolio of the Master Fund is divided into segments managed by individual portfolio managers. In addition to the portfolio managers below, CRMC's investment analysts may make investment decisions with respect to a portion of a Master Fund's portfolio. Investment decisions are subject to a Master Fund's objective(s), policies and restrictions and the oversight of the appropriate investment-related committees of CRMC and its investment divisions. The Master Fund portfolio managers primarily responsible for the day-to-day management of the Master Fund's portfolio are listed below:

Alan N. Berro is a Partner of Capital World Investors and has been an investment professional for 37 years in total; 31 years with CRMC or its affiliates.

Mark L. Casey is a Partner of Capital International Investors and has been an investment professional for 22 years, all with CRMC or its affiliates.

Irfan M. Furniturewala is a Partner of Capital International Investors and has been an investment professional for 22 years; 21 years with CRMC or its affiliates.

Jeffery T. Lager is a Partner of Capital International Investors and has been an investment professional for 27 years in total; 26 years with CRMC or its affiliates.

Jin Lee is a Partner of Capital World Investors and has been an investment professional for 26 years in total; 25 years with CRMC or its affiliates.

Akira Shiraishi is a Partner of Capital International Investors and has been an investment professional for 32 years in total; 30 years with CRMC or its affiliates.

Diana Wagner is a Partner of Capital World Investors and has been an investment professional for 25 years; 22 years with CRMC or its affiliates.

Alan J. Wilson is a Partner of Capital World Investors and has been an investment professional for 37 years in total, 31 years with CRMC or its affiliates.

Emme Kozloff is a Partner of Capital World Investors and has been an investment professional for 30 years in total; 16 years with CRMC or its affiliates.

The SAI of the Trust and the SAI of the Master Fund, which are available upon request, provide additional information about each portfolio manager's compensation, other accounts managed, and ownership of securities in the Master Fund.

JNL Multi-Manager Alternative Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long term growth of capital.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by allocating among a variety of alternative strategies managed by unaffiliated investment managers (“Sub-Advisers”) sometimes referred to as “sleeves.” Each of the Sub-Advisers generally provides day-to-day management for a portion of the Fund’s assets.

Each Sub-Adviser may use different investment strategies in managing Fund assets, acts independently from the others, and uses its own methodology for selecting investments. Jackson National Asset Management, LLC (“JNAM” or “Adviser”) is responsible for identifying and retaining the Sub-Advisers for the selected strategies and for monitoring the services provided by the Sub-Advisers. JNAM provides qualitative and quantitative supervision as part of its process for selecting and monitoring the Sub-Advisers, as described in the “Management of the Trust” section in this Prospectus. JNAM is also responsible for selecting the Fund’s alternative investment strategies and for determining the amount of Fund assets to allocate to each Sub-Adviser. Based on JNAM’s ongoing evaluation of the Sub-Advisers, JNAM may adjust allocations among Sub-Advisers.

Below are the principal investment strategies for each sleeve, but the Sub-Advisers may also implement other investment strategies in keeping with their respective sleeve’s objective.

Equity Long/Short Strategies

First Pacific Advisors, LP (“FPA”) pursues a contrarian value strategy that seeks to identify absolute value opportunities across the capital structure, and in a variety of market capitalizations, geographies and sectors with the long-term objective of achieving equity-like rates of return with less risk than the market and avoid permanent impairment of capital. Being contrarian in nature means the management team focuses on out-of-favor companies, does not pay close attention to benchmark weightings and is willing to hold meaningful amounts of cash for prolonged periods if opportunities for investment do not present themselves. FPA seeks “value” in companies whose securities are trading at a substantial discount to FPA’s estimate of their intrinsic value. Investments typically include common and preferred stock, convertible securities, rights and warrants, corporate and high yield bonds (commonly referred to as “junk bonds”), as well as government debt. In addition, FPA may sell securities short. The resulting gross exposure of the portfolio will typically be in the range of 50%-80% and net market exposure will typically be in the range of 45%-80%.

Boston Partners Global Investors, Inc. (“Boston Partners”) pursues a multi-faceted strategy that invests in a long-short portfolio of equity securities and financial investments with equity-like characteristics designed to provide exposure to emerging markets. Securities are selected by the Boston Partners using its “three circles” approach which combines a quantitative screening with a fundamental bottom up selection process. This investment strategy is grounded in the following principles: (1) low valuation stocks outperform high valuation stocks; (2) companies with strong fundamentals, e.g. high and sustainable returns on invested capital, outperform companies with weak fundamentals; and (3) stocks with positive business momentum, e.g. rising earnings estimates, outperform stocks with negative business momentum. With a long position, the Fund purchases a stock outright; with a short position, the Fund sells a security that it does not own and must borrow to meet its settlement obligations. Boston Partners examines various factors in determining the value characteristics of issuers, including price-to-book value ratios and price-to-earnings ratios. These value characteristics are examined in the context of the issuer’s operating and financial fundamentals, such as return-on equity and earnings growth and cash flow.

Under normal circumstances, Boston Partners expects that the Fund’s long positions will not exceed approximately 50% of the Fund’s net assets with a typical range of 30% to 70% net long. The Fund’s long and short positions may involve (without limit) equity securities of non-U.S. issuers that are traded in the markets of the United States.

Generally, the Boston Partners sleeve invests in futures contracts, futures-related instruments, forwards, swaps and options to provide exposure to asset classes including, but not limited to, global developed and emerging equity, fixed-income and currencies (collectively, “Instruments”). The Fund will also seek to gain exposure to commodity related instruments primarily by investing in JNL Multi-Manager Alternative Fund (Boston Partners) Ltd. (“Subsidiary”), which invests primarily in those futures and swaps (as described more fully below). These Instruments may be used for investment or speculative purposes, hedging or as a substitute for investing in conventional securities. The Fund may also invest in fixed-income securities, money market instruments, and cash. There are no geographic limits on the market exposure of the Fund’s assets. This flexibility allows Boston Partners to look for investments or gain exposure to asset classes and markets around the world, including emerging markets, that it believes will enhance the Fund’s ability to meet its objective. The Fund may also invest in exchange-traded funds or exchange-traded notes through which the Fund can participate in the performance of one or more Instruments. The Fund’s return is expected to be derived principally from changes in the value of securities and its portfolio is expected to consist principally of securities.

The Fund may invest up to 25% of the value of its total assets in the Subsidiary. The Subsidiary is a wholly owned and controlled subsidiary of the Fund, organized under the laws of the Cayman Islands as an exempted company. Currently, only the sleeve of the

Fund managed by Boston Partners is used for investments in the Subsidiary. Generally, the Subsidiary invests primarily in precious metals, commodity futures and swaps on commodity futures, but it may also invest in financial futures, option and swap contracts, fixed-income securities, pooled investment vehicles, including those that are not registered pursuant to the 1940 Act, and other investments intended to serve as margin or collateral for the Subsidiary's derivative positions. Boston Partners expects to invest the Fund's assets in the Subsidiary in order to gain exposure to futures contracts traded on the Indian stock exchange. The Fund invests in the Subsidiary in order to gain exposure to the commodities markets within the limitations of the federal tax laws, rules and regulations that apply to regulated investment companies ("RICs"). The Subsidiary is subject to the same general investment policies and restrictions as the Fund, except that, unlike the Fund, the Subsidiary is able to invest without limitation in precious metals and commodity-related investments subject to the same 1940 Act asset coverage requirements that are applicable to the Fund. In addition, to the extent applicable to the investment activities of the Subsidiary, the Subsidiary will be subject to the same fundamental and nonfundamental investment restrictions, will comply with the 1940 Act custody and affiliated transaction requirements, and will follow the same compliance policies and procedures as the Fund. The Fund is the sole shareholder of the Subsidiary and does not expect shares of the Subsidiary to be offered or sold to other investors. The Subsidiary is advised by Jackson National Asset Management, LLC ("JNAM" or "Adviser") and has the same money managers as the Boston Partners sleeve. The Trust's President and Vice President, who are the President and Chief Operating Officer, respectively, of JNAM, serve as directors of the Subsidiary. The Subsidiary has entered into a separate investment advisory agreement with JNAM for the management of the Subsidiary's portfolio pursuant to which JNAM has agreed to receive an advisory fee for services to the Subsidiary calculated in the same manner as the advisory fee the Fund pays. See section entitled "*Management Fee*" in the Prospectus.

Loomis, Sayles & Company, L.P. ("Loomis Sayles") invests in equity securities of companies of any market capitalization. While the majority of investments will be long, there may be opportunities where the strategy holds short investments. Under normal market conditions, the strategy will maintain long and short investments in the equity securities. As a substitute for short investments, the strategy may utilize market hedging strategies consisting of short exposures to indices, sectors or other securities or assets. Loomis Sayles may also use long or short total return swaps for either hedging purposes or investment purposes as part of its investment strategy.

Loomis Sayles follows a well-defined buy and sell discipline in constructing and managing the strategy's portfolio. For long positions, Loomis Sayles looks to invest in those few high-quality businesses with sustainable competitive advantages and profitable growth when they sell at a significant discount to estimates of intrinsic value. Shorting will be done only when secular and/or opportunistic shorts are presented. Loomis Sayles looks to short the stock of those companies with structurally deficient business models when the market price is well above intrinsic value and/or of companies where the market price embeds high expectations relative to long-term intrinsic value. Loomis Sayles will consider selling or covering a portfolio investment when they believe an unfavorable structural change occurs within a given business or the markets in which it operates, a critical underlying investment assumption is flawed, when a more attractive reward-to-risk opportunity becomes available, when the current price fully reflects intrinsic value, or for other investment reasons which Loomis Sayles deems appropriate.

Kayne Anderson Rudnick Investment Management, LLC ("KAR") invests in equity securities and equity-related instruments, in long and short positions of primarily U.S.-listed equity securities of any capitalization. KAR may also invest in securities of U.S. and foreign issuers, including securities of issuers in emerging market countries and securities denominated in a currency other than the U.S. dollar. The long investment strategy aims to purchase the stock of issuers deemed by KAR as high-quality companies at attractive valuations. KAR defines "high-quality" companies to include a durable competitive advantage, strong management team, and reasonable capital structure. The short investment strategy aims to sell short the stock of low-quality companies whose share price KAR expects to drop because it does not accurately reflect the poor fundamentals of the business. KAR defines "low-quality" companies to include an erratic or mediocre financial performance, poor history of capital allocation, a flawed business model and/or an aggressive capital structure. Net market exposure (long exposure minus short exposure) may fluctuate based on the number and quality of investments ideas KAR is able to find as a result of its bottom-up fundamental analysis, but the strategy will generally have a net long bias (long exposure will typically exceed short exposure).

Event Driven and Merger Arbitrage Strategy

Westchester Capital Management, LLC ("Westchester") employs a merger arbitrage strategy ("Merger Arbitrage Strategy") that invests in the common stock, preferred stock, corporate debt, derivatives, total return swaps and/or contracts for difference and, occasionally, warrants of companies which are involved in publicly announced mergers, takeovers, tender offers, leveraged buyouts, spin-offs, liquidations and other corporate reorganizations. The Fund may also invest in special purpose acquisition companies, a form of investment vehicle typically formed for the purpose of acquiring an operating business. Although a variety of strategies may be employed depending upon the nature of the reorganizations selected for investment, the simplest form of merger-arbitrage activity involves purchasing the shares of an announced acquisition target at a discount to their expected value upon completion of the acquisition.

Relative Value Strategies

DoubleLine Capital LP ("DoubleLine") employs an opportunistic income strategy by allocating investments to fixed-income instruments and other investments with no limit on the duration of the strategy. DoubleLine may invest in, without limitation, asset-

backed securities; domestic and foreign corporate bonds, including high-yield bonds; municipal bonds; bonds or other obligations issued by domestic or foreign governments, including emerging markets countries; REIT debt securities; and mortgage-related securities. When investing in mortgage-related securities, DoubleLine may invest in obligations issued or guaranteed by agencies or instrumentalities of the U.S. Government; CMOs issued by domestic or foreign private issuers that represent an interest in or are collateralized by mortgage related securities issued by agencies or instrumentalities of the U.S. Government; CMBS; obligations issued by private issuers that represent an interest in or are collateralized by whole mortgage loans or mortgage related securities without a government guarantee but typically with some form of private credit enhancement; “interest only” and “principal only” stripped mortgage securities; inverse floating rate securities; and debt or equity tranches of collateralized debt obligations collateralized by mortgage related securities.

DoubleLine operates under the cardinal mandate of delivering superior risk-adjusted fixed income returns. DoubleLine seeks to deliver positive absolute returns in excess of an appropriate aggregate fixed-income index with portfolio volatility that is similar to U.S. long-term treasury securities. Investment ideas employed by DoubleLine must offer an asymmetric, positively skewed risk-reward profile. As a result, a great deal of DoubleLine’s analysis seeks to identify fixed-income securities that they believe offer greater potential payoff than potential loss under multiple scenarios. Ultimately, a combination of risk management, asset allocation and security selection forms DoubleLine’s investment process. There can be no assurance that the strategy will achieve its investment objective.

The strategy is constructed with the intent to outperform under a range of future outcomes. DoubleLine’s risk integration process seeks to combine assets that will perform differently in different scenarios so that the overall portfolio generates acceptable performance. This process includes balancing the strength of cash flows from certain asset classes against various potential economic or market risks.

Lazard Asset Management LLC (“Lazard”) invests in convertible securities, preferred securities, equity, and debt, with the objective of current income, long-term capital appreciation and principal protection. Utilizing both quantitative and fundamental analysis to determine the best portfolio candidates, Lazard’s Portfolio Management Team constructs a diversified portfolio of convertible securities, preferred stocks, equity, and debt that have been evaluated on relative valuation and risk attributes. The strategy also will use derivatives and other securities, such as index or sector ETFs to seek to minimize market and interest rate risk. Lazard may use over-the-counter total return swaps as part of its investment strategy.

Global Macro Strategy

Western Asset Management Company, LLC (“Western Asset”) focuses under normal circumstances seeking to achieve its investment objective by implementing an opportunistic investing strategy. Western Asset attempts to identify and capitalize on attractive relative-value opportunities principally in fixed-income markets around the globe by investing in a variety of securities and other instruments. The strategy invests in fixed-income securities, up to 50% below investment-grade and up to 50% in un-hedged non-U.S. investments, and may also invest up to 50% emerging markets.

JNAM also may choose to allocate the Fund’s assets to additional strategies in the future. There is no assurance that any or all of the strategies discussed in this prospectus will be used by JNAM or the Sub-Advisers.

JNAM may also manage Fund assets directly to seek to enhance returns, or to hedge and to manage the Fund’s cash and short-term instruments.

JNAM and the Sub-Advisers will implement the various alternative investment strategies by taking long and/or short positions in a broad range of asset classes, such as equity securities, fixed-income, derivatives, other investment companies, currency- and commodity-related instruments and structured products. Long positions benefit from an increase in the price of the underlying instrument or asset class, while short positions benefit from a decrease in that price. The Fund has flexibility in the relative weighting of each asset class and expects to vary the percentages of assets invested in each asset class from time to time. JNAM’s allocations to the underlying Sub-Advisers will be a function of a variety of factors including each underlying strategy’s expected returns, volatility, correlation, and contribution to the Fund’s overall risk profile. In addition, we will also consider whether a particular market environment or more or less conducive to the underlying strategy. The Fund may invest in securities and other financial instruments of companies of any market capitalization. The Fund may invest in securities and other financial instruments available in and which have exposure to both U.S. and non-U.S. markets, including emerging markets, which can be U.S. dollar-denominated or non-U.S. dollar-denominated and may be currency hedged or un-hedged. The Fund may invest in corporate loans.

The Fund may invest in derivatives transactions such as options, futures contracts or swap agreements, including credit default swaps. The Fund’s derivative exposure will vary from time to time depending upon market conditions, inflows and outflows of investments in the Fund and other factors considered by the Sub-Advisers from time to time.

An “emerging market country” is a country that, at the time of investment, is classified as an emerging or developing country by any supranational organization such as an institution in the World Bank Group or the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

The Fund (all sleeves collectively) may invest up to 15% of its assets in illiquid investments. The Fund considers investments in private equity securities and hedge funds as illiquid investments.

The Fund may invest in a variety of equity securities, including common stock, preferred stock, rights and warrants to purchase common stock, depositary receipts, securities convertible into common and preferred stock and non-convertible preferred stock. Additionally, from time to time, the Fund may invest in shares of companies through initial public offerings (“IPOs”).

With respect to the Fund’s fixed-income investments, the Fund may invest in a variety of instruments including bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities. The value of the bond’s principal or the interest income paid on the bond is adjusted to track changes in an official inflation measure. The Fund may also invest in exchange traded notes (“ETNs”). The average portfolio duration of the fixed-income portion of the Fund will vary based on the Sub-Advisers’ and JNAM’s forecast of interest rates and there are no limits regarding portfolio duration or average maturity.

The Fund may invest in other pooled investment vehicles, including other investment companies, European registered investment funds (“UCITS”), real estate investment trusts (“REITs”), private investment funds, and partnership interests, including master limited partnerships (“MLPs”). A private investment fund is a type of financial investment company that is generally exempt from federal securities regulations and laws and has either less than 100 investors or where its member investors have substantial funds invested elsewhere. Unless otherwise indicated, references to the Fund’s investments and related risk factors in this prospectus and the Statement of Additional Information (“SAI”) include investments by any underlying mutual funds, or other pooled investment vehicles in which the Fund may invest.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Advisers’ investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Equity securities risk*
- *Short sales risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Large-capitalization investing risk*
- *Investment style risk*
- *Emerging markets and less developed countries risk*
- *Foreign securities risk*
- *Issuer risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Event driven and special situations risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Convertible securities risk*
- *Investments in IPOs risk*
- *Depositary receipts risk*
- *Allocation risk*
- *Subsidiary risk*
- *Portfolio turnover risk*
- *Special purpose acquisition companies risk*
- *LIBOR replacement risk*
- *Swaps risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). *Investing Through the Bond Connect Program.* The Fund may invest in bonds traded on the China Interbank Bond Market CIBM through the China – Hong Kong Bond Connect program (“Bond Connect”) that are regulated by both Hong Kong and China. These bonds involve a high degree of risk and special considerations not typically associated with investing in other more established markets. The Fund will not be able to buy or sell securities through Bond Connect when either the Chinese and Hong Kong markets are closed for trading, and the Chinese and/or Hong Kong markets may be closed for trading for extended periods of time because of local holidays. In addition, the Fund and/or securities offered through Bond Connect may lose their eligibility for trading through the program at any time, which includes by actions taken by regulators in Hong Kong or China. This could adversely affect the Fund’s net asset value and its ability to trade through Bond Connect, particularly during periods of heightened volatility or market disruptions.

The operational aspects, including the trading and settlement bonds, of Bond Connect may change over time. It currently operates under a recordkeeping system that presents a number of risks including settlement delays, custody, defaults by counterparties and a limited ability to enforce rights. It may be more difficult, or impossible, to obtain and/or enforce a judgment. The regulatory and legal framework of Bond Connect is less extensive and still developing. Trading through Bond Connect may subject the Fund to various taxes, some of which are currently uncertain.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Currency risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *Financial services risk*
- *Investment strategy risk*
- *Leverage risk*
- *Liquidity risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Advisers’ abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser, Sub-Advisers and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. (“Jackson”), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The following individuals are responsible for application of the Fund's strategy, executing trades and allocation of capital to the various strategies for the Fund:

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.’s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

The Sub-Advisers to the JNL Multi-Manager Alternative Fund are:

First Pacific Advisors, LP ("FPA") is located in Los Angeles, California. FPA is independently owned with 24 investment professionals and 79 employees in total as of December 31, 2021. FPA's equity and fixed-income styles are linked by a common fundamental value orientation. FPA's goal is to provide a consistent, risk-averse and disciplined approach to long-term investing in individual securities with the goal of achieving superior long-term total returns for client portfolios while maintaining a focus on capital preservation.

The following individuals are primarily responsible for the day-to-day management of the FPA strategy of the Fund's portfolio:

Mark Landecker, CFA, Partner, joined FPA in 2009. He serves as Portfolio Manager for the FPA Contrarian Value Strategy. Prior to joining FPA, Mr. Landecker served as Portfolio Manager at both Kinney Asset Management and Arrow Investments, Inc., and as associate at TD Capital and PricewaterhouseCoopers. Mr. Landecker earned a BBA (with honors) from the Schulich School of Business, York University, Toronto, Canada.

Steven Romick, CFA, Managing Partner, joined FPA in 1996. He serves as Portfolio Manager of the FPA Contrarian Value Strategy. Prior to joining FPA, Mr. Romick was Chairman of Crescent Management and a consulting security analyst for Kaplan, Nathan & Co. Mr. Romick earned a Bachelor's degree in Education from Northwestern University.

Brian A. Selmo, CFA, Partner, joined FPA in 2008. He serves as Portfolio Manager and Director of Research for the FPA Contrarian Value Strategy. Prior to joining FPA, Mr. Selmo was founder and managing member of Eagle Lake Capital, LLC, and Portfolio Manager of its predecessor. Previously, Mr. Selmo was an analyst at Third Avenue Management and Rothschild, Inc. Mr. Selmo earned a Bachelor's degree in Economics (with honors) from The Johns Hopkins University, where he graduated Phi Beta Kappa.

Boston Partners Global Investors, Inc. ("Boston Partners"), located at One Beacon Street, 30th Floor, Boston, MA 02108, and is an indirect wholly owned subsidiary of ORIX Corporation of Japan. Boston Partners provides investment management and investment advisory services to other institutional and proprietary accounts.

The following individuals are primarily responsible for the day-to-day management of the Boston Partners' strategy of the Fund's portfolio:

Joseph F. Feeney, Jr. is Chief Executive Officer and Chief Investment Officer for Boston Partners. He is responsible for the firm's strategic, financial and operating decisions, and all aspects of investment management including the firm's fundamental and quantitative research groups. He was one of the original partners of Boston Partners Asset Management in 1995. Prior to assuming these roles, he was director of research. Mr. Feeney joined the firm upon its inception in 1995 from Putnam Investments where he managed mortgage-backed securities portfolios. He began his career at the Bank of Boston where he was a loan officer specializing on highly leveraged loan portfolios. Mr. Feeney holds a B.S. degree in finance (Summa Cum Laude, Phi Beta Kappa) from the University of New Hampshire and an M.B.A. with High Honors from the University of Chicago. He holds the Chartered Financial Analyst® designation and is past President of the Fixed Income Management Society of Boston. He has 36 years of investment experience.

Paul Korngiebel, CFA, is a portfolio manager on all Boston Partners Emerging Markets strategies, including Boston Partners Emerging Markets Equity and Emerging Markets Long/Short Equity. He also serves as a supporting member of the greater Global Equity team, providing input on idea generation for various international and global portfolios. Mr. Korngiebel joined the firm from Deccan Value Advisors, which he co-founded, and prior to that he worked at Brandes Investment Partners. Both firms are dedicated to global value investing. Mr. Korngiebel holds a B.A. from Bowdoin (Phi Beta Kappa), M.A. degrees from Harvard and St. Johns College, and an M.B.A. degree from Northwestern (Beta Gamma Sigma). He holds the Chartered Financial Analyst® designation and has 21 years of investment experience.

David Kim is a portfolio manager for Boston Partners Emerging Markets strategies, including Boston Partners Emerging Markets Equity and Emerging Markets Dynamic Equity. Prior to this role, he was an emerging markets industry analyst with Boston Partners

specializing in fundamental research of stocks held in our Emerging Markets Equity portfolios. Prior to Boston Partners he was a private equity associate at Great Hill Partners, specializing within the broader technology sector. Mr. Kim holds a B.A. degree in economics from Amherst College, as well as an M.B.A. degree from Harvard Business School. He has six years of investment experience.

DoubleLine Capital LP (“DoubleLine”), located 505 N. Brand Boulevard, Suite 860, Glendale, California 91203. DoubleLine is registered as an investment adviser under the Investment Advisers Act of 1940, as amended. It provides investment management and sub-advisory services to public as well as various institutional and sub-advised accounts.

Jeffrey E. Gundlach is the founder and Chief Executive Officer of DoubleLine and DoubleLine Equity LP and is Chief Investment Officer of DoubleLine Capital. Mr. Gundlach has been Chief Executive Officer of DoubleLine Capital since its inception in December 2009 and of DoubleLine Equity since its inception in 2013. He is a graduate of Dartmouth College summa cum laude holding a BA in Mathematics and Philosophy. He attended Yale University as a PhD candidate in Mathematics.

Jeffrey J. Sherman has been the Deputy Chief Investment Officer of DoubleLine since June 2016 and a Portfolio Manager since September 2010. He participates on the Fixed Income Asset Allocation Committee and a portfolio manager for derivative-based and multi-asset strategies. He joined DoubleLine in December 2009. Prior to DoubleLine, he was a Senior Vice President at TCW where he worked as a portfolio manager and quantitative analyst focused on fixed-income and real-asset portfolios. Mr. Sherman assisted in developing real-asset strategies for TCW and was a portfolio manager overseeing several commodity funds. Prior to TCW, he was a statistics and mathematics instructor at both the University of the Pacific and Florida State University. Mr. Sherman holds a BS in Applied Mathematics from the University of the Pacific and a MS in Financial Engineering from the Claremont Graduate University. He is a CFA charterholder.

Kayne Anderson Rudnick Investment Management, LLC (“KAR”) is located at 2000 Avenue of the Stars, Ste. 1110, Los Angeles, CA 90067. KAR acts as sub-adviser to mutual funds and as investment adviser to institutions and individuals.

Chris Wright, CFA, is a Portfolio Manager and Senior Research Analyst at KAR, with primary research responsibilities for the small- and mid-capitalizations financials sector. Before joining KAR in 2012, Mr. Wright worked at Alvarez & Marsal as a Senior Associate in Turnarounds and Restructuring and at Houlihan Lokey as an Associate in the Investment Banking Financial Institutions Group.

Julie Biel, CFA, is a portfolio manager and senior research analyst at KAR with primary research responsibilities for the small- and mid-capitalization technology sector. Before joining KAR in 2013, Ms. Biel worked as an equity research associate at Imperial Capital and before that an equity research associate at Merrill Lynch. Ms. Biel earned a B.A. in economics and psychology from New York University, and an M.B.A from the University of California, Los Angeles. She is a CFA (Chartered Financial Analyst) charterholder and has been working in the investment industry since 2008.

Lazard Asset Management LLC ("Lazard"), is located at 30 Rockefeller Plaza, New York, New York 10112. Lazard is a subsidiary of Lazard Frères & Co. LLC, a New York limited liability company, which provides its clients with a wide variety of investment banking, brokerage and related services. Lazard and its affiliates provide investment management services to client discretionary accounts of both individuals and institutions.

The following individuals are primarily responsible for the day-to-day management of the Lazard strategy of the Fund’s portfolio:

Sean H. Reynolds, Managing Director, Portfolio Manager/Analyst, is a Portfolio Manager/Analyst for all capital structure and convertibles-based strategies. Prior to joining Lazard in 2007, Mr. Reynolds was a portfolio manager for convertible arbitrage strategies at SAC Capital Management from April 2003 to August 2006 and, subsequent to this, senior portfolio manager at Sailfish Capital Partners' G2 Multistrategy Fund. Previously he was a convertible arbitrage portfolio manager at the Clinton Group, Inc. From 1997 to 2002, Mr. Reynolds was a managing director and Head of Convertibles Sales (US) at Deutsche Bank Securities, including a period as an executive member of the North American Management Committee, Deutsche Bank Equities. Prior to 1997, Mr. Reynolds was responsible for global convertible securities sales at UBS Securities and domestic convertibles at Merrill Lynch. He has been in the investment industry since 1993. Mr. Reynolds has an MBA from the Wharton School of the University of Pennsylvania and a BA in Math and BAI (BSc) in Engineering from Trinity College Dublin.

Frank Bianco is a Portfolio Manager/Analyst for all capital structure and convertibles-based strategies. He began working in the investment field in 1991. Prior to joining Lazard in 2009, Mr. Bianco was a Portfolio Manager and Head of Credit Research at Argent Funds Group LLC, where he oversaw domestic and international convertible bond, high yield and equity derivative portfolios. Prior to that, Mr. Bianco was a senior research analyst at McMahan Securities Co. L.P., covering the Biotechnology and Healthcare sectors. Previously, he was a senior research analyst in the Credit Risk Management division of the Federal Reserve Bank of New York. Mr. Bianco started his career as a credit analyst at American International Group. Frank has a BA in Economics from Ohio Wesleyan University. He is a member of the New York Society of Security Analysts (NYSSA). Frank is a CFA® charterholder.

Loomis, Sayles & Company, L.P. ("Loomis Sayles") is located at One Financial Center Boston, Massachusetts 02111. Loomis Sayles is a Delaware limited partnership, registered as an investment adviser that provides investment advice to retirement and pension plans, institutional and corporate clients, insurance companies, mutual funds and high net worth individuals. Loomis Sayles is registered as

an investment adviser under the Investment Advisers Act. Loomis Sayles was founded in 1926 and is one of the oldest investment advisory firms in the United States.

The following individual is primarily responsible for the day-to-day management of the Loomis Sayles strategy of the Fund's portfolio:

Aziz V. Hamzaogullari, CFA is the chief investment officer and founder of the Growth Equity Strategies Team and Loomis Sayles. He is the portfolio manager of the Loomis Sayles large cap, global and all cap growth and international growth strategies, including the Loomis Sayles Growth, Global Growth and International Growth mutual funds and products outside the US, as well as the Sakorum Long/Short Equity Fund. Mr. Hamzaogullari is also an executive vice president and a member of Loomis Sayles' Board of Directors. Mr. Hamzaogullari joined Loomis Sayles in 2010 from Evergreen Investments where he was a senior portfolio manager. He joined Evergreen in 2001, was promoted to director of research in 2003 and portfolio manager in 2006. Mr. Hamzaogullari was head of Evergreen's Berkeley Street Growth Equity team and was the founder of the research and investment process. Prior to Evergreen, Mr. Hamzaogullari was a senior equity analyst and portfolio manager at Manning & Napier Advisors. He has 28 years of investment industry experience. He earned a BS from Bilkent University, Turkey, and an MBA from George Washington University. He is also a member of CFA Society Boston.

Westchester Capital Management, LLC ("Westchester"), 100 Summit Lake Drive, Valhalla, New York 10595, a registered investment adviser since 2010. Westchester and its affiliate manage merger-arbitrage programs and other investment strategies similar to the Fund's investment strategies for other institutional investors, including other registered open-end investment companies.

The following individuals are primarily responsible for the day-to-day management of the Westchester strategy of the Fund's portfolio:

Mr. Roy D. Behren and Mr. Michael T. Shannon are primarily responsible for the day-to-day management of the Fund's portfolio. Mr. Behren has served as Co-President of Westchester since 2011, served as a research analyst for Westchester Capital Management, Inc. (Westchester's predecessor adviser) from 1994 until 2010 and as the Chief Compliance Officer of Westchester Capital Management, Inc. from 2004 until June 2010.

Mr. Shannon has served as Co-President of Westchester since 2011, and served as Westchester Capital Management Inc.'s Director of Research from May 1996 until April 2005. From April 2005 to April 2006, Mr. Shannon was Senior Vice President in charge of the Special Situations and Mergers Group of D.E. Shaw & Co. Mr. Shannon returned to Westchester in May 2006 as a research analyst and portfolio strategist.

Western Asset Management Company, LLC ("Western Asset"), established in 1971 and now a wholly owned subsidiary of Legg Mason, Inc., acts as investment adviser to institutional accounts, such as corporate pension plans, mutual funds and endowment funds. Legg Mason is a wholly owned subsidiary of Franklin Resources, Inc. ("Franklin"), which is a publicly traded company (BEN) that, through its subsidiaries, engages in the business of investment management on an international basis. Western Asset's address is 385 East Colorado Boulevard, Pasadena, California 91101.

The Western Asset strategy is managed by a broad team of investment professionals. Senior members of the portfolio management team are responsible for the development of investment strategy and oversight for the Western Asset strategy and coordination of other relevant investment team members. They work together with the broader Western Asset investment management team on portfolio structure, duration weighting and term structure decisions.

The individuals responsible for day-to-day portfolio management, development of investment strategy, oversight and coordination of the Western Asset strategy are S. Kenneth Leech (Chief Investment Officer) and Prashant Chandran (Portfolio Manager). Each of Messrs. Leech and Chandran has been employed by Western Asset as an investment professional for at least the past five years and has been part of the portfolio management team for the Western Asset strategy since its inception in 2015.

S. Kenneth Leech is Chief Investment Officer of Western Asset. Mr. Leech joined Western Asset in 1990 as Director of Portfolio Management. In this position, he oversaw interest rate strategy and led the Long Duration effort. In 1998, he was named Chief Investment Officer and spearheaded the performance and product development efforts that helped underpin Western Asset's global growth and success. After taking medical leave for much of 2008, Mr. Leech resumed investment duties in early 2009 and was named Chairman of the Global Strategy Committee. In this position, he directed the global portfolio management and the macro-strategy alternative efforts. In 2013, he became Co-Chief Investment Officer as part of the transition process before fully resuming the Chief Investment Officer role in April 2014. Prior to joining Western Asset, Mr. Leech spent much of his career focusing on proprietary trading, most recently with Greenwich Capital (1988–1990) and the First Boston Corporation (1980–1988). In his four years at the University of Pennsylvania's Wharton School, he obtained three degrees while graduating *summa cum laude*.

Mr. Prashant Chandran returned to Western Asset as a Portfolio Manager in 2007 after working at Tahoma Capital. In 2005, Mr. Chandran was a Research Analyst for Western Asset and for over five years was Director of Capital Markets at Microsoft Corporation.

Mr. Chandran graduated from the Indian Institute of Technology Bombay. He has an MS from the University of Toledo and an MBA from the University of Chicago's Graduate School of Business. He is a CFA charterholder.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving each sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL Multi-Manager Emerging Markets Equity Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a variety of emerging market equity strategies, sometimes referred to as “sleeves,” managed by unaffiliated investment managers (“Sub-Advisers”). Each of the Sub-Advisers generally provides day-to-day management for a portion of the Fund’s assets.

Each Sub-Adviser may use different investment strategies in managing Fund assets, acts independently from the others, and uses its own methodology for selecting investments. Jackson National Asset Management, LLC (“JNAM” or “Adviser”) is responsible for identifying and retaining the Sub-Advisers for the selected strategies and for monitoring the services provided by the Sub-Advisers. JNAM provides qualitative and quantitative supervision as part of its process for selecting and monitoring the Sub-Advisers. JNAM is also responsible for selecting the Fund’s investment strategies and for determining the amount of Fund assets to allocate to each Sub-Adviser. Based on JNAM’s ongoing evaluation of the Sub-Advisers, JNAM may adjust allocations among Sub-Advisers.

Below are the principal investment strategies for each sleeve, but the Sub-Advisers may also implement other investment strategies in keeping with their respective sleeve’s objective.

T. Rowe Price Emerging Markets Discovery Stock Strategy

T. Rowe Price Associates, Inc. and T. Rowe Price Hong Kong Limited (collectively, “T. Rowe Price”) constructs the Emerging Markets Discovery Stock Strategy by investing in stocks issued by companies in emerging markets. T. Rowe Price may invest in companies of any size but generally seeks stocks of mid or larger companies that T. Rowe Price believes are forgotten. T. Rowe Price considers frontier markets to be a subset of emerging markets.

T. Rowe Price expects to make most of its investments in stocks of companies located in, or that have economic ties to, the emerging market countries (which include frontier markets) in Asia, Latin America, Europe, Africa, and the Middle East.

In selecting investments, T. Rowe Price generally favors companies with one or more of the following characteristics:

- under-owned and under-researched by mainstream investors;
- low valuation relative to a company’s fundamentals;
- companies that may benefit from restructuring activity or other turnaround opportunities;
- a sound balance sheet and other positive financial characteristics;
- strong or improving position in an overlooked industry or country; and
- above-average dividend yield and/or the potential to grow dividends.

WCM Focused Emerging Markets Strategy

WCM Investment Management, LLC (“WCM”) constructs the Focused Emerging Markets Strategy by investing in equity securities of non-U.S. domiciled companies or depositary receipts of non-U.S. domiciled companies located in developed countries and in emerging and frontier market countries.

WCM’s investments in equity securities may include common stocks and depositary receipts. The Fund’s investments in depositary receipts may include American, European, Canadian and Global Depositary Receipts (“ADRs”, “EDRs”, “CDRs”, and “GDRs”, respectively). ADRs are receipts that represent interests in foreign securities held on deposit by U.S. banks. EDRs and GDRs have the same qualities as ADRs, except that they may be traded in several international trading markets.

WCM uses a bottom-up approach that seeks to identify companies with attractive fundamentals, such as long-term growth in revenue and earnings, and that show a strong probability for superior future growth. WCM’s investment process focuses on seeking companies that are industry leaders with strengthening competitive advantages; corporate cultures emphasizing strong, quality and experienced management; low or no debt; and attractive relative valuations. WCM also considers other factors including political risk, monetary policy risk, and regulatory risk in selecting securities. Although the Fund may invest in any size companies, it generally invests in large capitalization established multinational companies. WCM considers large capitalization companies to be those with market capitalization of \$5 billion or greater at the time of investment. WCM generally invests in securities of companies located in different regions and in at least three different countries. However, from time to time, the Fund may have a significant portion of its assets invested in the securities of companies in one or a few countries or regions. The Fund may make significant investments in certain sectors or group of sectors within a particular industry or industries from time to time.

Wellington Emerging Markets Research Equity Core Strategy

Wellington Management Company LLP (“Wellington Management”) constructs the Emerging Markets Research Equity Core Strategy by investing in equity and equity-related securities issued by companies located in emerging market countries. Wellington Management may invest in equity securities of issuers that, while not domiciled in emerging market countries, have or will have substantial assets in emerging market countries or derive or expect to derive a substantial portion of their total revenues from either goods or services produced in, or sales made in, emerging market countries, including frontier markets. Wellington Management may invest in locally listed common stocks and securities traded in over-the-counter markets, depositary receipts (such as ADRs, EDRs, GDRs, and American Depository Shares (“ADSs”)).

Wellington Management may also invest in other permissible investments, such as real estate securities, convertible bonds, preferred stock, rights, warrants, exchange-traded funds, as well as debt securities, cash and cash equivalents, and derivative instruments which may be used for investment purposes and for efficient portfolio management including hedging against risk.

Wellington Management uses a bottom-up stock selection approach based on the fundamental research of its global industry analysts. Wellington Management will seek to develop a portfolio that is generally diversified across issuers, countries, industries, and style. Wellington Management will generally invest in mid- and large-capitalization companies. Wellington Management will generally invest in companies above \$2 billion in market capitalization.

Kayne Anderson Rudnick Emerging Markets Small Cap Strategy

Kayne Anderson Rudnick Investment Management, LLC (“KAR”) constructs the Emerging Markets Small Cap Strategy by investing in equity or equity-linked securities of small capitalization companies located in emerging markets countries. KAR will invest in a select group of small-cap companies believed by KAR to be undervalued relative to their future market growth potential. The investment strategy emphasizes companies that KAR believes to have a sustainable competitive advantage, strong management, and low financial risk and to be able to grow over market cycles.

KAR considers small-capitalization companies to be those companies that, at the time of initial purchase for the investment strategy, have market capitalizations of less than \$8 billion. KAR intends to diversify its investments among countries and normally to have represented in the portfolio business activities of a number of different countries. In determining “location” of an issuer, KAR primarily relies on the country where the issuer is incorporated. However, the country of risk is ultimately determined based on analysis of the following criteria: actual building address (domicile), primary exchange on which the security is traded and country in which the greatest percentage of company revenue or profit is generated. This evaluation is conducted so as to determine that the issuer’s assets are exposed to the economic fortunes and risks of the designated country. Equity securities in which KAR invests include common stocks, preferred stocks and ADRs/GDRs. KAR does not use allocation models to restrict investments to certain regions, countries, or industries.

KAR uses a strategy emphasizing highly profitable, consistently growing companies with low debt and rising cash flows. If a company meets these criteria, KAR researches and analyzes that company’s strength of management, its relative competitive position in the industry and its financial structure.

The Fund considers a company to be in an emerging or frontier country or market if the company has been organized under the laws of, has its principal offices in, or has its securities principally traded in, the emerging or frontier country or market, or if the company derives at least 50% of its revenues, net profits or incremental revenue growth (typically over the past five years) from, or has at least 50% of assets or production capacities in, the emerging or frontier country or market.

Emerging market countries include, but are not limited to, all countries represented by the Morningstar® Emerging Markets Index□ (the “Index”). The Index includes, but is not limited to, the following countries: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Kuwait, Malaysia, Mexico, Pakistan, Peru, Philippines, Qatar, Russia, Saudi Arabia, South Africa, Taiwan, Thailand, Turkey, and United Arab Emirates.

The Fund generally invests in securities of companies located in different regions and in at least three different countries. The Fund may concentrate, or invest a significant portion of its assets, in the securities of companies in one or a few countries or regions. The Fund may make significant investments in certain sectors or group of sectors within a particular industry or industries from time to time and intends to concentrate its investments in the banking industry.

The Fund may invest in participatory notes.

JNAM also may choose to allocate the Fund’s assets to additional strategies in the future. There is no assurance that any or all of the strategies discussed in this prospectus will be used by JNAM or the Sub-Advisers.

JNAM may also manage Fund assets directly to seek to enhance returns, or to hedge and to manage the Fund’s cash and short-term instruments.

The Fund has flexibility in the relative weighting of each asset class and expects to vary the percentages of assets invested in each asset class from time to time. JNAM's allocations to the underlying Sub-Advisers will be a function of a variety of factors including each underlying strategy's expected returns, volatility, correlation, and contribution to the Fund's overall risk profile.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Advisers' investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Emerging markets and less developed countries risk*
- *Equity securities risk*
- *Company risk*
- *Foreign securities risk*
- *Currency risk*
- *Managed portfolio risk*
- *Accounting risk*
- *Banking industry investment risk*
- *Concentration risk*
- *Government regulatory risk*
- *Depository receipts risk*
- *Stock risk*
- *Participation note risk*
- *China risk*
- *Frontier market countries risk*
- *Russia investment risk*
- *Portfolio turnover risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Issuer risk*
- *Small-capitalization investing risk*
- *Mid-capitalization and small-capitalization investing risk*
- *China and India country specific risk*
- *Asia ex-Japan concentration risk*
- *Asian investment risk*
- *European investment risk*
- *Consumer discretionary risk*
- *Information technology sector risk*
- *Investing through Stock Connect risk*
- *Investments in IPOs risk*
- *Financial services risk*
- *Micro-capitalization investing risk*
- *Custody risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Investment strategy risk*
- *Investment style risk*
- *Market risk*

- *Redemption risk*
- *Regulatory investment limits risk*
- *Sector risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Advisers' abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser, Sub-Advisers and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. (“Jackson”), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The following individuals are responsible for application of the Fund's strategy, executing trades and allocation of capital to the various strategies for the Fund:

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

The Sub-Advisers to the JNL Multi-Manager Emerging Markets Equity Fund are:

Kayne Anderson Rudnick Investment Management, LLC (“KAR”) is located at 2000 Avenue of the Stars, Ste. 1110, Los Angeles, CA 90067. KAR acts as sub-adviser to mutual funds and as investment adviser to institutions and individuals.

Hyung Kim is a Portfolio Manager and a Senior Research Analyst at KAR. Mr. Kim has primary research responsibilities for the Emerging Markets and International Small Cap strategies at KAR. Mr. Kim has approximately 15 years of research experience. Before joining KAR in 2017, Mr. Kim worked as an International Equity Analyst for Advisory Research Inc. for seven years and as a Portfolio Manager on their Global Value strategy. Prior to joining Advisory Research, Mr. Kim worked as a research analyst at Coghill Capital Management and in corporate banking at HSBC and Woori Bank in Seoul, Korea. He also worked as an equity research intern at CLSA in Seoul. Mr. Kim earned a B.A. in German with a minor in Economics from Hankuk University of Foreign Studies in Seoul, Korea, and an M.B.A. in accounting and finance from the University of Chicago Booth School of Business. He is fluent in Korean and German.

Craig Thrasher, CFA, is a Portfolio Manager and a Senior Research Analyst at KAR. Mr. Thrasher has primary research responsibilities for the International and Emerging Markets Small Cap strategies at KAR. Before joining KAR in 2008, Mr. Thrasher worked at Kirr, Marbach & Company as an Equity Analyst and at Wedbush Morgan Securities in correspondent credit. He has approximately 15 years of equity research experience. Mr. Thrasher earned a B.S. in Business and Public Administration, concentration in Finance, from the University of Arizona, and an M.B.A. from the University of Chicago, Graduate School of Business. Mr. Thrasher is a Chartered Financial Analyst charterholder.

T. Rowe Price Associates, Inc. ("T. Rowe") is located at 100 East Pratt Street, Baltimore, Maryland 21202. T. Rowe was founded in 1937. T. Rowe and its affiliates provide investment advisory services to individual and institutional investor accounts. T. Rowe is a wholly owned subsidiary of T. Rowe Price Group, Inc., a publicly traded company the principal business of which is investment management services.

The Sub-Sub-Adviser to the T. Rowe Price Emerging Markets Discovery Stock Strategy sleeve of the Fund is T. Rowe Price Hong Kong Limited ("T. Rowe Price Hong Kong"), located at 6/F Chater House 8 Connaught Place, Central Hong Kong. T. Rowe Price Hong Kong, a wholly owned subsidiary of T. Rowe Price, was organized as a Hong Kong limited company in 2010. T. Rowe Price Hong Kong is compensated by T. Rowe Price at no additional expense to the Fund.

Ernest Yeung, Vice President of T. Rowe Price Group, Inc. and T. Rowe Price Hong Kong Limited, is a portfolio manager for the Emerging Markets Discovery Equity Strategy at T. Rowe Price. He was the co-portfolio manager for the International Small-Cap Equity Strategies from 2009 to 2014. Prior to joining T. Rowe Price in 2003, Mr. Yeung was an analyst with HSBC Asset Management in London. Mr. Yeung earned an M.A., with honours, in economics from Cambridge University. He also has earned the Chartered Financial Analyst designation and the Investment Management Certificate.

WCM Investment Management, LLC ("WCM"), is located at 281 Brooks Street, Laguna Beach, California 92651. WCM is an independent, money management firm, founded in 1976. WCM provides investment management and sub-advisory services to public as well as various institutional and sub-advised accounts.

The portfolio managers responsible for management of the WCM Focused Emerging Markets Strategy of the Fund are Sanjay Ayer, Peter J. Hunkel, Gregory S. Ise, Mike Tian, and Michael Trigg.

Sanjay Ayer, CFA is a Portfolio Manager. Mr. Ayer joined WCM in 2007. He is a member firm's Investment Strategy Group (ISG) and his primary responsibilities include portfolio management and equity research. Prior to WCM, Mr. Ayer was an Equity Analyst at Morningstar, Inc. in Chicago from 2002 to 2006, where he covered the gaming, cruise and online travel industries.

Peter J. Hunkel is a Portfolio Manager. Mr. Hunkel joined WCM in 2007. Mr. Hunkel has been a portfolio manager of the focused international growth strategy since December 2004. Mr. Hunkel is a member of the firm's ISG and his primary responsibilities include portfolio management and equity research. Prior to joining WCM, Mr. Hunkel served as Chief Operating Officer and Senior Portfolio Manager at Centurion Alliance from 2000 to June 2007.

Gregory S. Ise, CFA is a Portfolio Manager and Business Analyst. Mr. Ise joined WCM in 2014. He is a member firm's Investment Strategy Group (ISG) and his primary responsibilities include portfolio management and equity research. Prior to joining WCM, Mr. Ise was a Senior International Research Analyst at Rainier Investment Management ("RIM") from 2012 to 2014, where he helped launch the firm's first international small cap open-end mutual fund. Prior to RIM, he was a Vice President and Analyst at Allianz Global Investors from 2006 to 2011, where he contributed to the global and international small cap open-end mutual funds.

Mike Tian, CFA, is a Portfolio Manager and Business Analyst. Mr. Tian joined WCM in 2012. He is a member firm's Investment Strategy Group (ISG) and his primary responsibilities include portfolio management and equity research. Since the start of his investment career in 2006, Mr. Tian's experience includes a position as Senior Equity Analyst and Equity Strategist at Morningstar, Inc. in Chicago. While there, he also managed the Morningstar Opportunistic Investor, a portfolio and newsletter focusing on special situations and growth companies, and additionally played an instrumental role in the development of Morningstar's economic moat trend methodology. Mr. Tian earned his B.S. in Finance from the University of Illinois at Urbana-Champaign and is also a CFA® charterholder.

Michael B. Trigg is a Portfolio Manager and President. Mr. Trigg joined WCM in 2005. Mr. Trigg is a member of the firm's ISG and his primary responsibilities include portfolio management and equity research. Since he began his investment career in 2001, Mr. Trigg's experience includes a position as equity analyst at Morningstar, Inc. in Chicago where, in addition to general equity analysis, he managed their Model Growth Portfolio.

Wellington Management Company LLP ("Wellington Management") is a Delaware limited liability partnership with principal offices at 280 Congress Street, Boston, Massachusetts 02210. Wellington Management is a professional investment counseling firm which provides investment services to investment companies, employee benefit plans, endowments, foundations, and other institutions. Wellington Management and its predecessor organizations have provided investment advisory services for over 80 years. Wellington Management is owned by the partners of Wellington Management Group LLP, a Massachusetts limited liability partnership.

Mary L. Pryshlak, CFA, Senior Managing Director and Director of Global Industry Research of Wellington Management, has been involved in portfolio management and securities analysis for the Fund since April 2020. Ms. Pryshlak joined Wellington Management as an investment professional in 2004.

Jonathan G. White, CFA, Managing Director and Director, Research Portfolios of Wellington Management, has been involved in portfolio management and securities analysis for the Fund since April 2020. Mr. White joined Wellington Management as an investment professional in 1999.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving each sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL Multi-Manager International Small Cap Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in international small cap strategies, sometimes referred to as “sleeves,” managed by unaffiliated investment managers (“Sub-Advisers”). Each Sub-Adviser generally provides day-to-day management for a portion of the Fund’s assets.

Each Sub-Adviser may use different investment strategies in managing Fund assets, acts independently from the others, and uses its own methodology for selecting investments. Jackson National Asset Management, LLC (“JNAM” or “Adviser”) is responsible for identifying and retaining the Sub-Advisers for the selected strategies and for monitoring the services provided by the Sub-Advisers. JNAM provides qualitative and quantitative supervision as part of its process for selecting and monitoring the Sub-Advisers. JNAM is also responsible for selecting the Fund’s investment strategies and for determining the amount of Fund assets to allocate to each Sub-Adviser. Based on JNAM’s ongoing evaluation of the Sub-Advisers, JNAM may adjust allocations among Sub-Advisers.

Below are the principal investment strategies for each sleeve, but the Sub-Advisers may also implement other investment strategies in keeping with their respective sleeve’s objective.

WCM International Small Cap Growth Strategy

WCM Investment Management, LLC (“WCM”) constructs the strategy by investing in equity securities or depositary receipts of small capitalization companies domiciled outside of the United States, including in emerging and frontier market countries. Emerging and frontier countries or markets are those countries or markets with low-to-middle-income economies as classified by the World Bank or included in the Morningstar® Emerging Markets Index[□]. WCM considers small capitalization companies to be companies with market capitalizations within the range of those companies included in the Morningstar® Global ex-US Small Cap Target Market Exposure Index[□] (“Index”) at the time of purchase. Because small capitalization companies are defined by reference to the Index, the range of market capitalization of companies in which the Fund invests may vary with market conditions. WCM will consider the market capitalization range by country. Investments in companies that move above or below the capitalization range of the Index may continue to be held by the WCM International Small Cap Growth Strategy at the Sub-Adviser’s discretion.

WCM uses a bottom-up approach that seeks to identify companies believed to have above-average potential for growth in revenue and earnings. WCM’s investment process seeks companies that are industry leaders with sustainable competitive advantages; corporate cultures emphasizing strong, quality and experienced management; little or no debt; and attractive relative valuations. In selecting securities, WCM also considers other factors including, among others, political risk, monetary policy risk, and regulatory risk specific to an issuer’s country of domicile.

Causeway International Small Cap Strategy

Causeway Capital Management LLC (“Causeway”) constructs the strategy by investing primarily in common stocks of companies with smaller market capitalizations located in developed and emerging markets outside the U.S. Smaller market capitalization companies have market capitalizations that do not exceed the highest market capitalization of a company within the Index at the time of purchase. As of December 31, 2021, the Index included companies with market capitalizations of up to \$9.2 billion and included companies in both developed and emerging markets outside the U.S. Investments in companies include both developed and emerging markets outside the U.S. Some of these companies, although small compared with larger U.S. companies, might be large companies in their local markets. The Causeway International Small Cap Strategy may invest in a wide range of industries. Investments in companies that move above or below the capitalization range of the Index may continue to be held by the Causeway International Small Cap Strategy at the Sub-Adviser’s discretion.

Causeway uses a quantitative investment approach to purchase and sell investments for its sleeve of the Fund. To select securities, Causeway’s proprietary computer model analyzes “stock-specific” factors relating to valuation, earnings growth, technical indicators, and competitive strength, and “top-down” factors relating to macroeconomics and country. Currently, the valuation factor category receives the highest overall weight in the model and stock-specific factors comprise approximately 90% of the score for a company. For each stock, the relative weight assigned to each stock-specific factor differs depending on its classification (for example, value, growth, momentum, capitalization or other classifications). The relative weights of these stock-specific factors are sometimes referred to as “contextual weights.” Factors and their weightings may change over time as the model is revised and updated, or if the classification of a stock changes. In addition to its quantitative research, the Causeway’s fundamental research analysts review the quantitative outputs to attempt to identify and address special issues, such as significant corporate actions or management changes, which are difficult to detect quantitatively.

Baillie Gifford International Smaller Companies Strategy

Baillie Gifford Overseas Limited (“Baillie Gifford”) constructs the strategy by investing in an international portfolio of common stocks of smaller companies located in countries of developed and emerging markets. When selecting companies for initial inclusion in the Baillie Gifford International Smaller Companies Strategy, Baillie Gifford seeks to invest in companies with a market capitalization in the region of \$2 billion or lower. The Baillie Gifford International Smaller Companies Strategy may continue to hold, and may increase its investment in, portfolio companies whose market capitalization subsequently increases. The Baillie Gifford International Smaller Companies Strategy expects over time to have a substantial portion of its portfolio invested in companies with a market capitalization in excess of \$2 billion. The Baillie Gifford International Smaller Companies Strategy currently defines a “smaller company” as a company with a market capitalization that does not exceed \$10 billion.

Baillie Gifford employs a bottom-up approach to stock selection and principally selects companies without regard to the Fund's benchmark. Baillie Gifford focuses on company research and the long-term outlook of companies. Ideas can come from a wide variety of sources, including, but not limited to, research trips, company meetings, and relationships with industry thought leaders and academics. Stock ideas will be researched to assess a range of factors, including: geographic and industry positioning, competitive advantage, management, financial strength and valuation.

Emerging and frontier countries or markets are those countries or markets with low-to-middle-income economies as classified by the World Bank or included in the Morningstar Emerging Markets Index. The Sub-Advisers consider a company to be in an emerging or frontier country or market if the company has been registered, incorporated or organized under the laws of, has its headquarters or its principal offices in, or has its stock exchange listing or securities principally traded in, the emerging or frontier country or market, or if the company derives at least 50% of its revenues, net profits or incremental revenue growth (typically over the past five years) from, or has at least 50% of assets or production capacities in, the emerging or frontier country or market. The Sub-Advisers consider a company to be domiciled in a country if the company is registered, incorporated or organized under the laws of that country, has headquarters or its principal place of business in that country, or has its stock exchange listing or securities principally traded in that country.

The Fund generally will invest in the securities of companies domiciled in at least three different countries. However, from time to time, the Fund may invest a significant portion of its assets in the securities of companies domiciled in one or a few countries. The Fund may make significant investments in certain sectors or group of sectors from time to time.

The Fund's equity investments include common stock and depositary receipts. The Fund's investments in depositary receipts may include American, European, Canadian and Global Depositary Receipts (“ADRs,” “EDRs,” “CDRs”, and “GDRs,” respectively), and other similar securities. ADRs are receipts that represent interests in foreign securities held on deposit by U.S. banks. EDRs and GDRs have the same qualities as ADRs, except that they may be traded in several international trading markets.

The Fund may participate in initial public offerings ("IPOs") and in securities offerings that are not registered in the U.S. In some emerging markets, the Fund may invest in companies that qualify as smaller companies but still are among the largest in that market.

The Fund may invest in Rule 144A and Regulation S securities. Rule 144A securities are securities offered as exempt from registration with the Securities and Exchange Commission (“SEC”) but are typically treated as liquid securities because there is a market for such securities. Regulation S securities are securities of U.S. and non-U.S. issuers that are issued through private offerings without registration with the SEC pursuant to Regulation S under the Securities Act of 1933, as amended.

The Fund may invest in A Shares of companies based in China that trade on the Shanghai Stock Exchange and the Shenzhen Stock Exchange through the Shanghai – Hong Kong and Shenzhen – Hong Kong Stock Connect programs (“Stock Connect”). Stock Connect is a mutual stock market access program designed to, among other things, enable foreign investments in China.

JNAM may choose to allocate the Fund's assets to additional strategies in the future. There is no assurance that any or all of the strategies discussed in this prospectus will be used by JNAM or the Sub-Advisers.

JNAM may also manage Fund assets directly to seek to enhance returns or to hedge and to manage the Fund's cash and short-term instruments.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Advisers' investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*

- *Equity securities risk*
- *Managed portfolio risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Investment style risk*
- *Emerging markets and less developed countries risk*
- *Foreign securities risk*
- *Allocation risk*
- *Depository receipts risk*
- *Investments in IPOs risk*
- *Frontier market countries risk*
- *Rule 144A securities risk*
- *Regulation S securities risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Currency risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investing through Stock Connect risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Advisers’ abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser, Sub-Advisers and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. (“Jackson”), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The following individuals are responsible for application of the Fund’s strategy, executing trades and allocation of capital to the various strategies for the Fund:

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.’s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the

University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

The Sub-Advisers to the JNL Multi-Manager International Small Cap Fund are:

Baillie Gifford Overseas Limited (“Baillie Gifford”), is located at Calton Square, 1 Greenside Row, Edinburgh EH1 3AN, Scotland. Baillie Gifford is an investment advisory firm founded in 1983 and a wholly owned by a Scottish investment company, Baillie Gifford & Co., which was founded in 1908. Baillie Gifford & Co. is one of the largest independently owned investment management firms in the United Kingdom and manages money primarily for institutional clients.

Praveen Kumar joined Baillie Gifford in 2008 and is a portfolio manager in the Japanese Equities Team. He is the lead manager for the Manager’s Japanese Smaller Companies Strategy and a member of the Manager’s International Smaller Companies Portfolio Construction Group. Mr. Kumar graduated BEng in Computer Science from Bangalore University in 2001 and gained an MBA from the University of Cambridge in 2008.

Brian Lum, CFA, is a portfolio manager in the Manager’s International Growth Research Team and became a member of the International Growth Portfolio Construction Group in May 2015. He also Chairs the Manager’s International Smaller Companies Portfolio Construction Group. Mr. Lum joined Baillie Gifford in 2006 and initially worked in the North American and Emerging Markets departments, before spending a number of years focused on investment in smaller companies. He is a CFA Charterholder. Mr. Lum graduated MSci and BA (Hons) in Physics from the University of Cambridge in 2006.

Charlie Broughton, CFA, joined Baillie Gifford in 2014 and is a portfolio manager in the Smaller Companies Team. Mr. Broughton is a member of the Manager’s Pan European Smaller Companies Portfolio Construction Group, lead manager of the Manager’s British Smaller Companies Strategy and a member of the Manager’s International Smaller Companies Portfolio Construction Group. He is a CFA Charterholder. Mr. Broughton graduated MA (Hons) in Medieval History and Archaeology from the University of St. Andrews in 2013.

Steve Vaughan, CFA, joined Baillie Gifford in 2012 and is a portfolio manager in the Smaller Companies Equities Team. Mr. Vaughan is a member of the Manager’s Pan European Smaller Companies Portfolio Construction Group and a member of the Manager’s International Smaller Companies Portfolio Construction Group. He is a CFA Charterholder. Prior to joining Baillie Gifford, Mr. Vaughan was an Officer in the British Army for nine years. He graduated BA (Hons) in Jurisprudence from the University of Oxford in 2001 and MA in International Relations from the University of Exeter in 2012.

Causeway Capital Management LLC (“Causeway”), located at 11111 Santa Monica Boulevard, 15th Floor, Los Angeles, CA 90025.

The portfolio managers responsible for management of the Causeway International Small Cap Strategy of the Fund are Arjun Jayaraman, MacDuff Kuhnert, Joe Gubler, and Ryan Myers.

Arjun Jayaraman, PhD, CFA, is head of the quantitative research group at Causeway. He has been a portfolio manager at the Causeway since January 2006. From 2004 to 2005, Dr. Jayaraman was a portfolio manager for quantitative strategies at PanAgora Asset Management. He was the lead portfolio manager of its non-U.S. large cap core equity portfolios and was the co-portfolio manager of its global large cap core equity portfolios. From 2000-2004, Dr. Jayaraman managed similar portfolios at Putnam Investments in addition to working closely with the teams that managed Putnam’s traditional non-U.S. strategies. Dr. Jayaraman has a BA in Economics from Columbia University, a PhD from New York University (Stern School of Business) and is a CFA charterholder.

MacDuff Kuhnert, CFA, is a director of Causeway and performs quantitative research. He joined Causeway in July 2001. His responsibilities include product development, asset allocation, risk management, and the design and implementation of proprietary valuation models and other quantitative tools. From 1996 to July 2001, Mr. Kuhnert worked for HW-MLIM as a quantitative research associate, where he created and developed advanced quantitative models used in the international value investment process. Mr.

Kuhnert has a BA in Chemistry from Dartmouth College. He is a CFA charterholder and member of the Los Angeles Society of Financial Analysts and the Los Angeles Quantitative Investment Association.

Joe Gubler, CFA, is a director of Causeway and performs quantitative research. He joined Causeway in April 2005. From 2002 to April 2005, Mr. Gubler worked as Director of Engineering for the MonsterTRAK division of Monster.com. He was responsible for a cross functional team that developed, enhanced, and maintained the software that powers the monstertrak.com website. From 1999 to 2002, Mr. Gubler developed database-enabled web applications for a wide range of companies, including the National Academy of Recording Arts and Sciences, the Recording Industry Association of America, Disney, NameSafe.com, and Array Networks. While studying astrophysics at UC San Diego, Mr. Gubler worked as a Graduate Research Assistant in the Jet Propulsion Laboratory's stellar interferometry group. Mr. Gubler has a BS, cum laude, in Physics from UC Irvine, an MS in Physics from UC San Diego, and an MBA from the UCLA Anderson Graduate School of Management. He is a CFA charterholder.

Ryan Myers is a director of Causeway and performs quantitative research. He joined Causeway in June 2013. From 2010 to 2012, Mr. Myers served as chief investment officer of Iron Castle Asset Management, an investment partnership focused on mid-cap U.S. equities. From 2007 to 2008, Mr. Myers worked as an analyst at Canyon Partners, where he covered the cable, media, telecom and satellite sectors. From 2005 to 2007, Mr. Myers was an associate for Oaktree Capital Management in the distressed opportunities group. Mr. Myers began his professional career in 2003 as an investment banking analyst at Goldman Sachs in the technology, media and telecom group. Mr. Myers earned a BA, magna cum laude, in economics from Harvard University, where he was elected to Phi Beta Kappa. He earned an MBA from the Stanford Graduate School of Business, where he was an Arjay Miller Scholar. Mr. Myers currently serves on the Board of Trustees of the Yosemite Conservancy, an organization dedicated to supporting projects and programs that preserve Yosemite National Park and enrich the visitor experience.

WCM Investment Management, LLC (“WCM”), is located at 281 Brooks Street, Laguna Beach, California 92651. WCM is an independent, money management firm, founded in 1976. WCM provides investment management and sub-advisory services to public as well as various institutional and sub-advised accounts.

Sanjay Ayer, CFA is a Portfolio Manager. Mr. Ayer joined WCM in 2007. He is a member firm’s Investment Strategy Group (ISG) and his primary responsibilities include portfolio management and equity research. Prior to WCM, Mr. Ayer was an Equity Analyst at Morningstar, Inc. in Chicago from 2002 to 2006, where he covered the gaming, cruise and online travel industries.

Gregory S. Ise, CFA is a Portfolio Manager and Business Analyst. Mr. Ise joined WCM in 2014. He is a member firm’s Investment Strategy Group (ISG) and his primary responsibilities include portfolio management and equity research. Prior to joining WCM, Mr. Ise was a Senior International Research Analyst at Rainier Investment Management (“RIM”) from 2012 to 2014, where he helped launch the firm’s first international small cap open-end mutual fund. Prior to RIM, he was a Vice President and Analyst at Allianz Global Investors from 2006 to 2011, where he contributed to the global and international small cap open-end mutual funds.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL Multi-Manager Mid Cap Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term total return.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by the Fund investing, under normal circumstances, at least 80% of its total assets (net assets plus the amount of any borrowings made for investment purposes) in a variety of mid capitalization growth and value strategies, sometimes referred to as “sleeves,” managed by unaffiliated investment managers (“Sub-Advisers”). Each of the Sub-Advisers generally provides day-to-day management for a portion of the Fund’s assets.

Each Sub-Adviser may use different investment strategies in managing Fund assets, acts independently from the others, and uses its own methodology for selecting investments. Jackson National Asset Management, LLC (“JNAM” or “Adviser”) is responsible for identifying and retaining the Sub-Advisers for the selected strategies and for monitoring the services provided by the Sub-Advisers. JNAM provides qualitative and quantitative supervision as part of its process for selecting and monitoring the Sub-Advisers. JNAM is also responsible for selecting the Fund’s investment strategies and for determining the amount of Fund assets to allocate to each Sub-Adviser. Based on JNAM’s ongoing evaluation of the Sub-Advisers, JNAM may adjust allocations among Sub-Advisers.

Below are the principal investment strategies for each sleeve, but the Sub-Advisers may also implement other investment strategies in keeping with their respective sleeve’s objective.

Champlain Mid Cap Strategy

Champlain Investment Partners, LLC (“Champlain”) invests mainly in common stocks of medium-sized companies that it believes have strong long-term fundamentals, superior capital appreciation potential and attractive valuations. Under normal circumstances, the Champlain Mid Cap Strategy invests in securities of medium-sized companies. Champlain defines a medium-sized company as having a market capitalization within the market cap range of the Russell Mid Cap Index as of the index’s most recent annual reconstitution, or is a constituent of the Russell Mid Cap or S&P 400 Indices, at the time of initial purchase. Through the consistent execution of a fundamental bottom-up investment process, which focuses on an analysis of individual companies, Champlain expects to identify a diversified universe of medium-sized companies that trade at a discount to their estimated intrinsic, or fair values. Champlain expects to identify a diversified universe of medium-sized companies that trade at a discount to their estimated or intrinsic fair values. As such, Champlain seeks to mitigate company-specific risk by limiting position sizes to 5% of the Champlain Mid Cap Strategy’s total assets at market value. Champlain may sell a security when it reaches the estimate of its fair value or new information or fresh perspective about a security invalidates the Champlain’s original thesis for making the investment. Champlain may also sell securities in order to maintain the 5% limit on position sizes or when exposure to a sector exceeds the Champlain Mid Cap Strategy’s sector weight rules. The Champlain Mid Cap Strategy is broadly diversified and Champlain seeks to create value primarily through favorable stock selection.

ClearBridge Mid Cap Strategy

ClearBridge Investments, LLC (“ClearBridge”) invests in equity securities, or other investments with similar economic characteristics, of medium capitalization companies. The ClearBridge Mid Cap Strategy may invest up to 20% of its assets in equity securities of companies other than medium capitalization companies. The ClearBridge Mid Cap Strategy may also invest up to 25% of its net assets in securities of foreign issuers.

The ClearBridge Mid Cap Strategy pursues a disciplined core investment strategy combining in-depth fundamental and quantitative analysis to identify attractive investment candidates. ClearBridge obtains market information about the universe of investment candidates and distills that information to select prospective investments. ClearBridge then establishes market-implied growth and return expectations based on current trading prices and challenges those expectations using their insight and proprietary analysis. In selecting companies, ClearBridge considers:

- Cash flow generation relative to operating assets and market valuation
- Earning power relative to operating assets and market valuation
- Growth prospects relative to company historical growth rates and market expectations
- Capital allocation discipline
- Balance sheet strength and dynamics
- Returns on capital
- Quality of company management and soundness of strategic plan

While markets are relatively efficient in the long term with economic fundamentals driving asset prices, market inefficiencies often occur, as evidenced by the disproportionate volatility of stock prices relative to publicly available information. ClearBridge believes this disciplined investment process, employing quantitative and fundamental analysis, can help exploit these market inefficiencies.

Kayne Anderson Rudnick Mid Cap Sustainable Growth Strategy

Kayne Anderson Rudnick Investment Management, LLC (“KAR”) constructs the Mid Cap Sustainable Growth Strategy by investing in a select group of medium market capitalization growth companies that KAR believes to be undervalued relative to their future growth potential. The investment strategy emphasizes companies KAR believes to have a sustainable competitive advantage, which in KAR’s view are companies that exhibit a number of traits, including but not limited to: strong management, low financial risk, and the ability to grow over multiple market cycles. Although the Kayne Anderson Rudnick Mid Cap Sustainable Growth Strategy invests primarily in U.S. companies, it may invest in foreign securities and depositary receipts.

KAR considers medium market capitalization companies for this purpose to be those companies that, at the time of initial purchase, have market capitalizations generally within the range of companies included in the Russell Midcap Growth® Index on a rolling three-year basis.

Nuance Mid Cap Value Strategy

Nuance Investments, LLC (“Nuance”) invests in securities of medium-capitalization companies. Nuance defines mid-capitalization companies as companies within the range of the Russell Midcap® Index, as determined by averaging the smallest and largest members’ month end market capitalization over the last 12 months. The Nuance Mid Cap Value Strategy primarily invests in equities, including depositary receipts, of companies organized or traded in the United States that Nuance believes are high quality, though temporarily out of favor. The Nuance Mid Cap Value Strategy’s investments may also include preferred or convertible preferred stocks. Although the Nuance Mid Cap Value Strategy will invest primarily in U.S. companies, the Nuance Mid Cap Value Strategy may invest up to 15% of its assets in non-U.S. companies that are classified as “developed”. The non-US developed countries in which the Nuance Mid Cap Value Strategy may invest currently include, but are not limited to, Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, and the United Kingdom.

Nuance selects securities for the Nuance Mid Cap Value Strategy by using an extensive quantitative screening and fundamental research process that identifies leading businesses selling at a discount to fair value with the potential to generate above-average rates of returns over time. Nuance seeks to identify companies across a range of industries and market sectors that have leading and sustainable market share positions, above-average financial strength, and are trading at a discount to Nuance’s view of intrinsic value. Nuance may sell an investment when it achieves or surpasses Nuance’s proprietary view of intrinsic value or when a security’s competitive position or financial situation erodes beyond Nuance’s expectations.

Victory Sycamore Mid Cap Strategy

Victory Capital Management Inc., through its investment franchise, Sycamore Capital, (“Victory Capital”) invests in equity securities of companies with market capitalizations, at the time of purchase, within the range of companies comprising the Russell MidCap® Value Index. The Victory Sycamore Mid Cap Strategy may invest a portion of its assets in equity securities of foreign companies traded on U.S. exchanges, including American and Global Depositary Receipts (“ADRs” and “GDRs”).

As of December 31, 2021, the Russell MidCap® Value Index included companies with approximate market capitalizations between \$163.8 million and \$71.7 billion. The size of companies in the index changes with market conditions and the composition of the index.

Victory Capital invests in companies that it believes to be high quality based on criteria such as market share position, profitability, balance sheet strength, competitive advantages, management competence and the ability to generate excess cash flow. Victory Capital uses a bottom-up investment process in conducting fundamental analysis to identify companies that have sustainable returns trading below Victory Capital’s assessment of intrinsic value and prospects for an inflection in business fundamentals that will enable the stock price to be revalued higher. Victory Capital may sell a security if it believes the stock has reached its fair value estimate, if a more attractive opportunity is identified or if the fundamentals of the company deteriorate.

JNAM also may choose to allocate the Fund’s assets to additional strategies in the future. There is no assurance that any or all of the strategies discussed in this prospectus will be used by JNAM or the Sub-Advisers.

JNAM may also manage Fund assets directly to seek to enhance returns, or to hedge and to manage the Fund’s cash and short-term instruments.

The Fund has flexibility in the relative weighting of each asset class and expects to vary the percentages of assets invested in each asset class from time to time. JNAM’s allocations to the underlying Sub-Advisers will be a function of a variety of factors including each underlying strategy’s expected returns, volatility, correlation, and contribution to the Fund’s overall risk profile.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective

for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Advisers' investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Equity securities risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Financial services risk*
- *Sector risk*
- *Foreign securities risk*
- *Depository receipts risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Investment style risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Advisers' abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser, Sub-Advisers and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The following individuals are responsible for application of the Fund's strategy, executing trades and allocation of capital to the various strategies for the Fund:

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the

University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

The Sub-Advisers to the JNL Multi-Manager Mid Cap Fund are:

Champlain Investment Partners, LLC (“Champlain”) is a registered investment adviser that was formed in 2004 Champlain is an independent, employee-owned asset management firm headquartered in Burlington, Vermont offering both domestic and emerging market investment strategies. Champlain’s portion of the Fund’s portfolio is managed by a team of investment professionals led by Scott Brayman, CFA, who is a co-founder of Champlain.

Mr. Brayman, CFA, has served as Chief Investment Officer of Small and Mid Cap Strategies and Managing Partner of Champlain since September 2004 and has led Champlain’s small and mid cap investment team since such time. Prior to joining Champlain, Mr. Brayman was a Senior Vice President at NL Capital Management, Inc. and served as a Portfolio Manager with Sentinel Advisors, Inc. where he was employed from June 1995 to September 2004. Mr. Brayman graduated cum laude from the University of Delaware with a Bachelor’s Degree in Business Administration. He earned his Chartered Financial Analyst (CFA) designation in 1995 and is a member of the CFA Institute and the Vermont CFA Society. He has more than 37 years of investment experience.

Mr. Bronner, CFA, has been a member of the investment team since April 2010. Prior to joining Champlain, Mr. Bronner was an analyst focusing primarily on the financial services industry at Duff & Phelps Corporation. He was a credit analyst with the commercial lending group at Merchants Bank, a subsidiary of Merchant Bancshares, Inc., before joining Duff & Phelps Corporation. Mr. Bronner graduated magna cum laude from the University of Vermont with a Bachelor of Science in Business Administration. He earned his CFA designation in 2011 and is a member of the CFA Institute and the Vermont CFA Society. He has more than 14 years of investment experience.

Mr. Caligiuri, CFA, joined Champlain in 2008 as an Operations Analyst and moved to the investment team in 2010. His experience includes internships at Sheaffer & Roland Consulting Engineers as a business operations analyst and Sopher Investment Management as a research assistant. Mr. Caligiuri graduated from Saint Michael’s College with a Bachelor of Arts in Philosophy. He earned his CFA designation in 2015 and is a member of the CFA Institute and the Vermont CFA Society. He has more than 13 years of investment experience.

Mr. Farley has been a member of the investment team since August 2014. Prior to joining Champlain, Mr. Farley was a founder and portfolio manager of Kelvingrove Partners, LLC, an investment management firm focused on technology, media, and telecommunications, where he was employed from 2008 to 2013. His investment management career began at Private Capital Management, where he was the managing director of investment research and a portfolio manager. Mr. Farley spent over 10 years as a securities analyst on Wall Street, and held senior investment research and management roles at Morgan Stanley, Donaldson Lufkin & Jenrette, and UBS. He began his career as a market analyst with AT&T. Mr. Farley earned Masters and Bachelor of Arts degrees from the University at Albany, State University of New York. He has more than 29 years of investment experience.

Mr. Hallisey has been a member of the investment team of Champlain since August 2016. Prior to joining Champlain, Mr. Hallisey was a member of Fidelity’s fund manager due diligence team. Mr. Hallisey’s experience includes coverage of the small and mid cap health care sector at BlackRock, Sirios Capital, and John Hancock Funds. Mr. Hallisey graduated from Saint Michael’s College with a Bachelor of Science in Business Administration and earned his MBA from Babson College. He has more than 28 years of investment experience.

Ms. Williams, CFA has been a member of the investment team of Champlain since July 2019. Prior to joining Champlain, Ms. Williams held the role of Vice President, Equity Analyst at GW&K Investment Management where she focused on small and smid cap health care equities and with AlphaOne Capital Partners, where she focused on small and micro cap health care and industrial equities. Ms. Williams graduated from Colgate University with a Bachelor of Arts degree in Economics and German Literature and earned her Masters of Business Administration degree from NYU’s Leonard Stern School of Business. Ms. Williams earned her CFA

designation in 2004 and is a member of the CFA Institute and the CFA Society Boston. Ms. Williams has more than 25 years of experience, including 15 years of buy-side equity research experience.

ClearBridge Investments, LLC (“ClearBridge”) has offices at 620 Eighth Avenue, New York, New York 10018 and is an investment adviser that manages U.S. and international equity investment strategies for institutional and individual investors. ClearBridge has been committed to delivering long-term results through active management for more than 50 years, and bases its investment decisions on fundamental research and the insights of seasoned portfolio management teams.

The portfolio managers responsible for management of the Portfolio are Brian Angerame and Matthew Lilling, CFA.

Mr. Angerame is a Managing Director and Portfolio Manager of ClearBridge and has 27 years of industry experience. Mr. Angerame joined a predecessor to the sub-adviser in 2000.

Mr. Lilling is a Director and Portfolio Manager of ClearBridge and has 15 years of industry experience. He joined ClearBridge in 2010.

Kayne Anderson Rudnick Investment Management, LLC (“KAR”) is located at 2000 Avenue of the Stars, Ste. 1110, Los Angeles, CA 90067. KAR acts as sub-adviser to mutual funds and as investment adviser to institutions and individuals.

The portfolio managers responsible for management of the Kayne Anderson Mid Cap Strategy are Douglas S. Foreman and Chris Armbruster.

Douglas S. Foreman, CFA, is Chief Investment Officer, Portfolio Manager, and a member of the Executive Management Committee at KAR. Mr. Foreman has approximately 35 years of investment experience. Before joining KAR in 2011, Mr. Foreman was Director of Equities at HighMark Capital Management and before that he was Group Managing Director and Chief Investment Officer of U.S. equities at Trust Company of the West (“TCW”). Mr. Foreman earned a B.S. in Marine Engineering from The U.S. Naval Academy and an M.B.A. from Harvard University. Mr. Foreman is a Chartered Financial Analyst charterholder.

Chris Armbruster, CFA, is a Portfolio Manager and a Senior Research Analyst at KAR with primary research responsibilities for the large and mid-capitalization consumer-discretionary, health-care and technology sectors. Before joining KAR in 2013, Mr. Armbruster worked at B. Riley & Co. as an Associate Analyst covering Special Situations and at Al Frank Asset Management as a Vice President in Equity Research. Mr. Armbruster has approximately 16 years of equity research experience. Mr. Armbruster earned a B.A. in Business Economics, with a minor in accounting, from the University of California, Los Angeles. Mr. Armbruster is a Chartered Financial Analyst charterholder.

Nuance Investments, LLC (“Nuance”) is located at 4900 Main Street, Suite 220, Kansas City, Missouri 64112. Established in 2008, Nuance is an SEC-registered investment adviser that provides investment advisory services to private clients and institutions.

The portfolio managers responsible for management of the Nuance Mid Cap Value Strategy are Scott A. Moore, Chad Baumler, and Darren Schryer.

Scott A. Moore, CFA, is President and Co-Chief Investment Officer of Nuance. He is the co-portfolio manager responsible for the day-to-day management of Nuance's Mid Cap Value Strategy. Mr. Moore has managed Nuance's Mid Cap Value Strategy since its inception in November 2008.

Chad Baumler, CFA, is Vice President and Co-Chief Investment Officer at Nuance. He is the co-portfolio manager responsible for the day-to-day management of Nuance's Mid Cap Value Strategy. Mr. Baumler has managed Nuance's Mid Cap Value Strategy since June 2014.

Darren Schryer, CFA, CPA, is a Portfolio Manager at Nuance, and responsible for the day-to-day management of Nuance's Mid Cap Value Strategy. Mr. Schryer has been a member of the investment team at Nuance since May 2016 and a member of the portfolio management team since December 2019.

Victory Capital Management Inc. (“Victory Capital”) is registered as an investment adviser with the SEC and is located at 15935 La Cantera Parkway, San Antonio, Texas 78256. Victory Capital is a diversified global asset manager comprised of multiple investment teams, referred to as investment franchises, each of which utilizes an independent approach to investing. Sycamore Capital is the investment franchise responsible for management of Victory Capital's portion of the Fund. The portfolio managers listed below are members of Victory Capital's Sycamore Capital investment franchise.

Mr. Miller is Chief Investment Officer of Sycamore Capital and has been associated with Victory Capital since 1987. Mr. Miller began his investment career in 1987 and earned a B.B.A. from the University of Cincinnati and an M.B.A. from Xavier University.

Mr. Graff has been associated with Victory Capital since 2001. Mr. Graff began his investment career in 1994. He earned a B.B.A. from Cleveland State University and a M.A. from St. Louis University and is a CFA charterholder.

Mr. Conners has been associated with Victory Capital since 1999. Mr. Conners began his investment career in 1994 and earned a B.S. from the College of Mount St. Joseph and an M.B.A. from Xavier University.

Mr. Albers has been associated with Victory Capital since 2005. Mr. Albers began his investment career in 1997. He earned a B.S. and a M.S. from the University of Wisconsin and is a CFA charterholder.

Mr. Rodarte has been associated with Victory Capital since 2006. Mr. Rodarte began his investment career in 2006. He earned a B.B.A. from Ohio University and is a CFA charterholder.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving each sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL Multi-Manager Small Cap Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a variety of small cap growth strategies, sometimes referred to as “sleeves,” managed by unaffiliated investment managers (“Sub-Advisers”). Each of the Sub-Advisers generally provides day-to-day management for a portion of the Fund’s assets.

Each Sub-Adviser may use different investment strategies in managing Fund assets, acts independently from the others, and uses its own methodology for selecting investments. Jackson National Asset Management, LLC (“JNAM” or “Adviser”) is responsible for identifying and retaining the Sub-Advisers for the selected strategies and for monitoring the services provided by the Sub-Advisers. JNAM provides qualitative and quantitative supervision as part of its process for selecting and monitoring the Sub-Advisers. JNAM is also responsible for selecting the Fund’s investment strategies and for determining the amount of Fund assets to allocate to each Sub-Adviser. Based on JNAM’s ongoing evaluation of the Sub-Advisers, JNAM may adjust allocations among Sub-Advisers.

Companies with similar characteristics may be grouped together in broad categories called sectors. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund’s performance may be more susceptible to any developments which affect those sectors emphasized by the Fund.

Below are the principal investment strategies for each sleeve, but the Sub-Advisers may also implement other investment strategies in keeping with their respective sleeve’s objective.

GIM Small Cap Advantage and Small Cap Select Strategies

Granahan Investment Management, Inc. (“GIM”) constructs the Small Cap Advantage strategy by blending two of their unique strategies, Small Cap Focused Growth strategy and Small Cap Discoveries strategy.

Within Small Cap Advantage strategy, the blended strategies utilize rigorous bottom-up fundamental research. GIM’s Small Cap Focused Growth strategy is grounded in the belief that superior long term returns are best achieved through a select portfolio of smaller companies that are poised to grow at 15% or more. Fundamental company analysis is subsequently combined with a strict valuation discipline centered on a stock’s expected return and risk/reward, with particular emphasis on minimizing the downside of the risk/reward equation. Within this philosophy, GIM’s Small Cap Focused Growth strategy seeks to own companies that have strong balance sheets, large open-ended opportunities, a favorable competitive landscape, and products or services providing a significant value proposition to the customer.

The Small Cap Discoveries strategy is based in the belief that the small/micro-capitalization market is an inefficient segment of the overall market with a skewed distribution of returns where a small but meaningful number of high-performing stocks drive the return of the benchmark. These high-performing stocks range from hyper-growth companies to companies that have sorely disappointed investors in the past. GIM’s disciplined, fundamental, bottom-up research process identifies strong earnings growth potential in companies that may or may not have a history of strong growth. The end result is a portfolio with the optimum combination of emerging growth prospects and stocks of well-positioned companies struggling under negative sentiment that together may achieve excess returns while limiting losses. In-depth company research combined with tools to gauge market sentiment results in a portfolio of stocks representing innovative emerging growth companies coupled with stocks of companies with unrecognized growth.

The Small Cap Select strategy takes a diversified approach to growth by seeking companies that can either sustain growth for an extended time, or materially accelerate their growth rate over the near to medium term. The strategy believes that this approach expands the investment opportunity set, diversifies the sources of alpha, and mitigates risk.

As part of a disciplined portfolio construction process, at GIM, every company in the portfolio is placed into one of three investment categories: Core Growth, Pioneer and Special Situation. These LifeCycle categories each have different performance drivers so provide true diversification and help mitigate risk in the portfolio.

Baron Custom Discovery Strategy

BAMCO, Inc. (“BAMCO”) constructs the Baron Custom Discovery Strategy by investing for the long term primarily in equity securities in the form of common stock of U.S. small-sized growth companies.

BAMCO defines small-sized companies as those, at the time of purchase, with market capitalizations up to the largest market cap stock in the Russell 2000 Growth Index at reconstitution, or companies with market capitalizations up to \$2.5 billion, whichever is larger. BAMCO seeks to invest in businesses it believes have significant opportunities for growth, sustainable competitive advantages, exceptional management, and an attractive valuation. Because of its long-term approach, the Baron Custom Discovery Strategy could

have a significant percentage of its assets invested in securities that have appreciated beyond their market capitalizations at the time of the investment. Although the strategy invests primarily in U.S. companies, it may also invest in securities of non-U.S. issuers that are not publicly traded in the U.S. and in Global Depository Receipts and European Depository Receipts.

BAMCO's research process includes examining companies from many perspectives through numerous interviews with company managements and site visits. BAMCO also interviews a company's employees, as well as its customers, suppliers, and competitors to determine whether the information gained from these parties is consistent with senior management's objectives and BAMCO's independent findings. Through these and other inquiries, BAMCO becomes an expert in the industries in which it invests and acquires a thorough understanding of the prospects of its investments in their competitive landscape. BAMCO also studies industry data, statistics, and trends; however, BAMCO invests without regard for market trends.

The Baron Custom Discovery Strategy may make significant investments in companies in which BAMCO has great conviction.

BAMCO purchases stocks that it believes are attractively priced relative to BAMCO's projections of intrinsic value. The most critical component of BAMCO's investment decisions is the quality of a company, as measured by its growth prospects, management, business model, competitive position, capital structure, and valuation. BAMCO does not use a market benchmark, nor does it aim to underweight or overweight any sectors or industries. BAMCO seeks to invest in businesses before their long-term growth prospects are appreciated by other investors.

Victory RS Investments Custom Growth Strategy

Victory Capital Management Inc., through its investment franchise, RS Investments ("Victory Capital"), sub-advises a portion of the Fund. Victory Capital constructs the Victory RS Investments Custom Growth Strategy by investing in small- and mid-capitalization companies. The Victory RS Investments Custom Growth Strategy typically invests most of its assets in equity securities of U.S. companies but may also invest any portion of its assets in foreign securities, including American and Global Depository Receipts ("ADRs" and "GDRs").

Victory Capital considers a company to be a small-capitalization company if its market capitalization (at the time of purchase) is either less than \$3 billion or 120% of the market capitalization of the largest company included in the Russell 2000® Index on the last day of the most recent quarter (currently, approximately \$13.9 billion, based on the size of the largest company in the Index on December 31, 2021), whichever is greater. The size of the companies in an index changes with market conditions and the composition of the index.

Victory Capital considers a company to be a mid-capitalization company if its market capitalization (at the time of purchase) is at least that of a small-capitalization company (as defined above) and less than \$8 billion or 120% of the market capitalization of the largest company included in the Russell 2500® Index on the last day of the most recent quarter (currently, approximately \$35.0 billion, based on the size of the largest company in the Index on December 31, 2021), whichever is greater. The size of the companies in an index changes with market conditions and the composition of the index. The strategy may hold investments in companies whose market capitalizations fall outside of the preceding parameters due to changes in values of those companies after the purchase.

Victory Capital employs both fundamental analysis and quantitative screening in seeking to identify companies that the investment team believes will produce sustainable earnings growth over a multi-year horizon. Investment candidates typically exhibit some or all of the following key criteria: strong organic revenue growth, expanding margins and profitability, innovative products or services, defensible competitive advantages, growing market share, and experienced management teams. Valuation is an integral part of the investment process and purchase decisions are based on the investment team's expectation of the potential reward relative to risk of each security based in part on the investment team's proprietary earnings calculations.

Victory Capital regularly reviews its investments and will sell securities when it believes the securities are no longer attractive because (1) of a deterioration in rank of the security in accordance with Victory Capital's process, (2) of price appreciation, (3) of a change in the fundamental outlook of the company or (4) other investments available are considered to be more attractive.

As a result of Victory Capital's investment process, its investments may be focused in one or more economic sectors from time to time, including the information technology sector.

Kayne Anderson Rudnick Small Cap Growth and Small-Mid Cap Growth Strategies

Kayne Anderson Rudnick Investment Management, LLC ("KAR") constructs the Small Cap Growth strategy by investing in common stocks of small market capitalization companies believed to possess sustainable competitive advantages at prices that KAR deems attractive. The investment strategy emphasizes companies determined by KAR to have a sustainable competitive advantage and the ability to grow over an extended period of time. Although the strategy invests primarily in U.S. companies, it may invest in foreign securities and American Depository Receipts.

As of the date of this Prospectus, KAR considers small market capitalization companies for this purpose to be those companies that, at the time of initial purchase, have market capitalizations generally within the range of companies included in the Russell 2000 Growth Index on a rolling three-year basis.

Although the strategy invests primarily in U.S. companies, it may invest in foreign securities and American Depository Receipts.

The Small-Mid Cap Growth strategy invests in common stocks of small and mid-market capitalization companies believed to possess sustainable competitive advantages at prices that KAR deems attractive. The investment strategy emphasizes companies determined by KAR to have a sustainable competitive advantage and the ability to grow over an extended period of time. Although the strategy invests primarily in U.S. companies, it may invest in foreign securities and American Depository Receipts.

KAR considers small and mid-market capitalization companies to be those companies that, at the time of initial purchase, have market capitalizations generally within the range of companies included in the Russell 2500 Growth Index on a rolling three-year basis.

KAR's sell discipline seeks to dispose of holdings that, among other things, are the subject of negative developments individually or as an industry, or as necessary to provide funding for new holdings that KAR deems more attractive.

SBH Small Cap Growth Strategy

Segall Bryant & Hamill, LLC ("SBH") constructs the SBH Small Cap Growth Strategy by investing in small companies that SBH believes to have attractive growth prospects for earnings and/or cash flows.

SBH currently considers "small-capitalization companies" to be those included in, or similar in size to, those included in the Russell 2000 Growth Index, at the time of purchase. As of December 31, 2021, the benchmark capitalization range was \$31.6 million to \$13.7 billion.

The SBH Small Cap Growth Strategy primarily invests in equity securities of companies whose stock is traded on U.S. markets, including depositary receipts or shares issued by companies incorporated outside of the United States (e.g., ADRs).

SBH implements an investment strategy primarily through independent "bottom-up" fundamental research. SBH constructs a portfolio designed to generate alpha, or risk-adjusted excess return relative to the Russell 2000 Growth Index, primarily through stock selection. SBH uses a proprietary discounted cash flow ("DCF") model for purposes of valuing and generating price targets for individual stocks. The DCF model is utilized for two primary purposes – to understand what assumptions are implied in a stock's current price and to generate an expected value for each stock, based on SBH's internally generated forecasts.

SBH also utilizes an "integrated" approach to a company's environmental, social, and corporate governance ("ESG") practices. Specifically, SBH evaluates the materiality of ESG exposures for companies in the strategy universe, benchmarks exposures against industry peers, reviews ESG performance over time, and lastly integrates exposures into SBH's valuation process.

WCM Small Cap Growth Strategy

WCM Investment Management, LLC ("WCM") sub-advises a portion of the Fund. WCM constructs the WCM Small Cap Growth Strategy by investing principally in small-capitalization companies.

WCM considers small capitalization companies to be companies with market capitalizations within the range of those companies included in the Russell 2000 Index at the time of purchase. Because small capitalization companies are defined by reference to an index, the range of market capitalization of companies which the Fund invests may vary with market conditions. As of December 31, 2021, the Russell 2000 Index included companies with approximate market capitalizations between \$31.57 million and \$13.96 billion.

The size of companies in the index changes with market conditions and the composition of the index.

The WCM Small Cap Growth Strategy primarily invests in equity securities of U.S. companies but may also invest any portion of its assets in REITs, foreign securities, including American and Global Depository Receipts ("ADRs" and "GDRs").

WCM employs both fundamental analysis and quantitative screening in seeking to identify companies that the investment team believes will produce significant, long-term excess return.

WCM's investment process examines four key governing components:

- Corporate Performance – reviewing the operating history of the company, understanding of management's skill set, the company's core competency, the culture and their ability to evolve.
- Systematic Effects – evaluating the macro factors affecting the business, their position in the market and looking to gain an understanding of the key drivers of the business.
- Sustainability – looking for economic moats to protect the margins and allow the company to beat the return fade by measuring how the company can protect its margins and continue to reinvest cash flows.
- Intrinsic Value – determining the value of the company versus how the market values the company.

JNAM also may choose to allocate the Fund's assets to additional strategies in the future. There is no assurance that any or all of the strategies discussed in this prospectus will be used by JNAM or the Sub-Advisers.

JNAM may also manage Fund assets directly to seek to enhance returns, or to hedge and to manage the Fund's cash and short-term instruments.

The Fund has flexibility in the relative weighting of each asset class and expects to vary the percentages of assets invested in each asset class from time to time. JNAM's allocations to the underlying Sub-Advisers will be a function of a variety of factors including each underlying strategy's expected returns, volatility, correlation, and contribution to the Fund's overall risk profile. The Fund may invest in securities and other financial instruments of companies of any market capitalization. The Fund may invest in securities and other financial instruments available in and which have exposure to both U.S. and non-U.S. markets, including emerging markets, which can be U.S. dollar-denominated or non-U.S. dollar-denominated and may be currency hedged or un-hedged.

The Fund may invest in a variety of equity securities, including common stock, preferred stock, rights and warrants to purchase common stock, depositary receipts, securities convertible into common and preferred stock and non-convertible preferred stock.

The Fund may invest in other pooled investment vehicles, including other investment companies, European registered investment funds ("UCITS"), real estate investment trusts ("REITs"), private investment funds, and partnership interests, including master limited partnerships ("MLPs"). A private investment fund is a type of financial investment company that is generally exempt from federal securities regulations and laws and has either less than 100 investors or where its member investors have substantial funds invested elsewhere.

Consistent with the Fund's objectives, the Fund may from time to time purchase derivative securities, such as forward currency contracts and currency futures and options, to, among other reasons, manage foreign currency exposure, provide liquidity, provide exposure not otherwise available, manage risk and implement investment strategies in a more efficient manner. The Fund may invest in derivative instruments that combine features of these instruments or are developed from time to time. The Fund expects to utilize contracts for difference, swap agreements and other derivative instruments to maintain a significant portion of its long and short positions. The Fund may seek to gain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as repurchase agreements, reverse repurchase agreements or dollar rolls). The Fund may (but is not required to) invest in derivatives, including put and call options, futures, forward contracts and swaps, in lieu of investing directly in a security, currency or instrument, for hedging and non-hedging purposes.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Advisers' investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Equity securities risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Investment style risk*
- *Allocation risk*
- *Information technology sector risk*
- *Portfolio turnover risk*
- *Depositary receipts risk*
- *Foreign securities risk*
- *Sector risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *ESG (Environmental, Social & Governance) investment strategy risk*
- *Expense risk*

- *Event driven and special situations risk*
- *Health care sector risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Advisers' abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser, Sub-Advisers and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. (“Jackson”), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The following individuals are responsible for application of the Fund's strategy, executing trades and allocation of capital to the various strategies for the Fund:

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

The Sub-Advisers to the JNL Multi-Manager Small Cap Growth Fund are:

BAMCO, Inc. (“BAMCO”) is located at 767 Fifth Avenue, New York, NY 10153.

Laird Bieger and Randolph Gwirtzman are co-managers of the Baron Custom Discovery Strategy. In this role, they are primarily responsible for stock selection, buy and sell decisions, and the day-to-day management of the strategy.

Laird Bieger is a Vice President and Portfolio Manager at BAMCO. Mr. Beiger joined BAMCO in 2000 as a research analyst and became a portfolio manager in 2013. Mr. Bieger has 24 years of research experience. From 1999 to 2000, Mr. Bieger worked at Water Street Capital as a research analyst. From 1992 to 1997, Mr. Bieger worked at Ford Motor Company in various roles. Mr.

Bieger graduated from Vanderbilt University with a B.A. in Economics in 1992 and from Columbia Business School with an MBA in 1999.

Randolph Gwirtzman, CFA, is a Vice President and Portfolio Manager at BAMCO. Mr. Gwirtzman joined BAMCO in 2002 as a research analyst and became a portfolio manager in 2013. Mr. Gwirtzman has 24 years of research experience. From 1997 to 2002, Mr. Gwirtzman worked at ING Furman Selz, Goldman Sachs Asset Management, and Tyndall Partners as a research analyst. From 1992 to 1997, Mr. Gwirtzman worked at Salomon Green & Ostrow as a bankruptcy attorney. Mr. Gwirtzman graduated from the University of Pennsylvania with a B.A. in Economics in 1989, cum laude from the Benjamin N. Cardozo School of Law with a J.D. in 1992, and from Columbia Business School with an MBA in 1999.

Granahan Investment Management, Inc. (“GIM”) is located at 404 Wyman St., Suite 460, Waltham MA 02451.

Andrew L. Beja, CFA, is a Senior Vice President and Managing Director of GIM. Mr. Beja is the Portfolio Manager of the GIM Small Cap Focused Growth strategy, and he also manages a portion of the multi-managed portfolios. Mr. Beja joined GIM at the end of 2011 as a Portfolio Manager. Mr. Beja has 30 years industry experience, primarily in the small and SMID cap sector of the market. He manages the GIM Small Cap Focused Growth product, as well as a portion of the small cap and SMID-cap portfolios. Mr. Beja’s research coverage includes Internet, Software and Business Services, as well as Consumer. From 2000 to 2011, Mr. Beja was with Lee Munder Capital Group in Boston, a firm he co-founded and where he managed several small and SMID cap growth equity products. In 2007, he started the Focused Growth product that he continues to manage at GIM. Prior to Lee Munder, Mr. Beja was a portfolio manager with Standish, Ayer & Wood. Before moving to the buy-side, Mr. Beja was an equities analyst for Advest. Mr. Beja received his BA from Miami University. He holds the Chartered Financial Analyst designation and is a member of the CFA Institute and the Boston Security Analysts Society.

David Rose, CFA, is a Senior Vice President, Chief Investment Officer, and a Managing Director of GIM. Mr. Rose is the portfolio manager for GIM’s Small Cap Select, SMID-Select and MidCap Select strategies, as well as overseeing a portion of the multi-managed Small Cap and SMID-Cap portfolios. Mr. Rose joined GIM in 2015 and has over 20 years industry experience, including as a portfolio manager for several highly ranked equity funds. Prior to joining GIM, most recently Mr. Rose was a partner with Furey Research Partners in Boston, where he conducted small cap equity research for use by the firm’s investment manager clients. Prior to his work at Furey Research, Mr. Rose spent much of his career as a portfolio manager with American Century Investments in Kansas City, MO, before moving to Pyramis Global Advisors in Smithfield, RI to manage a new mid-cap fund. Mr. Rose received his MS in Finance from the University of Wisconsin at Madison, and his BS in Business Administration from Washington University in St. Louis, MO. He holds the Chartered Financial Analyst designation and is a member of the CFA Institute.

Jeffrey A. Harrison, CFA, is a Senior Vice President and Managing Director of GIM. Mr. Harrison is a portfolio manager/analyst for the multi-managed Small Cap and SMID-Cap portfolios. Mr. Harrison came to GIM in 2015 with 18 years industry experience specializing in small cap equities, with the last 11 years as a portfolio manager. Mr. Harrison has spent much of his career as portfolio manager on a diversified small cap growth equity fund with Wells Capital Management and its predecessor companies in Richmond, VA. Mr. Harrison has extensive fundamental research experience across industries with specific expertise in the healthcare and financial services sectors. Mr. Harrison received his MBA in Finance from the College of William & Mary, and his BA from Hampden-Sydney College in Virginia. He holds the Chartered Financial Analyst designation and is a member of the CFA Institute.

Kayne Anderson Rudnick Investment Management, LLC (“KAR”) is located at 2000 Avenue of the Stars, Ste. 1110, Los Angeles, CA 90067. KAR acts as sub-adviser to mutual funds and as investment adviser to institutions and individuals.

Todd Bailey, CFA, is a portfolio manager and senior research analyst at KAR with primary research responsibilities for the small- and mid-capitalization financials and producer durables sectors. Before joining KAR in 2002, he worked as an associate analyst in equity research at Prudential Securities and before that was an equity research associate at RNC Capital Management. Mr. Bailey earned a B.S. in Finance from Northern Arizona University and an M.B.A. from the University of Southern California. He is a CFA (Chartered Financial Analyst) charterholder and has been working in the investment industry since 1999.

Jon Christensen, CFA, is a portfolio manager and senior research analyst at KAR with primary research responsibilities for the small- and mid-capitalization health care sector. Before joining KAR in 2001, Mr. Christensen was a portfolio manager and senior research analyst for Doheny Asset Management. Mr. Christensen earned a B.S. in mathematics/applied science from the University of California, Los Angeles, and an M.B.A. from the California State University, Long Beach. He is a CFA (Chartered Financial Analyst) charterholder. He began working in the investment industry in 1995.

Julie Biel, CFA, is a portfolio manager and senior research analyst at KAR with primary research responsibilities for the small- and mid-capitalization technology sector. Before joining KAR in 2013, Ms. Biel worked as an equity research associate at Imperial Capital and before that an equity research associate at Merrill Lynch. Ms. Biel earned a B.A. in economics and psychology from New York University, and an M.B.A from the University of California, Los Angeles. She is a CFA (Chartered Financial Analyst) charterholder and has been working in the investment industry since 2008.

Chris Wright, CFA, is a Portfolio Manager and Senior Research Analyst at KAR, with primary research responsibilities for the small- and mid-capitalizations financials sector. Before joining KAR in 2012, Mr. Wright worked at Alvarez & Marsal as a Senior Associate in Turnarounds and Restructuring and at Houlihan Lokey as an Associate in the Investment Banking Financial Institutions Group.

Segall Bryant & Hamill, LLC (“SBH”) is registered as an investment adviser with the SEC and is located at 540 West Madison Street, Suite 1900, Chicago, IL 60661.

Brian C. Fitzsimons, CFA, is the Director of Small Cap Growth Strategies at SBH. Mr. Fitzsimons is also responsible for research within the energy, materials, industrials, utilities, and financial services sectors. Mr. Fitzsimons joined the firm in May 2018 as part of SBH’s acquisition of Denver Investments. During his 13-year tenure with Denver Investments, Mr. Fitzsimons served as the director of small-cap growth research and a portfolio manager and analyst on the small-cap growth team. Prior to joining Denver Investments, Mr. Fitzsimons was with Newmont Capital Ltd. as a finance manager. He also worked as an equity analyst at A.G. Edwards & Sons, Inc. and Berger Financial Group. Additionally, Mr. Fitzsimons worked with a professional athletic league as the director of finance and as the controller. Mr. Fitzsimons earned his B.S. from Metropolitan State University of Denver and an MBA from the University of Denver. He has earned the Chartered Financial Analyst (CFA) designation and is a member of CFA Institute and CFA Society Colorado. Mr. Fitzsimons has been in the investment industry since 2000.

Mitch S. Begun, CFA, is a Senior Portfolio Manager at SBH. Mr. Begun is also responsible for research within the technology, telecommunication services, and consumer discretionary sectors. Mr. Begun joined the firm in May 2018 as part of SBH’s acquisition of Denver Investments. During his 15-year tenure with Denver Investments, he served as a portfolio manager and analyst on the small-cap growth team. Prior to joining Denver Investments, Mr. Begun worked as an equity research associate at Raymond James & Associates. Mr. Begun earned his BSBA from the University of North Carolina at Chapel Hill. He has earned the Chartered Financial Analyst (CFA) designation and is a member of CFA Institute and CFA Society Colorado. Mr. Begun has been in the investment industry since 2000.

Mark S. Truelsen, CFA, is a Senior Equity Analyst at SBH. Mr. Truelsen is responsible for research within the consumer staples and health care sectors. Mr. Truelsen joined the firm in May 2018 as part of SBH’s acquisition of Denver Investments. During his 16-year tenure with Denver Investments, he began as a marketing specialist for the firm before joining the small-cap growth team as an analyst in 2004. Prior to joining Denver Investments, Mr. Truelsen was a junior research analyst with RJ Falkner & Co. He also worked as a marketing assistant at Skyline Asset Management and as an investment representative at Scudder Kemper Investments. Mr. Truelsen earned his B.A. from the University of Illinois at Urbana-Champaign. He has earned the Chartered Financial Analyst (CFA) designation and is a member of CFA Institute and CFA Society Colorado. Mr. Truelsen has been in the investment industry since 1998.

Victory Capital Management Inc. (“Victory Capital”) is registered as an investment adviser with the SEC and is located at 15935 La Cantera Parkway, San Antonio, Texas 78256. Victory Capital is a diversified global asset manager comprised of multiple investment teams, referred to as investment franchises, each of which utilizes an independent approach to investing. RS Investments is the investment franchise responsible for management of Victory Capital’s portion of the Fund. The portfolio managers listed below are members of Victory Capital’s RS Investments investment franchise.

D. Scott Tracy is the Chief Investment Officer of the RS Growth Team, which became a part of Victory Capital in 2016. Mr. Tracy has co-managed the Victory RS Investments Custom Growth Strategy (formerly, the RS Investments Custom Growth Strategy) of the Fund since September 2015. His focus is on the financial, energy, and materials and processing sectors of the portfolio. Prior to joining RS Investments in 2001, he spent three years at Shoreline Investment Management, the in-house asset management arm of Hewlett-Packard, where his research focus included technology and industrial companies. He has also served as an equity analyst at Montgomery Securities. Mr. Tracy holds a BA in history from Trinity College and an MBA from the University of California at Berkeley. Mr. Tracy is a CFA charterholder.

Stephen J. Bishop has been a co-portfolio manager of the Victory RS Investments Custom Growth Strategy (formerly, the RS Investments Custom Growth Strategy) of the Fund since September 2015. Since 2007, Mr. Bishop has been a co-portfolio manager on the RS Growth Team, which became a part of Victory Capital in 2016. He joined RS Investments in 1996 as a research analyst primarily covering the technology sector, which remains his area of focus today. Prior to joining RS Investments, he worked as an analyst in the corporate finance department of DeanWitter Reynolds, Inc., for two years. He has more than 20 years of investment experience. Mr. Bishop holds a BA in economics from the University of Notre Dame and an MBA from Harvard Business School.

Melissa Chadwick-Dunn has been a co-portfolio manager of the Victory RS Investments Custom Growth Strategy (formerly, the RS Investments Custom Growth Strategy) of the Fund since September 2015. Since 2007, Ms. Chadwick-Dunn has been a co-portfolio manager on the RS Growth Team, which became a part of Victory Capital in 2016. Her primary focus is on the healthcare sector of the portfolio. Before joining RS Investments in 2001, she was an equity analyst at Putnam Investments for two years, covering international small-cap stocks. Prior to that, she spent four years in investment banking, working on corporate finance and mergers-and-acquisition transactions for Lehman Brothers and McDaniels S.A. Ms. Chadwick-Dunn holds a BA in economics, an MA in international relations from the University of Chicago and an MBA from the Wharton School of the University of Pennsylvania.

Christopher W. Clark has been a co-portfolio manager of the Victory RS Investments Custom Growth Strategy (formerly, the RS Investments Custom Growth Strategy) of the Fund since September 2015. Since 2014, Mr. Clark has been a co-portfolio manager on the RS Growth Team, which became a part of Victory Capital in 2016. Mr. Clark joined the RS Growth Team as an analyst in 2007; his focus is on the healthcare sector of the portfolio. Before joining RS Investments in 2007, he was a research associate at TIAA-CREF for three years, where he focused on global portfolio management and the healthcare sector. Prior to that, he was a research assistant at Dresdner RCM Global Investors for three years. Mr. Clark holds a BA in economics from the University of Virginia. Mr. Clark is a CFA charterholder.

Paul Leung has been a co-portfolio manager of the Victory RS Investments Custom Growth Strategy (formerly, the RS Investments Custom Growth Strategy) of the Fund since May 2018. Since 2012, Mr. Leung has been an analyst with the RS Growth Team, which became a part of Victory Capital in 2016. His focus is on the technology and utilities sectors of the portfolio. Prior to joining RS Investments, he worked as a senior investment analyst at Ashfield Capital Partners where he focused on the technology sector. Previously, he held research and financial analyst positions at Sterling Johnston Capital Management, from 2002 to 2010, and Citigroup, from 1999 to 2001. Mr. Leung holds a BS in applied economics and business management from Cornell University. Mr. Leung is a CFA charterholder.

WCM Investment Management, LLC (“WCM”), is located at 281 Brooks Street, Laguna Beach, California 92651. WCM is an independent, money management firm, founded in 1976. WCM provides investment management and sub-advisory services to public as well as various institutional and sub-advised accounts.

The portfolio managers responsible for management of the WCM Small Cap Growth Strategy of the Fund are John Rackers and Chad E. Hoffman.

Mr. Rackers joined WCM in 2018; as a member of the Investment Strategy Group for WCM’s domestic US growth strategies, his primary responsibilities are portfolio management and equity research. Mr. Rackers has 30 years of industry experience, most recently serving as lead portfolio manager for the Small-Cap Growth and SMID-Cap Growth strategies at Kennedy Capital Management and, earlier, at Missouri Valley Partners. Earlier still, he was a founding partner at Pearl Street Capital, where he managed a sector-focused long/short fund. Mr. Rackers received his M.B.A. in Finance from the University of Notre Dame (Indiana), and his B.S. in Finance from the University of Missouri.

Mr. Hoffman joined WCM in 2018; as a member of the Investment Strategy Group for WCM’s domestic US growth strategies, his primary responsibilities are portfolio management and equity research. Mr. Hoffman has 23 years of industry experience, most recently serving as Assistant Portfolio Manager for the Small-Cap Growth and SMID-Cap Growth strategies at Kennedy Capital Management and, earlier, at Missouri Valley Partners. He graduated Summa Cum Laude from Saint Louis University (Missouri) with a B.S. in Finance.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving each sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL Multi-Manager Small Cap Value Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term total return.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by the Fund investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a variety of small cap value strategies, sometimes referred to as “sleeves,” managed by five unaffiliated investment managers (“Sub-Advisers”). Each of the Sub-Advisers generally provides day-to-day management for a portion of the Fund’s assets.

Each Sub-Adviser may use different investment strategies in managing Fund assets, acts independently from the others, and uses its own methodology for selecting investments. Jackson National Asset Management, LLC (“JNAM” or “Adviser”) is responsible for identifying and retaining the Sub-Advisers for the selected strategies and for monitoring the services provided by the Sub-Advisers. JNAM provides qualitative and quantitative supervision as part of its process for selecting and monitoring the Sub-Advisers. JNAM is also responsible for selecting the Fund’s investment strategies and for determining the amount of Fund assets to allocate to each Sub-Adviser. Based on JNAM’s ongoing evaluation of the Sub-Advisers, JNAM may adjust allocations among Sub-Advisers.

Below are the principal investment strategies for each sleeve, but the Sub-Advisers may also implement other investment strategies in keeping with their respective sleeve’s objective.

Congress Small Cap Value Strategy

Congress Asset Management Company, LLP (“Congress”) constructs the Small Cap Value Strategy by investing in the common stocks of small capitalization (“small-cap”) companies.

The Small Cap Value Strategy market capitalization range is generally within the range of the Russell 2000 Value Index (between approximately \$33.77 million and \$13.98 billion as of December 31, 2021) at the time of purchase. The market capitalization range is expected to change over time.

Congress generally constructs the strategy to consist of 70-110 companies. The Small Cap Value Strategy is predominantly focused on investing in companies domiciled within the United States. The strategy can invest in foreign securities, primarily through American Depository Receipts (“ADRs”) and the equity securities of companies incorporated outside of the U.S. that are traded on U.S. exchanges. Investments in ADRs are generally less than 10%.

The strategy focuses on opportunities that Congress believes have significant upside potential, emphasizing a combination of both valuation and earnings power. Congress employs a fundamental, bottom-up investment approach that includes both financial modeling and qualitative analysis. The financial model is used to seek to develop an understanding of a company’s operating dynamics including the company’s financials, margins and growth rates. Qualitative analysis is focused on researching the key drivers of the business. Company specific research is complemented with a sector profile to focus on the key catalysts driving sector dynamics. A stock may be sold, among other reasons, if Congress believes that the company’s cumulative valuation and earnings upside potential approaches fair value, better opportunities exist, the company experiences fundamental deterioration, or the market capitalization rises above a targeted range.

Cooke & Bieler Small Cap Value Equity Strategy

Cooke & Bieler, L.P. (“C&B”) constructs the Small Cap Value Equity Strategy by investing in the common stocks of small capitalization (“small-cap”) companies.

C&B invests principally in small-capitalization companies, which are defined as having market capitalizations within the market capitalization range of the constituents of Russell 2000® Index at the time of purchase. As of December 31, 2021, the Index had a market capitalization range of \$33.8 million to \$13.9 billion.

C&B manages a relatively focused portfolio of typically 40 to 60 companies that enables C&B to provide adequate diversification while allowing the portfolio to behave differently than the market.

C&B selects securities for the strategy based on an analysis of a company’s financial characteristics and an assessment of the quality of a company’s management. In selecting a company, C&B considers criteria such as return on equity, balance sheet strength, industry leadership and cash flow projections. C&B further narrows the universe of acceptable investments by undertaking intensive research including interviews with a company’s top management, customers and suppliers. C&B believes their assessment of business quality and emphasis on valuation will protect the strategy’s assets in down markets, while their insistence on strength in leadership, financial condition and cash flow will produce competitive results in all but the most speculative markets. C&B regularly reviews the investments of the portfolio and may sell a portfolio holding when it has achieved its valuation target, there is deterioration in the underlying fundamentals of the business, or C&B has identified a more attractive investment opportunity.

WCM Small Cap Value Strategy

WCM Investment Management (“WCM”) constructs the Small Cap Value Strategy by investing in the common stocks of small capitalization (“small-cap”) companies that WCM believes are undervalued. WCM considers small capitalization companies to be companies within the market capitalization range of the constituents of the Russell 2000 Index (between approximately \$31.57 million and \$13.96 billion as of December 31, 2021). Investments in companies that move outside the capitalization range may continue to be held by the Small Cap Value Strategy at WCM’s discretion.

WCM generally constructs the strategy to consist of 25-40 companies. WCM typically selects shareholder-friendly companies with a durable competitive advantage that are trading at a discount to intrinsic value. Characteristics of these companies include sustained, high returns on invested capital, consistent free cash flow generation, and impressive compounding of net book value over time.

Reinhart Genesis PMV Strategy

Reinhart Partners, Inc. (“Reinhart”) constructs the Reinhart Genesis PMV Strategy by investing in equity securities issued by small-capitalization (“small-cap”) companies. Reinhart considers a company to be a small-cap company if it has a market capitalization, at the time of purchase, within the capitalization range of the Russell 2500™ Index as of the date it was last reconstituted. The market capitalizations within the Index vary, but as of December 31, 2021, they ranged from approximately \$159.2 million to \$35.0 billion.

Private Market Value (“PMV”) is Reinhart’s proprietary methodology for determining a company’s true intrinsic value. PMV is what an acquirer would be willing to pay for the entire company (per share).

Reinhart employs a four-step equity management process to identify and manage a portfolio of 35-45 stocks.

- First, Reinhart looks for companies with symptoms of success such as: consistent positive cash flow from operations and strong returns on equity, assets, and invested capital.
- Second, Reinhart further narrows its universe by applying a series of initial valuation measures. Companies that make it through these first two steps are then subjected to intensive fundamental analysis.
- Third, Reinhart seeks companies with durable competitive advantages. This may be the low-cost producer, maintain a dominating brand or serve a niche. Reinhart evaluates the company’s business model in order to understand the value and sustainability of its competitive position.
- The last step is to assign an independent, objective valuation to the enterprise. Reinhart does this through a private market valuation discipline. Actual takeover transactions are reviewed, and the corresponding, appropriate valuation multiples are applied to each security being analyzed. New securities are purchased if the price is at a discount of 30% or more to its private market valuation.

Stocks are sold when they reach their PMV. The gap between price and PMV serves as an objective basis to trim or add to existing holdings.

Reinhart may invest up to 20% of its net assets in securities of foreign issuers, real estate investment trusts (“REITs”) and securities of other investment companies, including exchange-traded funds (“ETFs”). Reinhart’s investment in other investment companies and ETFs will be within the limits of the Investment Company Act of 1940, as amended. Reinhart’s investments in foreign securities may include American depository receipts (“ADRs”).

ETFs are investment companies and investment in ETFs would, absent exemptive relief, be limited under applicable federal statutory provisions. Those provisions generally restrict a fund’s/strategy’s investment in the shares of another investment company to, as determined immediately after a purchase is made, not more than 5% of its total assets (which may represent no more than 3% of the outstanding voting stock of such other investment company) and limit aggregate investments in all investment companies to 10% of total assets.

River Road Small-Mid Cap Value II (SMID II) Strategy

River Road Asset Management, LLC (“River Road”) constructs the Small-Mid Cap Value II (SMID II) Strategy by investing primarily in equity securities of small- and mid-capitalization companies that River Road believes are undervalued. The market capitalizations within the SMID II Strategy may vary but they generally range from approximately \$500 million to \$10 billion at the time of initial purchase. This capitalization range will change over time. The SMID II Strategy may continue to hold securities of a portfolio company that subsequently drops below or appreciates above this capitalization threshold. The SMID II Strategy may also invest in companies of other market capitalizations, real estate investment trusts (REITs), BDC-RICs, convertible securities, and foreign stocks.

River Road’s investment philosophy is based upon its proprietary Absolute Value® approach, which seeks to generate attractive, sustainable, low volatility returns over the long term, with an emphasis on minimizing downside portfolio risk. River Road builds portfolios in house, from the bottom up, making security-specific research central to River Road’s process. At the core of River Road’s Absolute Value® approach is a systematic method for assessing the ‘risk-to-reward’ characteristics of an investment. The goal

of the research process is to formulate two outputs from which an investment decision is made – conviction rating (risk) and discount to value (reward). A stock's conviction rating combined with its discount to value determine not only whether the stock qualifies for investment, but also how the stock will be sized within a portfolio. River Road employs a balanced approach to diversification and a structured sell discipline that seeks to reduce portfolio volatility and the risk of permanent loss of capital.

JNAM also may choose to allocate the Fund's assets to additional strategies in the future. There is no assurance that any or all of the strategies discussed in this prospectus will be used by JNAM or the Sub-Advisers.

JNAM may also manage Fund assets directly to seek to enhance returns, or to hedge and to manage the Fund's cash and short-term instruments.

The Fund has flexibility in the relative weighting of each asset class and expects to vary the percentages of assets invested in each asset class from time to time. JNAM's allocations to the underlying Sub-Advisers will be a function of a variety of factors including each underlying strategy's expected returns, volatility, correlation, and contribution to the Fund's overall risk profile.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Advisers' investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Equity securities risk*
- *Company risk*
- *Issuer risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Investment style risk*
- *Allocation risk*
- *Depository receipts risk*
- *Foreign securities risk*
- *Real estate investment risk*
- *Managed portfolio risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Convertible securities risk*
- *Cybersecurity risk*
- *Exchange-traded funds investing risk*
- *Expense risk*
- *Investment in other investment companies risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser, Sub-Advisers and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The following individuals are responsible for application of the Fund's strategy, executing trades and allocation of capital to the various strategies for the Fund:

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

The Sub-Advisers to the JNL Multi-Manager Small Cap Value Fund are:

Congress Asset Management Company, LLP ("Congress") is located at 2 Seaport Lane, Boston, Massachusetts 02210. Congress was founded in 1985 and serves as an investment adviser to registered investment companies, high net worth individuals and institutions.

Jeff Kerrigan is the Portfolio Manager for the Congress Small Cap Value Strategy. He has over 27 years of investment management and research experience. Prior to joining Congress in 2017, Mr. Kerrigan was a Partner and Portfolio Manager at Century Capital Management, LLC from 2014 to 2017. Previously, Mr. Kerrigan was a Portfolio Manager and Chief Investment Officer at Haber Trilix and a Portfolio Manager with Gartmore Group, Fidelity Management & Research, and Fleet Investment Advisors. He was also an Equity Analyst with Putnam Investment Management. Mr. Kerrigan earned his Bachelor's and Master's degrees in Economics from Boston University. He is a CFA charterholder and a member of the CFA Society, Boston.

Cooke & Bieler, L.P. ("C&B"), a registered investment adviser is located at Two Commerce Square, 2001 Market Street, Suite 4000, Philadelphia, PA 19103. Founded in 1949, the firm provides investment management services to corporations, foundations, endowments, pension and profit sharing plans.

Steve Lyons, CFA, Partner, Analyst/Portfolio Manager. Mr. Lyons earned his undergraduate degree in Finance with honors from Arizona State University. He worked in the investment services industry specializing in private equity and business valuation before returning to business school. He received his MBA with honors from the University of Chicago. After working as a summer intern in 2005, Mr. Lyons joined C&B upon his graduation the following year.

Michael Meyer, CFA, Partner, Analyst/Portfolio Manager. Mr. Meyer earned his undergraduate degree in Economics from Davidson College, graduating cum laude with distinction. In 1993, following four years at Sterling Capital Management as an equity analyst and head equity trader, Mr. Meyer earned his MBA in Finance from the Wharton School of Business and joined C&B.

Edward O'Connor, CFA, Partner, Analyst/Portfolio Manager. Mr. O'Connor graduated cum laude with honors in Economics and Philosophy from Colgate University. He served as a U.S. diplomat in Cuba and Guatemala prior to receiving his MBA with concentrations in Finance and International Business in 1999 from the University of Chicago. He then joined Cambiar Investors in Denver, Colorado where he worked for three years before joining Cooke & Bieler in 2002.

R. James O'Neil, CFA, Partner, Analyst/Portfolio Manager. Mr. O'Neil received his undergraduate degree in Economics from Colby College, graduating cum laude with distinction. He was an Investment Officer in the Capital Markets Department at Mellon Bank for three years before entering Harvard Business School to earn his MBA. He served as a summer intern in 1987, joining C&B upon his graduation the following year.

Mehul Trivedi, CFA, Partner, Analyst/Portfolio Manager. Mr. Trivedi graduated magna cum laude with dual degrees in both Economics and International Relations from the University of Pennsylvania. After working as a fixed-income analyst at Blackrock Financial Management and then as a product manager at PNC Asset Management, Mr. Trivedi earned his MBA from the Wharton School of Business, serving as a summer intern at C&B in 1997 and joining the firm upon his graduation in 1998.

William Weber, CFA, Partner, Analyst/Portfolio Manager. Mr. Weber graduated magna cum laude from Villanova University in 2002 with dual degrees in Finance and English. He then worked at C&B for six years in various roles including marketing, operations and research support, before earning his MBA with honors from the University of Chicago Booth School of Business in 2010. While at Booth, Mr. Weber interned at T. Rowe Price Associates as an equity research analyst. He returned to C&B in 2010.

Andrew Armstrong, CFA, Partner, Analyst/Portfolio Manager. Mr. Armstrong earned his undergraduate degree in Economics from the University of Pennsylvania. He worked as an Associate at C&B for three years before joining Hotchkis & Wiley Capital Management as an investment analyst in 2011. Andrew returned to C&B in 2014.

Wesley Lim, CFA, Principal, Analyst/Portfolio Manager. Mr. Lim earned his BS in Physics and MS in Management Sciences and Engineering from Stanford University. He worked in various capacities for the Government of Singapore prior to receiving his MBA from the Wharton School of Business. After working as a summer intern in 2017, Mr. Lim joined C&B in August 2018.

Reinhart Partners, Inc. ("Reinhart"), is located at 1500 West Market Street, Suite 100, Mequon, Wisconsin 53092. Established in 1991, Reinhart is an SEC-registered investment adviser that provides investment advisory services to private clients and institutions.

The portfolio managers responsible for management of the Reinhart Genesis PMV Strategy of the Fund are Matthew Martinek, CFA and Brent Jesko.

Mr. Martinek joined Reinhart in 2010 as a Senior Analyst and was promoted to Portfolio Manager in 2011. Mr. Martinek has 17 years of investment experience as a small and mid-cap analyst for value-focused investment managers. Prior to joining Reinhart, Mr. Martinek was an Associate Analyst with T. Rowe Price, primarily focused on the Small Cap Value strategy. Mr. Martinek has a BBA in Accounting and Finance from the University of Wisconsin-Madison, where he was a member of the Applied Security Analysis Program. He also received an MBA from Columbia Business School, where he was a member of the Applied Value Investing program. He holds the Chartered Financial Analyst designation and is a member of the CFA Institute.

Mr. Jesko joined Reinhart as Lead Portfolio Manager and Principal in 2000. Prior to joining Reinhart, Mr. Jesko learned the Private Market Value investment philosophy under Dick Weiss at Strong Funds from 1995-2000. He was promoted to Associate Portfolio Manager for mid and small cap portfolios in 1998. In 1994, he interned at Goldman Sachs Asset Management, L.P. in New York City. He began his career in the Financial Industry in 1990 as a Commercial Credit Analyst for NationsBank in Dallas, TX. Mr. Jesko graduated Magna Cum Laude from Texas A&M University with a degree in Business administration. He went on to graduate with Highest Honors with an MBA from University of Chicago in 1995.

River Road Asset Management, LLC ("River Road"), Meidinger Tower, 462 South Fourth Street, Suite 2000, Louisville, Kentucky 40202, was founded in 2005. River Road is indirectly majority owned by Affiliated Managers Group, Inc., and members of River Road's senior management team hold a substantial minority equity interest in the firm.

J. Justin Akin serves as portfolio manager for River Road's Small Cap Value and Small-Mid Cap Value Portfolios. He previously served as Senior Equity Analyst for River Road. Prior to joining River Road in 2005, Mr. Akin worked with the firm's founders at Commonwealth SMC as Equity Research Analyst for the Small Cap Value and Dividend All-Cap Value Portfolios. Mr. Akin earned a B.S. in Economics from Centre College. Mr. Akin is a member of the CFA Institute and CFA Society Louisville.

R. Andrew Beck serves as Chief Executive Officer for River Road. Additionally, he is portfolio manager for River Road's Small Cap Value, Small-Mid Cap Value, Mid Cap Value, and Focused Absolute Value® Portfolios. Prior to co-founding River Road in 2005, Mr. Beck served as Senior Research Analyst and, later, Senior Vice President and Portfolio Manager for SMC Capital Inc. (Commonwealth SMC). Mr. Beck earned a B.S. in Finance from the University of Louisville and an M.B.A. from the F.W. Olin School at Babson College.

James C. Shircliff, CFA serves as a portfolio manager for River Road's Small Cap Value and Small-Mid Cap Value Portfolios. He previously served as the firm's Chief Investment Officer and a portfolio manager for River Road's Dividend All-Cap Value Portfolios. Prior to co-founding River Road in 2005, Mr. Shircliff served as EVP, Portfolio Manager and Director of Research for SMC Capital Inc. (Commonwealth SMC). Mr. Shircliff began his career in 1973 as Research Analyst for First Kentucky Trust, where he later served as Director of Research. In 1983, he joined Oppenheimer Management Co. as Special Situations Analyst and, later, Oppenheimer's Target Fund as Portfolio Manager. In 1986, Mr. Shircliff joined Southeastern Asset Management (Longleaf Funds) as Partner, Portfolio Manager and Director of Research. In 1997, he joined SMC Capital Inc., where he launched River Road's Small Cap Value and Dividend All-Cap Value Portfolios. Mr. Shircliff graduated from the University of Louisville with a B.S. in Finance. He earned the Chartered Financial Analyst® designation in 1978 and is a member of the CFA Institute and CFA Society Louisville.

WCM Investment Management, LLC ("WCM"), is located at 281 Brooks Street, Laguna Beach, California 92651. WCM is an independent, money management firm, founded in 1976. WCM provides investment management and sub-advisory services to public as well as various institutional and sub-advised accounts.

Jon Detter, Portfolio Manager and Business Analyst of WCM. Mr. Detter joined WCM in 2016 as a member of the Investment Strategy Group for its domestic, fundamental value strategies. Mr. Detter's primary responsibilities are portfolio management and equity research. His career in investments and valuation includes his role as principal at Opus Capital Management, where he was one of three portfolio managers on the Opus Small-Cap Value flagship product, as well as a founder of, and portfolio manager for, the Focused Small Cap product. Previously, Mr. Detter held positions at Valuation Research Corporation and Arthur Andersen LLP, performing valuation work for public and private companies, primarily with respect to equity and option valuations, purchase price allocations, intangible assets and asset impairment testing. Mr. Detter graduated magna cum laude from Xavier University with a B.S.B.A. in Finance. He is also a CFA charterholder.

Anthony Glickhouse, Portfolio Manager and Business Analyst of WCM. Mr. Glickhouse joined WCM in 2016 as a member of the Investment Strategy Group for its domestic, fundamental value strategies. Mr. Glickhouse's primary responsibilities are portfolio management and equity research. His industry experience includes a position at Opus Capital Management, where he was a research analyst on the Opus Small-Cap Value flagship product, as well as a founder of, and portfolio manager for, the Focused Small Cap product. Previously, Mr. Glickhouse held positions at The Private Client Reserve of U.S. Bank, where he conducted economic/capital market research and detailed asset allocation analysis, and at Renaissance Investment Management, where he performed operations and security analysis duties. Mr. Glickhouse graduated from Miami University with a B.S. in Finance. He is also a CFA charterholder.

Patrick F. McGee, Portfolio Manager and Business Analyst of WCM. Mr. McGee joined WCM in 2016 as a member of the Investment Strategy Group for its domestic, fundamental value strategies. Mr. McGee's primary responsibilities are portfolio management and equity research. His industry experience includes a position at Opus Capital Management, where he was a research analyst on the Opus Small-Cap Value flagship product, as well as a founder of, and portfolio manager for, the Focused Small Cap product. Previously, Mr. McGee held the Associate Analyst position at Avondale Partners LLC, where he assisted in research. Earlier still, Mr. McGee worked as a senior consultant at Ernst & Young LLP, where he established the Los Angeles office's Fraud Investigation and Dispute Services practice. Mr. McGee earned his B.B.A. in Finance and Public Policy from the College of William & Mary (Virginia), and his M.B.A. from the University of Virginia. He is also a CFA charterholder.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving each sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL iShares Tactical Moderate Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital through investment in exchange-traded funds (“Underlying ETFs”).

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of Underlying ETFs. An ETF is an investment fund that is traded on a stock exchange and holds an underlying basket of securities generally designed to track an index. ETFs can be bought and sold through the trading day in the secondary market or at net asset value directly with an authorized participant. The Fund will only invest in ETFs that have received an order for exemptive relief from the limits set forth in Section 12 of the 1940 Act. Such list of ETFs will be provided by Jackson National Asset Management, LLC, the Fund’s investment adviser (“JNAM” or the “Adviser”).

Final allocations are determined by the Adviser through the use of both internal and external resources. Mellon Investments Corporation (“Mellon”), the Fund’s sub-adviser (the “Sub-Adviser”), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund’s allocations are rebalanced periodically to maintain the Fund’s tactical allocation ranges.

The Fund typically allocates assets among Underlying ETFs that invest in equity securities, fixed income securities, and cash alternatives. The Adviser may also allocate the Fund’s assets to securities and derivative contracts to meet the Fund’s allocation targets. The target allocations for the Fund’s investment in Underlying ETFs and the corresponding allocation ranges of the primary asset classes are:

	Target Allocation	Minimum Allocation	Maximum Allocation
Equities	40%	20%	60%
Fixed Income*	60%	40%	80%
Alternative Assets and Strategies	0%	0%	15%

*May include cash equivalents.

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser.

The Fund may invest, directly or through ETFs, in securities that have exposure to foreign currencies through their underlying investments, such as in companies that trade in or receive revenues in foreign currencies.

The Fund may invest, directly or through ETFs, in illiquid or thinly traded securities.

The Fund may invest, directly or through ETFs, in bank loans.

The Fund may lend its securities to increase its income.

The Sub-Adviser may invest in ETFs in excess of the 1940 Act limits on investment in other investment companies as instructed by the Adviser (and in reliance on exemptive relief issued to the ETF by the SEC, provided that certain conditions are met). Because ETFs are investment companies, investment in ETFs would, absent exemptive relief, be limited under applicable federal statutory provisions. Those provisions generally restrict a fund’s investment in the shares of another investment company to, as determined immediately after a purchase is made, not more than 5% of its total assets (which may represent no more than 3% of the outstanding voting stock of such other investment company) and limit aggregate investments in all investment companies to 10% of total assets.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Exchange-traded funds investing risk*
- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Equity securities risk*
- *Liquidity risk*
- *Settlement risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Emerging markets and less developed countries risk*
- *Foreign securities risk*
- *Investment in other investment companies risk*
- *Counterparty risk*
- *Currency risk*
- *Derivatives risk*
- *Leverage risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Concentration risk*
- *Cybersecurity risk*
- *Expense risk*
- *Financial services risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Index investing risk*
- *Investment strategy risk*
- *Large-capitalization investing risk*
- *Portfolio turnover risk*
- *Prepayment risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Sector risk*
- *Short sales risk*
- *Temporary defensive positions and large cash positions risk*
- *TIPS and inflation-linked bonds risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser, Sub-Advisers and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. (“Jackson”), a leading provider of retirement products for industry

professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The following individuals are responsible for application of the Fund's strategy, executing trades and allocation of capital to the various strategies for the Fund:

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

Kyle Ottwell, CFA, CAIA, is Director, Investment Management for JNAM. Mr. Ottwell is responsible for manager research, portfolio construction, and asset allocation of Funds, joining the Investment Management team in October 2013. Mr. Ottwell originally joined JNAM in June of 2007 as a Fund Accountant, rising to the Supervisor position. Prior to JNAM he worked as a fund accountant for State Street. Mr. Ottwell holds a Bachelor of Science degree in Finance & Banking/Real Estate from the University of Missouri-Columbia. He is a CFA and CAIA charterholder.

The Sub-Adviser

Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

In its capacity as sub-adviser, Mellon monitors the investment allocations of the Fund and executes allocation instructions for the Fund as prepared by the Adviser. Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objective. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

Kyle Ottwell, CFA, CAIA, is Director, Investment Management for JNAM. Mr. Ottwell is responsible for manager research, portfolio construction, and asset allocation of Funds, joining the Investment Management team in October 2013. Mr. Ottwell originally joined JNAM in June of 2007 as a Fund Accountant, rising to the Supervisor position. Prior to JNAM he worked as a fund accountant for State Street. Mr. Ottwell holds a Bachelor of Science degree in Finance & Banking/Real Estate from the University of Missouri-Columbia. He is a CFA and CAIA charterholder.

The Sub-Adviser

Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

In its capacity as sub-adviser, Mellon monitors the investment allocations of the Fund and executes allocation instructions for the Fund as prepared by the Adviser. Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objective. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Mr. France is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Loyola University Maryland and a BSBA in accounting from Duquesne University. Mr. France holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL iShares Tactical Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital through investment in exchange-traded funds (“Underlying ETFs”).

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a group of Underlying ETFs. An ETF is an investment fund that is traded on a stock exchange and holds an underlying basket of securities generally designed to track an index. ETFs can be bought and sold through the trading day in the secondary market or at net asset value directly with an authorized participant. The Fund will only invest in ETFs that have received an order for exemptive relief from the limits set forth in Section 12 of the 1940 Act. Such list of ETFs will be provided by Jackson National Asset Management, LLC, the Fund’s investment adviser (“JNAM” or the “Adviser”).

Final allocations are determined by the Adviser through the use of both internal and external resources. Mellon Investments Corporation (“Mellon”), the Fund’s sub-adviser (the “Sub-Adviser”), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund’s allocations are rebalanced periodically to maintain the Fund’s tactical allocation ranges.

The Fund typically allocates assets among Underlying ETFs that invest in equity securities, fixed income securities, and cash alternatives. The Adviser may also allocate the Fund’s assets to securities and derivative contracts to meet the Fund’s allocation targets. The target allocations for the Fund’s investment in Underlying ETFs and the corresponding allocation ranges of the primary asset classes are:

	Target Allocation	Minimum Allocation	Maximum Allocation
Equities	80%	60%	100%
Fixed Income*	20%	0%	40%
Alternative Assets and Strategies	0%	0%	15%

*May include cash equivalents.

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser.

The Fund may invest, directly or through ETFs, in securities that have exposure to foreign currencies through their underlying investments, such as in companies that trade in or receive revenues in foreign currencies.

The Fund may invest, directly or through ETFs, in illiquid or thinly traded securities.

The Fund may invest, directly or through ETFs, in bank loans.

The Fund may lend its securities to increase its income.

The Sub-Adviser may invest in ETFs in excess of the 1940 Act limits on investment in other investment companies as instructed by the Adviser (and in reliance on exemptive relief issued to the ETF by the SEC, provided that certain conditions are met). Because ETFs are investment companies, investment in ETFs would, absent exemptive relief, be limited under applicable federal statutory provisions. Those provisions generally restrict a fund’s investment in the shares of another investment company to, as determined immediately after a purchase is made, not more than 5% of its total assets (which may represent no more than 3% of the outstanding voting stock of such other investment company) and limit aggregate investments in all investment companies to 10% of total assets.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Exchange-traded funds investing risk*
- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Equity securities risk*
- *Liquidity risk*
- *Settlement risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Emerging markets and less developed countries risk*
- *Foreign securities risk*
- *Investment in other investment companies risk*
- *Counterparty risk*
- *Currency risk*
- *Derivatives risk*
- *Leverage risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Concentration risk*
- *Cybersecurity risk*
- *Expense risk*
- *Financial services risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Index investing risk*
- *Investment strategy risk*
- *Large-capitalization investing risk*
- *Portfolio turnover risk*
- *Prepayment risk*
- *Real estate investment risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Sector risk*
- *Short sales risk*
- *Temporary defensive positions and large cash positions risk*
- *TIPS and inflation-linked bonds risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser, Sub-Advisers and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. (“Jackson”), a leading provider of retirement products for industry

professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The following individuals are responsible for application of the Fund's strategy, executing trades and allocation of capital to the various strategies for the Fund:

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

Kyle Ottwell, CFA, CAIA, is Director, Investment Management for JNAM. Mr. Ottwell is responsible for manager research, portfolio construction, and asset allocation of Funds, joining the Investment Management team in October 2013. Mr. Ottwell originally joined JNAM in June of 2007 as a Fund Accountant, rising to the Supervisor position. Prior to JNAM he worked as a fund accountant for State Street. Mr. Ottwell holds a Bachelor of Science degree in Finance & Banking/Real Estate from the University of Missouri-Columbia. He is a CFA and CAIA charterholder.

The Sub-Adviser

Mellon Investments Corporation ("Mellon") is a corporation organized under the laws of the State of Delaware and is an indirect subsidiary of The Bank of New York Mellon Corporation ("BNY Mellon Corp."). Mellon is headquartered at BNY Mellon Center, One Boston Place, Boston, Massachusetts 02108.

In its capacity as sub-adviser, Mellon monitors the investment allocations of the Fund and executes allocation instructions for the Fund as prepared by the Adviser. Mellon supervises and manages the investment portfolio of the Fund and directs the purchase and sale of the Fund's investment securities. Mellon utilizes teams of investment professionals acting together to manage the assets of the Fund. The team meets regularly to review portfolio holdings and to discuss purchase and sale activity. The team adjusts holdings in the portfolio as they deem appropriate in the pursuit of the Fund's investment objective. The individual members of the team who are jointly and primarily responsible for the day-to-day management of the Fund's portfolio are:

Marlene Walker Smith is Director, Head of Equity Index - Portfolio Management at Mellon. Ms. Walker Smith joined Mellon in 1995. She leads a team of portfolio managers covering domestic and international index portfolios, as well as corporate actions. Ms. Walker Smith has been working in the investment industry since 1990. She holds an MBA from the University of Pittsburgh and a BA from Washington & Jefferson College.

David France, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. France joined Mellon in 2009. He has been working in the investment industry since 1995. Todd Frysinger, CFA, is Vice President and Senior Portfolio Manager at Mellon. Mr. Frysinger joined Mellon in 2007. Mr. Frysinger is responsible for managing domestic and international equity indexing portfolios. He earned an MS in finance from Boston College and a BS in finance and management from Elizabethtown College. He holds the CFA® designation and is a member of CFA Institute and CFA Society Pittsburgh.

Vlasta Sheremeta, CFA, is Vice President and Senior Portfolio Manager at Mellon. Ms. Sheremeta joined Mellon in 2011. She has been working in the investment industry since 2010. Ms. Sheremeta is responsible for managing domestic and international equity indexing portfolios. Ms. Sheremeta earned an MBA from Carnegie Mellon University and a BS in business administration from the University of Pittsburgh. She holds the CFA® designation, and is a member of CFA Institute and CFA Society Pittsburgh.

Michael Stoll is Vice President and Senior Portfolio Manager at Mellon. Mr. Stoll joined Mellon in 2005. He has been working in the investment industry since 2005. Mr. Stoll is responsible for managing domestic and international equity indexing portfolios. Mr. Stoll earned a BS in civil engineering from the University of California at Irvine, and an MBA and an MS in engineering from the University of California at Berkeley.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/American Funds Moderate Growth Allocation Fund

Class A

Class I

Investment Objectives. The investment objective of the Fund is to seek a balance between current income and growth of capital.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in shares of a diversified group of other Funds (“Underlying Funds”). The Underlying Funds in which the Fund may invest are a part of either AFIS or the American Funds R6 mutual fund share class. Not all Funds of the American Funds are available as Underlying Funds.

Under normal circumstances, the Fund allocates approximately 40%-80% of its assets to Underlying Funds that invest primarily in equity securities and 20%-60% of its assets to Underlying Funds that invest primarily fixed-income securities.

Within these asset classes, the Fund remains flexible with respect to the percentage it will allocate among Underlying Funds.

The Underlying Funds available for investment as of the date of this Prospectus include:

American Funds Insurance Series®	American Funds Retail Funds
Global Growth Fund SM	AMCAP Fund
Global Small Capitalization Fund SM	American Balanced Fund
Growth Fund SM	American Funds Corporate Bond Fund
International Fund SM	American Funds Developing World Growth and Income Fund
New World Fund [®]	American Funds Emerging Markets Bond Fund
Washington Mutual Investors Fund	American Funds Global Balanced Fund
Capital World Growth and Income Fund	American Funds Inflation Linked Bond Fund
Growth-Income Fund SM	American Funds Mortgage Fund
International Growth and Income Fund SM	American Funds Strategic Bond Fund
Asset Allocation Fund	American High-Income Trust
Global Balanced Fund	American Mutual Fund
The Bond Fund of America SM	Capital Income Builder
Capital World Bond Fund SM	Capital World Bond Fund
American High-Income Trust	Capital World Growth and Income Fund
American Funds Mortgage Fund SM	EuroPacific Growth Fund
U.S. Government Securities Fund SM	Fundamental Investors
	Intermediate Bond Fund of America
	International Growth and Income Fund
	New Perspective Fund
	New World Fund
	SMALLCAP World Fund
	Short-Term Bond Fund of America
	The American Funds Income Series - U.S. Government Securities Fund
	The Bond Fund of America
	The Growth Fund of America
	The Income Fund of America
	The Investment Company of America
	The New Economy Fund
	Washington Mutual Investors Fund

The Fund seeks to achieve a balance between current income and growth of capital through its investments in Underlying Funds that invest primarily in equity and fixed-income securities. These investments may include Underlying Funds that invest in stocks of large established companies as well as those that invest in stocks of smaller companies with above-average growth potential.

Some of the Underlying Funds may invest in securities issued by companies located in countries outside the United States, including a range of developed and emerging market countries. Fund investments may include Underlying Funds that invest in foreign bonds denominated in currencies other than U.S. dollars as well as Underlying Funds that invest exclusively in bonds of U.S. issuers. The Underlying Funds may invest in a variety of sectors and credit qualities, including government bonds, inflation-linked bonds, investment grade corporate bonds, high yield corporate bonds (commonly referred to as "junk bonds"), mortgages, and emerging market debt. Under normal market circumstances, the Adviser seeks to maintain of portfolio of intermediate duration within investment grade debt.

Some of the Underlying Funds may utilize a number of derivatives in order to execute their investment strategy. Some of the Underlying Funds, particularly those classified as Equities Strategies, may hold a significant amount of small or mid-capitalization equities in order to execute their investment strategy. Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of junk bonds in order to execute their investment strategy.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Allocation risk*
- *Underlying funds risk*
- *Market risk*
- *Equity securities risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *Foreign securities risk*
- *Emerging markets and less developed countries risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Investment in other investment companies risk*
- *Investment style risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Currency risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *Investment strategy risk*
- *License termination risk*
- *Liquidity risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Because the Fund invests exclusively in the Underlying Funds, you should look elsewhere in the respective Prospectus for AFIS for the particular information and the risks related to the Underlying Funds.

In addition, the performance of the Fund depends on the Underlying Funds' sub-advisers' ability to effectively implement the investment strategies of the Underlying Funds.

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks.

In addition, the performance of the Fund depends on the Underlying Funds' sub-advisers' abilities to effectively implement the investment strategies of the Underlying Funds.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The Fund is managed by William Harding, Sean Hynes, Mark Pliska, and Kyle Ottwell who are responsible for setting the allocations made to the Fund and application of the Fund's strategy.

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. - *Investment style risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Currency risk*
- *Cybersecurity risk*
- *Derivatives risk*
- *Expense risk*
- *Investment strategy risk*
- *License termination risk*
- *Liquidity risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*
- *Portfolio turnover risk*

Because the Fund invests exclusively in the Underlying Funds, you should look elsewhere in the respective Prospectus for AFIS for the particular information and the risks related to the Underlying Funds.

In addition, the performance of the Fund depends on the Underlying Funds' sub-advisers' ability to effectively implement the investment strategies of the Underlying Funds.

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks.

In addition, the performance of the Fund depends on the Underlying Funds' sub-advisers' abilities to effectively implement the investment strategies of the Underlying Funds.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Adviser and Portfolio Management. The allocations for the Fund are made by JNAM. JNAM is located at 225 West Wacker Drive, Chicago, Illinois 60606. JNAM is the investment adviser to the Trust and other affiliated investment companies and provides the Trust and other affiliated investment companies with professional investment supervision and management. JNAM is an indirect, wholly owned subsidiary of Jackson Financial Inc. ("Jackson"), a leading provider of retirement products for industry professionals and their clients. Jackson and its affiliates offer variable, fixed and fixed index annuities designed for tax-efficient growth and distribution of retirement income for retail customers, as well as products for institutional investors. Prudential plc and Athene Life Re Ltd each hold a minority economic interest in Jackson. Prudential plc has no relation to Newark, New Jersey-based Prudential Financial Inc.

The Fund is managed by William Harding, Sean Hynes, Mark Pliska, and Kyle Ottwell who are responsible for setting the allocations made to the Fund and application of the Fund's strategy.

William Harding, CFA, is Senior Vice President and Chief Investment Officer for JNAM since July 2014. Mr. Harding was a Vice President, Head of Investment Management from October 2012 to June 2014. Mr. Harding leads the Investment Management function responsible for oversight of sub-advisor performance and risk, due diligence and manager research. Mr. Harding was previously the Head of Manager Research for Morningstar Inc.'s Investment Management division and has over 20 years of investment experience including asset allocation, manager research, portfolio management, and performance evaluation. Mr. Harding graduated from the University of Colorado, Boulder with a Bachelor of Science degree in Business. He holds an MBA from Loyola University Chicago and he is a Chartered Financial Analyst.

Sean Hynes, CFA, CAIA, is Assistant Vice President, Investment Management for JNAM since April 2013. Mr. Hynes provides leadership for the performance analysis and due diligence review of external investment managers. He develops and maintains key relationships with asset managers and provides leadership and direction to Investment Management staff. Prior to joining JNAM, Mr. Hynes was an Investment Manager for Morningstar Investment Services, a wholly owned subsidiary of Morningstar Inc., and a research associate for Managers Investment Group. Mr. Hynes holds a Bachelor of Science degree in Mathematics from the University of Notre Dame, and an MBA from Carnegie Mellon University. He is a CFA and CAIA charterholder.

Mark Pliska, CFA, is an Assistant Vice President for JNAM. Mr. Pliska is responsible for manager research, portfolio construction, and asset allocation of Funds. Prior to joining JNAM in 2011, Mr. Pliska worked as an Investment Analyst for Plan Sponsor Advisors from 2008 to 2011, where he was responsible for the selection and monitoring of investment managers, client reporting, and asset allocation for defined contribution and defined benefit plans, and prior to that, Mr. Pliska was a Research Analyst for DWM Financial Group from 2006 to 2008. Mr. Pliska is a National Merit Scholar and holds a B.A. in Economics from the University of Kansas.

Kyle Ottwell, CFA, CAIA, is Director, Investment Management for JNAM. Mr. Ottwell is responsible for manager research, portfolio construction, and asset allocation of Funds, joining the Investment Management team in October 2013. Mr. Ottwell originally joined JNAM in June of 2007 as a Fund Accountant, rising to the Supervisor position. Prior to JNAM he worked as a fund accountant for State Street. Mr. Ottwell holds a Bachelor of Science degree in Finance & Banking/Real Estate from the University of Missouri-Columbia. He is a CFA and CAIA charterholder.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

JNL/AB Sustainable Global Thematic Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term growth of capital.

Principal Investment Strategies. The Fund pursues opportunistic growth by investing in a global universe of companies whose business activities AllianceBernstein L.P., the Fund's sub-adviser ("Sub-Adviser"), believes position the company to benefit from certain sustainable investment themes that align with one or more of the United Nations Sustainable Development Goals ("SDGs") and thereby are expected to experience growth. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities of issuers located throughout the world that satisfy the Fund's sustainability criteria. An issuer that derives at least 25% of its total revenues from activities consistent with the achievement of the SDGs meets such criteria, although many of the issuers in which the Fund invests will derive a greater portion of their revenues from such activities.

The Sub-Adviser employs a combination of "top-down" and "bottom-up" investment processes with the goal of identifying, based on its internal research and analysis, securities of companies worldwide that fit into sustainable investment themes. First, the Sub-Adviser identifies, through its "top-down" process, the sustainable investment themes, which include climate, health and empowerment and may change over time based on the Sub-Adviser's research. In addition to this "top-down" thematic approach, the Sub-Adviser also uses a "bottom-up" analysis of individual companies, focusing on prospective earnings growth, valuation, and quality of company management and on evaluating a company's risks, including those related to environmental, social and corporate governance ("ESG") factors. ESG factors, which can vary across companies and industries, may include environmental impact, corporate governance, ethical business practices, diversity and employee practices, product safety, supply chain management and community impact. Eligible investments include securities of issuers that the Sub-Adviser believes will maximize total return while also contributing to positive societal impact aligned with one or more of the SDGs. While the Sub-Adviser emphasizes focusing on individual companies with favorable ESG attributes over the use of broad-based negative screens (e.g., disqualifying business activities) in assessing a company's exposure to ESG factors, the Fund will not invest in companies that derive revenue from direct involvement in adult entertainment, alcohol, coal, controversial weapons, firearms, gambling, GMOs, military contracting, prisons, or tobacco. The Sub-Adviser applies the "top-down" and "bottom-up" criteria stated herein to every investment, and each investment must meet both criteria. Every security must meet the Sub-Adviser's sustainability criteria to be included in the possible investment universe, and thus inclusion in the Fund's portfolio.

Proxies of companies in which the Fund invests are voted in accordance with the Sub-Adviser's proxy voting policies. Information on such policies is included in the Fund's SAI, as required.

The Sub-Adviser normally considers a large universe of mid- to large-capitalization companies worldwide for investment.

The Fund invests in securities issued by U.S. and non-U.S. companies from multiple industry sectors in an attempt to maximize opportunity, which should also tend to reduce risk. The Fund invests in both developed and emerging market countries. Under normal market conditions, the Fund invests at least 40% of its assets in securities of non-U.S. companies, defined as those companies that are domiciled or with substantial business operations outside the U.S. In addition, the Fund invests, under normal circumstances, in the equity securities of companies located in at least three countries. The percentage of the Fund's assets invested in securities of companies in a particular country or denominated in a particular currency varies in accordance with the Sub-Adviser's assessment of the appreciation potential of such securities. The Fund may invest in any company and industry and in any type of equity security, listed and unlisted, with potential for capital appreciation. It invests in well-known, established companies as well as new, smaller or less-seasoned companies. Investments in new, smaller or less-seasoned companies may offer more reward but may also entail more risk than is generally true of larger, established companies. The Fund may also invest in synthetic foreign equity securities, which are various types of warrants used internationally that entitle a holder to buy or sell underlying securities, real estate investment trusts and zero-coupon bonds.

The Fund may, at times, invest in shares of exchange-traded funds ("ETFs") in lieu of making direct investments in securities. ETFs may provide more efficient and economical exposure to the types of companies and geographic locations in which the Fund seeks to invest than direct investments. Investments in ETFs will not be subject to the Fund's sustainable investment themes or ESG factors.

Currencies can have a dramatic impact on equity returns, significantly adding to returns in some years and greatly diminishing them in others. Currency and equity positions are evaluated separately. The Sub-Adviser may seek to hedge the currency exposure resulting from securities positions when it finds the currency exposure unattractive. To hedge all or a portion of its currency risk, the Fund, from time to time, invests in currency-related derivatives, including forward currency exchange contracts, futures contracts, options on futures contracts, swaps and options. The Sub-Adviser may also seek investment opportunities by taking long or short positions in currencies through the use of currency-related derivatives.

The Fund may enter into other derivatives transactions, such as options, futures contracts, forwards, and swaps. The Fund may use options strategies involving the purchase and/or writing of various combinations of call and/or put options, including on individual

securities and stock indices, futures contracts (including futures contracts on individual securities and stock indices) or shares of ETFs. These transactions may be used, for example, in an effort to earn extra income, to adjust exposure to individual securities or markets, or to protect all or a portion of the Fund's portfolio from a decline in value, sometimes within certain ranges.

In determining when and to what extent to enter into derivatives transactions or to invest in ETFs, the Sub-Adviser will consider factors such as the relative risks and returns expected of potential investments and the cost of such transactions. The Sub-Adviser will consider the impact of derivatives and ETFs in making its assessment of the Fund's risks.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Managed portfolio risk*
- *Equity securities risk*
- *Market risk*
- *Sector risk*
- *ESG (Environmental, Social & Governance) investment strategy risk*
- *Foreign securities risk*
- *Large-capitalization investing risk*
- *Mid-capitalization investing risk*
- *Emerging markets and less developed countries risk*
- *Currency risk*
- *Derivatives risk*
- *Exchange-traded funds investing risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is AllianceBernstein L.P. ("AB"), located at 501 Commerce Street, Nashville, Tennessee 37203. AB is a global investment management firm that offers high-quality research and diversified investment services to institutional investors, individuals and private wealth clients in major world markets.

The portfolio manager of the Sub-Adviser responsible for the oversight of the Fund is Daniel C. Roarty. Information regarding the portfolio manager of the Fund is set forth below.

Daniel C. Roarty, CFA, is Chief Investment Officer of the Sustainable Equities Team at AB. Mr. Roarty manages a suite of geographically diverse strategies dedicated to the achievement of the United Nations ("UN") Sustainable Development Goals ("SDGs"). Since assuming the Chief Investment Officer role in 2013, Mr. Roarty has become a thought leader in socially responsible

investing, utilizing the SDGs as a road map for identifying thematic investment opportunities. Mr. Roarty is an active part of the sustainable investing community, acting as a subject-matter expert around the globe, including speaking at the 2018 Sustainable Investing Conference at the UN. Mr. Roarty joined the AB in 2011 as global technology sector head on the Global/International Research Growth team and was named team lead in early 2012. Mr. Roarty previously spent nine years at Nuveen Investments, where he co-managed both a large-cap and a multi-cap growth strategy. His research experience includes coverage of technology, industrials and financials stocks at Morgan Stanley and Goldman Sachs. Mr. Roarty holds a BS in finance from Fairfield University and an MBA from the Wharton School at the University of Pennsylvania. Mr. Roarty is a CFA charterholder.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/AQR Large Cap Defensive Style Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek total return. Total return consists of capital appreciation and income.

Principal Investment Strategies. The Fund pursues a “defensive” investment style, seeking to provide downside protection with upside potential through active stock selection, risk management, and diversification. The Fund pursues its objective by investing, under normal market conditions, at least 80% of its net assets (including any borrowings for investment purposes) in “Equity Instruments” of large-capitalization issuers. The Fund primarily invests in large-capitalization issuers located in the United States. Equity Instruments include common stock, preferred stock, warrants, exchange-traded funds that invest in equity securities, stock index futures, real estate investment trusts, and other derivative instruments where the reference asset is an equity security. As of the date of this prospectus, AQR Capital Management, LLC, the Fund’s sub-adviser (“Sub-Adviser”), generally considers large-cap issuers to be those issuers with market capitalizations within the range of the Morningstar® US Target Market Exposure Index□ at the time of purchase. As of December 31, 2021, the market capitalization of the companies comprising the Morningstar US Target Market Exposure Index ranged from \$3.7 billion to \$2.9 trillion. The Fund can invest in companies of any size and may invest in small- and mid-cap companies from time to time in the discretion of the Sub-Adviser.

The Fund pursues a defensive investment style, meaning it seeks to participate in rising equity markets while mitigating downside risk in declining markets. In other words, the Fund expects to lag the performance of traditional U.S. equity funds when equity markets are rising but to exceed the performance of traditional U.S. equity funds during equity market declines. To achieve this result, the Fund will be broadly diversified across companies and industries and will invest in companies that the Sub-Adviser has identified to have low measures of risk and high quality (e.g., stable companies in good business health). The Sub-Adviser believes that the stocks of these types of companies may tend to be lower “beta” stocks and that lower “beta” stocks generally are less volatile than higher “beta” stocks (that is, their value has a lower sensitivity to fluctuations in the securities markets). The Sub-Adviser expects low “beta” and high-quality stocks to produce higher risk-adjusted returns over a full market cycle than high “beta” or poor-quality stocks.

The Fund is actively managed, and the Sub-Adviser will vary the Fund’s exposures to issuers and industries based on the Sub-Adviser’s evaluation of investment opportunities. In constructing the portfolio, the Sub-Adviser uses quantitative models, which combine active management to identify quality companies and statistical measures of risk to assure diversification by issuer and industry, as well as additional criteria that form part of the Sub-Adviser’s security selection process. The Sub-Adviser uses volatility and correlation forecasting and other portfolio construction methodologies to manage the Fund. The Sub-Adviser utilizes quantitative risk models in furtherance of the Fund’s investment objective, which seek to control portfolio level risk. Shifts in allocations among issuers and industries will be determined using the quantitative models based on the Sub-Adviser’s determinations of risk and quality, as well as other factors including, but not limited to, managing industry and sector exposures.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts as well as exchange-traded funds and similar pooled investment vehicles for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. The Fund may invest in short-term instruments, including U.S. Government securities, bank certificates of deposit, money market instruments or funds, and such other liquid investments deemed appropriate by the Sub-Adviser. The Fund may invest in these securities without limit for temporary defensive purposes.

There is no assurance that the Fund’s use of Equity Instruments providing enhanced exposure will enable the Fund to achieve its investment objective. In addition, to attempt to increase its income or total return, the Fund may lend its portfolio securities to certain types of eligible borrowers.

The Sub-Adviser utilizes portfolio optimization techniques to determine trading activity, taking into account anticipated transaction costs associated with trading each Equity Instrument. The Fund employs sophisticated proprietary trading techniques in an effort to mitigate trading costs and execution impact on the Fund.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Large-capitalization investing risk*
- *Stock risk*

- *Company risk*
- *Market risk*
- *Managed portfolio risk*
- *Model risk*
- *Volatility risk*
- *Mid-capitalization investing risk*
- *Derivatives risk*
- *Counterparty risk*
- *Forward and futures contract risk*
- *Hedging transactions risk*
- *Leverage risk*
- *Investment in other investment companies risk*
- *U.S. Government securities risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Investment in money market funds risk*
- *Investment strategy risk*
- *Redemption risk*
- *Securities lending risk*
- *Small-capitalization investing risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is AQR Capital Management, LLC (“AQR”), located at Two Greenwich Plaza, Greenwich, Connecticut 06830. AQR is a Delaware limited liability company formed in 1998. AQR provides discretionary investment management services to registered investment companies, collective investment vehicles, private investment partnerships, foreign investment companies and separately managed accounts. AQR focuses in providing quantitative investment analysis, which relies on its proprietary models, utilizing a set of valuation, momentum, and other factors, to generate views on securities and apply them in a disciplined and systematic process.

The Fund is managed by a team of investment professionals. Information regarding the portfolio managers of the Fund is set forth below.

Clifford S. Asness, Ph.D., M.B.A., is the Managing and Founding Principal of AQR. Dr. Asness co-founded AQR in 1998 and serves as its chief investment officer. He earned a B.S. in economics from the Wharton School and a B.S. in engineering from the Moore School of Electrical Engineering at the University of Pennsylvania, as well as an M.B.A. and a Ph.D. in finance from the University of Chicago.

Michele L. Aghassi, Ph.D., is a Principal of AQR. Dr. Aghassi joined AQR in 2005 and serves as a portfolio manager for the firm’s equity strategies. Dr. Aghassi earned a B.Sc. in applied mathematics from Brown University and a Ph.D. in operations research from the Massachusetts Institute of Technology.

Andrea Frazzini, Ph.D., M.S., is a Principal of AQR. Dr. Frazzini joined AQR in 2008 and is the Head of AQR's Global Stock Selection team. He earned a B.S. in economics from the University of Rome III, an M.S. in economics from the London School of Economics and a Ph.D. in economics from Yale University.

John J. Huss is a Principal of AQR. Mr. Huss rejoined AQR in 2013 and is a researcher and portfolio manager for multi asset class strategies as well as the firm's equity strategies. Mr. Huss earned an S.B. in mathematics from the Massachusetts Institute of Technology.

Lars N. Nielsen, M.Sc., is a Principal of AQR. Mr. Nielsen joined the Sub-Adviser in 2000, is the Co-Head of Portfolio Management, Research, Risk and Trading and is a member of AQR's Executive Committee. Mr. Nielsen earned a B.Sc. and an M.Sc. in economics from the University of Copenhagen.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Baillie Gifford International Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is capital appreciation.

Principal Investment Strategies. The Fund seeks to meet its objective by investing in a diversified, international portfolio of common stocks and other equity securities of issuers located in countries of developed and emerging markets.

The Fund invests predominantly in securities issued by companies located in countries outside the United States, including a range of developed and emerging market countries. The Fund may, however, invest up to 10% of its net assets in common stocks and other equities of companies located in the United States. Under normal circumstances, the Fund invests in securities of issuers located in at least three countries outside the United States and typically maintains substantial exposure to emerging markets. The Fund may invest in equity securities either directly or indirectly, such as through depositary receipts, and may invest in preferred stocks, convertible securities and warrants. The Fund may invest in issuers of any market capitalization and may participate in initial public offerings (“IPOs”) and in securities offerings that are not registered in the United States. In selecting companies for investment, the Fund’s sub-adviser, Baillie Gifford Overseas Limited (“Sub-Adviser”) generally considers issuers in both developed and emerging markets. The Fund will aim to remain fully invested in equities, holding cash and cash equivalents primarily during periods of investment reallocation, or as a result of purchases of or redemptions from the Fund.

The Fund may invest in Rule 144A and Regulation S securities. Rule 144A securities are securities offered as exempt from registration with the Securities and Exchange Commission (“SEC”) but are typically treated as liquid securities because there is a market for such securities. Regulation S securities are securities of U.S. and non-U.S. issuers that are issued through private offerings without registration with the SEC pursuant to Regulation S under the Securities Act of 1933, as amended.

The Sub-Adviser employs a bottom-up approach to stock selection and selects companies without regard to a benchmark. The Sub-Adviser focuses on company research and the long-term outlook of companies and industries. Ideas regarding potential companies to add to the Fund’s portfolio can come from a wide variety of sources, including, but not limited to meetings with companies’ management teams and other stakeholders and relationships with industry thought leaders and academics. Stock ideas will be researched to assess a range of factors, including: a company’s geographic and industry positioning relating to its products and services (both current position and future potential), its competitive advantage over its competitors, its management team, its financial strength, its and valuation. The intended outcome is a diversified portfolio of at least 50 growth companies with the potential to outperform the benchmark over the long term. The Fund aims to hold securities for long periods (typically 5 years), which results in relatively low portfolio turnover and is in line with the Fund’s long-term investment outlook.

The Sub-Adviser employs a bottom-up stock-picking approach that seeks to make long-term investments in well managed businesses which enjoy genuine and sustainable competitive advantages. The Sub-Adviser seeks to identify companies that are likely to generate above average growth in earnings and cash flows, based on fundamental research. The Sub-Adviser’s fundamental research process focuses on: (i) the opportunity for an issuer to deliver superior returns; (ii) the ability of the issuer to execute on that opportunity; and (iii) the current market valuation of the issuer.

The Sub-Adviser may sell a holding if they determine there has been a material deterioration in the investment case or as appropriate to make other investments or meet redemptions. The Fund may invest without limitation in securities quoted or denominated in currencies other than the U.S. dollar and may hold such currencies. The Fund does not expect to engage in currency hedging and thus expects to be fully exposed to currency fluctuations relative to the U.S. dollar. In response to adverse market, economic, political or other conditions, the Fund may deviate from its investment policies by taking temporary defensive positions with some or all of its assets in high quality income securities, cash or cash equivalents. As a result, during such conditions, the Fund may not achieve its investment objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Equity securities risk*
- *Investment strategy risk*
- *Managed portfolio risk*
- *Investment style risk*

- *Emerging markets and less developed countries risk*
- *Asian investment risk*
- *China risk*
- *Currency risk*
- *Concentration risk*
- *Investments in IPOs risk*
- *Foreign securities risk*
- *Large-capitalization investing risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Clearance and settlement risk*
- *Stock risk*
- *Rule 144A securities risk*
- *Regulation S securities risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Convertible securities risk*
- *Counterparty risk*
- *Cybersecurity risk*
- *Depository receipts risk*
- *Derivatives risk*
- *Expense risk*
- *Investment in money market funds risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Baillie Gifford Overseas Limited (“Baillie Gifford”), Calton Square, 1 Greenside Row, Edinburgh, EH1 3AN, Scotland. Baillie Gifford is an investment advisory firm founded in 1983 and a wholly owned by a Scottish investment company, Baillie Gifford & Co., which was founded in 1908. Baillie Gifford & Co. is one of the largest independently owned investment management firms in the United Kingdom and manages money primarily for institutional clients.

The portfolio managers primarily responsible for the day-to-day management of the Fund are:

James K. Anderson, Partner of Baillie Gifford & Co., which is the 100% owner of Baillie Gifford. He has managed assets with Baillie Gifford since 1985 and has managed a portion of the Master Fund since 2003 (co-managed since 2013). Education: B.A., University College, Oxford; Diploma, Bologna Center of Johns Hopkins University; M.A., Carleton Ottawa University. Effective April 30, 2022, Mr. Anderson will be leaving Baillie Gifford.

Julia Angeles is portfolio manager and a member of the International Growth and Health Innovation Portfolio Construction Groups. She joined Baillie Gifford in 2008 and will become a Partner on May 1, 2022. Ms. Angeles previously worked as a Management

Consultant at McKinsey & Company advising firms in Denmark, Russia and Hungary. She obtained a PhD in Economics from the University of Aarhus, Denmark, and speaks fluent Russian and Danish.

Lawrence Burns joined Baillie Gifford in 2009 and became a Partner of Baillie Gifford & Co. in 2020. He is a portfolio manager in the Baillie Gifford & Co.'s International Growth Research Team. Mr. Burns has been a member of the International Growth Portfolio Construction Group since October 2012 and took over as Deputy Chair in July 2019. Mr. Burns is also a co-manager of the International Concentrated Growth Strategy. He has also spent time working in both the Emerging Markets and UK Equity Departments. Mr. Burns graduated BA in Geography from the University of Cambridge in 2009.

Thomas Coutts, CFA, Partner of Baillie Gifford & Co., which is the 100% owner of Baillie Gifford. He has worked in investment management with Baillie Gifford since 1999, has managed investment portfolios since 2001, and has co-managed a portion of the Master Fund since December 2016. Education: B.A., Trinity College, Oxford.

Brian Lum, CFA, is a portfolio manager in the Manager's International Growth Research Team and became a member of the International Growth Portfolio Construction Group in May 2015. He also Chairs the Manager's International Smaller Companies Portfolio Construction Group. Mr. Lum joined Baillie Gifford in 2006 and initially worked in the North American and Emerging Markets departments, before spending a number of years focused on investment in smaller companies. He is a CFA Charterholder. Mr. Lum graduated MSci and BA (Hons) in Physics from the University of Cambridge in 2006.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2020.

JNL/Baillie Gifford U.S. Equity Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is capital appreciation.

Principal Investment Strategies. The Fund seeks to meet its objective by investing, under normal circumstances, at least 80% of its net assets (plus any borrowings for investment purposes) in common stocks and other equity securities of companies whose principal activities are in the United States.

The Fund may invest in equity securities either directly or indirectly, such as through depositary receipts, and may invest in preferred stocks, convertible securities and warrants. The Fund typically invests primarily in issuers with a market capitalization of more than \$1.5 billion at the time of purchase and may participate in initial public offerings (“IPOs”). The Fund will aim to remain fully invested in equities, holding cash and cash equivalents primarily during periods of investment reallocation, or as a result of purchases of or redemptions from the Fund.

The Fund’s sub-adviser, Baillie Gifford Overseas Limited (“Sub-Adviser”), employs a bottom-up stock-picking approach that seeks to make long-term investments in well managed businesses which enjoy genuine and sustainable competitive advantages. The Sub-Adviser selects companies without regard to a benchmark, and the result is a portfolio of between 30-50 growth companies. The Sub-Adviser focuses on company research and the long-term outlook of companies and industries. Ideas regarding potential companies to add to the Fund’s portfolio can come from a wide variety of sources, including, but not limited to, meetings with companies’ management teams and other stakeholders and relationships with industry thought leaders and academics. Stock ideas will be researched to assess a range of factors, including: a company’s geographic and industry positioning relating to its products and services (both current position and future potential), its competitive advantage over its competitors, its management team, its financial strength, and its valuation.

The Sub-Adviser aims to deliver outstanding investment performance by identifying the exceptional growth businesses in the U.S. and owning them for long enough that the advantages of their business models and strength of their cultures become the dominant drivers of their stock prices. This long-term time horizon allows the investors to harness the asymmetry that is inherent in equity markets to capture the disproportionate impact of successful investments in equities.

The Sub-Adviser may sell a holding if they determine there has been a material deterioration in the investment case or as appropriate to make other investments or meet redemptions. In response to adverse market, economic, political or other conditions, the Fund may deviate from its investment policies by taking temporary defensive positions with some or all of its assets in high quality income securities, cash or cash equivalents. As a result, during such conditions, the Fund may not achieve its investment objective.

The Fund is a non-diversified fund, which means that it may invest a relatively large percentage of its assets in a small number of issuers, industries or sectors. The Fund aims to hold securities for long periods (approximately 5 years on average), which results in relatively low portfolio turnover and is in line with the Fund’s long-term investment outlook.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Equity securities risk*
- *Investment strategy risk*
- *Managed portfolio risk*
- *Investment style risk*
- *Concentration risk*
- *Non-diversification risk*
- *Investments in IPOs risk*
- *Large-capitalization investing risk*
- *Liquidity risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Foreign securities risk*
- *Securities lending risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Company risk*
- *Sector risk*
- *Stock risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Baillie Gifford Overseas Limited (“Baillie Gifford”), Calton Square, 1 Greenside Row, Edinburgh, EH1 3AN, Scotland. Baillie Gifford is an investment advisory firm founded in 1983 and a wholly owned by a Scottish investment company, Baillie Gifford & Co., which was founded in 1908. Baillie Gifford & Co. is one of the largest independently owned investment management firms in the United Kingdom and manages money primarily for institutional clients.

The Fund is jointly and primarily managed by Dave Bujnowski, Kirsty Gibson, Gary Robinson, and Tom Slater.

Dave Bujnowski joined Baillie Gifford in 2018 as a Senior Analyst and is now a portfolio manager in the US Equities team. Mr. Bujnowski became a Partner in 2021. Prior to joining Baillie Gifford, Mr. Bujnowski co-founded Coburn Ventures in 2005. In his 13 years at Coburn Ventures, Mr. Bujnowski was a Partner, primary client-facing consultant, research analyst, and portfolio manager of a long-short, market neutral hedge fund. He started his career in 1996, joining Warburg Dillon Read’s equity research group as an associate semiconductor analyst before joining UBS’s Global Tech Strategy team. Mr. Bujnowski graduated from Boston College in 1993, where he majored in Finance and Philosophy.

Kirsty Gibson is an Investment Manager in the US Equities Team. Ms. Gibson joined Baillie Gifford in 2012 and began her career on the US Equities Team, moving on to spend several years in small and large cap global equities departments, before returning to the US Equities Team. She graduated MA (Hons) in Economics in 2011 and MSc in Carbon Management in 2012, both from the University of Edinburgh.

Gary Robinson, CFA, is a Partner and Investment Manager in the US Equities Team. He graduated MBiochem in Biochemistry from the University of Oxford in 2003 and joined Baillie Gifford the same year. He spent time working on our Japanese, UK and European Equity Teams before moving to the US Equities Team in 2008. Mr. Robinson is a generalist investor but retains a special interest in the healthcare sector dating back to his undergraduate degree. Gary is also a member of the Global Stewardship Portfolio Construction Group.

Tom Slater, CFA, is Head of the US Equities Team and is a Decision Maker on Long Term Global Growth Portfolios. He joined Baillie Gifford in 2000 and became a Partner in 2012. Mr. Slater was appointed Joint Manager of Scottish Mortgage Investment Trust in 2015. During his time at Baillie Gifford he has also worked in the Developed Asia and UK Equity Teams. Mr. Slater’s investment interest is focused on high growth companies both in listed equity markets and as an investor in private companies. He graduated BSc in Computer Science with Mathematics from the University of Edinburgh in 2000.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2020.

JNL/BlackRock Global Allocation Fund

Class A Class I

Investment Objective. The investment objective of the Fund is high total investment return.

Investment Process. In making investment decisions, Fund management tries to identify the long term trends and changes that could benefit particular markets and/or industries relative to other markets and industries. The Sub-Adviser will consider a variety of factors when selecting the markets, such as the rate of economic growth, natural resources, capital reinvestment and the social and political environment.

In selecting stocks and other securities that are convertible into stocks, the Sub-Adviser emphasizes stocks that it believes are undervalued.

The Fund may invest in individual securities, baskets of securities or particular measurements of value or rate, and may consider a variety of factors and systematic inputs. The Sub-Adviser may employ derivatives for a variety of reasons, including but not limited to, adjusting its exposures to markets, sectors, asset classes and securities. As a result, the economic exposure of the Fund to any particular market, sector, or asset class may vary relative to the market value of any particular exposure.

The Sub-Adviser will invest in high-yield bonds or “junk” bonds, corporate loans and distressed securities only when it believes that they will provide an attractive total return, relative to their risk, as compared to higher quality debt securities.

The Sub-Adviser will invest in distressed securities when the Sub-Adviser believes they offer significant potential for higher returns or can be exchanged for other securities that offer this potential. However, there can be no assurance that the Fund will generally achieve these returns or that the issuer will make an exchange offer or adopt a plan of reorganization.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in both equity and debt securities, money market securities and other short-term securities or instruments, of issuers located around the world. There is no limit on the percentage of assets the Fund can invest in a particular type of security. Generally, the Fund seeks diversification across markets, industries and issuers as one of its strategies to reduce volatility. Except as described below, the Fund has no geographic limits on where its investments may be located. This flexibility allows the Sub-Adviser to look for investments in markets around the world that it believes will provide the best relative asset allocation to meet the Fund’s objective. The Fund may invest in securities of any market capitalization. The Fund uses derivatives as a means of managing exposure to foreign currencies and other adverse market movements, as well as to increase returns.

The Sub-Adviser uses the Fund’s investment flexibility to create a portfolio of assets that, over time, tends to be relatively balanced between equity and debt securities and that is widely diversified among many individual investments. The Fund may invest in both developed and emerging markets. In addition to investing in foreign securities, the Fund actively manages its exposure to foreign currencies through the use of forward currency contracts and other currency derivatives. From time to time, the Fund may own foreign cash equivalents or foreign bank deposits as a part of the Fund’s investment strategy. The Fund will also invest in non-U.S. currencies, however, the Fund may underweight or overweight a currency based on the Sub-Adviser’s outlook.

The Fund may also invest in REITs. REITs are companies that own interests in real estate or in real estate related loans or other interests, and have revenue primarily consisting of rent derived from owned, income producing real estate properties and capital gains from the sale of such properties. REITs can generally be classified as equity REITs, mortgage REITs and hybrid REITs. Equity REITs invest the majority of their assets directly in real property and derive their income primarily from rents. Equity REITs can also realize capital gains by selling properties that have appreciated in value. Mortgage REITs invest the majority of their assets in real estate mortgages and derive their income primarily from interest payments. Hybrid REITs combine the characteristics of both equity REITs and mortgage REITs. REITs are not taxed on income distributed to shareholders provided they comply with the requirements of the Internal Revenue Code of 1986, as amended.

The Fund’s composite Reference Benchmark has at all times since the Fund’s formation included a 40% weighting in non-US securities. The Reference Benchmark is an unmanaged weighted index comprised as follows: 36% of the Standard & Poor’s (“S&P”) 500 Index; 24% FTSE World (ex-U.S.) Index; 24% ICE BofA Current 5-Year US Treasury Index; and 16% FTSE Non-US Dollar World Government Bond Index. Throughout its history, the Fund has maintained a weighting in non-US securities, often exceeding the 40% Reference Benchmark weighting and rarely falling below this allocation. Under normal circumstances, the Fund anticipates it will continue to allocate a substantial amount (approximately 40% or more — unless market conditions are not deemed favorable by the Sub-Adviser, in which case the Fund would invest at least 30%) — of its total assets in securities of (i) foreign government issuers; (ii) issuers organized or located outside the U.S.; (iii) issuers which primarily trade in a market located outside the U.S.; or (iv) issuers doing a substantial amount of business outside the U.S., which the Fund considers to be companies that derive at least 50% of their revenue or profits from business outside the U.S. or have at least 50% of their sales or assets outside the U.S. The Fund will allocate its assets among various regions and countries, including the United States (but in no less than three different countries). For temporary defensive purposes, the Fund may deviate very substantially from the allocation described above.

The Fund may invest a portion of its assets in securities related to real assets (like real estate or precious metals-related securities) such as shares, bonds or convertible bonds issued by REITs or companies that mine precious metals.

The Fund may use derivatives, including options, futures, indexed securities, inverse securities, swaps and forward contracts both to seek to increase in the return of the Fund and to hedge (or protect) the value of its assets against adverse movements in currency exchange rates, interest rates and movements in the securities markets.

Derivatives are financial instruments whose value is derived from another security, a commodity (such as oil or gas), a currency or an index such as the S&P 500 Index and the VIX. The use of options, futures, indexed securities, inverse securities, swaps and forward contracts can be effective in protecting or enhancing the value of the Fund's assets.

The Fund may seek to provide exposure to the investment returns of real assets that trade in the commodity markets through investment in commodity-linked derivative instruments, such as structured notes, and other investment vehicles that exclusively invest in commodities, such as ETFs. The Fund may invest up to 25% of its total assets in commodity-related instruments (which may include, among others, commodity options and futures, swaps on commodity futures, ETFs that invest in commodities, and commodity-linked structured notes) (collectively, "Commodities").

The Fund can invest in all types of equity securities, including common stock, preferred stock, convertible securities, warrants and stock purchase rights of companies of any market capitalization. The Sub-Adviser may seek to invest in the stock of smaller or emerging growth companies that it expects will provide a higher total return than other equity investments. Investing in smaller or emerging growth companies involves greater risk than investing in more established companies.

The Fund can invest in all types of debt securities, including U.S. and foreign government bonds, corporate bonds and convertible bonds, mortgage-and asset-backed securities, structured notes, credit-linked notes, loan assignments and participations and securities issued or guaranteed by certain international organizations such as the World Bank.

The Fund may invest up to 35% of its total assets in high-yield bonds or "junk" bonds, corporate loans and distressed securities. Junk bonds are bonds that are rated below investment grade by independent rating agencies or are bonds that are not rated but which the Sub-Adviser considers to be of comparable quality. Corporate loans are direct obligations of U.S. or foreign corporations. Distressed securities are securities, including loans purchased by the Fund in the secondary market, that are in default or at risk of being in default on payments of interest or principal at the time the Fund buys the securities or are issued by a bankrupt entity. These securities offer the possibility of relatively higher returns but are significantly riskier than higher rated debt securities.

Other Strategies

In addition to the main strategies discussed above, the Fund may use certain other investment strategies. The Fund may also invest or engage in the following investments/strategies:

- Borrowing — The Fund may borrow for temporary or emergency purposes, including to meet redemptions, for the payment of dividends, for share repurchases or for the clearance of transactions.
- Contract for Difference — The Fund may enter into contracts for difference ("CFD"), a type of derivative. A CFD is a contract between two parties, typically described as "buyer" and "seller," stipulating that the seller will pay to the buyer the difference between the current value of an asset and its value in the future. (If the difference is negative, then the buyer instead pays the seller.) In effect, CFDs are financial derivatives that allow a fund to take advantage of values moving up (long positions) or values moving down (short positions) on underlying assets. For example, when applied to equities, a CFD is an equity derivative that allows a fund to obtain investment exposure to share price movements, without the need for ownership of the underlying shares.
- Depositary Receipts — The Fund may invest in securities of foreign issuers in the form of depositary receipts or other securities that are convertible into securities of foreign issuers. The Fund may invest in unsponsored Depositary Receipts.
- Illiquid Investments — The Fund may invest up to an aggregate amount of 15% of its net assets in illiquid investments. An illiquid investment is any investment that the Fund reasonably expects cannot be sold or disposed of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment.
- Restricted Securities — Restricted securities are securities that cannot be offered for public resale unless registered under the applicable securities laws or that have a contractual restriction that prohibits or limits their resale. They may include Rule 144A securities, which are privately placed securities that can be resold to qualified institutional buyers but not to the general public, and securities of U.S. and non-U.S. issuers that are offered pursuant to Regulation S under the Securities Act of 1933, as amended.
- Indexed and Inverse Securities — The Fund may invest in securities that provide a return based on fluctuations in a stock or other financial index. For example, the Fund may invest in a security that increases in value with the price of a particular securities index. In some cases, the return of the security may be inversely related to the price of the index. This means that the value of the security will rise as the price of the index falls and vice versa. Although these types of securities can make it

easier for the Fund to access certain markets or hedge risks of other assets held by the Fund, these securities are subject to the risks related to the underlying index or other assets.

- Investment Companies — The Fund has the ability to invest in other investment companies, such as exchange-traded funds, money market funds, unit investment trusts, and open-end and closed-end funds, including affiliated investment companies.
- Non-U.S. Dollar Cash Investments — The Fund may hold non-U.S. dollar cash investments.
- Repurchase Agreements, Purchase and Sale Contracts — The Fund may enter into certain types of repurchase agreements or purchase and sale contracts. Under a repurchase agreement, the seller agrees to repurchase a security at a mutually agreed-upon time and price. A purchase and sale contract is similar to a repurchase agreement, but purchase and sale contracts also provide that the purchaser receives any interest on the security paid during the period.
- Securities Lending — The Fund may lend securities with a value up to 33 1/3% of its total assets to financial institutions that provide cash or securities issued or guaranteed by the U.S. Government as collateral.
- Short Sales — The Fund may engage in short sales. The Fund may make short sales of securities, either as a hedge against potential declines in value of a portfolio security or to realize appreciation when a security that the Fund does not own declines in value. The Fund will not make a short sale if, after giving effect to such sale, the market value of all securities sold short exceeds 20% of the value of its total assets. The Fund may also make short sales “against the box” without being subject to this limitation. In this type of short sale, at the time of the sale, the Fund owns or has the immediate and unconditional right to acquire the identical securities at no additional cost.
- Short-Term Securities or Instruments — The Fund can invest in high quality short-term U.S. dollar or non-U.S. dollar denominated fixed-income securities or other instruments, such as U.S. or foreign government securities, commercial paper and money market instruments issued by U.S. or foreign commercial banks or depository institutions. The Sub-Adviser may increase the Fund’s investment in these instruments in times of market volatility or when it believes that it is prudent or timely to be invested in lower yielding but less risky securities. Large investments in such securities or instruments may prevent the Fund from achieving its investment objective.
- Standby Commitment Agreements — Standby commitment agreements commit the Fund, for a stated period of time, to purchase a stated amount of securities that may be issued and sold to the Fund at the option of the issuer.
- Temporary Defensive Strategies — For temporary defensive purposes, the Fund may restrict the markets in which it invests and may invest without limitation in cash, cash equivalents, money market securities, such as U.S. Treasury and agency obligations, other U.S. Government securities, short-term debt obligations of corporate issuers, certificates of deposit, bankers acceptances, commercial paper (short term, unsecured, negotiable promissory notes of a domestic or foreign issuer) or other high quality fixed-income securities.
- Warrants – A warrant gives the Fund the right to buy stock. The warrant specifies the amount of underlying stock, the purchase (or “exercise” price), and the date the warrant expires. The Fund has no obligation to exercise the warrant and buy the stock. A warrant has value only if the Fund is able to exercise it or sell it before it expires.
- When-Issued and Delayed Delivery Securities and Forward Commitments — The purchase or sale of securities on a when-issued basis or on a delayed delivery basis or through a forward commitment involves the purchase or sale of securities by the Fund at an established price with payment and delivery taking place in the future. The Fund enters into these transactions to obtain what is considered an advantageous price to the Fund at the time of entering into the transaction.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Foreign securities risk*
- *Derivatives risk*
- *Fixed-income risk*
- *Emerging markets and less developed countries risk*
- *Managed portfolio risk*
- *Market risk*
- *Credit risk*
- *Allocation risk*
- *Accounting risk*
- *Call risk*
- *Clearance and settlement risk*
- *Commodities regulatory risk*
- *Commodity risk*

- *Commodity-linked derivatives risk*
- *Commodity-linked notes risk*
- *Company risk*
- *Convertible securities risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Custody risk*
- *Depository receipts risk*
- *Distressed debt risk*
- *European investment risk*
- *Extension risk*
- *Financial services risk*
- *Forward and futures contract risk*
- *Forward foreign currency exchange contracts risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Interest rate risk*
- *Investment strategy risk*
- *Investment style risk*
- *Mid-capitalization investing risk*
- *Options risk*
- *Pacific Rim investing risk*
- *Portfolio turnover risk*
- *Real estate investment risk*
- *Settlement risk*
- *Small-capitalization investing risk*
- *Sovereign debt risk*
- *Stock risk*
- *Structured note risk*
- *Swaps risk*
- *Tax risk*
- *Volatility risk*
- *LIBOR replacement risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Borrowing risk*
- *China and India country specific risk*
- *Currency risk*
- *Cybersecurity risk*
- *Debt securities ratings risk*
- *Event driven and special situations risk*
- *Expense risk*
- *Government regulatory risk*
- *Indexed and inverse securities risk*
- *Inflation-indexed securities risk*
- *Investing through Stock Connect risk*
- *Investments in IPOs risk*
- *Investment in other investment companies risk*
- *Leverage risk*
- *Liquidity risk*
- *Master limited partnership risk*
- *Mortgage-related and other asset-backed securities risk*

- *Preferred stock risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Restricted securities risk*
- *Repurchase agreements, purchase and sale contracts risk*
- *Russia investment risk*
- *Sector risk*
- *Securities lending risk*
- *Short sales risk*
- *Standby commitment agreements risk*
- *Temporary defensive positions and large cash positions risk*
- *TIPS and inflation-linked bonds risk*
- *U.S. Government securities risk*
- *Warrants risk*
- *When-issued and delayed delivery securities and forward commitments risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is BlackRock Investment Management, LLC (“BlackRock”), located at 1 University Square Drive, Princeton, New Jersey 08540-6455.

The sub-sub-adviser to the Fund is BlackRock (Singapore) Limited (“BSL”), 20 Anson Road #18-01, Singapore, 079912.

Rick Rieder, Managing Director, and portfolio manager, is head of the Global Allocation Investment team. Mr. Rieder is BlackRock's Chief Investment Officer of Global Fixed Income, head of the Fundamental Fixed Income business, a member of BlackRock's Executive Sub-Committee on Investments, a member of BlackRock's Global Operating Committee and Chairman of the firm-wide BlackRock Investment Council.

Mr. Rieder joined the BlackRock Global Allocation team in 2019, in addition to retaining his leadership role in Global Fixed Income. Before joining BlackRock in 2009, Mr. Rieder was President and Chief Executive Officer of R3 Capital Partners. He served as Vice Chairman and member of the Borrowing Committee for the U.S. Treasury and is currently a member of the Federal Reserve Investment Advisory Committee on Financial Markets.

Mr. Rieder earned a BBA degree in Finance from Emory University in 1983 and an MBA degree from The Wharton School of the University of Pennsylvania in 1987. He is a member of the board of Emory University, Emory's Business School, and the University's Finance Committee, and is the Vice Chairman of the Investment Committee. Mr. Rieder is founder and chairman of the business school's BBA investment fund and community financial literacy program.

Russ Koesterich, CFA, JD, Managing Director and portfolio manager, is a member of the Global Allocation team and the lead portfolio manager of the GA Selects Model Portfolios.

Mr. Koesterich's service with BlackRock dates back to 2005, including his years with Barclays Global Investors (BGI), which merged with BlackRock in 2009. He joined the BlackRock Global Allocation team in 2016 as Head of Asset Allocation and was named a portfolio manager of the Fund in 2017. Previously, he was BlackRock's Global Chief Investment Strategist and Chairman of the Investment Committee for the Model Portfolio Solutions business, and formerly served as the Global Head of Investment Strategy for scientific active equities and as senior portfolio manager in the US Market Neutral Group. Prior to joining BGI, Mr. Koesterich was the Chief North American Strategist at State Street Bank and Trust. He began his investment career at Instinet Research Partners where he occupied several positions in research, including Director of Investment Strategy for both U.S. and European research, and Equity Analyst. He is a frequent contributor to financial news media and the author of three books, including his most recent "Portfolio Construction for Today's Markets."

Mr. Koesterich earned a BA in history from Brandeis University, a JD from Boston College and an MBA from Columbia University. He is a CFA® Charterholder.

David Clayton, CFA, JD, Managing Director and portfolio manager, is a member of the Global Allocation team and Head of Fundamental Security Selection.

Mr. Clayton joined the BlackRock Global Allocation team in 2010 and was named a portfolio manager of the Fund in 2017. Prior to his current role, he was head of portfolio oversight, as well as a senior investor and investment group leader on the Fund, primarily responsible for coverage of the energy, real estate, autos, industrials, materials and utilities sectors. Prior to joining BlackRock, he was Of Counsel in the Financial Restructuring Group at Milbank, Tweed, Hadley & McCloy LLP. Previously he was a Managing Director and analyst with The Blackstone Group, responsible for distressed and special situations investments across multiple industries. Prior to joining Blackstone, Mr. Clayton spent six years at Merrill Lynch Investment Managers (MLIM), initially as an attorney specializing in corporate finance transactions and restructurings, and most recently as a Vice President and analyst in the Global High Yield Bond & Bank Debt Group. Mr. Clayton began his career as an attorney specializing in corporate finance transactions, first at Blake, Cassels & Graydon in Toronto and then at Milbank in New York.

Mr. Clayton earned a BA degree, with honors, in economics from the University of Western Ontario in 1990 and MBA and LLB degrees from Dalhousie University in 1994. He is a CFA® Charterholder.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

Class I

Investment Objective. The investment objective of the Fund is to seek long-term capital growth.

Principal Investment Strategies. The Fund seeks to meet its objective by investing in equity securities that provide exposure to the natural resources sector, as well as fixed-income securities. The Fund may invest in securities of any market capitalization.

Under normal market conditions, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in companies with substantial natural resource assets or in securities the value of which is related to the market value of some natural resource assets. Equity securities include common stock, preferred stock, securities convertible into common stock, rights to subscribe for common stock, and derivative securities or instruments, such as options, the value of which is based on a common stock or group of common stocks.

Generally, a company has substantial natural resource assets when at least 50% of the non-current assets, capitalization, gross revenues or operating profits of the company in the most recent or current fiscal year are involved in or result from (directly or indirectly through subsidiaries), oil, gas, exploring, mining, extracting, refining, processing, transporting, fabricating, dealing in or owning natural resource assets. Examples of natural resource assets include precious metals (e.g., gold, silver and platinum), ferrous and nonferrous metals (e.g., iron, aluminum and copper), strategic metals (e.g., uranium and titanium), water, hydrocarbons (e.g., coal, oil and natural gas), timber land, underdeveloped real property and agricultural products (e.g., fertilizers and agricultural chemicals). The Fund normally invests in a portfolio consisting of companies in a variety of natural resource related sectors, such as energy, chemicals, oil, gas, paper, mining, steel or agricultural products. Under certain circumstances, however, the Fund may concentrate its investments in one or more of these sectors.

Generally, the Fund may invest in the securities of corporate and governmental issuers located anywhere in the world in both developed and emerging markets (but in no fewer than three countries).

In addition, the Fund will concentrate its investments in one or more issuers in the natural resources related industries. The Fund focuses on investments in companies that provide exposure to commodities where the Fund's Sub-Adviser, BlackRock International Limited ("Sub-Adviser") sees attractive supply-and-demand dynamics. The Fund is a non-diversified fund, which means that it can invest more of its assets in fewer companies than a diversified fund. The Fund will normally invest in both U.S. and non-U.S. companies, including companies located in emerging markets, and in securities denominated in both U.S. dollars and foreign currencies. The Fund may invest in securities of issuers with any market capitalization. There are no geographic limits on the Fund's investments.

The Fund chooses securities using a combination of "top down" and "bottom up" investment styles. "Top down" means that the Fund seeks to allocate its investments to natural resource-related economic sectors the Fund's management believes have more favorable pricing power than other natural resource related sectors. "Bottom up" means that the Fund also selects investments based on management's assessment of the earning prospects of individual companies.

When assessing individual companies, the Fund seeks to invest in companies that the Fund's management believes are relatively undervalued. A company's stock is undervalued when the stock's current price is less than what the Fund believes a share of the company is worth. A company's worth can be assessed by several factors, such as financial resources, value of tangible assets, rate of return on capital, quality of management, and overall business prospects. A company's stock may become undervalued when most investors fail to perceive the company's strengths in one or more of these areas. Fund management may also determine a company is undervalued if its stock price is down because of temporary factors from which Fund management believes the company will recover.

The Fund attempts to identify companies that are undervalued based on relative price-earnings, price-to-book, and price-to-cash-flow ratios. In seeking to identify such companies, Fund management considers which of the companies that meet its criteria would be most likely to benefit from the economic circumstances anticipated by Fund management.

The Fund may invest, irrespective of currency and regardless of the issuer's country of origin, in convertible bonds and warrants, provided that the associated rights confer entitlement to the subscription of shares in companies in which the Fund is permitted to invest under terms of its investment policy. Furthermore, the Fund may invest in listed and equity-linked notes, which is an instrument whose return is determined by the performance of a single equity security, a basket of equity securities, or an equity index, provided the underlying equities relate to companies permitted under the terms of the Fund's investment policy. Investments in equity-linked notes, together with convertible bonds and warrants may not exceed 15% of the net assets of the Fund.

The Fund may use derivatives to hedge its investment portfolio against market, interest rate and currency risks or to seek to enhance its return. The derivatives that the Fund may use include indexed and inverse securities, options, futures, swaps and forward foreign exchange transactions.

The Fund is a “non-diversified” fund, as defined in the Investment Company Act of 1940, as amended (the “1940 Act”), and may invest more of its assets in fewer issuers than “diversified” mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Natural resource related securities risk*
- *Concentration risk*
- *Commodity risk*
- *Managed portfolio risk*
- *Market risk*
- *Accounting risk*
- *Company risk*
- *Credit risk*
- *Derivatives risk*
- *Emerging markets and less developed countries risk*
- *Financial services risk*
- *Fixed-income risk*
- *Foreign securities risk*
- *Forward foreign currency exchange contracts risk*
- *Interest rate risk*
- *Investment strategy risk*
- *Investment style risk*
- *Liquidity risk*
- *Large-capitalization investing risk*
- *Mid-capitalization investing risk*
- *Non-diversification risk*
- *Portfolio turnover risk*
- *Prepayment risk*
- *Russia investment risk*
- *Sector risk*
- *Securities lending risk*
- *Stock risk*
- *Swaps risk*
- *Volatility risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Asset-based securities risk*
- *Borrowing risk*
- *Convertible securities risk*
- *Counterparty risk*
- *Currency risk*
- *Cybersecurity risk*
- *Debt securities ratings risk*

- *Depository receipts risk*
- *Expense risk*
- *Government regulatory risk*
- *Indexed and inverse securities risk*
- *Investment in other investment companies risk*
- *Leverage risk*
- *Model risk*
- *Preferred stock risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Repurchase agreements, purchase and sale contracts risk*
- *Restricted securities risk*
- *Rule 144A securities risk*
- *Settlement risk*
- *Small-capitalization investing risk*
- *Temporary defensive positions and large cash positions risk*
- *When-issued and delayed delivery securities and forward commitments risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is BlackRock International Limited, (“BlackRock”) located at 40 Torphichen Street, Edinburgh, United Kingdom EH3 8JB.

Alastair Bishop, Managing Director, is a member of the Natural Resources team within Fundamental Equity division of BlackRock's Active Equity Group. Mr. Bishop joined BlackRock in 2010 from Piper Jaffray where he was a Senior Research Analyst covering Clean Technology. Prior to joining Piper Jaffray in 2009, he covered the Renewable Energy and Industrial sectors for 8 years at Dresdner Kleinwort. Mr. Bishop earned a BSc honors degree in Economics from the University of Nottingham in 2001.

Tom Holl, CFA, Director, is a member of the Natural Resources team within the Fundamental Equity division of BlackRock's Active Equity Group. He is responsible for covering the mining, gold and agriculture/nutrition sectors. Mr. Holl moved to his current role in 2008. His service with the BlackRock dates back to 2006, including his years with Merrill Lynch Investment Managers (MLIM), which merged with BlackRock in 2006. At MLIM, Mr. Holl was a member of the Global Equity team and the Real Estate team as a member of the graduate training program. Mr. Holl earned a BA degree, with honors, in Land Economy from Cambridge University in 2006.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/BlackRock Large Cap Select Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Principal Investment Strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of borrowings made for investment purposes) in equity securities of U.S. large capitalization companies. The Fund defines large capitalization companies as those with a market capitalization of at least \$2.0 billion at the time of investment. In addition, up to 20% of the Fund's net assets may be invested in foreign equity securities. Investments in equity securities include common stock and preferred stock, convertible securities, as well as American Depository Receipts ("ADRs"). The Fund may, but is not required to, use exchange-traded or over-the-counter derivative instruments for risk management purposes or as part of the Fund's investment strategies. The derivatives in which the Fund may invest include futures and forward currency agreements and may also be used to hedge against a specific currency. In addition, futures on indices may be used for investment (non-hedging) purposes to seek to earn income; to enhance returns; to replace more traditional direct investments; or to obtain exposure to certain markets. Generally, derivatives are financial contracts whose value depends upon, or is derived from, the value of an underlying asset, reference rate, or index, and may relate to stocks, bonds, interest rates, currencies or currency exchange rates, and related indexes. The principal types of derivatives used by the Fund include options, futures and forward currency agreements. The Fund may use derivatives to earn income and enhance returns, to manage or adjust the risk profile of the Fund, to replace more traditional direct investments, or to obtain exposure to certain markets.

The Fund will invest in companies within its capitalization range as described above. However, the Fund may invest a portion of its assets in securities outside of this range. Further, if movement in the market price causes a security to change from one capitalization range to another, the Fund is not required to dispose of the security.

The Fund may engage in active and frequent trading of the securities in its portfolio (e.g., greater than 100% turnover), which would increase transaction costs incurred by the Fund. In addition, when the Fund engages in active and frequent trading, a larger portion of the income allocations investors receive from the Fund may reflect short-term capital gains which are taxed at ordinary income rates.

For temporary defensive purposes during unusual economic or market conditions or for liquidity purposes, the Fund may invest up to 100% of its assets in cash, money market instruments, repurchase agreements and other short-term obligations. When the Fund engages in such activities, it may not achieve its investment objective.

In selecting securities, the Sub-Adviser seeks to invest in companies that possess dominant market positions or franchises, a major technological edge, or a unique competitive advantage. To this end, the Sub-Adviser considers earnings revision trends, expected earnings growth rates, sales acceleration, price earnings multiples and positive stock price momentum, when selecting securities. The Sub-Adviser expects that these companies can sustain an above average return on invested capital at a higher level and over a longer period of time than is reflected in the current market prices.

In deciding whether an investment is tied to the U.S., the Sub-Adviser considers a number of factors including whether the investment is issued or guaranteed by the U.S. Government or any of its agencies; the investment has its primary trading market in the U.S.; the issuer is organized under the laws of, derives at least 50% of its revenues from, or has at least 50% of its assets in, the U.S.; the investment is included in an index representative of the U.S.; or the investment is exposed to the economic fortunes and risks of the U.S.

The Fund maintains the flexibility to invest in securities of companies from a variety of sectors, but from time to time, based on economic conditions, the Fund may have significant investments in particular sectors, including but not limited to the financial services sector and the information technology sector.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Large-capitalization investing risk*
- *Managed portfolio risk*
- *Market risk*
- *Stock risk*

- *Accounting risk*
- *Company risk*
- *Convertible securities risk*
- *Depository receipts risk*
- *Financial services risk*
- *Foreign securities risk*
- *Investment style risk*
- *Liquidity risk*
- *Mid-capitalization investing risk*
- *Preferred stock risk*
- *Information technology sector risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Investment in other investment companies risk*
- *Investment strategy risk*
- *Issuer risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Warrants risk*
- *When-issued and delayed delivery securities and forward commitments risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is BlackRock Investment Management, LLC (“BlackRock”), located at 1 University Square Drive, Princeton, New Jersey 08540-6455.

Lawrence Kemp, CFA, Managing Director and Portfolio Manager, is head of BlackRock's US Growth team within the Fundamental Active Equity business of BlackRock's Active Equity Group. Prior to joining BlackRock, Mr. Kemp was at UBS Global Asset Management, where he managed the Laudus Growth Investors US Large Cap Select Growth Fund, as well as both diversified and concentrated US large cap growth institutional equity portfolios against the Russell 1000 Growth and S&P 500 indexes. Mr. Kemp joined the Growth Equity team at UBS Global Asset Management in 2001, but his tenure with the firm dated back to 1992. He held various roles including chief investment strategist, co-head of fixed income and global head of high yield research. Mr. Kemp holds a BA from Stanford University and an MBA from the University of Chicago.

Phil Ruvinsky, Managing Director, is a member of the Fundamental Equity division of BlackRock's Alpha Strategies Group. He is the portfolio manager of the Blackrock Midcap Growth fund and senior research analyst for BlackRock's Fundamental Large Cap Growth equity team and is primarily responsible for covering the media and internet sectors. Prior to joining BlackRock in 2013, Mr. Ruvinsky was a sector head and research analyst at Sureview Capital LLC from 2010 to 2013, where he was the sector head for the global internet, media and telecom sectors. He began his investment career with UBS Global Asset Management in 2002 where, most recently, he was a portfolio manager and investment analyst with primary research responsibility for internet, consumer and health care sectors. Mr. Ruvinsky received a BA degree in economics from the University of Texas, a JD degree from the University of Michigan Law School and an MBA degree from Columbia Business School.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Causeway International Value Select Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital and income through investment primarily in larger capitalization equity securities.

Principal Investment Strategies. The Fund invests primarily in common stocks of companies in developed countries outside the U.S. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in stocks of companies in a number of foreign countries and invests the majority of its total assets in companies that pay dividends or repurchase their shares. The Fund may invest up to 15% of its total assets in companies in emerging (less developed) markets.

When investing the Fund's assets, Causeway Capital Management LLC ("Sub-Adviser") follows a value style, performing fundamental research supplemented by quantitative analysis. Beginning with a universe of all publicly listed companies throughout the non-U.S. developed and emerging markets, the Sub-Adviser applies market capitalization and liquidity thresholds to reduce investment candidates to approximately 2,000 equity securities. The Sub-Adviser uses quantitative valuation screens to further narrow the potential investment candidates. The Sub-Adviser then performs fundamental research, which generally includes company-specific research, company visits, and interviews of suppliers, customers, competitors, industry analysts, and experts. The Sub-Adviser also applies a proprietary quantitative risk model to adjust return forecasts based on risk assessments. This process results in risk-adjusted return forecasts for a closely followed group of potential investment candidates. Using a value style means that the Sub-Adviser buys stocks that it believes have lower prices than their true worth. For example, stocks may be "undervalued" because the issuing companies are in industries that are currently out of favor with investors. However, even in those industries, certain companies may have high rates of growth of earnings and be financially sound.

The Sub-Adviser considers whether a company has each of the following value characteristics in purchasing or selling securities for the Fund:

- Low price-to-earnings ratio (stock price divided by earnings per share) relative to the sector;
- High yield (percentage rate of return paid on a stock in dividends and share repurchases) relative to the market;
- Low price-to-book value ratio (stock price divided by book value per share) relative to the market;
- Low price-to-cash flow ratio (stock price divided by net income plus noncash charges per share) relative to the market; and
- Financial strength

Generally, price-to-earnings and yield are the most important factors.

The Fund generally invests in companies with market capitalizations greater than \$5 billion at time of investment, but may invest in companies with any market capitalization. There are no limitations on the minimum amount or maximum amount that the Fund may invest in any particular country.

The Sub-Adviser determines a company's country by referring to: its stock exchange listing; where it is registered, organized or incorporated; where its headquarters are located; its Morningstar country classification; where it derives at least 50% of its revenues or profits from goods produced or sold, investments made, or services performed; or where at least 50% of its assets are located. These categories are designed to identify investments that are tied economically to, and subject to the risks of, investing outside the U.S. The Fund considers a country to be an emerging market if the country is included in the Morningstar Emerging Markets Index.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Market risk*
- *Foreign securities risk*
- *Equity securities risk*
- *Managed portfolio risk*
- *Company risk*
- *Stock risk*
- *Investment style risk*

- *Dividend-paying stock risk*
- *Currency risk*
- *Emerging markets and less developed countries risk*
- *Quantitative strategy risk*
- *Clearance and settlement risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Accounting risk*
- *Counterparty risk*
- *Cybersecurity risk*
- *Depository receipts risk*
- *Derivatives risk*
- *Expense risk*
- *Government regulatory risk*
- *Hedging instruments risk*
- *Investment strategy risk*
- *Leverage risk*
- *Liquidity risk*
- *Model risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*
- *When-issued and delayed delivery securities and forward commitments risk*

The Fund may invest in when-issued and delayed delivery securities. Actual payment for and delivery of such securities does not take place until sometime in the future, *i.e.*, beyond normal settlement. The purchase of these securities will result in a loss if their value declines prior to the settlement date. This could occur, for example, if interest rates increase prior to settlement.

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The sub-adviser to the Fund is Causeway Capital Management LLC (“Causeway”), located at 11111 Santa Monica Boulevard, 15th Floor, Los Angeles, CA 90025. J.P. Morgan Investment Management, Inc. served as the Fund’s sub-adviser until September 28, 2015. Effective September 28, 2015, Causeway is the Fund’s sub-adviser.

Sarah Ketterer, Chief Executive Officer, Portfolio Manager. Ms. Ketterer is the chief executive officer of Causeway, portfolio manager for the firm's fundamental strategies, and is responsible for investment research across all sectors. She co-founded the firm in June 2001.

Harry Hartford, President, Portfolio Manager. Mr. Hartford is the president of Causeway, portfolio manager for the firm's fundamental strategies, and director of research. He co-founded the firm in June 2001.

Jonathan Eng, Portfolio Manager. Mr. Eng is a director of Causeway and a portfolio manager for its fundamental strategies. He joined the firm in July 2001 as a research associate and has been a portfolio manager since February 2002.

Conor Muldoon, CFA, Portfolio Manager. Mr. Muldoon is a director of Causeway and a portfolio manager for its fundamental strategies. He joined the firm in August 2003 as a research associate and has been a portfolio manager since September 2010.

Alessandro Valentini, CFA Portfolio Manager. Mr. Valentini is a portfolio manager for its fundamental strategies. He joined the firm in July 2006 and has been a portfolio manager since April 2013.

Ellen Lee, Portfolio Manager. Ms. Lee is a director of Causeway and a portfolio manager for its fundamental strategies. She joined the firm in August 2007 as a research associate and has been a portfolio manager since January 2015.

Steven Nguyen, Portfolio Manager. Mr. Nguyen is a director of Causeway and a portfolio manager for its fundamental strategies. He joined the firm in April 2012 as a research associate and has been a portfolio manager since January 2019.

Brian Cho, Portfolio Manager. Mr. Cho is a director of Causeway and a portfolio manager for its fundamental strategies. He joined the firm in April 2012 as a research associate and has been a portfolio manager since January 2021.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/ClearBridge Large Cap Growth Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek long-term capital growth.

Principal Investment Strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities or other equity investments with similar economic characteristics, of U.S. companies with large market capitalizations. Large-capitalization companies are those companies with market capitalizations similar to companies in the Russell® 1000 Index (the “Index”). The size of the companies in the Index changes with market conditions and the composition of the Index. As of December 31, 2021, the largest market capitalization of a company in the Index was approximately \$2.913 trillion and the median market capitalization of a company in the Index was approximately \$15,388 billion. Securities of companies whose market capitalizations no longer meet this definition after purchase by the Fund still will be considered securities of large-capitalization companies for purposes of the Fund’s 80% investment policy.

Equity securities may include exchange-traded and over-the-counter (“OTC”) common and preferred stocks, warrants and rights, securities convertible into common stocks, and securities of other investment companies and of real estate investment trusts (“REITs”).

The portfolio managers utilize ClearBridge’s fundamental research analysts who, using their industry expertise, determine the material ESG (environmental, social and governance) factors facing both individual companies and industry sectors and engage with company management regarding the extent to which they promote best practices of such factors. ESG factors may include, but are not necessarily limited to, environmentally-friendly product initiatives, labor audits of overseas supply chains and strong corporate governance. The choice of ESG factors for any particular company reflects the specific industry.

The Fund may invest up to 20% of its net assets in equity securities of foreign issuers, either directly or through depositary receipts. Equity securities of foreign issuers may include foreign companies that were originally domiciled in the U.S., companies with a dominate product and global footprint and/or companies that have business models similar to those of large cap U.S. companies but which provide diversification to the Fund.

A short sale is a transaction in which the Fund sells securities it does not own in anticipation of a decline in the market price of the securities. The Fund may hold no more than 25% of its net assets (taken at the then current market value) as required collateral for such sales at any one time.

As a non-principal investment strategy, the Fund may invest up to 20% of its assets in equity securities of companies other than those with market capitalizations similar to companies in the Index (i.e., medium- or small-capitalization companies).

The Fund may hold cash pending investment and may invest in money market instruments for cash management purposes. The amount of assets the Fund may hold for cash management purposes will depend on market conditions and the need to meet expected redemption requests.

The Fund may depart from its principal investment strategies in response to adverse market, economic or political conditions by taking temporary defensive positions, including by investing in any type of money market instruments, short-term debt securities or cash without regard to any percentage limitations. Although ClearBridge has the ability to take defensive positions, it may choose not to do so for a variety of reasons, even during volatile market conditions.

The Fund uses a focused approach of investing in a smaller number of issuers than the Index, which may result in significant exposure to certain industries or sectors, such as the information technology and internet technology services.

Selection process. ClearBridge emphasizes individual security selection while diversifying the Fund’s investments across industries, which may help to reduce risk. ClearBridge attempts to identify established large-capitalization companies with the highest growth potential. ClearBridge then analyzes each company in detail, ranking its management, strategy and competitive market position. Finally, ClearBridge attempts to identify the best values available among the growth companies identified. The core holdings of the Fund will be large-capitalization companies that ClearBridge believes to be dominant in their industries, global in scope and with a long-term history of performance.

In selecting individual companies for investment, ClearBridge considers:

- Favorable earnings prospects
- Technological innovation
- Industry dominance
- Competitive products and services
- Global scope

- Long-term operating history
- Consistent and sustainable long-term growth in dividends and earnings per share
- Strong cash flow
- High return on equity
- Strong financial condition
- Experienced and effective management

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Market risk*
- *Large-capitalization investing risk*
- *Investment style risk*
- *Issuer risk*
- *Foreign securities risk*
- *Stock risk*
- *Information technology sector risk*
- *Managed portfolio risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Currency risk*
- *Cybersecurity risk*
- *Expense risk*
- *Investment strategy risk*
- *Liquidity risk*
- *Mid-capitalization and small-capitalization investing risk*
- *Portfolio turnover risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Short sales risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is ClearBridge Investments, LLC (“ClearBridge”), with offices at 620 Eighth Avenue, New York, New York 10018. ClearBridge is an investment adviser that manages U.S. and international equity investment strategies for institutional and individual investors. ClearBridge has been committed to delivering long-term results

through active management for more than 50 years, and bases its investment decisions on fundamental research and the insights of seasoned portfolio management teams.

The portfolio managers responsible for day-to-day operation of the Fund are Peter Bourbeau and Margaret Vitrano. Mr. Bourbeau and Ms. Vitrano have the ultimate authority to make Fund decisions.

Mr. Bourbeau is a Managing Director and Portfolio Manager of ClearBridge and has 30 years of investment industry experience. He joined ClearBridge or its predecessor in 1991. Previously, Mr. Bourbeau was a Director of Citigroup Global Markets Inc. (“CGMI”) and served as a Portfolio Manager at Smith Barney Asset Management.

Ms. Vitrano is a Managing Director and Portfolio Manager of ClearBridge and has 25 years of investment industry experience. Previously, she was a Senior Research Analyst for Information Technology and Communications at ClearBridge from 2007 to 2012. Ms. Vitrano joined ClearBridge or its predecessor in 1997. Previously, she was a Director of CGMI and a research analyst at Citigroup.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL/DFA International Core Equity Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to achieve long-term capital appreciation.

Principal Investment Strategies. Under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in non-U.S. equity securities and/or investments that provide exposure to non-U.S. securities. The Fund purchases a broad and diverse group of securities of non-U.S. companies. The Fund invests in companies of all sizes, with increased exposure to smaller capitalization, lower relative price, and higher profitability companies relative to the International Universe. For purposes of the Fund, the Sub-Adviser defines the “International Universe” as a market capitalization weighted set of non-U.S. companies in developed markets that have been authorized as approved markets for investment by the Sub-Adviser’s Investment Committee. Market capitalization weighted means that a company’s weighting in the International Universe is proportional to that company’s actual market capitalization compared to the total market capitalization of all eligible companies. The higher the company’s relative market capitalization, the greater its representation. The Fund’s increased exposure to smaller capitalization, lower relative price, and higher profitability companies may be achieved by decreasing the allocation of the Fund’s assets to larger capitalization, higher relative price, or lower profitability companies relative to their weight in the International Universe. An equity issuer is considered to have a high relative price (i.e., a growth stock) primarily because it has a high price in relation to its book value. An equity issuer is considered to have a low relative price (i.e., a value stock) primarily because it has a low price in relation to its book value. In assessing relative price, the Sub-Adviser may consider additional factors such as price to cash flow or price to earnings ratios. In assessing profitability, the Sub-Adviser considers different ratios, such as that of earnings or profits from operations relative to book value or assets. The criteria the Sub-Adviser uses for assessing relative price and profitability are subject to change from time to time. The Sub-Adviser may also adjust the representation in the Fund of an eligible company, or exclude a company, after considering such factors as free float, momentum, trading strategies, liquidity, size, relative price, profitability, investment characteristics and other factors that the Sub-Adviser determines to be appropriate. For investments in small capitalization companies, the Sub-Adviser may consider a small capitalization company’s investment characteristics, with respect to other eligible companies, when making investment decisions and may exclude a small capitalization company when the Sub-Adviser determines it to be appropriate. In assessing a small company’s investment characteristics, the Sub-Adviser considers ratios such as recent changes in assets divided by total assets. Under normal circumstances, the Sub-Adviser will seek to limit such exclusion to no more than 5% of the eligible small capitalization company universe in each country in which the Fund invests. The Sub-Adviser may decrease the allocation of the Fund’s assets to eligible small capitalization companies that generally have lower profitability and/or higher relative prices. The criteria the Sub-Adviser uses for assessing a company’s investment characteristics are subject to change from time to time.

Under normal circumstances, the Fund intends to invest at least 40% of its assets in three or more non-U.S. countries by investing in securities of companies associated with such countries.

The Fund intends to purchase securities of companies associated with developed market countries that the Sub-Adviser has designated as approved markets. The Sub-Adviser determines company size on a country- or region-specific basis and based primarily on market capitalization. The percentage allocation of the assets of the Fund to securities of the largest high relative price companies will generally be reduced from between 5% and 35% of their percentage weight in the International Universe. The percentage by which the Fund’s allocation to securities of the largest high relative price companies is reduced will change due to market movements and other factors.

As of December 31, 2021, the Fund can invest in the following countries that have been designated as approved markets by the Sub-Adviser: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, and the United Kingdom. The Sub-Adviser will determine in its discretion when and whether to invest in countries that have been authorized as approved markets, depending on a number of factors, including, but not limited to, asset growth in the Fund, constraints imposed within approved markets, and other characteristics of each country’s markets. The Investment Committee of the Sub-Adviser also may designate other countries as approved markets for investment in the future, in addition to the countries listed above. Although the Sub-Adviser does not intend to purchase securities not associated with an approved market, the Fund may acquire such securities in connection with corporate actions or other reorganizations or transactions with respect to securities that are held by the Fund from time to time. Also, the Fund may continue to hold investments in countries that are not currently designated as approved markets, but had been authorized for investment in the past, and may reinvest distributions received in connection with such existing investments in such previously approved markets.

The Fund may gain exposure to companies associated with approved markets by purchasing equity securities in the form of depositary receipts, which may be listed or traded outside the issuer’s domicile country. The Fund also may purchase or sell futures contracts and options on futures contracts for foreign or U.S. equity securities and indices, to increase or decrease market exposure based on actual or expected cash inflows to or outflows from the Fund.

The Fund may invest in exchange-traded funds (“ETFs”) for the purpose of gaining exposure to the equity markets while maintaining liquidity. In addition to money market instruments and other short-term investments, the Fund may invest in affiliated and unaffiliated registered and unregistered money market funds to manage cash pending investment in other securities or to maintain liquidity for the payment of redemptions or other purposes. Investments in ETFs and money market funds may involve a duplication of certain fees and expenses.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Foreign securities risk*
- *Currency risk*
- *Small-capitalization investing risk*
- *Investment style risk*
- *Profitability investment risk*
- *Derivatives risk*
- *Market risk*
- *Managed portfolio risk*
- *Company risk*
- *Stock risk*
- *Depository receipts risk*
- *Forward and futures contract risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). In general, securities will not be purchased or sold based on the prospects for the economy, the securities markets or the individual issuers whose shares are eligible for purchase. Securities which have depreciated in value since their acquisition will not be sold solely because prospects for the issuer are not considered attractive or due to an expected or realized decline in securities prices in general. Securities generally will not be sold solely to realize short-term profits, but when circumstances warrant, they may be sold without regard to the length of time held. Securities, including those eligible for purchase, may be disposed of, however, at any time when, in the Sub-Adviser’s judgment, circumstances warrant their sale, including but not limited to tender offers, mergers and similar transactions, or bids made for block purchases at opportune prices. Generally, securities will be purchased with the expectation that they will be held for longer than one year and will be held until such time as they are no longer considered an appropriate holding in light of the investment policy of the Fund.

In attempting to respond to adverse market, economic, political, or other conditions, the Fund may, from time to time, invest its assets in a temporary defensive manner that is inconsistent with the Fund’s principal investment strategies. In these circumstances, the Fund may be unable to achieve its investment objective.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Exchange-traded funds investing risk*
- *Expense risk*
- *Investment in other investment companies risk*
- *Investment strategy risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Sector risk*

- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Dimensional Fund Advisors LP, 6300 Bee Cave Road, Building One, Austin, Texas 78746. The Sub-Adviser has been engaged in the business of providing investment management services since May 1981. DFA is organized as a Delaware limited partnership and is controlled and operated by its general partner, Dimensional Holdings Inc., a Delaware corporation.

The Sub-Adviser uses a team approach in managing investment portfolios. The investment team includes the Investment Committee of the Sub-Adviser, portfolio managers and trading personnel. The Investment Committee of the Sub-Adviser is composed primarily of certain officers and directors of the Sub-Adviser who are appointed annually. In accordance with the team approach, the portfolio managers and portfolio traders implement the policies and procedures established by the Investment Committee. The portfolio managers and portfolio traders also make daily investment decisions regarding the portfolios managed by the Sub-Adviser based on the parameters established by the Investment Committee. The following individuals coordinate the efforts of all other portfolio managers and trading personnel with respect to the day-to-day management of the Fund.

William B. Collins-Dean is a Vice President and Senior Portfolio Manager of the Sub-Adviser. Mr. Collins-Dean has an MBA from the University of Chicago Booth School of Business and a BS from Wake Forest University. Mr. Collins-Dean joined the Sub-Adviser in 2014, has been a portfolio manager since 2016 and has been responsible for the Fund since June 2019.

Jed S. Fogdall is Global Head of Portfolio Management, Chairman of the Investment Committee, Vice President and a Senior Portfolio Manager of the Sub-Adviser. Mr. Fogdall has an MBA from the University of California, Los Angeles and a BS from Purdue University. Mr. Fogdall joined the Sub-Adviser as a portfolio manager in 2004 and has been responsible for the Fund since June 2019.

Mary T. Phillips is Deputy Head of Portfolio Management, North America, a member of the Investment Committee, Vice President and a Senior Portfolio Manager of the Sub-Adviser. Ms. Phillips holds an MBA from the University of Chicago Booth School of Business and a BA from the University of Puget Sound. Ms. Phillips joined the Sub-Adviser in 2012, has been a portfolio manager since 2014, and has been responsible for the Fund since June 2019.

Bhanu P. Singh is a Vice President and Senior Portfolio Manager of the Sub-Adviser. Mr. Singh received his MBA from the University of Chicago Booth School of Business and his BA from the University of California, Los Angeles. Mr. Singh joined the Sub-Adviser originally in 2003, has been a portfolio manager since 2012 and has been responsible for the Fund since June 2019.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/DFA U.S. Core Equity Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Principal Investment Strategies. Under normal market conditions, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities of U.S. companies. The Fund purchases a broad and diverse group of securities of U.S. companies. The Fund invests in companies of all sizes, with increased exposure to smaller capitalization, lower relative price, and higher profitability companies relative to the U.S. Universe. The Sub-Adviser generally defines the U.S. Universe as a market capitalization weighted set of U.S. operating companies listed on a securities exchange in the United States that is deemed appropriate by the Sub-Adviser. Market capitalization weighted means that a company's weighting in the U.S. Universe is proportional to that company's actual market capitalization compared to the total market capitalization of all eligible companies. The higher the company's relative market capitalization, the greater its representation. The Fund's increased exposure to smaller capitalization, lower relative price, and higher profitability companies may be achieved by decreasing the allocation of the Fund's assets to larger capitalization, higher relative price, or lower profitability companies relative to their weight in the U.S. Universe. An equity issuer is considered to have a high relative price (i.e., a growth stock) primarily because it has a high price in relation to its book value. An equity issuer is considered to have a low relative price (i.e., a value stock) primarily because it has a low price in relation to its book value. In assessing relative price, the Sub-Adviser may consider additional factors such as price to cash flow or price to earnings ratios. In assessing profitability, the Sub-Adviser considers different ratios, such as that of earnings or profits from operations relative to book value or assets. For investments in small capitalization companies, the Sub-Adviser may consider a small capitalization company's investment characteristics, with respect to other eligible companies, when making investment decisions and may exclude a small capitalization company when the Sub-Adviser determines it to be appropriate. In assessing a small company's investment characteristics, the Sub-Adviser considers ratios such as recent changes in assets divided by total assets. Under normal circumstances, the Sub-Adviser will seek to limit such exclusion to no more than 5% of the eligible U.S. small capitalization company in which the Fund invests. The Sub-Adviser may decrease the allocation of the Fund's assets to eligible small capitalization companies that generally have lower profitability and/or higher relative prices. The criteria the Sub-Adviser uses for assessing relative price, profitability, and investment characteristics are subject to change from time to time.

The percentage allocation of the assets of the Fund to securities of the largest U.S. high relative price companies as defined above will generally be reduced from between 2.5% and 25% of their percentage weight in the U.S. Universe. The percentage by which the Fund's allocation to securities of the largest U.S. high relative price companies is reduced will change due to market movements. The Sub-Adviser may also adjust the representation in the Fund of an eligible company, or exclude a company, after considering such factors as free float, momentum, trading strategies, liquidity, size, relative price, profitability, investment characteristics, and other factors that the Sub-Adviser determines to be appropriate.

The Fund may purchase or sell futures contracts and options on futures contracts for equity securities and indices, to increase or decrease market exposure based on actual or expected cash inflows to or outflows from the Fund.

The Fund may invest in exchange-traded funds ("ETFs") for the purpose of gaining exposure to the U.S. stock market while maintaining liquidity. In addition to money market instruments and other short-term investments, the Fund may invest in affiliated and unaffiliated registered and unregistered money market funds to manage cash pending investment in other securities or to maintain liquidity for the payment of redemptions or other purposes. Investments in ETFs and money market funds may involve a duplication of certain fees and expenses.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Small-capitalization investing risk*
- *Investment style risk*
- *Profitability investment risk*
- *Derivatives risk*
- *Company risk*
- *Managed portfolio risk*
- *Market risk*

- *Stock risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). In general, securities will not be purchased or sold based on the prospects for the economy, the securities markets or the individual issuers whose shares are eligible for purchase. Securities which have depreciated in value since their acquisition will not be sold solely because prospects for the issuer are not considered attractive or due to an expected or realized decline in securities prices in general. Securities generally will not be sold solely to realize short-term profits, but when circumstances warrant, they may be sold without regard to the length of time held. Securities, including those eligible for purchase, may be disposed of, however, at any time when, in the Sub-Adviser’s judgment, circumstances warrant their sale, including but not limited to tender offers, mergers and similar transactions, or bids made for block purchases at opportune prices. Generally, securities will be purchased with the expectation that they will be held for longer than one year and will be held until such time as they are no longer considered an appropriate holding in light of the investment policy of the Fund.

In attempting to respond to adverse market, economic, political, or other conditions, the Fund may, from time to time, invest its assets in a temporary defensive manner that is inconsistent with the Fund’s principal investment strategies. In these circumstances, the Fund may be unable to achieve its investment objective.

There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Exchange-traded funds investing risk*
- *Expense risk*
- *Investment in other investment companies risk*
- *Investment strategy risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Sector risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Dimensional Fund Advisors LP, 6300 Bee Cave Road, Building One, Austin, Texas 78746. The Sub-Adviser has been engaged in the business of providing investment management services since May 1981. DFA is organized as a Delaware limited partnership and is controlled and operated by its general partner, Dimensional Holdings Inc., a Delaware corporation.

The Sub-Adviser uses a team approach in managing investment portfolios. The investment team includes the Investment Committee of the Sub-Adviser, portfolio managers and trading personnel. The Investment Committee of the Sub-Adviser is composed primarily of certain officers and directors of the Sub-Adviser who are appointed annually. In accordance with the team approach, the portfolio managers and portfolio traders implement the policies and procedures established by the Investment Committee. The portfolio managers and portfolio traders also make daily investment decisions regarding the portfolios managed by the Sub-Adviser based on the parameters established by the Investment Committee. The following individuals coordinate the efforts of all other portfolio managers and trading personnel with respect to the day-to-day management of the Fund.

Jed S. Fogdall is Global Head of Portfolio Management, Chairman of the Investment Committee, Vice President and a Senior Portfolio Manager of the Sub-Adviser. Mr. Fogdall has an MBA from the University of California, Los Angeles and a BS from Purdue University. Mr. Fogdall joined the Sub-Adviser as a portfolio manager in 2004 and has been responsible for the Fund since 2012.

Mary T. Phillips is Deputy Head of Portfolio Management, North America, a member of the Investment Committee, Vice President and a Senior Portfolio Manager of the Sub-Adviser. Ms. Phillips holds an MBA from the University of Chicago Booth School of Business and a BA from the University of Puget Sound. Ms. Phillips joined the Sub-Adviser in 2012, has been a portfolio manager since 2014, and has been responsible for the Fund since April 2022.

John A. Hertzler is a Vice President and Senior Portfolio Manager of the Sub-Adviser. Mr. Hertzler is a CFA® charterholder and holds an MBA from the University of California, Los Angeles and a BA from Dartmouth College. Mr. Hertzler joined the Sub-Adviser in 2013, has been a portfolio manager since 2016, and has been responsible for the Fund since April 2022.

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/DFA U.S. Small Cap Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to achieve long-term capital appreciation.

Principal Investment Strategies. The Fund, using a market capitalization weighted approach, purchases a broad and diverse group of readily marketable securities of U.S. small capitalization companies. A company's market capitalization is the number of its shares outstanding times its price per share. In general, the higher the relative market capitalization of the U.S. small capitalization company, the greater its representation in the Fund. The Sub-Adviser may adjust the representation in the Fund of an eligible company, or exclude a company, after considering such factors as free float, momentum, trading strategies, liquidity, relative price, profitability, investment characteristics and other factors that the Sub-Adviser determines to be appropriate. An equity issuer is considered to have a low relative price (i.e., a value stock) primarily because it has a low price in relation to its book value. In assessing relative price, the Sub-Adviser may consider additional factors such as price to cash flow or price to earnings ratios. In assessing profitability, the Sub-Adviser considers different ratios, such as that of earnings or profits from operations relative to book value or assets. For investments in small capitalization companies, the Sub-Adviser may consider a small capitalization company's investment characteristics, with respect to other eligible companies, when making investment decisions and may exclude a small capitalization company when the Sub-Adviser determines it to be appropriate. In assessing a small company's investment characteristics, the Sub-Adviser considers ratios such as recent changes in assets divided by total assets. Under normal circumstances, the Sub-Adviser will seek to limit such exclusion to no more than 5% of the eligible U.S. small capitalization company universe in which the Fund invests. The Sub-Adviser may decrease the allocation of the Fund's assets to eligible small capitalization companies that generally have lower profitability and/or higher relative prices. The criteria the Sub-Adviser uses for assessing relative price, profitability, and investment characteristics are subject to change from time to time.

As a non-fundamental policy, under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities of U.S. small capitalization companies. As of the date of this Prospectus, for purposes of the Fund, the Sub-Adviser considers small capitalization companies to be companies whose market capitalizations are generally in the lowest 10% of total market capitalization or companies whose market capitalizations are smaller than the 1,000th largest U.S. company, whichever results in the higher market capitalization break. Total market capitalization is based on the market capitalization of eligible U.S. operating companies listed on a securities exchange in the United States that is deemed appropriate by the Sub-Adviser. Under the Sub-Adviser's market capitalization guidelines described above, based on market capitalization data as of December 31, 2021, the market capitalization of a small-capitalization company would be \$10.142 billion or below. This threshold will change due to market conditions.

The Fund may purchase or sell futures contracts and options on futures contracts for equity securities and indices, to increase or decrease market exposure based on actual or expected cash inflows to or outflows from the Fund.

The Fund may invest in exchange-traded funds ("ETFs") for the purpose of gaining exposure to the U.S. stock market while maintaining liquidity. In addition to money market instruments and other short-term investments, the Fund may invest in affiliated and unaffiliated registered and unregistered money market funds to manage cash pending investment in other securities or to maintain liquidity for the payment of redemptions or other purposes. Investments in ETFs and money market funds may involve a duplication of certain fees and expenses.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Equity securities risk*
- *Small-capitalization investing risk*
- *Investment style risk*
- *Profitability investment risk*
- *Derivatives risk*
- *Company risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market risk*
- *Stock risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks).

For purposes of the Fund, the Sub-Adviser considers small-capitalization companies to be companies whose market capitalizations are generally in the lowest 10% of total market capitalization or companies whose market capitalizations are smaller than the 1,000th largest U.S. company, whichever results in the higher market capitalization break. The Fund also may purchase securities of foreign issuers that are traded in the U.S. securities markets, but such investments may not exceed 5% of the gross assets of the Fund. Generally, it is the intention of the Fund to purchase the stock of eligible companies using a market capitalization weighted approach (see below).

The Fund intends to invest in the securities of eligible companies using a market capitalization weighted approach. Market capitalization weighting means each security is generally purchased based on the issuer’s relative market capitalization. Market capitalization weighting may be modified by the Sub-Adviser for a variety of reasons. The Sub-Adviser may adjust the representation in the Fund of an eligible company, or exclude a company, after considering such factors as free float, momentum, trading strategies, liquidity, size, relative price, profitability, investment characteristics and other factors determined to be appropriate by the Sub-Adviser. An equity issuer is considered to have a low relative price (i.e., a value stock) primarily because it has a low price in relation to its book value. In assessing relative price, the Sub-Adviser may consider additional factors such as price to cash flow or price to earnings ratios. In assessing profitability, the Sub-Adviser considers different ratios, such as that of earnings or profits from operations relative to book value or assets. In assessing a company’s investment characteristics, the Sub-Adviser considers ratios such as recent changes in assets divided by total assets. The criteria the Sub-Adviser uses for assessing relative price, profitability, and investment characteristics are subject to change from time to time. The Sub-Adviser may deviate from market capitalization weighting to limit or fix the exposure of the Fund to a particular issuer to a maximum proportion of the assets of the Fund. The Sub-Adviser may exclude the stock of a company that meets applicable market capitalization criterion if the Sub-Adviser determines, in its judgment, that the purchase of such stock is inappropriate in light of other conditions. The Sub-Adviser may decrease the allocation of the Fund’s assets to eligible small capitalization companies that generally have lower profitability and/or higher relative prices. These adjustments will result in a deviation from traditional market capitalization weighting. Adjustment for free float modifies market capitalization weighting to exclude the share capital of a company that is not freely available for trading in the public equity markets. For example, the following types of shares may be excluded: (i) those held by strategic investors (such as governments, controlling shareholders and management), (ii) treasury shares, or (iii) shares subject to foreign ownership restrictions.

Furthermore, the Sub-Adviser may reduce the relative amount of any security held in order to retain sufficient portfolio liquidity. A portion, but generally not in excess of 20% of assets, may be invested in interest bearing obligations, such as money market instruments, thereby causing further deviation from market capitalization weighting. A further deviation may occur due to holdings in securities received in connection with corporate actions.

Block purchases of eligible securities may be made at opportune prices, even though such purchases exceed the number of shares that, at the time of purchase, adherence to a market capitalization weighted approach would otherwise require. In addition, securities eligible for purchase or otherwise represented in the Fund may be acquired in exchange for the issuance of shares. While such transactions might cause a deviation from market capitalization weighting, they would ordinarily be made in anticipation of further growth of assets.

Generally, changes in the composition and relative ranking (in terms of market capitalization) of the stocks that are eligible for purchase take place with every trade when the securities markets are open for trading due, primarily, to price changes of such securities. On at least a semi-annual basis, the Sub-Adviser will identify companies whose stock is eligible for investment by the Fund. Additional investments generally will not be made in securities that have changed in value sufficiently to be excluded from the Sub-Adviser’s then current market capitalization requirement for eligible portfolio securities. This may result in further deviation from market capitalization weighting. Such deviation could be substantial if a significant amount of holdings of the Fund change in value sufficiently to be excluded from the requirement for eligible securities, but not by a sufficient amount to warrant their sale.

If securities must be sold in order to obtain funds to make redemption payments, such securities may be repurchased, as additional cash becomes available. In most instances, however, management would anticipate selling securities which had appreciated sufficiently to be eligible for sale and, therefore, would not need to repurchase such securities.

Generally, current income is not sought as an investment objective and investments will not be based upon an issuer’s dividend payment policy or record. However, many of the companies whose securities will be selected for investment do pay dividends. It is anticipated, therefore, that dividend income will be received.

In general, securities will not be purchased or sold based on the prospects for the economy, the securities markets or the individual issuers whose shares are eligible for purchase. Securities which have depreciated in value since their acquisition will not be sold solely

because prospects for the issuer are not considered attractive or due to an expected or realized decline in securities prices in general. Securities generally will not be sold solely to realize short-term profits, but when circumstances warrant, they may be sold without regard to the length of time held. Securities, including those eligible for purchase, may be disposed of, however, at any time when, in the Sub-Adviser's judgment, circumstances warrant their sale, including but not limited to tender offers, mergers and similar transactions, or bids made for block purchases at opportune prices. Generally, securities will be purchased with the expectation that they will be held for longer than one year and will be held until such time as they are no longer considered an appropriate holding in light of the investment policy of the Fund.

In attempting to respond to adverse market, economic, political, or other conditions, the Fund may, from time to time, invest its assets in a temporary defensive manner that is inconsistent with the Fund's principal investment strategies. In these circumstances, the Fund may be unable to achieve its investment objective.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Counterparty risk*
- *Cybersecurity risk*
- *Exchange-traded funds investing risk*
- *Expense risk*
- *Investment in other investment companies risk*
- *Investment strategy risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Sector risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is Dimensional Fund Advisors LP, 6300 Bee Cave Road, Building One, Austin, Texas 78746. The Sub-Adviser has been engaged in the business of providing investment management services since May 1981. DFA is organized as a Delaware limited partnership and is controlled and operated by its general partner, Dimensional Holdings Inc., a Delaware corporation.

The Sub-Adviser uses a team approach in managing investment portfolios. The investment team includes the Investment Committee of the Sub-Adviser, portfolio managers and trading personnel. The Investment Committee of the Sub-Adviser is composed primarily of certain officers and directors of the Sub-Adviser who are appointed annually. In accordance with the team approach, the portfolio managers and portfolio traders implement the policies and procedures established by the Investment Committee. The portfolio managers and portfolio traders also make daily investment decisions regarding the portfolios managed by the Sub-Adviser based on the parameters established by the Investment Committee. The following individuals coordinate the efforts of all other portfolio managers and trading personnel with respect to the day-to-day management of the Fund.

Jed S. Fogdall is Global Head of Portfolio Management, Chairman of the Investment Committee, Vice President and a Senior Portfolio Manager of the Sub-Adviser. Mr. Fogdall has an MBA from the University of California, Los Angeles and a BS from Purdue University. Mr. Fogdall joined the Sub-Adviser as a portfolio manager in 2004 and has been responsible for the Fund since September 2012.

Marc C. Leblond is a Vice President and a Senior Portfolio Manager of the Sub-Adviser. Mr. Leblond holds an MBA from the University of Chicago Booth School of Business and an MS and BS from Columbia University. Mr. Leblond joined the Sub-Adviser in 2015, has been a portfolio manager since 2017, and has been responsible for the Fund since April 2020.

Joel P. Schneider is Deputy Head of Portfolio Management, North America, a member of the Investment Committee, Vice President and a Senior Portfolio Manager of the Sub-Adviser. Mr. Schneider holds an MBA from the University of Chicago Booth School of Business, an MS from the University of Minnesota, and a BS from Iowa State University. Mr. Schneider joined the Sub-Adviser in 2011, has been a portfolio manager since 2013, and has been responsible for the Fund since July 2015.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/DoubleLine® Core Fixed Income Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek to maximize current income and total return.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of fixed-income instruments of varying maturities, which may be represented by forwards or derivatives such as options, futures contracts, or swap agreements. For purposes of satisfying the 80% requirement, the Fund may also invest in derivative instruments that have economic characteristics similar to the fixed-income instruments mentioned above. “Fixed-Income instruments” include but are not limited to securities issued or guaranteed by the United States Government, its agencies, instrumentalities or sponsored corporations; corporate obligations (including foreign subordinated or junior subordinated bank debt, including Tier 1 preferred or hybrid bank debt, and Tier 2 debt); mortgage-backed securities; asset-backed securities (“ABS”); foreign securities (corporate, currencies and government); emerging market securities (corporate, quasi-sovereigns and government); bank loans and assignments; ABS loans and other securities bearing fixed or variable interest rates of any or no maturity. Such Fixed-Income instruments may be indexed to inflation by certain issuers. In managing the Fund’s investments, under normal market conditions, the portfolio manager intends to seek to construct an investment portfolio with a weighted average effective duration of no less than two years and no more than eight years, as calculated by DoubleLine. Duration is a measure of the expected life of a fixed-income security that is used to determine the sensitivity of a security’s price to changes in interest rates. Effective duration is a measure of the Fund’s portfolio duration adjusted for the anticipated effect of interest rate changes on bond and mortgage pre-payment rates. The effective duration of the Fund’s investment portfolio may vary materially from its target range, from time to time, and there is no assurance that the effective duration of the Fund’s investment portfolio will always be within its target range.

The Fund invests primarily in investment grade debt securities, but may invest up to 33 1/3% of its total assets in high-yield securities (“junk bonds”), bank loans or assignments rated BB+ or lower by Moody’s or equivalently rated by S&P Global Ratings, Fitch Inc., Kroll, DBRS, Morningstar, or any other NRSRO, or, if unrated, determined by DoubleLine to be of comparable quality. DoubleLine does not consider the term “junk bonds” to include any mortgage-backed securities or any other asset-backed securities, regardless of their credit rating or credit quality. The Fund may invest up to 30% of its total assets in securities or derivatives denominated in foreign currencies, and may invest beyond this limit in U.S. dollar-denominated securities of foreign issuers. The Fund may invest up to 30% of its total assets in securities and instruments that are economically tied to emerging market countries. An “emerging market country” is a country that, at the time the Fund invests in the related fixed income instruments, is classified as an emerging or developing economy by any supranational organization such as an institution in the World Bank Group or the United Nations, or an agency thereof, or is considered an emerging market country for purposes of constructing a major emerging market securities index. The Fund will invest up to 20% of its respective assets in any combination of mortgage-related and/or other asset-backed interest only, principal only or inverse floater securities.

The Fund may invest all of its assets in derivative instruments, such as options, futures contracts or swap agreements, or in mortgage-backed securities or ABS. The Fund may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis and may engage in short sales. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a Fund of purchase and sale contracts or by using other investment techniques (such as buybacks or dollar rolls). The “total return” sought by the Fund consists of income earned on the Fund’s investments, plus capital appreciation, if any, which generally arises from decreases in interest rates or improving credit fundamentals for a particular sector or security. The Fund may also invest up to 10% of its total assets in preferred stocks, convertible securities and other equity related securities. The Fund may invest in other investment companies, including, for example, other open-end or closed-end investment companies, ETFs, and domestic or foreign private investment vehicles, including investment companies sponsored or managed by the Sub-Adviser and its affiliates. The Fund may invest in securities issued by companies in the financial services sector.

To the extent permitted by the Fund’s investment objectives and general investment policies, the Fund may invest in residual interest bonds without limitation. The term “residual interest bonds” generally includes tender option bond trust residual interest certificates and instruments designed to receive residual interest payments or other excess cash flows from collateral pools once other interest holders and expenses have been paid.

The Fund may invest in derivatives based on Fixed-Income Instruments.

In managing the Fund’s investments, under normal market conditions, the portfolio manager uses a controlled risk approach. The techniques of this approach attempt to control the principal risk components of the fixed income markets and may include consideration of:

- security selection within a given sector;
- relative performance of the various market sectors;
- the shape of the yield curve; and
- fluctuations in the overall level of interest rates.

DoubleLine utilizes active asset allocation in managing the Fund's investments.

Portfolio securities may be sold at any time. By way of example, sales may occur when the Fund's portfolio manager determines to take advantage of what the portfolio manager considers to be a better investment opportunity, when the portfolio manager believes the portfolio securities no longer represent relatively attractive investment opportunities, when the portfolio manager perceives deterioration in the credit fundamentals of the issuer, or when the individual security has reached the portfolio manager's sell target.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Call risk*
- *Convertible securities risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Credit risk*
- *Currency risk*
- *Debt securities ratings risk*
- *Derivatives risk*
- *Emerging markets and less developed countries risk*
- *Equity securities risk*
- *Extension risk*
- *Event driven and special situations risk*
- *Financial services risk*
- *Fixed-income risk*
- *Foreign securities risk*
- *Forward and futures contract risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Inflation-indexed securities risk*
- *Interest rate risk*
- *Investment in other investment companies risk*
- *Investment strategy risk*
- *Issuer risk*
- *Leverage risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Mortgage-related and other asset-backed securities risk*
- *Options risk*
- *Portfolio turnover risk*
- *Prepayment risk*
- *Real estate investment risk*
- *Restricted securities risk*
- *Settlement risk*
- *Short sales risk*
- *Swaps risk*
- *Volatility risk*
- *LIBOR replacement risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). The Fund seeks to consistently add value relative to the Bloomberg U.S. Aggregate Bond Index, while keeping risk equal to or less than that index. In managing the Fund, the Sub-Adviser generally makes investment decisions based on

its view of longer-term (three- to five-year) trends and non-economic factors that may affect interest rates, while seeking to maintain a portfolio duration that approximates that of the Bloomberg U.S. Aggregate Bond Index.

There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Asset-based securities risk*
- *Counterparty risk*
- *Currency management strategies risk*
- *Cybersecurity risk*
- *Expense risk*
- *Market risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Sovereign debt risk*
- *Temporary defensive positions and large cash positions risk*
- *U.S. Government securities risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is DoubleLine Capital LP ("DoubleLine"), located at 505 N. Brand Boulevard, Suite 860, Glendale, California 91203. DoubleLine is registered as an investment adviser under the Investment Advisers Act of 1940, as amended. DoubleLine is an independent, employee-owned money management firm, founded in 2009. DoubleLine provides investment management and sub-advisory services to public as well as various institutional and sub-advised accounts.

The portfolio managers of the Sub-Adviser responsible for the oversight of the Fund. Information regarding the portfolio managers of the Fund is set forth below.

Jeffrey E. Gundlach is the founder and Chief Executive Officer of DoubleLine and DoubleLine Equity LP and is Chief Investment Officer of DoubleLine Capital. Mr. Gundlach has been Chief Executive Officer of DoubleLine Capital since its inception in December 2009 and of DoubleLine Equity since its inception in 2013. He is a graduate of Dartmouth College summa cum laude holding a BA in Mathematics and Philosophy. He attended Yale University as a PhD candidate in Mathematics.

Jeffrey J. Sherman has been the Deputy Chief Investment Officer of DoubleLine since June 2016 and a Portfolio Manager since September 2010. He participates on the Fixed Income Asset Allocation Committee and a portfolio manager for derivative-based and multi-asset strategies. He joined DoubleLine in December 2009. Prior to DoubleLine, he was a Senior Vice President at TCW where he worked as a portfolio manager and quantitative analyst focused on fixed-income and real-asset portfolios. Mr. Sherman assisted in developing real-asset strategies for TCW and was a portfolio manager overseeing several commodity funds. Prior to TCW, he was a statistics and mathematics instructor at both the University of the Pacific and Florida State University. Mr. Sherman holds a BS in Applied Mathematics from the University of the Pacific and a MS in Financial Engineering from the Claremont Graduate University. He is a CFA charterholder.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/DoubleLine® Emerging Markets Fixed Income Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek high total return from current income and capital appreciation.

Principal Investment Strategies. Under normal circumstances, the Fund (for purposes of this section, the “Fund”) will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in fixed-income instruments with exposure to emerging markets countries. These fixed-income instruments include but are not limited to securities issued or guaranteed by companies (including foreign hybrid securities), financial institutions and government entities in emerging market countries and other securities bearing fixed or variable interest rates of any or no maturity.

Generally, fixed-income instruments consist of a security or instrument having one or more of the following characteristics: a fixed-income security, a security issued at a discount to its face value, a security that pays interest, whether fixed, floating or variable or a security with a stated principal amount that requires repayment of some or all of that principal amount to the holder of the security. The Sub-Adviser interprets the term broadly as an instrument or security evidencing what is commonly referred to as an IOU rather than evidencing the corporate ownership of equity unless that equity represents an indirect or derivative interest in one or more debt securities.

An “emerging market country” is a country that, at the time of investment, is classified as an emerging or developing economy by any supranational organization such as the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index. In addition, DoubleLine Capital LP (“Sub-Adviser”) has broad discretion to identify other countries that it considers to be emerging market countries. In determining whether an issuer of non-sovereign debt is in an emerging market country, the Sub-Adviser will generally look to the issuer’s “country of risk”, as classified in Bloomberg. Bloomberg’s determination of “country of risk” is based on a number of criteria, including country of domicile, country of primary listing, country of majority revenue, and reporting currency. The Sub-Adviser may also classify a non-sovereign issuer as an emerging market issuer on a basis other than Bloomberg’s “country of risk” classification.

The Fund will generally invest in at least four emerging market countries. In allocating investments among various emerging market countries, the Sub-Adviser attempts to analyze internal political, market and economic factors. These factors may include:

- public finances;
- monetary policy;
- external accounts;
- financial markets;
- foreign investment regulations;
- stability of exchange rate policy; and
- labor conditions.

The Fund may invest in hybrid securities relating to emerging market countries. A third party or the Sub-Adviser may create a hybrid security by combining an income producing debt security and the right to receive payment based on the change in the price of an equity security.

The Fund may invest, without limitation, in fixed-income instruments of any credit quality, including those that at the time of investment are unrated or rated BB+ or lower by S&P or Ba1 or lower by Moody’s or the equivalent by any other nationally recognized statistical rating organization or unrated securities judged by the Sub-Adviser to be of comparable quality. Corporate bonds and certain other fixed-income instruments rated below investment grade, or such instruments that are unrated and determined by the Sub-Adviser to be of comparable quality, are high yield, high risk bonds, commonly known as junk bonds. Generally, lower-rated debt securities offer a higher yield than higher rated debt securities of similar maturity but are subject to greater risk of loss of principal and interest than higher rated securities of similar maturity.

The Fund may invest up to 15% of its net assets in defaulted corporate securities. The Fund might do so, for example, where the Sub-Adviser believes the restructured enterprise valuations or liquidation valuations may exceed current market values. In addition, the Fund may invest in defaulted sovereign investments, including, for example, where the Sub-Adviser believes the expected debt sustainability of the country is not reflected in current market valuations. Repayment of defaulted securities and obligations of distressed issuers (including insolvent issuers or issuers in payment or covenant default, in workout or restructuring or in bankruptcy or in solvency proceedings) is subject to significant uncertainties.

The Fund may invest in derivatives, which are financial contracts whose values depend on changes in the value of one or more underlying assets, reference rates, or indexes. Derivatives include, among others, options, swaps (including credit default swaps), futures, structured investments, foreign currency futures and forward contracts. In a credit default swap, one party makes a stream of payments to another party in exchange for the right to receive a specified return in the event of a default by a third party on its

obligation or other credit event. These practices may be used to hedge the Fund's portfolio as well as for investment purposes; however, such practices sometimes may reduce returns or increase volatility.

In managing the Fund's investments, under normal market conditions, the Sub-Adviser intends to seek to construct an investment portfolio with a weighted average effective duration of no less than two years and no more than eight years. Duration is a measure of the expected life of a fixed-income instrument that is used to determine the sensitivity of a security's price to changes in interest rates. For example, the value of a portfolio of fixed-income securities with an average duration of three years would generally be expected to decline by approximately 3% if interest rates rose by one percentage point. Effective duration is a measure of the Fund's portfolio duration adjusted for the anticipated effect of interest rate changes on bond and mortgage prepayment rates. The effective duration of the Fund's investment portfolio may vary materially from its target range, from time to time, and there is no assurance that the effective duration of the Fund's investment portfolio will always be within its target range.

The Fund may invest without limit in investments denominated in any currency, but currently expects to invest a substantial amount of its assets in investments denominated in the U.S. dollar.

The Fund may pursue its investment objective and obtain exposures to some or all of the asset classes described in its principal investment strategies by investing in other investment companies, such as exchange-traded funds.

Portfolio securities may be sold at any time. By way of example, sales may occur when the Sub-Adviser perceives deterioration in the credit fundamentals of the issuer, when the Sub-Adviser believes there are negative macro geopolitical considerations that may affect the issuer, when the Sub-Adviser determines to take advantage of a better investment opportunity, or when the individual security has reached the Sub-Adviser's sell target. The Fund may lend its securities to increase its income.

Any percentage limitation and requirement as to investments will apply only at the time of an investment to which the limitation or requirement is applicable and shall not be considered violated unless an excess or deficiency occurs or exists immediately after and as a result of such investment. Accordingly, any later increase or decrease resulting from a change in values, net assets or other circumstances will not be considered in determining whether any investment complies with the Fund's limitation or requirement.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Counterparty risk*
- *Credit risk*
- *Currency risk*
- *Debt securities ratings risk*
- *Derivatives risk*
- *Emerging markets and less developed countries risk*
- *Extension risk*
- *Fixed-income risk*
- *Foreign securities risk*
- *Government regulatory risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Interest rate risk*
- *Investment in other investment companies risk*
- *Issuer risk*
- *Leverage risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market risk*
- *Portfolio turnover risk*
- *Prepayment risk*
- *Sector risk*
- *Sovereign debt risk*
- *Volatility risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Call risk*
- *Concentration risk*
- *Cybersecurity risk*
- *Distressed securities risk*
- *Expense risk*
- *Investment strategy risk*
- *Latin America concentration risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Settlement risk*
- *Structured investments risk*
- *Temporary defensive positions and large cash positions risk*

A Note Regarding Debt Obligations. The terms debt security, debt obligation, bond, fixed-income instrument and fixed-income security can be used interchangeably. These terms should be considered to include any evidence of indebtedness, including, by way of example, a security or instrument having one or more of the following characteristics: a security or instrument issued at a discount to its face value, a security or instrument that pays interest at a fixed, floating, or variable rate, or a security or instrument with a stated principal amount that requires repayment of some or all of that principal amount to the holder of the security. These terms are interpreted broadly to include any instrument or security evidencing what is commonly referred to as an IOU rather than evidencing the corporate ownership of equity unless that equity represents an indirect or derivative interest in one or more debt securities. For this purpose, the terms also include instruments that are intended to provide one or more of the characteristics of a direct investment in one or more debt securities.

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is DoubleLine Capital LP (“DoubleLine”), located at 505 N. Brand Boulevard, Suite 860, Glendale, California 91203. DoubleLine is registered as an investment adviser under the Investment Advisers Act of 1940, as amended. DoubleLine is an independent, employee-owned money management firm, founded in 2009. DoubleLine provides investment management and sub-advisory services to public as well as various institutional and sub-advised accounts.

The portfolio managers of the Sub-Adviser responsible for the oversight of the Fund. Information regarding the portfolio managers of the Fund is set forth below.

Luz M. Padilla joined DoubleLine in 2009 as the Director of the Emerging Markets Group and is the lead Portfolio Manager. Ms. Padilla attended University of California at Berkeley as a fellow of the Robert A. Toigo Foundation and graduated with an MBA in 1994. Ms. Padilla received her BA in Economics in 1989 from Stanford University in Palo Alto, California.

Mark Christensen joined DoubleLine in 2009 as a Portfolio Manager and Senior Credit Analyst. Mr. Christensen graduated from Brigham Young University with a BS in Business Management with an emphasis in International Finance.

Su Fei Koo joined DoubleLine in 2009 as a Portfolio Manager and Senior Credit Analyst. Ms. Koo holds a BS in Business Administration from the University of Houston and an MBA in Finance from the University of Southern California.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/DoubleLine® Shiller Enhanced CAPE® Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek total return (capital appreciation and current income) which exceeds the total return of its benchmark.

Principal Investment Strategies. The Fund seeks to achieve its objective by looking to achieve total return (capital appreciation and current income) in excess of the Shiller Barclays CAPE® US Sector II ER USD Index (the “Index”).

The Fund will seek to use derivatives, or a combination of derivatives and direct investments to provide a return that tracks closely the performance of the Index. The Fund will also invest in a portfolio of debt securities to seek to provide additional long-term total return. The Fund uses investment leverage in seeking to provide both the Index return and the return on a portfolio of debt securities; it is likely that the Fund will have simultaneous exposures both to the Index and to debt securities, in each case in an amount potentially up to the value of the Fund’s assets. It is possible that the Fund could lose money at the same time on both its investments in debt securities and its exposure to the Index.

The Fund will normally use derivatives in an attempt to create an investment return approximating the Index’s return. For example, the Fund might enter into swap transactions or futures transactions designed to provide the Fund a return approximating the Index’s return. The transaction pricing of any swap transaction will reflect a number of factors, including the limited availability of the Index, that will cause the return on the swap transaction to underperform the Index. Please see “*Note regarding Index-Based Swaps*” below for more information. The Fund expects to use only a small percentage of its assets to attain the desired exposure to the Index because of the structure of the derivatives the Fund expects to use. As a result, use of those derivatives along with other investments will create investment leverage in the Fund’s portfolio. In certain cases, however, such derivatives might be unavailable or the pricing of those derivatives might be unfavorable; in those cases, the Fund might attempt to replicate the Index return by purchasing some or all of the securities comprising the Index at the time. If the Fund at any time invests directly in the securities comprising the Index, those assets will be unavailable for investment in debt instruments, and the Fund’s ability to pursue its investment strategy and achieve its investment objective may be limited.

To the extent use of the above-described derivatives strategy leaves a substantial portion of the Fund’s assets available for other investment by the Fund, the Fund expects to invest those assets in a portfolio of debt instruments managed by DoubleLine Capital LP (the “Sub-Adviser”) to seek to provide additional long-term total return.

The Shiller Barclays CAPE® US Sector II ER USD Index. The Index incorporates the principles of long-term investing distilled by Dr. Robert Shiller and expressed through the CAPE® (Cyclically Adjusted Price Earnings) ratio (the “CAPE® Ratio”). The Index aims to identify undervalued sectors based on a modified CAPE® Ratio, and then uses a momentum factor to seek to reduce the risk of investing in a sector that may appear undervalued, but which may have also had recent relative price underperformance due to fundamental issues with the sector that may negatively affect the sector’s long-term total return.

The Index allocates an equally weighted notional long exposure to four U.S. sectors that are undervalued, as determined using the modified CAPE® Ratio. Each U.S. sector is represented by a sector ETF, which is an ETF in the family of Select Sector SPDR Funds or, in the case of the real estate sector, the iShares Dow Jones U.S. Real Estate Index Fund. Each month, the Index ranks ten U.S. sectors based on a modified CAPE® Ratio (a “value” factor) and a twelve-month price momentum factor (a “momentum” factor). The Index selects the five U.S. sectors with the lowest modified CAPE® Ratio — the sectors that are the most undervalued according to the CAPE® Ratio. Only four of these five undervalued sectors, however, end up in the Index for a given month, as the sector with the worst 12-month price momentum among the five selected sectors is eliminated. The Select Sector SPDR Funds are typically comprised of issuers represented in the S&P 500 Index. As of December 31, 2021, the issuers represented in the S&P 500 Index had market capitalizations ranging from \$2.913 trillion to \$3.98 billion.

The classic CAPE® Ratio is used to assess equity market valuations and averages ten years of reported earnings to account for earnings and market cycles. Traditional valuation measures, such as the price-earnings (PE) ratio, by contrast, typically rely on earnings information from only the past year. The Index uses a modified version of the classic CAPE® Ratio to standardize the comparison across sectors. There can be no assurance that the Index will provide a better measure of value than more traditional measures, over any period or over the long term.

Through the Index, the Fund will have focused exposures to the sectors making up the Index. As of the date of this Prospectus, the eleven sectors making up the Index include: Communication Services, Consumer Discretionary, Consumer Staples, Energy, Financials, Health Care, Industrials, Materials, Technology, Utilities and Real Estate. As a result, the Fund’s net asset value may be affected to a greater degree by factors affecting those sectors or industries than a fund that invests more broadly.

Under normal circumstances, to the extent use of the above-described derivatives strategy leaves a substantial portion of the Fund’s assets available for other investment by the Fund, the Fund intends to invest those assets in a portfolio of debt instruments managed by the Sub-Adviser to seek to provide additional long-term total return. The Fund may invest directly in debt instruments; alternatively,

the Sub-Adviser may choose to invest all or a portion of the Fund's assets in one or more DoubleLine fixed-income funds. Debt instruments, in which the Fund may invest, include, by way of example, (i) securities or other income-producing instruments issued or guaranteed by the U.S. Government, its agencies, instrumentalities or sponsored corporations (including inflation-protected securities); (ii) corporate obligations (including foreign hybrid securities); (iii) mortgage-backed securities (including commercial and residential mortgage-backed securities) and other asset-backed securities, collateralized mortgage obligations ("CMOs"), government mortgage pass-through securities, multiclass passthrough securities, private mortgage pass-through securities, stripped mortgage securities (*e.g.*, interest-only and principal-only securities), and inverse floaters; (iv) collateralized debt obligations ("CDOs"), including collateralized loan obligations ("CLOs"); (v) foreign securities (corporate and government), including emerging market securities; (vi) bank loans and assignments and other fixed and floating rate loans (including, among others, senior loans, second lien or other subordinated or unsecured fixed or floating rate loans, delayed funding loans and revolving credit facilities); (vii) municipal securities and other debt obligations issued by states, local governments, and government-sponsored entities, including their agencies, authorities, and instrumentalities; (viii) inflation-indexed bonds; (ix) convertible securities; (x) preferred securities; (xi) Real Estate Investment Trust ("REIT") securities; (xii) distressed and defaulted securities; (xiii) payment-in-kind bonds; (xiv) zero-coupon bonds; (xv) custodial receipts, cash and cash equivalents; (xvi) short-term, high quality investments, including, for example, commercial paper, bankers' acceptances, certificates of deposit, bank time deposits, repurchase agreements, and investments in money market mutual funds or similar pooled investments; and (xvii) other instruments bearing fixed, floating, or variable interest rates of any maturity. The Fund may invest in any level of the capital structure of an issuer of mortgage-backed or asset-backed securities, including the equity or "first loss" tranche.

The Sub-Adviser may invest Fund assets in other DoubleLine funds from time to time in order to obtain the Fund's desired investment exposure. Investing in other DoubleLine funds involves potential conflicts of interest. For example, the Sub-Adviser or its affiliates may receive fees based on the amount of assets invested in such other investment vehicles. This and other factors may give the Sub-Adviser an economic or other incentive to make or retain an investment for the Fund in an affiliated investment vehicle in lieu of other investments that may also be appropriate for the Fund. To reduce this potential conflict of interest, the Sub-Adviser has agreed to reduce its advisory fee to the extent of advisory fees paid to the Sub-Adviser or its affiliates by other investment vehicles in respect of assets of the Fund invested in those vehicles.

The Fund's portfolio of debt instruments will normally have an overall weighted average effective duration of not less than one year or more than eight years. Duration is a measure of the expected life of a fixed-income instrument that is used to determine the sensitivity of a security's price to changes in interest rates. Effective duration is a measure of the Fund's portfolio duration adjusted for the anticipated effect of interest rate changes on bond and mortgage pre-payment rates. The longer a portfolio's effective duration, the more sensitive it will be to changes in interest rates. The effective duration of the Fund's portfolio of debt instruments may vary materially from its target range, from time to time, and there is no assurance that the effective duration of the portfolio will always be within its target range.

The Fund may invest in debt instruments of any credit quality, including those that are at the time of investment unrated or rated BB+ or lower by S&P or Ba1 or lower by Moody's or the equivalent by any other nationally recognized statistical rating organization or unrated securities judged by the Sub-Adviser to be of comparable quality. Corporate bonds and certain other fixed-income instruments rated below investment grade, or such instruments that are unrated and determined by the Sub-Adviser to be of comparable quality, are high yield, high risk bonds, commonly known as junk bonds. Generally, lower-rated debt securities offer a higher yield than higher-rated debt securities of similar maturity but are subject to greater risk of loss of principal and interest than higher-rated securities of similar maturity. The Fund may invest up to 33 1/3% of its net assets in junk bonds, bank loans and assignments rated below investment grade or unrated but determined by the Sub-Adviser to be of comparable quality, and credit default swaps of companies in the high yield universe. The Sub-Adviser does not consider the term "junk bonds" to include any mortgage-backed securities or any other asset-backed securities, regardless of their credit rating or credit quality.

The Fund may invest up to 5% of its net assets in defaulted corporate securities. The Fund might do so, for example, where the portfolio manager believes the restructured enterprise valuations or liquidation valuations may exceed current market values. Repayment of defaulted securities and obligations of distressed issuers (including insolvent issuers or issuers in payment or covenant default, in workout or restructuring or in bankruptcy or in solvency proceedings) is subject to significant uncertainties.

The Fund may invest a portion of its net assets in inverse floater securities and interest-only and principal-only securities. An inverse floater is a type of instrument, which may be backed by or related to a mortgage-backed security, that bears a floating or variable interest rate that moves in the opposite direction to movements in interest rates generally or the interest rate on another security or index. Because an inverse floater inherently carries financial leverage in its coupon rate, it can change very substantially in value in response to changes in interest rates. Interest-only and principal-only securities may also be backed by or related to a mortgage-backed security. Holders of interest-only securities are entitled to receive only the interest on the underlying obligations but none of the principal, while holders of principal-only securities are entitled to receive all of the principal but none of the interest on the underlying obligations. As a result, they are highly sensitive to actual or anticipated changes in prepayment rates on the underlying securities.

The Fund may invest a portion of its net assets in debt instruments (including hybrid securities) issued or guaranteed by companies, financial institutions and government entities in emerging market countries. An "emerging market country" is a country that, at the time the Fund invests in the related fixed-income instruments, is classified as an emerging or developing economy by any

supranational organization such as the United Nations, or related entities, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

The Fund may invest in other investment companies, including, for example, other open-end or closed-end investment companies, ETFs, and domestic or foreign private investment vehicles, including investment companies sponsored or managed by the Sub-Adviser and its affiliates. The Fund may engage in short sales, either to earn additional return or to hedge existing investments.

In managing the Fund's debt instruments, under normal market conditions, the Sub-Adviser uses a controlled risk approach. The techniques of this approach attempt to control the principal risk components of the fixed-income markets and may include consideration of:

- security selection within a given sector;
- relative performance of the various market sectors;
- the shape of the yield curve; and
- fluctuations in the overall level of interest rates.

The Sub-Adviser also utilizes active asset allocation and monitors the duration of the Fund's fixed-income securities to seek to mitigate the Fund's exposure to interest rate risk.

Portfolio securities may be sold at any time. By way of example, sales may occur when the Fund's Sub-Adviser determines to take advantage of what the Sub-Adviser considers to be a better investment opportunity, when the Sub-Adviser believes the portfolio securities no longer represent relatively attractive investment opportunities, when the Sub-Adviser perceives deterioration in the credit fundamentals of the issuer, or when the individual security has reached the Sub-Adviser's sell target.

Note regarding Index-Based Swaps. In cases where a Fund enters into a swap transaction or other transaction based on an index, the transaction pricing will typically reflect, among other things, compensation to the index sponsor for the use of the index sponsor's intellectual property and/or index data ("Intellectual Property") in connection with the transaction. These costs may be significant and will cause the return on the Fund's investment in a swap transaction or other transaction based on the index to underperform the index. Barclays Bank PLC, the sponsor of the Shiller Barclays CAPE® US Sector TR USD Index, has agreed that it will not charge DoubleLine Shiller Enhanced CAPE®'s swap counterparties, if any, more than 0.38% of the notional value of any swap transactions related to the Index, for the use of its Intellectual Property. The terms of these transactions may change over time without notice to shareholders.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Accounting risk*
- *Asset-based securities risk*
- *Company risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *Counterparty risk*
- *Credit risk*
- *Derivatives risk*
- *Emerging markets and less developed countries risk*
- *Equity securities risk*
- *Exchange-traded funds investing risk*
- *Extension risk*
- *Financial services risk*
- *Fixed-income risk*
- *Foreign securities risk*
- *Forward foreign currency exchange contracts risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Index investing risk*
- *Indexed and inverse securities risk*
- *Interest rate risk*
- *Investment in other investment companies risk*

- *Leverage risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market risk*
- *Mortgage-related and other asset-backed securities risk*
- *Municipal securities risk*
- *Portfolio turnover risk*
- *Prepayment risk*
- *Real estate investment risk*
- *Sector risk*
- *Settlement risk*
- *Short sales risk*
- *Structured investments risk*
- *U.S. Government securities risk*
- *Volatility risk*
- *LIBOR replacement risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Currency risk*
- *Cybersecurity risk*
- *Expense risk*
- *Inflation-indexed securities risk*
- *Investment strategy risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is DoubleLine Capital LP (“DoubleLine”), located at 505 N. Brand Boulevard, Suite 860, Glendale, California 91203. DoubleLine is registered as an investment adviser under the Investment Advisers Act of 1940, as amended. DoubleLine is an independent, employee-owned money management firm, founded in 2009. DoubleLine provides investment management and sub-advisory services to public as well as various institutional and sub-advised accounts.

The portfolio managers of the Sub-Adviser responsible for the oversight of the Fund. Information regarding the portfolio managers of the Fund is set forth below.

Jeffrey E. Gundlach is the founder and Chief Executive Officer of DoubleLine and DoubleLine Equity LP and is Chief Investment Officer of DoubleLine Capital. Mr. Gundlach has been Chief Executive Officer of DoubleLine Capital since its inception in December 2009 and of DoubleLine Equity since its inception in 2013. He is a graduate of Dartmouth College summa cum laude holding a BA in Mathematics and Philosophy. He attended Yale University as a PhD candidate in Mathematics.

Jeffrey J. Sherman has been the Deputy Chief Investment Officer of DoubleLine since June 2016 and a Portfolio Manager since September 2010. He participates on the Fixed Income Asset Allocation Committee and a portfolio manager for derivative-based and multi-asset strategies. He joined DoubleLine in December 2009. Prior to DoubleLine, he was a Senior Vice President at TCW where

he worked as a portfolio manager and quantitative analyst focused on fixed-income and real-asset portfolios. Mr. Sherman assisted in developing real-asset strategies for TCW and was a portfolio manager overseeing several commodity funds. Prior to TCW, he was a statistics and mathematics instructor at both the University of the Pacific and Florida State University. Mr. Sherman holds a BS in Applied Mathematics from the University of the Pacific and a MS in Financial Engineering from the Claremont Graduate University. He is a CFA charterholder.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/DoubleLine® Total Return Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek to maximize total return.

Principal Investment Strategies. Under normal circumstances, the Fund intends to invest more than 50% of its net assets in residential and commercial mortgage-backed securities. These investments may include mortgage-backed securities of any maturity or type, including those guaranteed by, or secured by collateral that is guaranteed by, the United States Government, its agencies, instrumentalities or sponsored corporations, and privately issued mortgage-backed securities rated at the time of investment Aa3 or higher by Moody's or AA- or higher by S&P or the equivalent by any other nationally recognized statistical rating organization or in unrated securities that are determined by DoubleLine Capital LP, the Fund's sub-adviser ("Sub-Adviser") to be of comparable quality. These investments also include, among others, government mortgage pass-through securities, CMOs, multiclass pass-through securities, private mortgage pass-through securities, stripped mortgage securities (interest-only and principal-only securities) and inverse floaters.

Since the Fund's inception, the Fund has historically invested substantially all of its assets in the mortgage-backed securities described above; short-term investments, such as notes issued by U.S. Government agencies and shares of money market funds; and, from time to time, other asset-backed backed obligations, collateralized loan obligations, collateralized debt obligations, and obligations of the U.S. Government and its agencies, instrumentalities, sponsored corporations. The Fund may invest in other instruments as part of its principal investment strategies as described below, but it has not historically done so and there can be no assurance it will do so in the future.

In managing the Fund's portfolio, the Sub-Adviser typically uses a controlled-risk approach. The techniques of this approach attempt to control the principal risk components of the fixed income markets and may include, among other factors, consideration of the Sub-Adviser's view of the following: the potential relative performance of various market sectors, security selection available within a given sector, the risk/reward equation for different asset classes, liquidity conditions in various market sectors, the shape of the yield curve and projections for changes in the yield curve, potential fluctuations in the overall level of interest rates, and current fiscal policy.

Under normal circumstances, the Fund intends to invest at least 80% of its assets (net assets plus the amount of borrowings made for investment purposes) in bonds. Bonds include bonds, debt securities, and other fixed income instruments issued by governmental or private-sector entities.

Generally, bonds consist of a security or instrument having one or more of the following characteristics: a fixed-income security, a security issued at a discount to its face value, a security that pays interest, whether fixed, floating or variable, or a security with a stated principal amount that requires repayment of some or all of that principal amount to the holder of the security. The Sub-Adviser interprets the term broadly as an instrument or security evidencing what is commonly referred to as an "IOU" rather than evidencing the corporate ownership of equity unless that equity represents an indirect or derivative interest in one or more debt securities.

The Fund may invest in bonds of any credit quality, including those that are at the time of investment unrated or rated BB+ or lower by S&P or Ba1 or lower by Moody's or the equivalent by any other nationally recognized statistical rating organization. Bonds and fixed income instruments rated below investment grade, or such instruments that are unrated and determined by the Sub-Adviser to be of comparable quality, are high yield, high risk bonds, commonly known as junk bonds. Generally, lower rated debt securities offer a higher yield than higher rated debt securities of similar maturity but are subject to greater risk of loss of principal and interest than higher rated securities of similar maturity. The Fund may invest up to 33½% of its net assets in junk bonds, bank loans and assignments rated below investment grade or unrated but determined by the Sub-Adviser to be of comparable quality, and credit default swaps of companies in the high yield universe. The Sub-Adviser does not consider the term "junk bonds" to include any mortgage-backed securities or any other asset-backed securities, regardless of their credit rating or credit quality.

Investment in secured or unsecured fixed or floating rate loans arranged through private negotiations between a borrowing corporation, government or other entity and one or more financial institutions may be in the form of participations in loans or assignments of all or a portion of loans from third parties.

The Fund may enter into credit default swaps. In a credit default swap, one party makes a stream of payments to another party in exchange for the right to receive a specified return in the event of a default by a third party on its obligation or other credit event. The Fund may enter into a credit default swap on either side (making such a stream of payments or agreeing to provide the specified return).

The Fund may invest a portion of its net assets in inverse floater securities and interest-only and principal-only securities. An inverse floater is a type of instrument, which may be backed by or related to a mortgage-backed security, that bears a floating or variable interest rate that moves in the opposite direction to movements in interest rates generally or the interest rate on another security or index. Because an inverse floater inherently carries financial leverage in its coupon rate, it can change very substantially in value in

response to changes in interest rates. Interest-only and principal-only securities may also be backed by or related to a mortgage-backed security. Holders of interest-only securities are entitled to receive only the interest on the underlying obligations but none of the principal, while holders of principal-only securities are entitled to receive all of the principal but none of the interest on the underlying obligations. As a result, interest-only and principal-only securities are highly sensitive to actual or anticipated changes in prepayment rates on the underlying securities.

The Sub-Adviser monitors the duration of the Fund's portfolio securities to seek to assess and, in its discretion, adjust the Fund's exposure to interest rate risk. In managing the Fund's investments, under normal market conditions, the Sub-Adviser intends to seek to construct an investment portfolio with a weighted average effective duration of no less than one year and no more than eight years. Duration is a measure of the expected life of a fixed income instrument that is used to determine the sensitivity of a security's price to changes in interest rates. For example, the value of a portfolio of fixed income securities with an average duration of three years would generally be expected to decline by approximately 3% if interest rates rose by one percentage point. Effective duration is a measure of the Fund's portfolio duration adjusted for the anticipated effect of interest rate changes on bond and mortgage prepayment rates. The effective duration of the Fund's investment portfolio may vary materially from its target range, from time to time, and there is no assurance that the effective duration of the Fund's investment portfolio will always be within its target range.

Portfolio securities may be sold at any time. By way of example, sales may occur when the Sub-Adviser determines to take advantage of what the Sub-Adviser considers to be a better investment opportunity, when the Sub-Adviser believes the portfolio securities no longer represent relatively attractive investment opportunities, when the Sub-Adviser perceives deterioration in the credit fundamentals of the issuer, or when the Sub-Adviser believes it would be appropriate to do so in order to readjust the duration of the Fund's investment portfolio.

Any percentage limitation and requirement as to investments will apply only at the time of an investment to which the limitation or requirement is applicable and shall not be considered violated unless an excess or deficiency occurs or exists immediately after and as a result of such investment. Accordingly, any later increase or decrease resulting from a change in values, net assets or other circumstances will not be considered in determining whether any investment complies with the Fund's limitation or requirement.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Asset-based securities risk*
- *Collateralized debt obligations risk*
- *Counterparty risk*
- *Credit risk*
- *Derivatives risk*
- *Extension risk*
- *Financial services risk*
- *Fixed-income risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Interest rate risk*
- *Investment strategy risk*
- *Issuer risk*
- *Leverage risk*
- *Liquidity risk*
- *Managed portfolio risk*
- *Market risk*
- *Model risk*
- *Mortgage-related and other asset-backed securities risk*
- *Prepayment risk*
- *Real estate investment risk*
- *Sector risk*
- *Settlement risk*
- *U.S. Government securities risk*
- *Volatility risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Income risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*
- *Temporary defensive positions and large cash positions risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser’s abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is DoubleLine Capital LP (“DoubleLine”), located at 505 N. Brand Boulevard, Suite 860, Glendale, California 91203. DoubleLine is registered as an investment adviser under the Investment Advisers Act of 1940, as amended. DoubleLine is an independent, employee-owned money management firm, founded in 2009. DoubleLine provides investment management and sub-advisory services to public as well as various institutional and sub-advised accounts.

The portfolio managers of the Sub-Adviser responsible for the oversight of the Fund. Information regarding the portfolio managers of the Fund is set forth below.

Jeffrey E. Gundlach is the founder and Chief Executive Officer of DoubleLine and DoubleLine Equity LP and is Chief Investment Officer of DoubleLine Capital. Mr. Gundlach has been Chief Executive Officer of DoubleLine Capital since its inception in December 2009 and of DoubleLine Equity since its inception in 2013. He is a graduate of Dartmouth College summa cum laude holding a BA in Mathematics and Philosophy. He attended Yale University as a PhD candidate in Mathematics.

Ken Shinoda joined DoubleLine at inception in 2009. Mr. Shinoda is Chairman of the Structured Products Committee and oversees the non-Agency RMBS team specializing in investing in non-Agency mortgage-backed securities, residential whole loans and other mortgage-related opportunities. He is co-Portfolio Manager on the Total Return, Opportunistic Income, Opportunistic MBS and Strategic MBS strategies. He is also lead Portfolio Manager overseeing the Mortgage Opportunities private funds. Mr. Shinoda is also a permanent member of the Fixed Income Asset Allocation Committee, as well as, participating in the Global Asset Allocation Committee. Prior to DoubleLine, Mr. Shinoda was Vice President at TCW where he worked in portfolio management and trading from 2004-2009. He holds a BS in Business Administration from the University of Southern California and is a CFA® charterholder.

Mr. Hsu joined DoubleLine at its inception in 2009. He is a portfolio manager for the DoubleLine Total Return and ABS/Infrastructure Income strategies. Mr. Hsu is a permanent member of the Fixed Income Asset Allocation and Structured Product Committees. He holds a BS in Finance from the University of Southern California and is a CFA charterholder.

The SAI provides additional information about a portfolio manager’s compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees’ basis for approving the sub-advisory agreement is available in the Fund’s Annual Report for the period ended December 31, 2021.

JNL/Fidelity Institutional Asset Management® Total Bond Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek a high level of current income.

Principal Investment Strategies. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in debt securities of all types and repurchase agreements for those securities. The Fund may invest up to 20% of its assets in lower-quality debt securities (those of less than investment-grade quality, also referred to as “high yield debt securities” or “junk bonds”).

FIAM LLC, the Fund’s sub-adviser (“Sub-Adviser”), uses the Bloomberg U.S. Aggregate Bond Index (the “Index”) as a guide in allocating the Fund’s assets across the investment-grade, high yield, and emerging market asset classes. The Sub-Adviser manages the Fund to have similar overall interest rate risk to the Index.

The Sub-Adviser may invest the Fund’s assets in securities of foreign issuers in addition to securities of domestic issuers.

The Sub-Adviser allocates the Fund’s assets among different asset classes, different market sectors (for example, corporate, asset-backed, or government securities), and different maturities based on the Sub-Adviser’s view of the relative value of each sector or maturity.

The Sub-Adviser considers other factors when selecting the Fund’s investments, including the credit quality of the issuer, security-specific features, current valuation relative to alternatives in the market, short-term trading opportunities resulting from market inefficiencies, and potential future valuation. In managing the Fund’s exposure to various risks, including interest rate risk, the Sub-Adviser considers, among other things, the market’s overall risk characteristics, the market’s current pricing of those risks, information on the Fund’s competitive universe and internal views of potential future market conditions.

The Sub-Adviser may engage in transactions that have a leveraging effect on the Fund, including investments in derivatives, regardless of whether the Fund may own the asset, instrument, currency, or components of the index underlying the derivative, and forward-settling securities. The Sub-Adviser may invest a significant portion of the Fund’s assets in these types of investments. If the Fund invests a significant portion of its assets in derivatives, its investment exposure could far exceed the value of its portfolio securities and its investment performance could be primarily dependent upon securities it does not own. The Fund’s derivative investments may include interest rate swaps, total return swaps, credit default swaps, options (including options on futures and swaps), forwards, and futures contracts (both long and short positions) on securities, other instruments, indexes, or currencies. Depending on the Sub-Adviser’s outlook and market conditions, the Sub-Adviser may engage in these transactions to increase or decrease the Fund’s exposure to changing security prices, interest rates, credit qualities, foreign exchange rates, or other factors that affect security values, or to gain or reduce exposure to an asset, instrument, currency, or index.

In selecting foreign securities, the Sub-Adviser’s analysis also considers the credit, currency, and economic risks associated with the security and the country of its issuer. The Sub-Adviser may also consider an issuer’s potential for success in light of its current financial condition, its industry position, and economic and market conditions.

To earn additional income for the Fund, the Sub-Adviser may use a trading strategy that involves selling (or buying) mortgage securities and simultaneously agreeing to purchase (or sell) mortgage securities on a later date at a set price. This trading strategy may increase interest rate exposure and result in an increased portfolio turnover rate which increases transaction costs and may increase taxable gains.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund’s shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund’s investment in any particular type of security, or assurance of the Fund’s success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser’s investment techniques otherwise failing to achieve the Fund’s investment objective. The principal risks of investing in the Fund include:

- *Fixed-income risk*
- *Interest rate risk*
- *Credit risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Foreign securities risk*
- *Issuer risk*
- *Leverage risk*

- *Prepayment risk*
- *Derivatives risk*
- *Reverse repurchase agreements risk*
- *Counterparty risk*
- *Managed portfolio risk*
- *Swaps risk*
- *Forward and futures contract risk*
- *Options risk*
- *Portfolio turnover risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Currency risk*
- *Currency management strategies risk*
- *Currency transaction risk*
- *Cybersecurity risk*
- *Emerging markets and less developed countries risk*
- *Extension risk*
- *Income risk*
- *Investment strategy risk*
- *Market risk*
- *Mortgage-related and other asset-backed securities risk*
- *Settlement risk*
- *Temporary defensive positions and large cash positions risk*
- *U.S. Government securities risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund’s authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is FIAM LLC (“FIAM”), 900 Salem Street, Smithfield, Rhode Island 02917. FIAM is an indirectly held, wholly owned subsidiary of FMR LLC.

The Fund is managed on a team basis. The individual members of the team that are primarily responsible for the day-to-day management of the Fund’s portfolio are:

Alexandre Karam is a portfolio manager in the High Income and Alternatives division at Fidelity Investments. In this role, Mr. Karam manages portfolios across retail and institutional assets. Prior to assuming his current responsibilities, Mr. Karam was a research analyst, focused primarily on distressed credits across a variety of industries. Before joining Fidelity in 2016, Mr. Karam was a vice president at Paulson & Company. Before that, he was an analyst at Goldman Sachs and Morgan Stanley. He has been in the financial industry since 2005. Mr. Karam earned his bachelor of arts degree in economics and bachelor of science degree in electrical engineering from Stanford University. He also earned his master of science degree in electrical engineering from Stanford University and his master of business administration from Harvard Business School.

Jeffrey Moore is a portfolio manager in the Fixed Income division at Fidelity Investments. In this role, Mr. Moore manages portfolios across retail and institutional assets. Additionally, he is a presenting member to Fidelity’s Asset Allocation Committee. Prior to assuming his current position, Mr. Moore was a fixed income analyst assigned to several sectors, including sovereign debt, energy, real estate investment trusts (REITs), banks, and Canada. Before joining Fidelity in 1995, Mr. Moore worked at Dominion Bond Rating Service in Toronto and Canada’s Department of Finance. Mr. Moore was selected into the Accelerated Economist Training

Program, serving at the Treasury Board and at the Privy Council Office. He has been in the financial industry since 1990. Mr. Moore earned his bachelor of arts degree, with honors, in economics from the University of Western Ontario and his master's degree in economics from the University of Waterloo. He is also a CFA charterholder.

Celso Muñoz is a portfolio manager in the Fixed Income division at Fidelity Investments. In this role, Mr. Muñoz manages portfolios across retail and institutional assets and serves as a member of the bond division's Core/Core Plus team. Prior to assuming his current position, Mr. Muñoz was a research analyst responsible for covering the insurance and government-sponsored enterprise (GSE) industries. Previously, he served as a research analyst in the Equity division, where he most recently covered life insurance stocks and previously covered specialty pharmaceuticals, generic pharmaceuticals, and drug wholesaler stocks. Before joining Fidelity in 2005, Mr. Muñoz was an associate at Deutsche Bank. In this capacity, he was a member of the Mergers & Acquisitions group within the firm's investment banking practice. He has been in the financial industry since 1999. Mr. Muñoz earned his bachelor of science degree in economics, with a concentration in finance as well as public policy management, from the University of Pennsylvania and his master of business administration degree from Harvard Business School. He is also a CFA charterholder.

Ford O'Neil is a portfolio manager in the Fixed Income division at Fidelity Investments. In this role, Mr. O'Neil manages various retail and institutional taxable bond funds and portfolios. Prior to assuming his current position in August 1992, Mr. O'Neil was an analyst in Fidelity's Asset Management division. In this capacity, he was responsible for the electric utility sector. Before joining Fidelity in 1989, Mr. O'Neil was an associate in the Investment Banking department at Advest, Inc, where he advised corporations on capital raising. He has been in the financial industry since 1985. Mr. O'Neil earned his bachelor of arts degree in government from Harvard College and his master of business administration degree from The Wharton School at the University of Pennsylvania.

Michael Weaver is a portfolio manager in the High Income and Alternatives division at Fidelity Investments. In this role, Mr. Weaver manages portfolios across retail and institutional assets. Prior to assuming his current role, Mr. Weaver was a research analyst covering various sectors including media, cable, satellite and the automotive sector. He also served as portfolio manager of the Fidelity Select Automotive Fund. Before joining Fidelity in 2005, he worked as a research analyst at Janus Capital Group from 2003 to 2005, an investment banking associate at J.P. Morgan from 2000 to 2003, and an investment banking analyst at Barclays Capital from 1998 to 2000. He has been in the financial industry since 1998. Mr. Weaver earned his bachelor of science degree in economics from the Wharton School at the University of Pennsylvania.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/First Sentier Global Infrastructure Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to seek total return through growth of capital and inflation-protected income.

Principal Investment Strategies. The Fund, under normal market conditions, invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in publicly traded equity securities of infrastructure companies. The Fund will typically invest in U.S. and non-U.S. (foreign markets), which may include developing and emerging market countries.

The Fund defines non-U.S. companies as companies (i) that are organized under the laws of a foreign country; (ii) whose principal trading market is in a foreign country; or (iii) that have a majority of their assets, or that derive a significant portion of their revenue or profits from businesses, investments or sales, outside of the United States. Under normal market conditions, the Fund invests significantly (ordinarily at least 40% —unless market conditions are not deemed favorable by the Fund’s sub-adviser, in which case the Fund would invest at least 30%) in non-U.S. infrastructure companies.

The Fund defines an infrastructure company as one that exhibits the characteristics of high barriers to entry, strong pricing power, predictable cash flows and sustainable growth. The Fund defines infrastructure assets, among other things, as the physical structures, networks and systems of transportation, energy, water, waste, and communication. Given the evolving nature of the global listed infrastructure market, the Fund may hold securities outside of the above sectors as long as they meet the Fund’s definition of an infrastructure company.

The Fund seeks to invest in the securities of companies which have high barriers to entry, strong pricing power, sustainable growth and predictable cash flows.

The equity securities in which the Fund may invest include, but are not limited to, common and preferred stock of companies of any size market capitalizations. The foreign securities in which the Fund may invest include, but not limited to, depositary receipts, such as American Depository Receipts (“ADRs”), European Depository Receipts (“EDRs”) and Global Depository Receipts (“GDRs”). The Fund may also invest in initial public offerings (“IPOs”).

The Fund may invest without limit in stapled securities to gain exposure to infrastructure companies in Australia. A stapled security, is a security that is comprised of two parts – a trust and a share of a company – that cannot be separated from one another, and must be treated as one unit at all times (such as when buying or selling a security). The value of stapled securities and the income derived from them may fall as well as rise. Stapled securities are not obligations of, deposits in, or guaranteed by, the Fund. The listing of stapled securities on a domestic or foreign exchange does not guarantee a liquid market for stapled securities.

The Fund may invest in real estate investment trusts (“REITs”) and in limited partnerships and master limited partnerships (“MLPs”) listed on a domestic or foreign exchange that meet the Fund’s definition of an infrastructure company.

The Fund may invest in Rule 144A and Regulation S securities. Rule 144A securities are securities offered as exempt from registration with the Securities and Exchange Commission (“SEC”) but are typically treated as liquid securities because there is a market for such securities. Regulation S securities are securities of U.S. and non-U.S. issuers that are issued through private offerings without registration with the SEC pursuant to Regulation S under the Securities Act of 1933, as amended.

The Fund’s investment strategy is based on active, bottom-up stock selection which seeks to identify mispricing. The strategy seeks to minimize risk through on-the-ground research, a focus on quality, and sensible portfolio construction. First Sentier Investors (Australia) IM Ltd, the Fund’s sub-adviser (the “Sub-Adviser”) integrates a rigorous stock selection process with strict portfolio management risk controls. Securities within the Fund’s wider investment universe are screened for infrastructure characteristics, thoroughly analyzed, and then ranked by value and quality. This provides an indication of the portfolio holdings, as derived from a purely bottom-up basis. The Fund is then constructed, based primarily on these rankings. Regional and sector risks are also monitored as a risk management overlay. This aims to ensure appropriate portfolio diversification along both country and sector lines.

The Sub-Adviser’s sell discipline is driven by a security moving to a lower position within their value and quality ranking system. This can occur through:

- A rise in a company’s share price, leading to decreased upside potential and a lower value ranking.
- A downgrade in a company’s discounted cash flow valuation, leading to lower value ranking.
- A downgrade of a company’s quality score, leading to a lower quality ranking.

The Fund may temporarily depart from its principal investment strategies by making short-term investments in cash, cash equivalents, high-quality, short-term debt securities and money market instruments for temporary defensive purposes in response to adverse market, economic, political or other conditions. This may result in the Fund not achieving its investment objective during that period.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Infrastructure companies risk*
- *Equity securities risk*
- *Company risk*
- *Stock risk*
- *Sector risk*
- *Market risk*
- *Investment strategy risk*
- *Managed portfolio risk*
- *Foreign securities risk*
- *European investment risk*
- *Emerging markets and less developed countries risk*
- *Currency risk*
- *Stapled securities risk*
- *Master limited partnership risk*
- *Regulation S securities risk*
- *Rule 144A securities risk*
- *Investments in IPOs risk*
- *Mid-capitalization investing risk*
- *Small-capitalization investing risk*
- *Natural resource related securities risk*
- *Real estate investment risk*
- *Accounting risk*
- *Issuer risk*
- *Depository receipts risk*
- *Preferred stock risk*
- *Concentration risk*
- *Volatility risk*
- *Liquidity risk*
- *Portfolio turnover risk*
- *Derivatives risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund's ability to achieve its stated investment objective. Those additional risks are:

- *Cybersecurity risk*
- *Expense risk*
- *Redemption risk*
- *Regulatory investment limits risk*
- *Securities lending risk*

Please see the "Glossary of Risks" section, which is set forth before the "Management of the Trust" section in this Prospectus, for a description of these risks.

In addition, the performance of the Fund depends on the Sub-Adviser's abilities to effectively implement the investment strategies of the Fund.

The SAI has more information about the Fund's authorized investments and strategies, as well as the risks and restrictions that may apply to it.

The Sub-Adviser and Portfolio Management. The Sub-Adviser to the Fund is First Sentier Investors (Australia) IM Ltd ("First Sentier"), which is located at Level 5, Tower 3, International Towers, 300 Barangaroo Avenue, Barangaroo NSW 2000 Australia, and has been engaged as Sub-Adviser to manage the investments of the Fund since August 2018. First Sentier is an Australian domiciled investment adviser regulated by the Australian Securities and Investments Commission and registered with the SEC.

Edmund Leung is a Portfolio Manager for the Global Listed Infrastructure team at First Sentier. He is one of the portfolio managers responsible for the day-to-day management of the Fund, and of a number of other listed infrastructure portfolios on behalf of institutional and wholesale clients. Mr. Leung is also responsible for research coverage of toll roads, towers and data centers. He brings specialist investment experience to the role, having previously covered rail, ports, airports, satellites and utilities for the Global Listed Infrastructure team. Mr. Leung joined First Sentier in January 2007. His investment experience over this time includes smaller companies analysis with the Asia Pacific/Global Emerging Markets team in Hong Kong and credit analysis for a number of sectors with the Global Fixed Interest and Credit team.

Prior to joining First Sentier, Mr. Leung was an Actuarial Analyst at Aviva Australia conducting financial modelling and analysis of wealth management products. He holds a Bachelor of Commerce (Hons) from the University of Melbourne and is a Chartered Financial Analyst (CFA) charterholder.

Peter Meany is Head of Global Listed Infrastructure at First Sentier. Mr. Meany is responsible for managing infrastructure securities on behalf of institutional and wholesale clients in Asia-Pacific, Europe, the Middle East and North America. Since establishing the strategy in 2007, he has built a high quality team of infrastructure specialists and delivered consistent outperformance through a wide range of market conditions.

Mr. Meany has more than 20 years' experience in the infrastructure industry. Prior to his time at First Sentier, he was responsible for research coverage of the Infrastructure & Utilities sectors at Credit Suisse (Australia). Mr. Meany also gained experience at Credit Suisse as an analyst in the telecoms and energy sectors. He started his career as an analyst at Macquarie Equities when the infrastructure sector was in its infancy. Mr. Meany holds a Bachelor Economics (Finance) from Macquarie University.

Andrew Greenup is Deputy Head of Global Listed Infrastructure and a Senior Portfolio Manager. Mr. Greenup co-founded the Global Listed Infrastructure Fund in 2007. He brings to this role 20 years' investment experience, a strong stock picking track record and portfolio management experience. In 2005, Mr. Greenup joined First Sentier as a senior analyst in the Australian Equities - Core team.

Prior to his time at First Sentier, Mr. Greenup worked at Allianz Global Investors as a senior analyst in Australian equities. Before funds management, Andrew worked at Credit Suisse First Boston as an equities analyst for eight years. During his time in financial markets, Andrew has researched a broad cross section of industries including Infrastructure, Utilities, Transportation, Developers & Contractors, Retailing, Food & Beverages, Gaming, Media, Insurance and Diversified Financials.

Mr. Greenup holds a Bachelor Business (First Class Honours) from the Queensland University of Technology (QUT) and was awarded the QUT University medal. He has completed a Graduate Diploma in Applied Finance & Investment from the Financial Services Institute of Australasia and a Postgraduate Diploma in International Relations from Macquarie University. He is an Associate of the Australian Institute of Company Directors, a Fellow of the Financial Services Institute of Australia, and a member of the Australian Institute of International Affairs.

The SAI provides additional information about a portfolio manager's compensation, other accounts managed, and ownership of securities in the Fund(s).

A discussion regarding the Board of Trustees' basis for approving the sub-advisory agreement is available in the Fund's Annual Report for the period ended December 31, 2021.

JNL/Franklin Templeton Income Fund

Class A

Class I

Investment Objective. The investment objective of the Fund is to maximize income while maintaining prospects for capital appreciation.

Principal Investment Strategies. Under normal market conditions, the Fund invests in a diversified portfolio of debt and equity securities. The Fund has significant ability to invest in a broad range of investments and may shift its investments from one asset class to another based on the Sub-Adviser's analysis of the best opportunities for the Fund's portfolio in a given market. The equity securities in which the Fund invests consist primarily of common stock, including those with dividend yields the Sub-Adviser believes are attractive. In its search for growth opportunities, the Fund maintains the flexibility, based on economic conditions, to invest in common stocks of companies from a variety of industries but from time to time, based on economic conditions, the Fund may have significant investments in certain sectors, particularly healthcare, financials and utilities.

Debt securities obligate the issuer to repay a loan of money at a future date and generally provides for the payment of interest on the amount borrowed to the bond or note holders. Debt securities include all varieties of fixed, floating and variable rate instruments including secured and unsecured bonds, bonds convertible into common stock, senior floating rate and term loans, mortgage-backed securities and other asset-backed securities, debentures, zero coupon bonds, notes, and short-term debt instruments. Bond investments may include U.S. and foreign corporate debt, U.S. Treasuries and foreign government bonds. Debt securities tend to increase in value when interest rates decline and decrease in value when interest rates rise. Lower-rated debt securities generally pay higher yields than more highly rated securities to compensate investors for the higher risk.

An equity security represents a proportionate share of the ownership of a company; its value is based on the success of the company's business, any income paid to stockholders, the value of its assets and general market conditions. Common stocks and preferred stocks, and securities convertible into common stock, are examples of equity securities. The Fund may invest in convertible securities without regard to the ratings assigned by the rating services.

The Fund may invest up to 100% of total assets in debt securities that are rated below investment grade (sometimes called "junk bonds"), including a portion in defaulted securities. Securities rated in the top four ratings categories by independent rating organizations such as S&P Global Ratings and Moody's Investors Service ("Moody's") are considered investment grade. Securities rated Ba or lower by Moody's or BB or lower by S&P Rating Services are considered to be below investment grade. If, subsequent to its purchase a security is downgraded in rating or goes into default, the Fund will consider such events in its evaluation of the overall investment merits of that security but will not necessarily dispose of the security immediately.

The Fund may invest up to 25% of its assets in foreign securities, either directly or through depository receipts, which are certificates typically issued by a bank or trust company that give their holders the right to receive securities issued by a foreign or a domestic company. The Fund may lend its securities to increase its income.

The Sub-Adviser searches for undervalued or out-of-favor securities it believes offer opportunities for income today and significant growth tomorrow. In analyzing both corporate debt and equity securities, the Sub-Adviser considers a variety of factors, including:

- a security's relative value based on such factors as anticipated cash flow, interest or dividend coverage, asset coverage, and earnings prospects;
- the experience and strength of the company's management;
- the company's changing financial condition and market recognition of the change;
- the company's sensitivity to changes in interest rates and business conditions; and
- the company's debt maturity schedules and borrowing requirements.

With respect to debt and equity securities in the utilities industry, the Sub-Adviser considers the effects of the regulatory environment on utilities companies. The Sub-Adviser also considers a company's price-earnings ratio, profit margins and liquidation value. It generally performs independent analysis of the debt securities being considered for the Fund's portfolio, rather than relying principally on the ratings assigned by rating organizations.

Alongside traditional financial and economic analyses, the Sub-Adviser assesses the potential impacts of material environmental, social and governance (ESG) factors on an issuer, which the Sub-Adviser believes provide a measure of the issuer's sustainability. In analyzing ESG factors, the Sub-Adviser assesses whether an issuer's practices pose a material financial risk or opportunity. Consideration of ESG factors and risks is only one component of the Sub-Adviser's assessment of eligible investments and may not be a determinative factor in the Sub-Adviser's final decision on whether to invest in an issuer. In addition, the weight given to ESG factors may vary across types of investments, industries, regions and issuers; ESG factors and weights considered may change over time; and not every ESG factor may be identified or evaluated.

The Fund may invest up to 25% of its net assets in equity-linked notes ("ELNs"). ELNs are hybrid derivative-type instruments that are specially designed to combine the characteristics of one or more reference securities (usually a single stock, a stock index or a basket of stocks (underlying securities)) and a related equity derivative, such as a put or call option, in a single note form. The Fund may engage in all types of ELNs, including those that: (1) provide for protection of the Fund's principal in exchange for limited participation in the appreciation of the underlying securities, and (2) do not provide for such protection and subject the Fund to the risk of loss of the Fund's principal investment. ELNs can provide the Fund with an efficient investment tool that may be less expensive than investing directly in the underlying securities and the related equity derivative. The Fund may also buy and sell exchange-traded funds ("ETFs") and options on ETFs.

The Fund may, from time to time, use a variety of equity-related derivatives and complex equity securities, which may include purchasing or selling call and put options on equity securities and equity security indices, futures on equity securities and equity indexes, options on equity index futures and equity-linked notes, for various purposes including enhancing Fund returns, increasing liquidity, gaining exposure to particular instruments in more efficient or less expensive ways and/or hedging risks relating to changes in certain equity markets. In addition, the Fund may use interest rate-related derivatives, including interest rate swaps and interest rate and/or bond futures contracts (including U.S. Treasury futures contracts) for various purposes including enhancing Fund returns, increasing liquidity, gaining exposure to particular instruments in more efficient or less expensive ways and/or hedging risks relating to changes in interest rates. The Fund also may, from time to time, use currency-related derivatives, such as forward foreign currency exchange contracts, currency futures contracts, currency swaps and currency options to hedge (protect) against currency risks, and credit-related derivatives, such as credit default swaps and options on credit default swaps, to hedge (protect) against credit risks. The use of such derivative transactions may allow the Fund to obtain net long or net short exposures to selected markets, interest rates, countries or durations.

The Fund may invest in securities issued by companies in the financial services sector. An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The following descriptions of the principal risks do not provide any assurance either of the Fund's investment in any particular type of security, or assurance of the Fund's success in its investment selections, techniques and risk assessments. As a managed portfolio, the Fund may not achieve its investment objective for a variety of reasons including changes in the financial condition of issuers (due to such factors as management performance, reduced demand or overall market changes), fluctuations in the financial markets, declines in overall securities prices, or the Sub-Adviser's investment techniques otherwise failing to achieve the Fund's investment objective. The principal risks of investing in the Fund include:

- *Allocation risk*
- *Equity securities risk*
- *Fixed-income risk*
- *Market risk*
- *Investment style risk*
- *Investment strategy risk*
- *Managed portfolio risk*
- *Credit risk*
- *High-yield bonds, lower-rated bonds, and unrated securities risk*
- *Interest rate risk*
- *Income risk*
- *Debt securities ratings risk*
- *Convertible securities risk*
- *Equity-linked notes (ELNs) risk*
- *Concentration risk*
- *Sector risk*
- *Financial services risk*
- *Health care sector risk*
- *Utilities sector risk*
- *Foreign securities risk*
- *U.S. Government securities risk*
- *Liquidity risk*
- *Company risk*

- *Issuer risk*
- *Stock risk*
- *Depository receipts risk*
- *Derivatives risk*
- *Corporate loan, sovereign entity loan, and bank loan risk*
- *LIBOR replacement risk*

Please see the “Glossary of Risks” section, which is set forth before the “Management of the Trust” section, for a description of these risks. There may be other risks that are not listed in this Prospectus that could cause the value of your investment in the Fund to decline and that could prevent the Fund from achieving its stated investment objective. This Prospectus does not describe all of the risks of every technique, investment strategy or temporary defensive position that the Fund may use. For additional information regarding the risks of investing in the Fund, please refer to the SAI.

Additional Information About the Other Investment Strategies, Other Investments and Risks of the Fund (Other than Principal Strategies/Risks). There may be additional risks that may affect the Fund’s ability to achieve its stated investment objective. Those additional risks are:

- *Accounting risk*
- *Commodity-linked derivatives risk*
